Turkey Shooting in the Wild South.

REEK bottoms, black jack ridges, low swales thick with bamboo briers, old sedge fields, with the broom six or seven feet high, pea fields lying contigu ous to these-such are the chosen haunts of the wild turkey.

Much has been written and said in sporting books about this bird, most of which is hearsay, for the writers display a most lamentable ignorance of its history and of its habits.

The hardest of all birds to raise in the poultry yard, they are the hardiest in a wild state. The old hen will select the driest spot for miles around with an intuitive perception that the season is going to be a rainy one. She will cover this nest up so skillfully that the most practiced eye will fail to discover it. When found, there is something pathetic about the manner in which she tries to hide her round, bright eye, knowing as well as you do that here is her vulnerable point. At such times you may walk up and study her at your leisure, for she does not intend to leave that nest unless you become too familiar, when with a low "chut!" "chut!" of angry remonstrance she flies away.

When first hatched they do not look like domestic turkeys, but have an indescribable, wide-awake look, as if they had inherited from their paternal ancestor, the old gobbler, some soupcon of the guile that so eminently distinguishes that wise and wary old bird. Indeed, when the young turkeys begin to walk about this mundane sphere the young gobblers, not a month old, will un consciously put on airs and begin to look wise. So strong are inherited traits in birds, or in men! The young hens, on the contrary, are very meek and mild, with a strong tendency to lurk and cry out peevishly for the old hen if they see their father with his majestic and Turk-like beard too near them. So strong is sex in woman or birds !

About the middle of September in our climate they are about two-thirds grown, and then is the time to kill them. Full feathered and strong on the wing, yet their heavy bodies make them fly very slow, and they fall an easy prey to the sportsman. At this time, too, being antirely uneducated, they will come to the call of the

veriest tyro; and, indeed, will come better to a slight whistle, made by the mouth, in imitation of the cry of the young birds, than to any call. Next to the quail, the most social and gregarious of all birds, they seek each other after being scattered, and the plaintive cry of the ambushed hunter leads many a promising young bird to his ruin. his ruin.

But ah me! what a difference in the same birds three months later! Then the most practiced eye cannot tell a young gobbler from an old one as they rise on the hill above the swamp and sail majestically across the creek, above the swamp and sail majestically across the creek, far out of range of any shot gun. They cannot then be approached at all, under any circumstances. Accidentally, as you walk out of the swamp into a pen field you sometimes walk into the midst of a flock scattered, feeding upon the dearly loved pea. Then, if you shoot straight at the heads of the crossing gobblers, you have the satisfection of seeing two fine, fat fellows fall to your win. It is with a feeding of present triums that can

the satisfaction of seeing two fine, fat fullows full to your aim. It is with a feeling of personal triumph that one kills two wild turkeys in successive shots, nor is it often done; once in a way, or twice, but not oftener.

But it is chiefly upon strategic movements that the experienced hunter of turkeys relies. I have often thought, while lying in my blind, that the greatest strategist in the world, Napoleon Bonaparte, would have made an accomplished turkey hunter. Absurd! you say. Well I have my reasons for my belief, and I think that you will agree with me when you come to the end of this article. However that may be, there are old globbiers extant, to capture whom would require an amount of patience, energy, woodcraft, knowledge of the habits of your game, and skill, that if exercised in another direction, education taken for granted, would make a good general. Me judice.

patience, energy, woodcraft, knowledge of the habits of your game, and skill, that if exercised in another direction, education taken for granted, would make a good general. Me judice.

Yes, there are gobblers in the South who would put to shane Minerva and all her owls. If Mentor, whom we all remember in the Telemaque as the utterer of the most delightful platitudes, were to attempt to stalk an old gobbler he would make a most ignominious failure, and would find to his amazement and sorrow that it would be easier to rescue a hundred and sorrow that it would be easier to rescue a hundred and sorrow that it would be easier to rescue a hundred hay-like Telemaques from the wiles of a hundred sea-green Calypsos than to circumvent one wily, veteran old turkey. "Deep sir, deep and devilish tough!" would be the praise bestowed upon that bird by Major Bagstock, to whom, in my wrath and vexation, I have often compared an old bird, who obstinately remained just out of gun shot!

Yes, a very knowing bird, indeed, is the graduate, who, after being shot at by all the negroes in the neighborhood, with pot metal, double-barreled guns and old army muskets until he knows their range exactly, will strut by the hour just one hundred and fifty yards from the blind, behind which the sable sportsman lies snugly ensconced, rolling his eyes in eager anticipation of that sharp old bird's coming nearer; an anticipation of that sharp old bird's coming nearer; an anticipation, it is needless to say, never to be realized. Sometimes, in utter anguish of heart, the wearied and hopeless darkey will fire at him only to hear the derisive gobble of the veteran re-echo the report of his gun.

Wild legends are in circulation among the negroes, anent sone old gobblers. How, once upon a time, when old daddy Nero was "settin' fur turkey," a huge old bird made his appearance behind old Nero's back and gave him ad dig with his long sharp beak that was very painful indeed, whereupon old daddy Nero, having fired both barrels at the feathered flend, faint

It is only in the bright, still mornings of early spring that you can shoot the old gobbiers. They lose some of that wariness that so distinguishes them at other times. "Love rules the court, the canny, the grove," and, we sight trainfully add, the wise old gobbler.

"Love rules the court, the camp, the grove," and, we might truthfully add, the wise old gobbler. But let no tyro in turkey hunting think to put the "comether" on one of these old birds. He can tell one of their "yelps" just as well as the old turkey hunter can, and refuseth to come to a call, compounded of a grunt, a squeal and a whistle. He incontinently takes to his heels and gooth the other way, with steps quick-ened by a knowledge that in that way lies safety. Though, for that matter, he might have come to the call with perfect impunity, for not one man of a hundred can kill a turkey after being called to the blind without he have some previous experience.

Suppose some still morning in March, when all the woods in our climate are gay and fragrant with the yellow jasmine, and the snow-white blossoms of the dogberry contrast vividly with the scarlet flowers of the

low jasmine, and the snow-white blossoms of the dog-berry contrast vividity with the scarlet flowers of the maple, your feet press violets and lady's slippers and "star eyes," crushing perfume at every step; all around is heard the myriad hum of insects that wake to life in early spring; the woods are vocal with the sweet strains of the mocking bird, the cat bird, the thrush, the black-bird and the "rain crow," On such a morning as this, you take down the trusty old gun, put a shell marked

BB in the right barrel and one marked 8 in the left, and soon you are seated behind an old log, with the firm determination that to-dug the old gobbler, your favorite aversion, on foot, or wing, shall die, for is not this the third day? By Mercury, the patron of rascally turkeys, it is the fourth!

determination that to-day the old gobbler, your favorite aversion, on foot, or wing, shall die, for is not this the Etirid day? By afercury, the patron of rascally turkeys, it is the fourth!

A full mile from you, sitting on the fence of an old sedge field, is your old foe, the wisest turkey in South Carolina. He is evidently dreaming of tall and lithe turkey hens whom he has appointed to meet this very morning. He wonders why he does not hear them, as he knows that turkey hens, unlike human beings, are very panctual to their appointments. Hark I borne on the still morning air, comes a plaintive "cluck, cluck!" to his attentively listening ear. How changed in a moment! Now, full four feet high, with mujestic beard nearly a foot long, he struts about waiting a repetition of the call. The seconds grow into minutes, the minutes into hours, and he hears nothing more. Just as he is beginning to think that he may have been mistaken: "Cluck, cluck!" A! that is the voice of Mary Jane, that tall and graceful young turkey hen to whom he was introduced last week, and with whom he fell in love at first sight. With wings outstretched and head thrown far forward to catch sight of the charmer, he speeds to the closen trysting place, on the branch near the old pine log. He has run over half the distance, when a deadly fear stops him short in his mad career. What if that mellifluous sound, instead of coming from the beauteous beak of his own Mary Jane, should have been made by a turkey bone? For a long time he stands, drawn up to his full height, watching on every side for the danger. Hark! no turkey bone ever threw that amorous, inviting cry upon the seented air. He is now fully satisfied. He pauses no longer, but on the outstretched wings of eager love he hastens forward to the old pine log. One segre love he hastens forward to the old pine log. One segre love, and there rings out the left burrel loaded with the No.8's, and with head shattered to pieces, the noble bird falls beaddong to the earth. Your sable henchmay flow of

There is a peculiarity about the wild turkey, and indeed in all gallinaceous birds, that is very curious. When
pens or traps are made for them, they are built of small
logs, and a hole is dug under the trap large enough to admita full grown turkey. Corn is scattered for a long
distance in the woods, ending in a bountiful supply in the
pen late top of the pen is left open, so that when the
birds have eaten up all the corn, or sufficiently gorged
themselves, they fly out at the open top. This is repeated
for several days, and then the top is closed and the pen
batted as before. The turkeys, never suspecting anything wrong go into the pen as usual, and when they try
to fly out they find the top closed. With a fataiity not to
be expected from such sharp birds, they never look down
for the hole by which they entered, and are captured to
a bird.

a bird.

Quail will do the same thing, and, I believe, all birds of that kind.

There is still another mode of hunting the wild turkey, ail will do the same thing, and, I believe, all birds of

There is still another mode of hunting the wild turkey, and that is to "roost" then, or watch them when they go to roost. On moonlight nights, when they roost in trees that are not too tall, by getting the birds between you and the moon some can be killed in this way, by using buckshot in a close shooting gun. So tenacious are they of life, that unless they are shot in the brain they often fly long distances, and fall dead entirely out of reach of the disappointed hunter. This is only another mode of porhunting, and is not much in favor with the skillful sportsman.

man.

No. All the pleasure of true sport is not in killing for the sake of slaughter, but an intelligent knowledge of seeking game difficult to kill, and, when killed, eating it well cooked and with thankful hearts. Ah, me! when I look back over the days when, with elastic step and bounding pulse, I could shoot an old gobbler square through at one hundred yards, and on an emergency could kill him on the wing nearly every time, I am re-

minded that the shot fun with me has superseded the minded that the shot gun with me has supersected refile, my boy load's weapon. But though nearly half a century has rolled over my head, the eye is still undimmed, the love of sport and nature, once merely a recreation, is the sole resource now of a life during which I have learned contentment. have learned contentment. FRASER RIVER SALMON.

BY MOWITCH-NO. I.

THE salmon frequenting Fraser River, the principal river of British Columbia, which empties its waters into the State of Georgia, a short distance above the 40th parallel of North Istitude, are of many varieties; and although they have been much written about, and have attracted more or less attention in many parts of the world, more particularly since they have been so extensively cannel and exported to Europe, they may fairly be said to have never been properly classified. The classification of so many varieties is a work that would necessarily involve no small amount of study, time and observation, while the person undertaking the work would have to be scientifie in a high degree in this particular branch of Natural History. Without disparaging any writers who have given their time and attention to this end. I do not think it would be at all unfair to say that anything that has been written, that I have seen on this important topic, is meager, insufficient and to some degree erroneous. To do justice to a subject of this magnitude is a task of no mean character involving, as it does, an amount of time that is not at the disposal of many, be they ever so fond of the undertaking and ever so competent to deal with it. I do not claim to be a scientist, even in the ordinary acceptation of the word, nor to possess the necessary qualification to enable me to give a proper description of these fish, but from a long course of observation, coupled with the desire to awaken in some one sufficient interest to pay that attention due to our salmon, I propose giving you some description respecting them, which hamy be of some interest to hose

in some one sufficient interest to pay that attention due to our salmon, I propose giving you some description respecting them, which may be of some interest to those who care for the subject. The fish not possessing scientific names, perhaps it will serve the purpose by attending to them by the names they are known by to the Musqueam Indians, a large tribe or nation inhabiting the Lower Fraser.

The first salmon, known to the Indians as the Sawkwey (and to the whites as spring salmon), make their appearance in February, and continue to run the greater part of the year, at intervals. A large number of these are white salmon, i.e., the flesh is white in color, and average perhaps sixteen to eighteen pounds in weight, although an average is of course only approximate in this and all sorts of salmon, still, the difference in weight of this variety varies to a greater extent than in any other.

atthough an average 1501 course omy approximate in this and all sorts of salnon, still, the difference in weight of this variety varies to a greater extent than in any other.

The next run is the Suckeye run, which commences in July and lasts four, five and six weeks, the greater press, or bulk of them, being within three weeks or thereabout. This is the "boss run" of the season, and the one to which Friser River is indebted for its notoriety as a saluon stream. This is the harvest of the cameries, no other run approaching it in any respect. Every effort is made during this run to "make hay while the sun shines," and the fisherman's success for the year's work is mainly dependant on a good Suckeye run. The supply of fish is always greater than the demand, or, in other words, twice as many fish can generally be caught as can be cared for, and the energy of the cannery proprietors isstrained to the utmost to push the work to its greatest extent, and put up or can salmon to the fullest capacity of their appliances, leaving such work as lacquering cans, labeling and boxing to such time as the run slackens and time is not so precious. Most years no lack of fish exists, and no conjecture could be made of the probable numbers coming into the river, or how many fish could be taken were there enough canneries to put then up. A fair average for this variety would be seven pounds. They are very much of a size, and do not vary much in weight.

The second run of Sawkwey, or spring salmon, comes about the 1st of August, and does not present any material difference from the first run, except that there are a larger proportion of white salmon in this than the earlier run. While speaking of this sort, I may say that the external appearance of the fish does not in any way indicate whether it is white or red, the difference in color only becoming apparent by cutting it so as to expose the flesh to view. The white salmon is not thought to be as fine for the table as the other, but I think this is only prejudice.

only recoming apparent by cutting it so as to expose the flesh to view. The white salmon is not thought to be as fine for the table as the other, but I think this is only prejudice.

The next run is the Cohoo run, which commences about the 1st of September, the fish being much the same in weight as the suckeye, about seven peunds. The next run is the Qualoch, or dog-toothed salmon, which I take to be identical with the redfish of Idaho, lately described by Capt. Bendire. These come about the latter part of September, and average say ten pounds. The last run of the season is a large trout, or salmon trout, a very bandsome and decidedly game fish, and, in my humble opinion, a much more desirable fish for the table, either fresh or salted, than any others in our waters. This run fasts during September, October and November, and an average might be put at twenty pounds, although they, like the Sawkwey, have a wide range in respect toweight. Every second year we have a run of Hone-holia, or humpbacked salmon. These come in large quantities, are caught while fishing for the other varieties, are to some extent eaten by the Indians, but meyer by the whites, are never salted or canned, being worthless for either purpose, and are detested by the fishernen on account of the trouble of taking them out of the next and throwing them alway. Their average weight is six pounds, but as throwing them away. Their average weight is six pounds, but as three fish possess some characteristics widely different from other varieties of salmon in general, I reserve any remarks concerning them at pres-

ent, but will probably treat of them in a subsequent article. The greatest weight of any Fraser River salmon I have any record of is lifty-five pounds. Some taken may possibly have been larger, but few ever attain this weight. I will not touch on the canning industry, it having already been written up to some extent, and it does not differ materially from the Columbia River or other canning operations. I would remark, however, or passant, that I think the refuse from the establishments might be turned to account for fish guano, and likewise a large amount of oil be obtained from it; but no efforts have been made in either direction, the refuse being thrown into the river to get rid of it. As regards the spawning of these fish, it is evident that from the time of their entering the river their whole energies are devoted to reaching the spawning beds, in proof of which I may cite the fact that they run during the night as well as by day. Enough has been said about their indomitable perseverance as regards surmounting obstacles, such as falls, cataracts, etc., and here, as elsewhere, nothing but an insurmountable barrier stops them on their upward journey. No number of attempts and failures duants or disheartens them; if it is possible to go higher they are sure to do so. Were this noble family of fishes entitled to a coat of arms, Excelsior would be the most appropriate legend that could be possibly inscribed on it. The first tributary of Fraser River that takes its quota is the Coquitiam of Quequitiam, as pronounced by the Indians) River, about twenty-two miles from the sea, and thence each stream, and their names are legion, to the foot of the Rocky Mountains, receives its portion. Some of the stream are so small as to almost deny the fish admission, others mighty rivers. ent, but will probably treat of them in a subsequent ar-

WOODCOCK CARRYING THEIR YOUNG.

SPRINGFIELD, May 18th.

Editor Forest and Stream: Editor Forest and Stream:—
Last year in a certain spot hereabout, which is not apparently congenial to the covey later on in the season, certain woodcock made their nests, and lutched their brood. Flushed by accident, they were waited on from time to time, and the knowing few, closing one eye, thought of the good time coming when they should "tumble to the racket" of a pair of English guns.

Before the "law was oft," however, the birds were oft, and the places which at first knew them, knew them no more.

more.

Last week, one of the disappointed shots, in driving

Last week, one of the disappointed shots, in driving by the game locality, again sintred some birds, and one of them was observed to be carrying in her flight a young bird held by and between her hanging legs.

The fact is new to me, that woodcock ever transported their young in that way; and I beg to know, if it is a habit generally known, or if this is a strange freak which, from its novelty, may be as interesting to others as to me. How is it, my brothers? Did you ever note the like?

Though what has been observed by our correspondent may be new to many sportsmen, the woodcock's habit of sometimes removing her young from danger has long been known to naturalists. The habit referred to is common, both to the woodcock of Europe and to his smaller North American cousin. An interesting article referring to this subject appeared in the London Zoologist for November last, we believe, and a number of notes on the subject in weekly journals, both on this and the other side of the water. The following from our contemporary, the Scientific American, is interesting, but refers to the European woodcock. Scolopaw rusticola:-

to the European woodcock. Scolopaw risticola:—
Among several curious habis of the woodcock, described by the editor of the Zoologist, its practice of carrying its young is perhaps the most interesting. The testimony of many competent witnesses is cited to corroborate the statement. The late L. Lloyd, in his "Scandinavian Adventures," wrote: "If, in shooting, you meet with a brood of woodcocks, and the young ones cannot fly, the old bird takes then separately between her feet, and flies from the dogs with a moaning cry."
The same author makes a similar statement in another work, this habit of the woodcock having been observed by a friend.

The same author makes a similar statement in another work, this habit of the woodcock having been observed by a friend.

One of the brothers Stuart, gives, in "Lays of the Deer Forest," a graphic account of the performance. He says: "As the nests are laid on dry ground, and often at a distance from moisture, in the latter case, as soon as the young are hatched, the old bird will sometimes carry them in her claws to the marest spring or green strip. In the same manner, when in danger, she will rescue those which she can lift; of this we have frequent opportunities for observation in Tarmaway. Various times when the hounds, in beating the ground, have come upon a brood, we have seen the old bird rise with the young one in hee claws and carry it fifty or a hundred yards away; and if followed to the place where she pitched, she has repeated the transportation until too much harassed. In any sudden alarm she will act in the same way." Another method of transportation has been observed by Mr. Charles St. John, and described in his "Natural History and Sport in Moray." He says: "I found out that the old woodcock carries her young even when larger than a snipe, not in her claws, which seem quite incapable of holding up any weight, but by clasping the little bird tightly between her thighs, and so holding it tightly against her own body."

This narrator doubts the feasibility of any other mode of transportation.

of transportation.

Another note from the pen of "J. D. B.," in the London Field, is as follows :-

Fredd, is as follows:—

Thave seen the woo-look when suddenly flushed carry its young. As far as I could see, it seemed to do so by pressing the legs together, as a man clings to a barebackel these with his legs. A woodcock's legs are longer than those of a hawk, and had it carried the young one in its claws! I think some daylight would have been seem between the young and old bird, or the outline of the young bird; but when flying away the young one was pressed up against the body, and, for all one could distinguish, might have been a lump of turf. If the old woodcock has time to adjust its grip properly, it goes

away with a steady flight: but sometimes it seems to rise in a great hurry, snatching up the child as it best can. The legs and the young one are then far more pendulous, and the bird sways to and fro like a child's balloon, and drops in a heather at a very short distance. I have never seen a woodcock carrying its young (as reported) to and from the feeding ground, but I have no doubt it would be capable of doing so, if it had time to adjust its burden and get the right grip. I have seen a duck carrying its young one in its bill, as it would carry a frog; it was walking, not flying. I have seen a rat carrying its young; it did not do it like a dog or cat; it had hold of a small pinch of skin in the middle of the belly.

It will be observed that Mr. St. John and the cor-

It will be observed that Mr. St. John and the cor respondent of the Field are both of the opinion that the old bird carries the young grasped between her legs, and not held in the claws, as might have been expected.

The testimony in regard to this practice in the Amer ican woodcock is no less positive, though the habit does not seem to have attracted such general attention as in the European species. Messrs. W. W. Coe and Jno. H. Sage, of Portland, Conn., both of whom are known to ornithologists as careful and accurate observers of the habits of our birds, unite in testifying to having seen a woodcock carry off one of her young ones in her claws. The occur-rence is thus spoken of in Merriam's Review of the Birds of Connecticut, p. 104 :-

of Connecticut, p. 104:—
Mr. John H. Sage tells me that, while collecting with
Mr. W. W. Coe, near Portland, Conn., May, 30th, 1874,
they flushed a woodcock with young, one of which she
carried off in her claws! and Mr. Coe writes me "in regard to the woodcock carrying off its young: Mr. Sage
and I were not four feet apart, when the old bird got up
between us, rose about three feet, and then dove down
again and picked up a young bird with her feet, and
with her tail spread and held forward under the young,
carried it off about eight rods and came back for the
others, but my boy frightened her away."

Evidence such as this of course, is convent to, catalytic

Evidence such as this of course is enough to establish the fact that the birds have this curious habit here, as well as in the old country, but additional observations, as to just how the act is performed, are needed.

We should be very glad to hear from our readers who may have witnessed similar occurrences, and should be glad to have their accounts given with all the detail and particularity possible.

WHITE HARES AGAIN.—Laramie City, W. T., May 17th.—Editor Forest and Stream:—With all due deference to your statement, backed by Coues and Allen, Lepus campestris do not, as a rule, turn white in winter, During ten years' experience on the plains of Western Kansas, Nebraska and Eastern Colorado, I have never seen a white rabbit, yet both jacks and cotton-tails are very abundant. If white jack-rabbits have been identified in those regions, they can only be regarded as albinos, and the color permanent. I have often suspected that the white jacks were entitled to distinction as a separate variety, a suspicion that was strengthened by knowing that the change in coloration was far from being universal, and, so far as I can determine, confined to high altitudes.

E. W. GUILD. altitudes. E. W. GUILD.

This is becoming interesting. We have on our side of the question the authorities, and the word of many mountain and plainsmen, and shall be glad to hear from all our Western friends on this question. We have ourselves seen jack rabbits in winter that were white, and were certainly not albinos; moreover, they were Lepus campestris. We know that our friend, Mr. Guild, has had a long experience on the Southwestern plains. but a friend, Charley Reynolds, since dead, assured us that in Dakota the jacks almost always turned white. Mr. W. H. Reed has told us the same for Wyoming, or parts of it. Let us hear from all hands.

NAUTICUS' SNAKE.—Bryan County, Ga., May 19th.—
I saw in one issue of "our paper" a description of a very short, thick snake that one of your correspondents killed in Florida—name was not known. Was this not a Trigonocephatus pisciverus, or, as we call them, cotton-mouth mocassin? One was killed on my place here yesterday not over two feet long and as large as my arm, or as big as a rattlesnake of five feet. They are very deadly, as much so as the rattlesnake. The one killed yesterday was so clumsy that he could hardly get out of his own way. John Edwards Holbrook, M. D., is my authority for the above name for cotton mouth. I have his works on herpetology, and have always found his work very accurate.

Geo. L. Appleton.

Way's Station, Ga.

But Toxicophis piscivorus, as it is now usually called, does not quite correspond in color with the snake killed by " Nauticus."

ARRIVALS AT THE ZOULOGICAL GARDEN, CINCINNATI, UP TO AMIQAIS AT THE MODDOGAN UNION, DESIRANTI, BY 20 JUNE 187.—2 Macaque monkeys (Macatus exploinal/pas), I black sea lion (Zalophus gilllespiel), 21 printire dogs (Cymungs Indovictanus), I butfalo (Beom americanus), 2 Augoru gouts (Capra hirces), all born in garden. 2 passenger pieros (Ectophetes migratorius), 4 wild geese (Bernical canadonals), 9 silver pheasunts (Exploramus nytches) merus), 2 gold pheasants (Thaumalea picta), 4 hybrids (between merus, 2 gold phensants (Indimates pieto), 4 hybrids (between T. omberstden and T. pieto), 8 individual grass parrafacets (Melop-sitteaus undulatus); all batched in garden. 25 yellow birds (Chry-somiris Iristis), 15 indigo burds (Opanospiae equino), 2 cow birds (Molothus pecorio), 2 Virginia cardinals (C. tripiniams); all pur-chased. 2 European mag piets (Fice caudata), lorchard oriolo (tet-rus spurius), 1 bittern (Botaurus magitams), 4 striped prairie spuli-sies (Sourandulus Iristicans), 10 million (Montalian rels (Spermophilus tridecem-lineatus), 1 Virginia deer (C. virginiaanus): all presented.

FRANK J. THOMPSON, Supt.

Note.—I had the good fortune to secure the (placenta) of the sea lion, which has been forwarded to Prof. J. A. Allen, Museum Com. Zollogy, Cambridge, Mass., for scientific examination.

PLAN OF THE INTERNATIONAL FISHERY EX-HIBITION

WE present to our readers this week a plan of the great "International Fisherei Austellung" in Berlin, with the following description :-

THE GROUND FLOOR OF THE MAIN BUILDING.

1. Fountain of Neptune in the great water basin.

2-5. Collection of water animals, manumals, birds, fishes, amphibians, reptiles, invertebrates, etc., which are beneficial or hurtful to fishes.

6. Italy: South America.

7-9. Japan; China.

Anam.

11-13. East India, Farther India, South Sea Islands and Netherland Colonios

years ago. These are from the eggs sent to Germany by Prof. Baird in October, 1877; and Mr. Shusker has some a year older in his ponds, but as there were but few eggs received that year, and his portion is necessarily small, he is too careful of them to risk them in the bad water of Berlin. In the aquaria there are many fine fishes and curious ones; among the latter may be classed the display of Dr. Hermes, of the Berlin Aquarium, who has a tank of els, which are some six incles in length, labeled "male eels," and accompanied by the following description:—

"male eels," and accompanied by the following description:—
"In the year 1874 Dr. Syrski, of Trieste, succeeded in discovering the secret of the sexual organization of the eel, which had remained a mystery up to this time, it usually being considered as an hermaphrodite." Three Italian professors published in this same year an account of an extended examination of eels, in which they proved to their own satisfaction that the eel was an hermaphrodite, and it is only by knowing that one sex is represented only by small fish that we can account for the fact that they escaped observation so long, the males not exceeding forty-four centimetres (about sixteen inches) in length, and in addition to this it appears to be the case that all the eels in the waters of the interior are females,

where the crosses are numerous, and, one might add, worthless. The German fish culturist is fond of hybrids, on the ground that they are of quicker growth, while the American breeder has not gone lote this question except as an occasional experiment, and perhaps they may be of the opinion of your representative fish culturist here, who, when a gentleman called his attention to a tank of fish bearing the placard, "Bastard von forelle und suibling," by saying, "There, Mr. Mather, are not those fine fish?" answered, "Yes; if one did not know that they were bastards,"

Many other unimportant fishes are shown, and, although not living, one cannot full to be interested in the model pike (Ysozo) in tin, which is some fifteen feet long, and is suspended in the grotto, having a brass ring around its neck with a Greek inscription. This is an exaggerated model of an "historical pike," whose painting adorns the wall opposite, and is about eight feet in length. The painting is an old one, and formerly adorned the old covered bridge over the Neckar at Heilbronn, and after the destruction of the bridge the picture was taken to the town hall, where it has since hung, until the opening of the Fishery Exhibition. The inscription says: "This picture is of the natural size of the fish," and is accompanied by the following verse:—

Schau bey Heilbroun, mich recht versteh', in Were, genannt Bockineer See

ied by the following verse:

Schau bey Heilbronn, mich recht verstch',

Den Sten Octob.

Of which the following may be offered as a free translation: "Look I by Heilbronn, you will understand, there is a lake called the 'Bockinger Sec,' which is an expanse of the Weyer, and contains about six acres, which cannot be emptied. In the year 1497 such a pike as is here pictured was caught at this place, and of the self-same size. Around his neck, just behind the gills, there was a metal ring with a Greek inscription, as follows: 'I am the fish which was caught in this lake in the time of Frederico, the other of this name, Regent of the world, in the year 1290, the 5th of October.''

This, as will be seen, leaves a time of 267 years between the times of capture, but gives us no clue to its age or size when first taken. The truthful chronicle further saith, "On the 5th of October, 1290, under the reign of the Emperor's earlier in the year 1497, weighing 350 pounds, and was four yards long. It was then presented to the Emperor Maximillian I.'

There is no reason to doubt but what the ring grew also, as it does not seem to have pincked the neck of the

There is no reason to doubt but what the ring grew There is no reason to doubt but what the ring grew also, as it does not seem to have pinched the neck of the fish, and why should it not, having been placed on its neck by the Emperor's own hand? If fish will grow so under these circumstances, it might be well to import a few emperors into America and station one at each fish breeding establishment.

MAIN BUILDING-SECOND FLOOR.

Norway, Sweden, Denmark, Russia, Holland, England United States and Switzerland.

ADDITIONS AND EXTENSIONS.

14. Rotunda for fishery productions, fresh fish, etc. 15-16. Cyclorama, with rocky grotto, disclosing views of the Bay of Naples. 17-19. Artificial fish culture. 18. Restaurant. 20. Pand for boots.

Pond for boats.

20. Fond for boats.
21. Smokehouse for fish in operation.
22. Shrubbery and pond for fish.
22. Shrubbery and pond for fish.
23-23. The German Department.
The main building is about 230 feet in length by 180 wide, and is built of stone, while the additions are of wood. It has been lately erected for the National Agricultural Museum, but was only finished in time to be opened as the Fishery Exhibition. It is fitted up in most excellent taste, and the whole exhibition is so arranged as to attract thousands who are not in the least interested in the fisheries. This is well shown by the fact that on in the fisheries. This is well shown by the fact that on Whitsunday it was visited by over 24,000 persons.

[From a Staff Correspondent.]

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

V.-LIVING FISHES.

V.—LIVING FISHES.

THE display of live fishes here is small in comparison with the other objects and interests, and necessarily so, being perhaps of less importance than most other departments, and few people are interested in making such a show, Germany being the main exhibitor in this line. America sends a few catfish, Amiurus catus, and a helbender, Menapoma, from Mr. E. G. Blackford, of Fulton Market, New York; and in the central basin in the "grotto of Neptune" can be seen the famous Russian sterlet, Accipenser rutherus, which is an inhabitant of the tributaries of the Black Ses, and is so highly esteemed as food. This fish always commands a high price, and in Germany is valued at about a dollar per pound, the fish culturists of this land being anxious to introduce it into their rivers. Three were recently served at a supper given by Dr. Wittmack, custodian of the Agricultural Museum (the building in which the Fishery Exhibition is held), at which were present Prof. G. Brown Goode, Deputy Commissioner from America; Mr. Fred Mather, the fish culturist, and Mr. J. W. True, the custodian of the American collection, who speak of it as a very fine fish, making due allowance for national tastes, cooking, etc., the Germans having a habit of emothering a fish with some sauce or other, which disguises its natural flavor, while we Americans prefer our fish without sauce, cooked like a beefsteak, in its own juices.

One of the most interesting exhibits is that connected with the display of Mr. Schuster, of Freiburg, who has about a dozen California sidmon of twelve to fourteen inches in length, and weighing perhaps a pound or moro, swimming in a glass tank, apparently none the worse for having been transported in the egg from California two

while the males always stay in the sea, or perhaps near the mouths of rivers. It is difficult to distinguish the sexes by their external appearance, and it requires a practiced eye to do it with certainty. The specimens here exhibited are from Trieste, sent by Dr. Jacoby, and the Inspector of the zoological station there, Dr. Graffe, who, by long experience, is enabled to determine the sexes of eels at sight, pronounces these to be male cels."

Your correspondent is not able to give an opinion upon this subject, and his interviews with the scientists of the American Commission have not been successful in getting an opinion from them, and so he can only state the facts as he sees them, and leave the reader to investigate them. It is but just, however, to say that the learned gentlemen who tell us that they can distinguish the male from the female cel at sight do not attempt to impart this knowledge to us ordinary mortals in any way whatever, and we are left to guess what may be the subtle distinction between them which the "practiced cye" alone can detect. Thus are sure hopes of being able to fathom the mystery of the cel again dashed to earth after being raised by the placard above translated.

The carp is of course well represented in all its varieties by many specimens from different breeders, as well as the golden orie, Idas melanotus, which is bred by the Cerman fish culturists both for food and ornament, while the lover of beautiful and gamy fish is tempted to linger before a tank containing a large "satiling," Salmo salvelinus, the "charr" of the English, which grows in the Boden See (Lake Constance) to the weight of perhaps twenty pounds. The large specimen here shown weighed about twelve pounds, its deeply colored crimson sides showing like a brook trout in the breeding season. It is not only a most beautiful fish, but also a fine one on the table, and one which should be introduced into American lakes of sufficient depth, the German fish much exceeding that of England in size, and one which, when place

MAP OF THE MAGALLOWAY .- We have received from Lee & Shepard, of Boston, a new map of the Magalloway, compiled by Mr. Chas. L. Adams, which includes the country adjacent to that river, with routes from the Rangeley Lakes.

Lake Megantic is now attracting much attention as a hunting and fishing region, and many sportsmen will go from the Rangeley and Magalloway by the woods. It takes about three days from Parmachence Lake to Megantic with good guides.

A VETERAN SPORTSMAN.—The Syracuse Standard of the 23d inst. has this pleasant personal mention of Mr. L. H. Redfield, of that city, a gentloman who is well known throughout this State for his earnest efforts in be half of game protection :-

Mr. L. H. Redfield is quite enthusiastic over his fate trip into the North Woods with P. H. Agen, £84. When we recall the fact that Mr. R. is eighty-seven years old, and when we remember this and the fact that he is the and when we remember this and the fact that he is the oldest editor and publisher in the State, we are induced to extend our warmest congratulations. The veteran, after arriving at Lake No. 4, took his rod and line and went after the speckled beauties, independent and alone like the younger fisherman. He stood the journey well, ate well, fished well and enjoyed the trip most heartily If it were not for the fact that the date of Mr. Redfield's birth is down in black and white in the family Bible, we should be inclined to think there was a mistake of some fifty years in his age.

FIRST MUSCALONGE OF THE SEASON. THEST MUSCALONGE OF THE SEASON.—New YOFF, June 4th.—Just received a splendid fish (muscalonge) from Clayton, N. Y.; the first of the season; weight, twenty pounds. Caught by Mr. G. M. Skinner on one of his own spoon bait. Sorry we can't invite you all to dinner: have distributed it to many friends in small portions.

Apply & Targett

Wisconsin—Oshkosh, May 24th.—Black bass fishing is reported better than for years past, and indications are that some of the finny tribo will be taken into camp, C. C. M.

A New Salmon River Purchased.—A club of New York gentlemen, among whom are Messrs. Vanderbilt, Tiflany, of the well-known jewelers' firm; Mr. Winchester, treasurer of the National Express Company; Messrs. Fearing, Cooper, Lawrence and a score or more of metropolitan Waltonians, have just completed the purchase of a large tract of land and fishing privileges at the junction of the Metapedia and Restigouche rivers, near Campbellton, N. B. This tract was the property of Mr. Fruzer, whose hotel has been known for years to the angling tourist readers of the Forest and Stream. The price paid was \$33,000. The salmon fishing here has long been famous. Some of the members of the new club are now on the ground, and tokens of their success will the rod and line have already been received in this city. -A club of Ne A NEW SALMON RIVER PURCHASED.

Canada Salmon—Eight-inch Trout,—New York, May 17th.—In reply to Mr. Fay's communication in your paper of the 22d ult. I would say that he was very fortunate in litting the salmon fishing on the Restigouche and Metapedia so exactly as to be there at the arrival of the first run of salmon, and—in a week—to get such good sport. Such good luck would probably seldom occur. Ordinarily people require a [month's absence from the States to be sure of a good score of salmon. That fish arrives in the fresh water streams in Canada at very irregular periods, and seldom so early as the 5th of June. I have waited two weeks in some years before salmon commenced to run freely, so that ordinarily salmon trips are, as I said, very expensive, and anglors may either make up their minds to face three or feour weeks' expenses instead of one week, or else go home without salmon. So that with rod, flies, lines and other expenses, a person had better multiply Mr. Fay's figures by four to get a total

stead of one week, or else go home without sumon. So that with rod, flies, lines and other expenses, a person had better multiply Mr. Fay's figures by four to get a total cost, for to my notion it don't pay to go so far and return thence with poor or no luck, merely because one cannot stay at stream only a week—as Mr. Fay did.

But the principal reason for writing you is to say that I am informed that the open or public fishing on the Metapedia has been taken up by a club, and so a friend who has been accustomed to going there says he is slut out. It does seem as though none but governor-generals and the nobility of England could longer afford to go-slishing for sulmon.

While passing laws to prohibit the taking of lobsters under a certain size, why not make a vigorous effort to punish the taking of trout less than eight inches long? I have seen such slaughter of troutlings, fingerlings, such infanticide, that I fear nothing but the brand of the law, added to the scorn of true sportsmen, will stop this murderous work and preserve any trout for decent and merciful anglers. Do urge this subject. Can't we get such MANHATTAN.

A law prohibiting the capture of trout less than eight inches in length might be acceptable to expert anglers, but it would be both undesirable and impracti-

NEW HAMPSHIRE NOTES.

THE salmon have again made their appearance in the Merrimae River at this place two hards THE salmon have again made their appearance in the Merrimae River at this place, two having been seen below Amoskrag Falls on Friday, May 28th, and one of 10½ bls. weight was taken from the river at the same place on Monday, which had been killed by the logs; the last of the annual "drive" of lumber being on its way over the falls that day.

The river has been unusually low this spring, and the logs have been very much delayed, but the rains of the last day or two have raised it so as to float them out of the way, and give water enough for the salmon to come up, and a number were reported yesterday as being in and about the fishway.

Salmon have also been seen, during the last few days, in the Nashua River, in which they were planted by the Massachusetts Commissioners in 1876, and in which we caused two fishways to be built at Nashua in 1878.

Lamprey eels and allowires have also made their appearance in large numbers at Lawrence and Lowell, and their advance guard has found its way up to Nashua and Manchester. This shows that with proper fishways there is no difficulty in restoring these migratory fish to one river.

The writer took a trip to the Upper Coos country last week with last of the Control.

one river.

The writer took a trip to the Upper Coos country last week, with a lot of "Schoodie salmon," otherwise called land-locked, which latter term is such a misnomer that it ought to be abolished, for whatever may have been the original could be abolished these fish, or the ircumstances in which their ancestors were developed, they are in mosense "land-locked" ow in Grand Lake stream, and can go to salt water any warm morning they may famoy the

go to saft water any warm morning they may fainty the excursion.

These salmon are placed in Great Diamond Pond, in Stewartstown, and although the extreme heat of the 25th and 26th ult., when the trip was made, together with the thumping over the roads, after we left the rail at North Stratford, killed a part of them, enough were left to start the breed in Diamond Pond, from which we hope they will find their way to Diamond Stream and the Ma_alloway.

The lumbermen who have been at work at the Competitut bakes this spring report having seen several

The lumberment who have been at work at the Connecticut lakes this spring report having seen several large schools of those planted in Second Lake last summer, being now from six to nine inches long. The writer and his son, who assisted him on this trip, had several hours' good fishing on "Great Diamond," and brought back more pounds of fish than they took up, getting

about sixty, ranging from nine to twelve inches in length, averaging over \(\frac{1}{2}\) lb. in weight. This is said to be the normal size of the fish in "Great Diamond," while those of "Little Diamond," which is the upper lake, are said of "Little Diamond," which is the upper lake, are said to not up to two pounds. The fish in "Little Diamond," which is the upper lake, are said to run up to two pounds. The fish in "Little Diamond" had not begun biting yet, so that we did not see any of them; but I am strongly of the impression that the Great Diamond trout are neither more nor less than the "blue-backed trout," or "Salmo opuassa," of the Rangeley Lakes, answering perfectly to their description so far as I could see.

They look more like a more description and the same and the same are said to the same and the same are said to the same and the same are said to the same and the same are said to the same are said to the same are said to the same are said to the same are said to the same are said to the same are said to the same are said to the same are said to the same are said to the same are said to said the same are said to said the same are said to said the same are said to said the same are said to said the same are said to said the same are said to said the same are said to said the said

us I could see.

Look more like a mackerel than a brook trout,
aken. The flesh is very deep red and very highd, and altogether they are a superb fish. The

weeks later than those of the lower lake.

trout of "Little Diamond" do not bite till two or three weeks later than those of the lower lake. Should any of your readers feel like a trip to the upper Connecticut, this month, they will find excellent accommodations at the Parsons House, Colebrook, and an obliging landlord in the proprietor, Mr. E. F. Bailey, and good fishing in every direction.

Besides the lakes above spoken of, there are the Mohawk River, rising in Dixville Notch, and flowing west to Colebrook; Clear Stream, also rising in the Notch, and flowing east to Errol Dam; Sim's Stream, three miles below Colebrook, and brooks in every direction.

The Willard House, at North Stratford, kept by Messrs. Gould & Moses, is another good place for headquarters. I must not forget to mention that we met your correspondent, the well-known guide, Mr. Edward Norton, and enjoyed an hour's chat with him over his moose hunting reminiscences of last fall.

For good fishing, good reads, beautiful scenery, abundant springs of natural ice water, and obliging landlords, commend me to the Upper Coos country.

Manchester, N. H., June 2d.

Manchester, N. H., June 2d.

THE BLACK BASS OF TEXAS.

Editor Forest and Stream:—
Since the perusal of the last few numbers of the Forest and Stream. I am more than ever convinced of the necessity for a better system of nomenclature for our game fishes. If anglers cannot remember the scientific names, which is the only safe plan, they should agree upon distinctive common names for the different species, which should be applied in all of the States indiscriminately. As a case in point, the black base has had more than forty scientific specific names applied by different naturalists at various times, and it is known in the several States by nearly as many vernacular names; it is, therefore, not surprising that anglers find it difficult to make themselves understood when alluding to this genus, even by residents of their own State, as the following may witness:—

themselves understood when alluding to this genus, even by residents of their own State, as the following may witness:—

In your issue of May 6th is a communication from Willist Texas, signed "C. L. J.," in which he asks for information in regard to thy shining for black bass, and incidentally alludes to this fish in a way that proves that he knows what he is talking about. In the issue of May 27th, however, "C. S. W.," in a communication from Waxalachie, Texas, takes issue with "C. L. J.," and denies that there is such a fish as the black bass in the whole State of Texas, and uses the following language:—

"I have fished all the principal rivers and best fishing grounds in the State and killed every variety of lish known to exist in Texas fresh waters, but have never yet met with the black bass. What is known as the black bass here is rock bass proper, called in the Northern States variously rock bass, striped bass, river bass, etc., according to the locality, and universally known as trout among natives of the Southern States. If 'C. L. J.' will carefully peruse Fraulk Forester's 'Fin and Feather' he will find there such information in regard to black bass and rock bass as will forever settle in his own mind which of the two varieties abound in Texas waters."

Now "C. S. W." is, no doubt, perfectly serious and honest in this declaration and fully believes every word of it, as viewed from his standpoint; and really the only difference between the two gentlemen consists in their applying different names to the same fish.

But there are two species of black bass—the small-mouthed bass and the large-mouthed base she, there is no evidence that the small-mouthed base bass (there is no evidence that the small-mouthed black bass of the North and West, except that it grows to a larger size. Indeed, one of the scientiat it grows to a larger size.

fresh waters of the State, and it is just the same as the large-mouthed black bass of the North and West, except that it grows to a larger size. Indeed, one of the scientific names of this fish is of Texas origin. Girard called this species, which he first found in the Nucces River, Dioplites nuccensis, and even at the present day it is so called in France, Prof. Leon Vaillant of Paris distinguishing this variety as Microplerus nuccensis in a work now in press, entitled "Mission Scientifique au Mexique." "C.S. W.," instead of throwing any light upon this subject, makes "confusion worse confounded" by stating that what is known as the black bass in Texas is really the rock bass, and which he says is known in the North by the various names of rock bass, river bass, striped bass, etc. (names that apply to fishes of wholly different genera), Now, if he had read "C. L. J.," article more attentively he would have known that "C. L. J." usent black bass (trout) and nothing else, for he speaks of it as weighing from four to six pounds. The largest rock bass Lever saw weighed but two pounds, and it seldon weighs more than a pound.

The rock bass (Amboplites rupestris) is a fish entirely different from the black bass, being very deep for its length and much compressed, so that a specimen as long as the hand would be about as wide and no thicker than the hand; it is also known as "red eye" and "ogogle eye."

The large-mouthed black bass (Micropterus pallidus), as is well known, has more proportional length and width, with an enormous mouth, and an adult fish would have no difficulty in swallowing an ordinary rock bass.

dus), as is well known, has more proportional length and width, with an enormous mouth, and an adult fish would have no difficulty in swallowing an ordinary rock bass. The striped bass (Roccus linealus) is a salt water fish of the Atlantic coast, growing often to a weight of seventy-five pounds, and frequently taken with rod and line, weighing thirty pounds or more.

There is a fresh water species of this genus, however, in the Great Lakes and a portion of the Mississippi Val-

ley, called the striped lake bass, or white bass (Roccus chrysops), but its weight seldom exceeds two or three pounds. In the Lower Mississippi and some of its ributaries there is a fish belonging to the same family, but of a different genus—the short striped bass, or brassy bass (Morone interrupta), and which grows to about the same size as the last-named species.

The only fish known in the North as "river bass" is the small-mouth d black bass, and is so called in Western New York, in contradistinction to the large-mouthed bass, which is there called "lake bass."

the small-mouth a black bass, and is so caused in western New York, in contradistinction to the large-mouthed bass, which is there called "lake bass."

"C.S.W." seems to have got these several dish considerably mixed, and I do not wonder at it if he takes "Frank Forester" as his guide, for it is notorious that: "Frank Forester" never caught a black bass in his life, and I doubt if he ever saw a live one, if I may judge from his description of the species in his standard work, "Fish and Fishing." The illustration of the black bass in aid work is a miscrable burlesque on this fine game fish, though it professes to have been drawn from nature by the nutlor. The illustration of the toke bass in the same work is not a rock bass at all, but is a very poor cut of an entirely different fish—the "crapple," or culico bass (Ponocrys nigromaculatus). Aside from the salmon and the speckled brook trout, "Frank Forester's" ichtlyological writings are totally unreliable. His descriptions of most of the species were compiled from authors who were in many instances inaccurate.

writings are totally unreliable. His descriptions of most of the species were compiled from authors who were in many instances inaccurate.

"C. S. W." evidently recognizes but one species of black bass, the small-mouthed (which does not exist in Texas), and ignores the fact that the fresh water "tront" of the Southern States is the large-mouthed black bass. But so it is, and the two species co-exist in many Southern streams, where they are sometimes called "white trout" and "black trout," but oftener are known collectively as "trout."

I will merely say to "C. L. J.," who seems to have the right stuff in him for an angler, that he has gone to work in the right way, and that he will have no difficulty in getting the black bass of Texas to rise to his files (even if they are of his own tying) if he fishes from sundown until dark, when there is a good rippling breeze, in favorable portions of the stream, and provided he keeps well hild or out of sight of the fish. This is the great secret in fly-fishing for black bass.

Cynthiana, Ky., June 3d.

Wittis Texas. June 1st.

Willis, Texas, June 1st.

Editor Forest and Stream:—

VILLIS, Texas, June 1st.

Lay In your issue of May 27th one "C. S. W.," of Waxahachie, Texas, takes me to task for applying the term

"black bass" to a certain variety of fish in our waters

commonly called "rout," and although he advises me

that the term is misapplied, yet he does not tell me what I should call it.

that the term is misappined, yet he does not tell me what I should call it.

I have fished ever since I was big enough to pull an angle worm in twain, or since I could take a brass pin between my toeth and crook it into a semblance of a hook, and with a "sour wood" sprout snatch out the lusty goggle-eye and pollywog, and I have ever been a close observer of every variety of fish and game met with, and I would be utterly afraid to place before a criticising world an effusion upon something I know nothing about. "C. S. W." directs my attention to Forester's "Fur, Fin and Feather." I have never read the work, although I have many other books by that versatile author, and there is not a sportsman in America who cherishes in his heart a higher regard for Frank Forester than I do; but this is an age of progress, and although Forester is excellent authority on many things, yet I believe we have more modern writers whom I would regard as authority far above him.

I will take the privilege of calling the attention of "C, S, W," to "Hallock's Gazetteer." Read what he says about black bass; get Gill's opinion, also Dr. Estes', D. S. Jordan's, Dr. Henshall's and others, who know more about such things than Forester ever thought of, at least so far as Southern fishes are concerned. Frank Forester never was in Texas, nor did he ever see a fish from this State, hence I can not allow him as authority on that which he never saw, and against the direct exporience and study of our first-class native-born naturalists.

I still claim that the fish valguty called "trout" in our waters is the large-mouthed black bass and the North, the large and small mouth, and I regard our fish as the latter, and one cannot make anything else out of him. I can go in one day's fishing in this county into a circle whose radius is not over one mile, and I will quarantee to kill four different specimens of black bass and lay them all side by side on the grass, and nintery-nine men out of every hundred would pronounce them each a separate I have fished ever since I was big enough to pull an

I can go in one day's fishing in this country into a circle whose radius is not over one mile, and I will guarantee to kill four different specimens of black bass and lay them all side by side on the grass, and mincty-nine men out of every hundred would pronounce them each a separate and distinct variety. I will take two out of our lake, one of which will be a beautiful, glassy, pea-green on the back and head, fading into white on the belly, with an almost imperceptible form and aft line running along the side from the till covers to the tail, where the scales of the back and sides divide with those of the rest of the body. The other is precisely the same fish in every respect, except that the color on the back is a dark olive or subdued lead, fading down as in the other. The third I will take from another lake, whose water is dark amber, clear and deep. (The water of the former lake is a light steel colored.) In this latter lake then fish are all very dark, nearly black on the upper parts and very white below. The fourth I take from a clear, bright, running creek. These bass are smaller and more slender, scarcely any color, a light steel with a sheen of green and eyes as yellow as gold, whereas those in the lakes have a dark brown or hazel eye. Now take those out of the lakes and put them into the creek, and in two weeks all will be the color of the little four onnee fellows found there, and vice versa. Those taken from the small creek are only smaller because of their age; they leave and go into larger lakes and streams as they attain greater size. Now if "C. S. W." were to see these specimens lying together he would call one a "Texas trout," another "rock bass," another "chub," and the little fellow a "brook trout," as I have known others like him to do before, and leave the "black bass" out, like a "poor boy at a country wedding," meriting a good deal, but having no show.

That which is termed rock bass, strawberry bass, croppie, etc., at the North, is our white perch, or gasper, in Texas; sea-also and chin

bass; nor will I be convinced otherwise until I have it from the best authority in this country. However, I am willing to leave it to the Forrst and Stream to decide, and you and I go together and take our boats, rods, flies, bobs and the like and kill some of them.

I have not had a thorough trial of the fly on bass yet. The water has been too high; the weather wet and raining all through May. I took one two pounder the other day with a fly of my own make, made of feathers—white heron, wood duck, game cock hackle (red), and scarlet ribbon in strips as substitute for his. When this bass made a rush for my lure he really frightened me. I was made a rush for my lure he really frightened me. I was made a rush for my lure he really frightened me. I was made a rush for his highest from the rush grass, when all at once a splash, a rush, a flying of sparkling drops of water over my boat and me, a singing of the reel (I never heard or saw one before), and the bass out of the water mid air twenty feet from the strike, and pitching like a mustang pony, all in one-fifteenth of a second, was too much for me; but I recovered in time to attend handsonely to his next rush, and laid him in the boat. Ahem! "O. S. W.," If you think these are not black bass if you think they won't rush for a fly, or anything else you may offer them—then you come here and go with me, and I think you will return a better satisfied, if not a wisor man.

When the weather gets in such condition that one can

think you will return a better satisfied, if not a wasse think you will return a better satisfied, if not a main.

When the weather gets in such condition that one can fish, I shall try overy method of new and old style fishing, and then I can tell you what I know about ity-fishing, and then I can tell you what I know about ity-fishing. I can get all the bass I want with minnows and cut bait, but I would rather take one "big one" with a fly than kill the biggest old buck in Texas.

I think if "C.S. W." will carefully read Dr. Hensball's papers on ity-fishing for black bass—now appearing in the FORDST AND STREAM—the will be convinced that they will take the fly; at least I have that much confidence in what he shall say, and I trust the Doctor will never stop writing until he has told us all he knows about the subject.

Austin, Texas, June 1st

Editor Forest and Stream:— AUSTIN, Texas, June 1st.
I have before use your issue of May 27th in which
"C. W. S," asks "C. L. J." to give "an account of the
first or opening battle of his campaign" against "Texas
trout" will files.

trout." with flies.

I, in the past two days, have taken "Texas trout." with flies. On the 30th of May several others and myself visited Barton Creek, near this point, and between six and seven o'clock I captured four "Texas trout." On May 31st, in company with Col. A. J. P., I again visited Barton Creek and with flies I captured two more "Texas trout." trout. HASTINGS

DOGS FOR PRAIRIE CHICKEN SHOOTING.

ALGONA, Iowa, May 19th.

Editor Forest and Stream :

Editor Forest and Stream:—

ALGONA, Iowa, May 19th.

Sometime sinee I noticed an article in the Forest and Stream is—

Sometime sinee I noticed an article in the Forest ann Stream from the pen of an Eastern gentleman giving his experience in hunting Eastern dogs on the Western prairies. His experience is but the experience of most sportsemen when they bring their dogs West to hunt prairie chickens. The training of their dogs is not right for that kind of business. When a dog is trained to work well on prairie chickens that dog will almost always work well on prairie chickens that dog will almost always work well on woodcock, partridge, snipe and quail. But a dog that is trained on those birds will seldom work well on prairie chickens. The dog that is being trained wants a large field to work in. He nutst have room to be independent, room to range. Then he will learn to take the scent high in the wind, where he can breathe. A dog cannot work well with his nose down in the prairie grass. His head must be above the grass to do good work.

A well-trained chicken dog will never work down the wind. They will always work from one side to the other if they wish to get down the wind. Four years ago a gentleman came here from Scotland on his way to a large farm about twenty miles west of us in Palo Alfo County. He brought with him three splendid pointer dogs, with pedigrees of cighty years. I told him when he came that his dogs would be of but little use here. He laughed at me; told me what great experience his dogs had had in Scotland. "Why," said he, "your American dogs do not know how to hunt. They are nothing but curs; they have had no good breeding." But I told him he had better look out for a good dog if he wished to have good shooting. He took his dogs out and set them at work. The dogs did not understand their business. Their work had been in too small fields, and when they came to have miles of prairie to work over they were lost. They did not know what to do. The gentleman was very much law they have had no goo

I do not delieve there is a place in the Office challes where there are more prairie chickens, or where one has a botter chance to judge the work of dogs on those birds. We have hundreds of sportsmen here every year from the East and South who bring with them fine dogs, but few of those dogs work well. They do not understand how to do it; and a man that comes here for a few days shooting does not want to put in all his time training does

dogs.

It has been my experience that to have a dog work well

anothing about the game that he is ex-It has been my experience that to have a dog work well he must know something about the game that he is expected to find. To be successful with prairie chickens he must be a great ranger, carry his head high above the grass and haye a good nose. It is a common thing for a dog to run from fifty to one hundred miles a day when hunting prairie chickens, and a dog that is shut up most of the time cannot expect to range with a dog that is out with a team three days in the week.

I have no wish to run down well-bred dogs, and no man admires them more than I do; but a well-bred dog must have a great range and plenty of game to work well. I always work my dogs from the wagon, and I believe it is the true way to do where one has a chance. The dog that has been taught to putter in the brush is too slow for prairie work.

J. G. Smith.

TRAINING FOXHOUNDS

Edilor Forest and Streem.:—

I have taken the FORIST AND STREAM for the last six years, and have been waiting and hoping to see something written on foxhounds all that time, and now that it is started I hope to hear more.

All through northern New England, in every town are one or two old fox lunters. Not after the Southern style, following the hounds on horseback, as in this hilly and ledgy country it would be impossible; but with one or two good dogs starting sly Reynard, while the frost still lies on the meatows where he has been prowling during the night after mice, and keeping in hearing of the dogs, cut him off at some of hits crossing places with an ounce and a quarter of double B shot.

The Southern gentry that ride to hounds call that a mean way: but it is no fool of a job to get a shot at an old dog fox that has been run a few times and has had a few shot lodged in his jacket at long range.

I know the bird hunters call foxes vermin, but for us who love the sport, there is nothing like it. I have mised and trained a few hounds, and what "Parmer" says in your issue of the 27th is about right; though is should never dare to let a pup make his first acquaintance with a fox by a bite through the nose. He would have to lave good grit to face the next one alone, though he might do some good with a dozen or two more. I have known of several good, likely pups, spoiled by tackling a wounded fox alone. I owned as fine a young dog as ever run, and the first fox I ever shot with him I only broke his fore legs, and when the pup came up, I thought I would let him kill him. Well, Reynard got first grig and hung on, and when the pup got away, he was done with putting his nose very near a fox again, and although he would work an old trail and start his fox in good shabe, he never would run very close on the fox; and if a fox was shot at and wounded he would not follow him a rod. I think it is better not to run a puppy till he is a year or more old, as the work is too hard for one younger than that. But if a man lives

CHARCOAL AS A CURE FOR WORMS IN PUPPIES.—West Boylston, Mass., June 8th.—Editor Forest and Stream:—Every one who has bred dogs and raised a litter of puppies has more or less trouble with worms, often losing some and occasionally a whole litter. Now these popular remedies for worms in dogs are injurious to the urinary organs, especially puppies, and I have known instances where pups were permanently injured by overdoses of worm medicines. Often the owner is unused to administering medicine to the dog, and also many do not consider the age and give the pup of a few weeks of age the same quantity as an adult dog. Now these popular remedies—areca nut, santonine, turpentine, tin filings, etc.—all tend to inflame the urinary organs and often leave the dog or puppy in a bad state, which takes some time to recover from.

Santonine I acknowledge to be first rate; it does its work, but leaves in a high state of inflammation the urinary organs.

work, but leaves in a high state of inflamination the un-nary organs.

The last three litter of puppies which I have raised I have had good healthy ones, not troubled with worms, and all I have used is charcoal, giving when four or five weeks old a teaspoonful of powdered charcoal twice a day for three days. I have also used it with success on old dogs, cleaning them from worms. Farmers and stock raisers use it on cattle for the same purpose, and it accom-plishes the object, effectually destroying them in cattle.

Charcoal is a purifier and absorbant of putrid gases; it absorbs gases very rapidly. One cubic inch of fresh char-coal will absorb nearly one hundred inches of gaseous

ammonia. When given to a dog, it absorbs or destroys the putrescent gases which are generated in the stomach and alimentary canal. These gases lelp to generate the worms, and without them the worm cannot live. Charcoal also acts on the digestive organs, increasing their power as well as healing any unhealthy condition of the stomach if existing there. Not the least is the fact that charcoal would not inflame the nuceous membrane throughout the alimentary canal, and the urinary organs would be in as good condition as before.

PAUL.

good condition as before.

Training Forhourds.—Carthage, Mo., May 18th.—Editor Forest and Stream:—I saw in your issue of May 13th a communication from a subscriber who wants to know how to train forhounds so as to give them staying qualities. Now, my experience is that it depends more upon the breed than on the training Of course the training helps, but without the right stock all the training you can give them will not make them first-class foxhounds. The way I train them is this:—I take the puppies, when eight or nine months old, when in good condition and not too fat, and start them with two or three old slow and steady fellows. Once started, call in the old dogs and let the puppies run. They will usually make it warm for Reynard for one or two hours. When they do not run so freely, stop them. Never allow them to run themselves out and stop themselves. Now, when they have rested sufficiently, turn your old dogs loose, make it warm for Reynard for one or two hours. When they do not run so freely, stop them. Never allow them to run themselves out and stop themselves. Now, when they have rested sufficiently, turn your old dogs loose, and when they have started the fox again, which will not be before long, keep the young dogs in sight, and should they begin to play excite them. You can, in this way, generally keep them running until the old hounds catch the fox, which will be done inside of two hours. This method I have found to work the best in this country, and proved to be the most successful one I have ever tried.

S. H.

country, and proved to be the most successful one I have ever tried.

How to Give Pills to Doos.—Dover, Del., May 11th. Editor Forest and Stream.—Many persons experience great difficulty in administering pills to dogs.—especially large pills, and those having a very unpleasant taste. Sugar-coated, two grain pills are nothing, but when it comes to giving the second quinine pill, manus the sugar coated, two grain pills are nothing, but when it comes to giving the second quinine pill, manus the sugar coated the sugar manner, one and sometimes two men have their hands full, causing the dog to struggle and become nervons, greatly to his injury if he be in a debilitated state. This morning I wished to give one of the dogs a dose of quinine; my supply of sugar-coated pills was exhausted, but I had sone loose sulphate of quinine in the bouse. I knew that if I encased it in dough or meat he would chew it, and I also knew that to gag him with a solution would be unwise. A happy thought struck me, and I at once put it to use. I made up the quinine pills, rolled them in dry wheat flour, poured a tablespoonful of cod liver oil into a saucer, and proceeded to the residence of my k-9 friend. After dipping my finger into the oil and dropped the first one into his mount, which he opened to receive my finger. He swallowed it (the pill) in the time it would take to wink. The second pill I placed in the palm of my hand, and he took it greedity. I immediately returned to the house, made a bread pill the size of an ordinary marble, rolled it in the oil and sent it the same road. To be farther convinced of its complete success, I made a small pill of powdered ginger (hot) and a large one of dough, and gave them in the same nanner to a four months old puppy with equal success. After giving each dose I allowed the dog to take what remained of the cod liver oil. I hope some of your readers, who have occasion to give large doses of disagreeable medicine, will try it and give their experience.

COCKERS FOR SALE.—We call attention to the advertisement in another column of Mr. Macdougal's fine kennel of cockers. Mr. M., in writing us about them, says: "While thanking you for the favorable notice my dogs at the late show, I think that they can hardly be called Sussex spaniels. The reason Mr. Dalziel gave for passing over Bijou was that he was not like a Sussex, though why that should be anything against a cocker is more than I can say. Cora is more fairly said to resemble that breed, as I understand their color is golden brown. Her coat was of that color, but only because it was somewhat faded. When in condition Cora is dark liver. I deem these remarks necessary because I advertise my dogs as cockers."

KENNEL NOTES

DEATHS.—Fictress—Miss Julia Wygant's (of Peekskill, N. Y.), cocker Victress died on May 25th. The cause was presumed to be the excessive heat.——Datay—Dr. Edward J. Furster, of Boston, had his black setter bitch Daisy (Chapin's Rube-Nelly) poisoned on May 25th. The poison had evidently been intended for cats, as several dogs had fallen victim to same cause.

ORANGE AND WHITE LAVERACKS.—We learn from Mr. F. A. Merrick, of New Brighton, Pa., that Mr. J. C. Higyins' young Lawerack is not the only orange and white Lawerack in America, as we are informed, as Mr. M. is the owner of Prince Laverack; a pure orange and white. He was one of a litter of eight, whelped June 19th, 1879, by Mr. J. J. Skellenburg's Thunder out of Peeress.

DIDO.—Mr. J. O. Donner, of this city, is to be congratulated in having succeeded in purchasing Dido from Mr. Wells, of Chatham, Ont. This perfect bitch arrived in New York on Smady last in tine condition. She is to be bred to Mr. J. C. Higgins' Pontiac. Their progeny will be hard to beat. As good as Dido looks upon the bench, we know her to be hetter in the field, and Mr. Donner can now feel that he owns one of the threst animals ever bred in America.

SALES.—Dido—Mr. W. R. Wells, Jr., of Chatham, Ont., has sold his setter bitch Dido (Druid-Star) to Mr. J. O. Donner, of this city. Plato—Mr. E. A. Godefroy has purchased from Mr. C. S. Keller the white and black pointer dog Plato. Horeot—Mr. C. S. Keller, of Washington, D. C., has purchased from Mr. E. A. Godeffroy the Irish setter puppy, Boreen (Raver II,—Mayn).

WHELPS .- Flirt-Mr. A. J. Ward's (Boston, Mass.) setter bitch. Flirt (Rock-Starlight), whelped on May 20th, seven pupp dogs and one bitch, by Mr. Avery W. Gore's Fred.

NAMES CLAIMED.—Baren.—Mr. C. S. Keller, of Washington, D. C., claims the name of Boreen for his Irlah setter dog unpry by Bover H. out of Moya. ——Glentond—Mr. Geo. L. Wilms, of Jersey Gity, N. J., claims the name of Glenwood for his lemon and white pointer pup by Mr. W. F. Steel's Glenmark (Rush-Romp), out of Mr. R. J. Green's Girl (Teil-Maryland). ——Jockey Olde—Mr. Geo. L. Wilms elains the name of Jockey Club for his liver pointer pup, by Mr. E. Culver's Duke (Frank-Quail II) out of Mr. P. Lumbreyer's Queen (Ben H.-Nellie). ——Glendale—Mr. Geo. Piercey, of Jersey City, claims the name of Glendale for his cuson and white pointer puppy, by Glenmark out of Mr. L. P. Green's Girl (Teil-Maryland). ——Eragline—Mr. R. G. H. Hall, of Portland, Mo., claims the name of Evangeline for his red Irish setter blich puppy by champion Elebo out of Meg, Meg by Imported Milo outof imported Biddy.

HRED.—Zeal-Fanst—The St. Louis Kennel Club's iZeal to Champion Faust. Marguerite-Box—The St. Louis Kennel Club's Marguerite, Faust—June, to Champion Box. Oxida-Charbe—Mr. W. H. Lee's (Boston, Mass.) imported King Charles bitch, Oxida, to Mr. S. K. Hindley's Charlio.——Gussie-Bory O'Moore—Mr. W. H. Pierce's (Courtland K Kennels, Peckskill, N. X.) Tod Irish bitch Gussie to champion Rory O'Moore, on May 8th and 11th.—Janate-Girn—Mr. W. H. Pierce's (Courtland K Kennels, Peckskill, N. X.) Gordon setter bitch Jennie to Dr. Aten's champion Glen, on May 21st and 22d.——Fannie-Glen—Mr. W. H. Pierce's (Courtland K Kennels, Peckskill, N. X.) Gordon setter, bitch Fannie, to Dr. Aten's champion Glen, on May 2tthand 25th.

Archern.

THE GRAND NATIONAL ARCHERY MEETING.

THE principal event in the archery season of 1880 to American THE principal event in the archery season of 1880 to American toxophillies is only a little more than a month ahead of us, and every enterprising archer should be shaping bis affairs so as to be in attendance. The city of Buffulo, where the meeting is to be held, is located so far East that the greater number of contestants should come from Eastern societies, and it is to be hoped hat every member of these societies in his favorable attendance. testants should come from Eastern societies, and it is to be hoped hat every member of those societies thus favorably situated will strive to be present, and join in friendly contest with their brethren of the West. Much is to be gained by any archer, whether an expert or a beginner, by attending and taking a part in one of these great public meetings. It is too commonly the idea that one should wait until he has become a fairly good shot. We have the property of the common of the second

iden that one should wait until he has become a fairly good shot before attempting to shoot in public. Nothing is further from truth. It is much better to begin by public shooting, accustoming the nerves to the unusual strain, than to acquire a reputation for good seoring first, to be utterly broken and humiliated by the necessary failure upon a first public appearance. None of our American archers have had time to become experts. None have grown into the reliability of veterans, and the attempt to name the winners of the ten first prizes at the coming tournament would be worse than the solution of the fifteen block puzzle. Not only would this be difficult from the favows similarity in the scoring of many of our most successful archers, but from the further fact that no one can estimate the different effects of the surroundings of a great public meeting upon the scoring of different persons.

Every national meeting in Great Britain witnesses the curious fact that sevenil archers who usually get near 400 points at a

of the surroundings of a great public meeting upon the scoring of different persons.

Every national meeting in Great Parinin writnesses the enriches fact that sovernil archives who usually rest mane? 400 points at the third source of points are the straight of the championship at the mitonal meeting scored 50 points. In the blue Fork Rounding private practice, and in the struggle for the championship at the mitonal meeting scored 50 points. In the other great public match at the same points are the country, Mr. Piers (Light, who, during the same season, in private practice, and in the struggle for the championship at the points are the country of the country, Mr. Piers (Light, who, during the same season, in private practice, earlier with one exception, in the second class of the English private points at the Double Round, only succeeded in getting 59 points at the Double Round, only succeeded in getting 59 points at the Double Round, only succeeded in getting 59 points at the Double Round, only succeeded in getting 59 points at the Double Round, only succeeded in getting 59 points at the mount of the second class of the English private periterion, the last parts with one exception, in the second class of the English private prize-winning at public meetings, and that is the fact than arrebre can ever become so completely master of his weapons are soored aways up to his standard. Upon one oday he will astonia himself by continuous steady central shooting, making almost prize-winning at public meetings, and that is the fact than carebre can ever become so completely master of his weapons are soored aways up to his standard. Upon one odly he will astonia himself by continuous steady central shooting, making almost prize-winning at public meetings, and that is the fact than carebre can ever become so completely master of his weapons and soore always, it is just as slikely to be upon one of the second of the second control of the second control of the second control of the second control of the second control of th

Mississippi River, writes that his business is such that he "cannot onselsuppirative, writes that his obsidees is store that he considers a limpossibility by "utterly abandoning it and going any way." Who would grudge a prize to such an archer? The cash prizes will this year most probably be graded from first to twelfth, thus giving double the number offered last year, and the special prizes will be so arranged that no archer shall win more than one special series. This result was the series of the state of the series of the s cal prize. This will enable many archers to bear off something as a trophy of the tourney, and will give much more additaction than the faulty arrangement of last year, which resulted in giving too many prizes to the best shots. The Double York Round will be shot through by the gentlemen upon the first two days as Single York upon each days, and upon the third day there will be some handleap shooting. The ladies will shoot the Double Columbia Round through upon the two first days and handleaps upon the third day. The programme for the meeting will be out within a fortnight, and will be sent by the Corresponding Secretary to all archers who desire a copy. An effort is now being made by the writer, together with other members of the Executive Committee, to admit all archers to contest for all the prizes of the association regardless of the question of membership. Of course the Executive Committee have no power to allow the national medals to be contested for by any archer who is not a member, because of the constitutional provision upon that sub-This will enable many archers to bear off something as cial prize. member, because of the constitutional provision upon that sub-ject; but if the Executive Committee will admit all archers to compete for the cash and special prizes no doubt many would attend and take part in the meeting who would otherwise be de-burred. The annual business meeting of the Association will take barred. The annual business meeting of the Association will take place on Monday before the tournament begins, and it is to be hoped that at that meeting the competition for the medals will be also opened to all American archers. We are satisfied that much good would result from such a course, and surely no evil can spring from it. The writer has steadily advocated this idea from the inciplency of the Association, and at the last unnual from the inciplency of the Association, and at the last annual business meeting tried most earnestly to secure such a result, and he feels sure that the friends of this idea are now in the majority. Let us "gather together from every land and name and trihe," and make our national meeting of archers for 1880 one long to be remembered by the votaries of the bow. The writer begs of each archer who reads this and who is not a member of any society belonging to the National Association, but who will attend and take part in the meeting if this restriction is removed, to send him his or her name at once.

WILL H. THOMPSOS.

A CHALLENGE.—New York, June 5th.—Editor Forest and Stream:
—We hereby challenge the New York Archery Club to shoot a
friendly match with the Oritani Archers—a team of four gentle-Irtendly match with the Oritani Archees—a team of four gentle-men from each club—at either the American or York Round; or, four gentlemen and two ladies, ladies to shoot the Columbia Round—none to take part in the match unless they have been a member of their respective clubs at least thirty days at the date of this challenge. Match to take place any time after July 1st.

W. HOLBERTON, President Oritani Archers.

A MANHATTAN BOWMAN.-New York, June 5th.-Editor Forest and Stream:—I notice that a slight error has been made in recording the field meeting of the Brooklyn Archery Club, held on Monday last. I am represented as shooting as a member of the New York Archery Club, while the fact is I am an officer of the Manhattan Bowmen, and represented them on that occasion. By

making this correction you will oblige, yours very truly,
MALCOLM MCLEAN, President Manhattan Bowmen.

Dricket.

assumed name against the Leicestershire team, but was early in the day recognized by a trother trooper. He was allowed to finish his innings, when the doors of the Lolectert "high" are said to have closed "on the other side of "Jordan." If we are not very much mittaken, 3% days at hard habor will be his portion. Oh, where, bo, where is the Reverend T. D.?

BELLEVILLE (Ont.) CRICKET CLUB .- This established club is now BELLEVILLE (Ont.) CRICKET CLUI.—This established club is now in possession of one of the finest grounds in Canada. At a recent meeting the following officers were elected for the season; Patron, Alex. Robertson, M. P. P.; Prosident, C. J. Starliug; First Vice-President, N. B. Fülkenir; Second Vice-President, S. G. Beatty; Third Vice-President, I. P. Reeves; Secretary, W. H. Biggar; Treasurer, R. F. Benjamin; Captain, E. Corvy. Committee of Management—Chairman, James Jenkins; W. N. Thomas, Hugh McKinnon, Geo. Maybee, E. W. Davy, A. M. Kemp. Honorary Members—E. R. Benjamin, Jas. Corby, Wm. Pedin, Jas. D. Clarke, A. Bruce Clarke, A. Bruce.

CANADIANS IS. WEST OF SCOTLAND .- The first match of the Northwestern Team after their arrival was played on May 21st Northwestern Team after their arrival was played on May 2lst and 2ll at Hamilton Crescent, Glasgow, the visitors winning by 5 wickets. According to the report of the match sent us by our correspondent, Jordan (Daie) was accorded the best bowlerby the Secth critics, and Hardman the safest bat, Jordan's 41 and 19 were contributed by hard "lamming," and Pinkney is said to have played well. The fielding of the Canadians is described as being "something too awfully bad." Kearney had the misfortune to break his little finger in fielding in the second innings, and had to retire. Unfortunately the crowded state of our columns will not permit of a lengthy or detailed account of the game, The score: game. The score :-

I. I., on May 29th, resulting in victory for the visitors by two S. I., on Mily 20th, resulting in victory for the visitors by two wickets. In beautiful cricketting weather, and on a very interior wicket, which had evidently not been gone over with the roller to any great extent, this match was contested on Decoration Day. The Hill team was a very good one, including Pearson, the old professional of the Philadelphia Cricket Club, well known use a professional of the Philadelphia Cricket Cito, well known is a very excellent and stubborn bat, and Tyres, the new professional of the club. Little can be said in favor of the selection of the home cleven or its handling in the field, we seldom having seen a team placed in a more "go as you please" manner. The hour for drawing the stumps had been agreed upon by both ceptains for drawing the stumps had been agreed upon by both captains to be 5.39 R.x.; but later on, when the Islanders had overtopped their adversary's score, the visiting captain requested that an hour later might be named for the closing of the game, which was consented to by the representative of the home club, and his vacilitation cost his side the game. Concessions, therefore, having been established, it did not surprise us to see Mr. Inman, who was not on the team, take Mr. Bance's place with the gloves when that gentleman was unfortunately injured during the second limings. Of course, this is not the way to play cricket, and the match lost all interest to those who knew anything of the game.

Play began at 11.10 A.M., with the Staten Island at the bat, and Play oggin in II. MA.S., with une cated resum at the bar, and in despite that all the athletic associations were having their games, and the boating fraternity were at the Passaic liver witnessing the regards, yet the attendance was a very good one. Tyres and Biddle handled the ball for Chestnut Hill, and Outer bridge was the only battoman that succeeded in getting it away. for double figures, the innings closing for 56 runs. Small as this for double figures, the innings closing for 50 runs. Small as this total was, the visitors did not do as well, both Lane and Sprague being well on the spot. Certainly the former is one of the best bowlers in America, and if anything, in better trim than last season. Forty-one was all the tins could show when the last wicket fell. To inspire the elevens to greater deeds the lunchoon bell was rung, and some fifty to sixty players, members and guests, were invited to take a birds-eye view of a round of roazt beef about the size of a cricket-ball, and a leg of lamb somewhat larger than a ball. But there was loaf bread and cheese, when one could find a knite, and as no one turned up to ask for fifty cents a head, the cricketers took in a reof in their beits, and the "patrons of the game." a double hitch of their back-straps, and the game went grindly on. Propped up with a bat, Mr. Simms, the Philadelphia umpire, feebly gasped "Play," and from that fine until 34 had been totaled, the wickets of the Islanders were ratted down by the Philadelphia bowiers. It may here be remarked that those of the home team that did not go out on the first ball, waited for a second, and some few had strengthenough to cope with two overs. With half a century to make and wit, the Chestnut Hill boys went in smiling; but Lane was deadly, and eight wickets fell before the necessary score was recorded. Further remarks being unnecessary, we present the full score:—

When pressed the lump recedes and the stomach is natural, but the moment the pressure is removed, the lump returns. What shall do? Ans. Your puppy has unbliked hernia, and unless a surgical opperation is undertaken by a skilled surgicen, we would recommend you to apply simply a compress (a cone-shaped cork is as good as anything) and bandago around the puppy.

is as good as anything) and bandage around the puppy.

S. B., Cleveland.—I. I want to buy a spaniel, saw one in the street like one I want; he was of about twenty to twenty-five pounds weight; liver and white, curly cont and long ears. 2. What kind of dog is a Japanese spaniel? 3. What is the cheapest book I can buy with illustrations of all the breeds of spaniels? Ans. I. Cocker spaniels, see advertisements in another column. 2. Somewhat similar to the King Charles breed. 3. No cheap book can give correct and life-like illustrations of dogs. Stonchenge's "Dogs of the British Islands," and Vero Shaw's "Book of the Dog," contain what you want. tain what you want.

GEORGIA.—My Gordon setter has a dry cough, now and then he makes an effort to clear his throat, and I have noticed once that he coughed up some phlegm. I find some running at the nose. What shall I do for him? Ans. It is impossible from the outline of your description to know whether your dog is suffering from old or is in the first stages of distemper. You neglect to such a ge, a very important point. Should the dog have cold, keep him warm and dry and administer several small does of castor oil, one day intervening. Should you decide that it is distemper. doses of quinine, say two grains three times a day will probably be the best treatment for you to adopt when this issue reaches

G. E. J., New York City.-1. What are best kind of rabbit dogs G. E. J., New York City.—1. What are best kind of rabbit does, and where can I get two? 2. My bended bas something the matter with his ear; he sentches it, after he has been running. 3. My red Irish setter bitch, one year old, has had a swolten throat ever since she was two months old. What shall I do for her? Ans. I. Bengles are the best to our liking. See advertisements in another column. 2. You do not state whether there is any discharge from ear or not; should there be any, your dog is allieted with internal canker. See answers on this subject in late issues of this paper. 3. Rub part afflicted with mild iodine olutment.

of this paper. 3. Rub part afflicted with mild folline oiutiment. E. V., N. Z.—Is the name of woodchuck, or ground-long, a sunonym to the badger? In company of a friend I dug out a happy family, consisting of the mother and three hopeful young ones, last week on my farm in Pennsylvania, but hind that the animal called badger in Europe is larger and somewhat different in color to these ground-hogs as they are called in Pennsylvania. Ans The badger and woodchuck are two entirely different animals having nothing in common except their habit of living in holese which they excavate in the ground. The former (Metos turns), of Europe, and (Taxidea americana) of the West, are carnivorous, and are allied to the bears, raccoons, etc., while woodchuck (Artenny monaz) is a rodent, and belongs to the order which includes the squirrels, hares, gophers, beaver, etc.

NEW PUBLICATIONS.

CANDE AND CAMERA; A Two Hundred Miles Tour through the Maine Forests. By Thomas Sedgwick Steele. With illustrations. New York: Orange, Judd Co. 1880.

Under this title Mr. Steele has given us one of the most attractive summer books of the year. It is a sketch of a canoe voyage which the author took through the wilds of Maine in the summer of 1879, providing himself with the usual complete campaign outfit, and in addition with a full set of photographers' instruments and the services of a photographer. In this way the party were

with a full set of photographers' instruments and the services of a photographer. In this way the party were enabled to secure views of every point of interest visited by them, and these pictures have been used for the lawish illustration of the volume before us. In addition to giving the reader these faithful reproductions of scenes on the Penobscot, Mr. Steele has enlisted the skill of such well-known artists as True, Williams, Day, Aug. Will and others, whose character sketches add much to the charm of the pages. The mechanical work of the book is of the very hignest standard; it is a superb volume. The country explored and described comprised the region of the east branch of the Penobscot River—a territory rich in beautiful scenery and well supplied with game and fish. It is admirably adapted to canoeing, and at the time of Mr. Steele's trip a fortunate height of water, caused by the heavy rains at the beginning of the journey, with an almost uninterrupted succession of perfect days, conspired to make the trip one of as much comfort as the true follower of field sports could desire. No one wants to float down a river on towery beds of ease, Mr. Steele is no amateur in the camp and on the jaunt. He has explored the wilds of Florida, the forests of Wissiactic sportsman, he communicates this spirit to his book, and writes in a vein which leads the reader unconsciously to sympathize with him in his description of a striking landscape, his spirited accounts of a capture of a striking landscape, his spirited accounts of a capture of a striking landscape, his spirited accounts of a capture of a striking landscape, his spirited accounts of a capture of a striking landscape, his spirited accounts of a capture of a fish or the running of a rapid, and in his philosophicial and out-spoken sentiments regarding the ethics of the camp and field. For this reason we commend the style of his book, as we are always glad to indorse every contribution to the literature of manly, out-door recreation. as we are always glad to indorse every contribution to the literature of manly, out-door recreation.

June is the month selected by the pigeon shooters, and in consequence a large amount of our space is necessarily devoted to that sport.

-The minds of certain citizens of New Jersey, are still befogged by the opinion that the State game laws are inoperative on private lands. We commend the letter of W.," published in another column, to the New Jersey State Association. There is an opportunity here for that body to show their metal. And that there may be no trouble in discovering the offenders next Fourth of July, we will be happy to give the proper parties such definite information, that there will be no excuse if the woodcock are slaughtered on that day.

LETTERS TO HERBERT,-Letters postmarked Paris, and addressed to William Henry Herbert (Frank Forester), who has been dead over twenty-two years, have recently been received at the Newark post-office. They were addressed "The Cedars," Herbert's old home on the Passaic, which was long ago burned down.

AMERICA AT BERLIN.—The American exhibit of fish culture apparatus and methods is deservedly attracting much attention at the Berlin Exhibition. The visitor are not satisfied with the regular hours of the Exhibition, but have so besieged the American representatives at their hotels that it has been found necessary for them to leave their hotels and resort to private lodgings in order to escape. This would seem to show that we have sent something to Berlin which is worth seeing.

THE FRASER RIVER SALMON.—The paper on this subject, of which we print to-day the first installment, will not fail to attract the attention of naturalists and practical fish culturists. Systematists have given no little attention to the Salmonidæ of our Northwest coast, but of their habits very little has been written, and the little is inaccessible to most of our readers.

It affords us much satisfaction, then, to be able to furnish such an excellent account of the habits of the salmon of Fraser River. Our correspondent, "Mowitch," whose writings have so often interested the readers of Forest AND STREAM, has, by this contribution, further increased he burden of gratitude which they already owed him,

WANTED-A "NEW YORK STATE ASSOCI-ATION FOR THE FISH AND GAME." PROTECTION OF

HEN the "Females' Society for the Protection of the Naked Limbs of the Infants of Dahomey converts its weekly gatherings into sessions of gossip and slander, the public is not inclined to bother itself much about the matter, for it is by no means certain that the infants of Dahomey need clothing, nor even if they did, is it a matter of particularly vital importance to that public. When, on the contrary, an association of intelligent men repeatedly convene under a title which implies of certain amount of work in a designated and important field, and then deliberately ignore that work and its claims upon them, a certain portion of the public does interest itself in the matter, and it calls for some explanation and remedy of the abuse.

There came together, at Seneca Falls, New York, the other day, as the readers of the Forest and Stream have already been told, an assembly of the delegates of fortythree sportsmen's clubs. The convention met under the title of the "New York State Association for the Protection of Fish and Game," The meeting continued from Monday through the following Saturday. During that period several thousand pigeons were shot in competitive matches at the traps, but not a single iota was accomplished in the way of advancing the interests of game protection in the State. As a pigeon-shooting tournament the convention was a great success; as the session of a game protective body it was an utter failure.

The intelligent, systematic and proper protection of game and fish is a subject of live importance, and the proceedings of the Seneca Falls convention, therefore, is of interest to every sportsman in the State. A society professedly established for the protection of game and fish, and assuming a title setting forth that claim, repre sents not only sportsmen in general, but particularly the higher class of sportsmen who recognize and practice the higher code of sporting ethics.

The reputation of the individual is here directly concerned, and every man who is thus represented at the annual meetings of the Association may call that body to account for its repeated delinquencies in its neglect of a professed duty. The very grave charge may be preferred and sustained, that, so far as the ostensible object of its annual meeting is concerned, the convention is a wretched farce, and that, instead of exerting any good influence for the cause of the due protection of game, what influence there may be is bad.

This is not a question of pigeon shooting, nor of the expediency of a body of men gathering for a week's tournament at the traps. It is simply the question whether a society may profess one thing and practice another whether a body of men with such a grand field for earnest work as was presented to the convention at Seneca Falls may bring that work into ridicule by systematically and year after year ignoring it.

The title, "New York State Association for the Protection of Fish and Game," is a misnomer. This organization is one to which all who are interested in the protection of game should look for their greatest encouragement and from whose influence, example and efforts the greatest good should result; yet at the only time when it appears before the public, the only time, in fact, when it appears at all, it entirely loses sight of the objects which it ought to hold in supreme importance; it deliberately throws away its opportunities for creditable effort, and substitutes an amusement which affords temporary pleasure to its members. More than this, it belies the cause it professes to serve. It is a shame that instead of the good work which a true New York State Association for the Protection of Fish and Game, with its wealth and influence, might accomplish to restock and keep stocked the vast territories offer themselves for easy improvement, the organization which appears before the public for the professed accomplishment of these ends should have degenerated into a congregation of trap shooters.

The interests of game protection in this State imperatively demand of the so-called "New York State Association for the Protection of Fish and Game" one of two things: either to abandon its false title, or to make itself worthy of that title. As the "New York State Associa-tion of Pigeon Shooters," or a body with any other name which shall designate the true nature of an annual tournament, no one can find fault. Such an association would be both honest in name and consistent in practice.

We should much prefer, however, that the present body, who are so well known to each other, who are practical and experienced sportsmen, and consequently so well fitted to work understandingly and in harmony, should really assume the character of a game protective society, and substitute for their present negative influence, the positive power they are so preëminently capable of wielding.

The Long Island Sportsmen's Association is with reason jubilant over its exploits at Seneca Falls. The convention of 1881 will offer to it a magnificent oppor tunity for reform in this matter. The new president of the Association, Abel Crook, Esq., and those who are associated with him as officers and committees, are capable

of shaping the course of the Association next year in a direction which shall make it a credit to the sportsmen of the State and the country.

What will they do?

MIGRATORY QUAIL.

HE migratory quail ordered by gentlemen in this country were shipped from Messina May 5th, ult., per steamer Gilsland, for New York. She is due in New York in the forepart of this month, and her arrival is daily expected. The birds will be distributed as follows: Lewiston, Maine..... 400 | Danville, Canada..... Other towns in Maine, | Chatham, Ont., Can... 300

Chatham, Ont., Can.
Sherbrooke, P.Q., Can,
Altoona, Pa.....
Zanesville, Ohio.
Wilkesbarre, Pa.
Baltimore, Md....
Jefferson City, Mo...
Glencoe, Ill.... by Mr. Everett Smith, Fish and Game Commissioner Toledo, Ohio.... Quebec, Canada. 200 Total.... 200

-Caleb Cooke, a widely known naturalist, curator of Essex Institute at Lynn and attaché on the staff of the Peabody Academy of Science, died at 9 o'clock on the night of June 5th, of typhold pneumonia, after a brief He was about forty years old, and unmarried. He held the United States consulship at Zanzibar at one time, and was a man of wide range of knowledge, genial and warmly endeared to a large circle of friends at home and abroad. Mr. Cooke was an active worker in the Salem fraternity, and was of a modest, unassuming and generous disposition.

How it Works.-The subscription price of the Forest AND STREAM is \$4 per year, but it costs the subscriber more than that. One of our stanch friends, who subscribed for the American Sportsman in 1874, then to the Rod and Gun, and whose name has been on our books ever since, writes that he was led by reading its pages to buy first a Parker gun and the various knick-knacks which go with a gun, then a Nichols and LeFever, with loading tools, and rods, reels, lines and other fishing traps too numerous to mention.

This is just the work we are doing all the time. If a a man is not a sportsman when he begins to read the FOREST AND STREAM, the paper incites him to be one. We can never fully estimate the good effects accruing from a year's subscription to a bright sporting journal.

VALUABLE CONTRIBUTIONS .- We have recently printed, under the title of "Spring Notes from Minneapolis, Minn.," two papers which are of very great value, as well for their matter as their method. Mr. Thos. S. Roberts, from whose pen they come, is well known to our naturalists, not only as a careful and accurate observer, but also as a student of very great originality and acuteness. His "Spring Notes" show in their preparation a careful attention to detail which is most admirable, and which gives to his contributions an importance far above that of most of the notes which come under that heading.

We cannot refrain from recommending these pro ductions to field collectors as models of their kind, and we think that a series of similar notes from different sections of the country would not only be of great interest to most of our readers, but would have a high scientific value as well.

Such field notes should not be interrupted, but continuous, the thermometer should be read at least three times daily, morning, noon and night, and, if convenient. the minimum temperature for each day should be given ; the state of the weather should be noted, the different plants in bloom mentioned and matter pertaining to any Only by of the different vertebrates be introduced. following some such method as this can field notes be made as valuable as they ought to be.

ONE OF MANY LETTERS .- It is always encouraging to receive merited commendations and expressions of approval. Our lot in this respect is a most happy one. We are constantly in receipt of letters from old and new friends, which are filled with expressions well fitted to encourage us in our efforts to make the FOREST AND STREAM an acceptable journal. Here is an extract from one of these letters :-

I cannot close this lotter without giving expression to my ap-preciation of your efforts in providing sportsmen with so excel-ient a journal as FOREST AND STREAM. No other inducence is so widespread and powerful in the up-

No other induence is so widespread and powerful in the up-building and mainteanance of a healthy sentiment in favor of those outdoor sports which are so delightful and beneficial to all who indulge them in moderation.

Nowhere can one find a paper so full of all that is of timely in-terest, and yet bearing the test of age. Its every utterance has the saving quality of purity, and much of the matter published from week to week will endure in the memory of sportsmen so long as the love of nature is strong within us.

Your removal to more commodious quarters, while being an evidence of insucial preservity that must, be precultable greatify.

evidence of financial prosperity that must be peculiarly gratifying to those directly interested, is not without promise to your readers, for we all know that pleasant surroundings are conducte to good work, in whatever direction one's efforts may be applied. I must be especially so in your life and work.

GAME PROTECTION.

WORK FOR THE NEW JERSEY ASSOCIATION.

Editor Porest and Stream

NEW YORK, June 5th.

Now that our friends the Jerseymen have their new woodcook law, would it not be well for the authorities of the State to see to law, would it not be well for the authorities of the Staie to see to the enforcement of said hiw. In one of my former letters to you I claimed that the old law had never been enforced—furthermore, that every Jerseyman, or ruther a good many, claimed the right to shoot on their own land. One of your correspondents, signing himself "New Jersey," informed me through your paper that the old State law giving each Jerseyman the right to shoot on his land the whole year round had been repeated in 1874. It might have been repeated in Treaton, but this repeal is not in force in the State of New Jersey.

have been repealed in Treaton, but this repeal is not in force in the State of New Jersey.

Last Monday (Decoration Day) I happened to be in Passale County, N. J., and if you had heard the guns in the different swamps, you would have thought so. I had a long talk with a shooter, and be told me that this new law was fot only a fraudbut had been gotten through the Legislature through misrepresentations, and for the headers of the this new September law, who still calms the right to absort on the originators of this new September law, who still calms the right to absort on his rew. man, one of the originators of this new September law, who still claims the right to shoot on his own ground. He says that he is going to shoot on his own land next Fourth of July, and in fact he braze about it. The upshot of all this is that twenty more men claim the same right. They say that if Mr. So-and-So can go out shooting, they do not see any reason why they should not go themselves. They will go in a body, and they say that they

themserves. They will go in a body, and they say that they would like to see anybody arrest them.

As I said in one of my former letters, we have old laws enough; why pass new ones as long as the old ones are not enforced, especially when the instigators of these new laws are the first ones. to break the old ones?

GAME PROTECTION VS. TRAP SHOOTING.

NEW YORK, June 4th

Editor Forest and Stream:—

In my anxiety to hear and learn all about the proceedings of the New York State Sportsmen's Convention, I looked easerly, but in New York Sate Sportshort s convertion, I looked engery, but in year, in frour edition of yesteriar, There must certainly be a mistake somewhyte somewhyte paper, speaking about the conven-tion, gives only the scores of different pigcon matches. Could it be possible that such a body of men, chiming to represent the sportsmen of the State of New York, should have convened without transacting any other business than pigeon shooting? I have

out transacting any other business than pigeon shooting? I have asked several of my Brooklyn friends, but all I could get out of them was, "The Brooklyn boys carried everything before them." In the heat of a battle, amidst the roaring of the guns, the cries of agony of the wounded and dying, the curses of the living, the sight of blood and gore will make human flends out of tender hearted men. Is it possible that such has been the case with our signic blooms and gote win mine numan literatoric of tener hearted men. Is if possible that such has been the case with our sportsmen at the convention—that the blood of the third their thou-sand innocent slaughtered at Soncea Falls turnol heir heads made them forget their duties and loss sight of the objects in view? No, it cannot be. I can hardly believe it. However, view? No, it cannot use. I can narrily believe it. However, should my presentitionent proves true, etc every sportesman in the United States know it. At the same time, let those gentlemen who convened last week at Seneea. Falls, and agreed to meet again next year in Brooklyn, change the title of their convention. Let it be called the New York State Pigeon Shooters' Convention, as they have certainly no right to the title they met under last week.

ome years ago pigeon shooting was indulged in for p Some years ago piezon shooting was indulged in for practice; to-day it has grown into an infatuation. It is indulged in for gambling purposes and orgies. In some instances, it has broken up homes and families—has even taken the bread out of children's up homes and families—baseven taken the bread out of children's mouths. It has made gamblers out of steady men. Clubs that have been gotten up for game protection have been turned into gambling associations; charters have been gotten under false pretences, and then broken. And all this under the cloak and color of sportsmanship. Well might Mr. Hergh address to those so-called clubs Gieero's words to Cataline: "Usqueque Lunden called clubs Ciccro's words to Cataline: Catilina, abutère patientia nostra."

A TRUE LOVER OF THE SPORT.

IS TRAP SHOOTING CRUEL?

Editor Forest and Stream :-

"En Garde," in Forest and Stream." of May 27th, makes rather a decided misnomer of his pseudonym, for he is certainly off his guard, and certainly leaves himself open in places more than one to severe criticism.

than one to severe criticism.

He was never more mistaken in his life, than when he laid the inception of my article, in defense of the pigeon, to either no experience, or a luckless one at the trap. I confess to a limited experience, but not a luckless one. I have shot over traps long enough to acquire a decent proficiency, and a strong disgust for what I fearlessly denounce as a foolish, unanally and crue practice. I still hold trap shooting is rapidly reducing the pigeon supply, and that its continuance will eventually result in absolute extermination. Yes, I look back with pleasure to the time when the great flocks visited us semi-annually, and, contrary to "En Garde's" suggestion, it was not in the "long ago" when our country was densely wooded, but within the last ten years, for being still in my bird decade, that happy quoch, when gunne of all sorts was nient.

densely wooded, but within the last ten years, for being stoll in my third decade, that happy opoch, when game of all sorts was pienty, is a leefle before my time, while that smooth-bore musket, with its "half pint of shot, and four lingers of powder," merges into a very serviceable Remington twelve-bore.

"En Garde" thanks "Knowles" for taking up the cudgel in behalf of "the guild" (by "the guild"," I presume he means the noble order of trap-shooters), and "squelchedly" replying to my letter. He also says he "believes him to be one who would never wantonly practice cruelty toward one of God's creatures." This last sounds woll; but every time he steps to the score and peppers a pigeon full of shot, he indulges in a most cruel and unworthy practice toward one of the inost innocent creatures of a kind Providence. Providenc

That twenty-nine per cent. that gets beyond the eighty yards That twenty-ince per cent, that gots beyond the eightly yatus boundary is sadly reduced before it runs the ganultet of the outside shooters, and I will venture to say that not two per cent, of the pigeons sprung from traps ever get back to their native pastures; and, if they do, their lead-loaded bodies, in spite of their marredous fecundity, will be in no shape for propagation. When the terrible net drops on a pigeon, he is lost. What with packing, shipping and confinement, his spirit is broken; and when for the first time in weeks he stratches his minima freely, and

when for the first time in weeks he stretches his pinions freely, and when the run of the run happy in his new found liberty, and darts away from the trap happy in his new found liberty, "bang'! goes the unerring gun, and "dead bird" is the only enlogy spoken over his corse.

Mr. trank Beebark defends the pigeon. I thank him heartly fo'

his substantial support, and am sure there are many, many more if our way of thinking.

If trap shooting is not abolished voluntarily, it perforce soon

will be, for the pigeon will become extinct, and then, and not till then, will "the problem" be solved and the glass ball become the

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

NEW FIRM.-Messrs, Schuyler & Duane, importers and dealers in guns and sporting goods, military arms and ammunition, opened their new store, 189 Broadway, on the 25th of May, with a stock of goods selected by Mr Schuyler during his recent trip in Europe. They handle guns of all kinds and have no specialties, but soon expect a fine assortment of Purdy guns, which will probably be the most valuable of any ever seen in this country, The store is quite large enough for a large business, and we hope they may have it. Mr. R. B. Schuyler was formerly of the well-known firm of Schuyler, Hartley & Graham, whose copartnership expired by limitation in January last. He is well posted in the business, and with his experience ought to meet with great success. His copartner, Mr. Duane, is an amateur in that line, but a Their advertisement will soon thorough financial man. appear in our columns.

FOUNTAIN GUN CLUB.-The Fountain Gun Club. of Brooklyn, celebrated its victories at Seneca Falls by a banquet at their club rooms, 451 Flatbush avenue, last Monday evening. The club team who were the winners of the Dean Richmond Cup were the special guests of the evening, and deservedly so, as they had done admira ble work at the traps. The dining-room was handsomely decorated with the club colors of the Washington, Long Island, Foresters, Nonpareil and Phoenix gun clubs, and the Dean Richmond, Wadsworth and R. V. Pierce prizes and the broom-were prominently displayed as evidences of the club's prowess. Immediately back of the President's chair was a crayon allegorical drawing repre-Fresident's chair was a crayon allegorical drawing representing Harry Miller bestowing laurel wreaths on the club team—Messrs. M. G. Bayliss, Charles W. Wingert and E. H. Madison. Surmounting the picture was the legend: "The Fountain Gun Club Welcomes its Sons of Guns—Bayliss, Wingert and Madison." President Abel Crook presided at the dinner. He was surrounded by the other officers of the club—Vice-President G. A. Chappell, Secretary C. H. Wingert, and Treasurer H. G. Miller. On the right and left of the officers were Judge Calvin E. Pratt, Robert Furey, T. C. Banks, G. F. Gidlersleeve, of the Long Island Shooting Club; Henry Altenbrand, President of the Washington Gun Club; Charles E. Fiske, A. Eddy, John Hanley, John T. Slaine, W. H. Hunter, Frank Chamberlain, Nathaniel Beggs, E. H. Madison, M. G. Bayliss, William Cleaver, Dominick Byrne, Robert Wells, Samuel Norman, and other well-known sportsmen.

The mem was in Harry Miller's best style, and the club members and guests in the best of spirits. Wit and merriment ruled the hour. President Crook recounted the recent successes of the Club, and called attention to the remarkable fact that the Fountain boys had brought home the three principal prizes of the State Association. Speeches were made by Judge Pratt, Mr. Furey, T. C. Baulks, of the FOREST AND STREAM, Charles Fiske, Mr. Geo. Chappell, Mr. E. H. Madison, and others. senting Harry Miller bestowing laurel wreaths on the

—Mr. Henry Altenbrand, President of the Washington Gun Club of Brooklyn, E. D., is a member of the Stand-ing Committee of the New York State Association.

My Committee of the New Tork State Association.

WAKEFIELD, Mass., May 28th.—At a meeting of the Parker Sportsman's Club, held last evening, the following officers were elected: President, S. T. Parker, Vice-President, W. J. Godfrey; Secretary and Treasurer, S. O. Richardson, Jr.; Executive Committee.—F. H. Emerson, W. W. Whitten, H. C. Lane; Referee, M. W.

Boardman.

Texas State Sportsman's Association.—The morning of May 17th found a goodly assembly of sportsmen on the grounds of the Jackstone Gun Club, of Dallas, awaiting the opening shoot. Representatives from Denison, Denton, Fexarkana, Houston, Wils Point, Galveston, Fort Worth, Sherman and other clubs were on the grounds in eager anticipation of the coming contests.

The first day of the tournament opened up with a sweepstakes. Five single birds at twenty-one yards rise. Some very effective work was done, resulting in a tie between Messrs. J. Thompson and Barrodell, who finally divided first money.

Some very effective work was done, resulting in a ne eetween Messrs. J. Thompson and Barrodell, who finally divided first money.

Contest No. 2; ten birds, twenty-one yards rise. First prize, §250 cash; second prize, §150; third prize, §75; fourth, §25. Mr. Lister took first money.

The remaining eight contests, comprising sweepstakes and team shoots, passed off very smoothly, the only unpleasant feature being the scarcity of pigeons, compelling them to fall back on balls. Among the many excellent shots present at the tournament may be mentioned Mr. J. H. Mason, of Houston, winner of the Webb Medal; Mr. P. B. Watson, of Houston, winner of the Knepfly Championship Medal, and Mr. Sam Finley, of Dallas.

The delegations to the convention met at Lively Hall on the evening of the 19th and elected the following officers to serve during the ensuing year: President, G. A. Foote, McKinney, Tex.; First Vice-President, C. C. Pettit, Galveston; Corresponding Secretary, H. M. Thompson, Waco; Recording Secretary, M. W. Shaw, Galveston. By vote it was decided that the next convention meet at Galveston.

A DISASTROUS EXPERIENCE WITH DITTMAR POWDER.

PHILADELPHIA, MISS., May 18th.

Editor Forest and Stream:—
Thinking that it will probably be the cause of some brother sportsman shunning the breakers on which I have been wrecked, I give my experience with Dithmar powder. I am a dentist by profession, and my home is Philadeiphia, Miss., although I have an office in Louisville, Miss., where I spend about half of my time. Whether in Philadelphia or Louisville my gun has always been an indispensable article; in fact, it has been an inseparable companion during the whole of my life, and often, when wearied with the confinement of my office, I have found it a source of pleasure and recreation to spend a few hours with my gun in the field, or at the glass ball trap. I have looked forward with pleasure to all the late improvements in guns and animunition, and

and often, when wearied with the confinement of my office, I have found it a source of pleasure and recreation to spend a few hours with my gmi in the field, or at the glass ball trap. I have looked forward with pleasure to all the late improvements in guns and ammunition, and the many advertisements and recommendations which I had seen of the Dittmar powder had made ne anxious to try it, and if it proved to be what was claimed for it, to introduce it into our club. I ordered several canisters of the Dittmar powder, and they were promptly expressed on the 24th of March; but, owing to some carelessness of the express company, the goods were lost, and did not reach Louisville until the 1st of May. Awring heard that I had sent for a new kind of powder, wrote to New York for some of the finest Dittmar powder that could be had, and in a few days received several canisters. He came to me and requested me to give his powder a trial, to see what it would do; but I affirst refused to do so, as he had very little instructions for using the powder. I told him that I was afraid that his powder was not suitable for large gauge shot guns, and that I had ordered powder for shooting glass balls, and I preferred waiting to see if there was a difference in the powder. He told me that a small circular came with the powder, and that the circular stated that the powder could be used in both shot guns and rifles, and the charge was the same amount by measure as that of black powder, and that the ordered the finest powder that could be procured. I went to my sporting papers and looked up all the information I could find, and examined different advertisements of the Dittmar Powder Company, but could lim nothing that led me to believe that the company put up different kinds of powder for different general season of the Dittmar Powder for different general season of the Dittmar than my regular charge of black powder.

My gun was a Parker eleven gauge and weighed eight and a half pounds, and I had been shooting four draching of black pow

with the bone that connects the forelinger with the wrist, making the wound fully three inches across, measured from any point.

I was carried to town and my wound dressed, and several parties were sent back to look up the missing thumb and the shattered gun. They soon returned, bringing my thumb and accompanying fiels, and reported that it was found just forty yards from where I was standing when I fred the gun. My gun was torn into fitty or more pieces and badly scattered. The barrels were about forty yards apart when found. The left-hand varrel (the barrel that I shot) had a piece forn from the outside of the but to fit the barrel that I shot) had a piece forn from the outside of the but was turned back, but not forn off. The right-hand barrel was been like a bow and the left-hand lock plate was forn to pieces like so much pasteboard. My gun was a \$65 Parker, with steel barrels.

I have not written this through any prejudice I have against the Dittnar powder, for I am satisfied that, if rightly used, it is a valuable invention, but I do wish to warn others from doing as I have done in using FFF rifle powder in large gauge shot guns. Since my accident I have received the Dittnar powder that I ordered from Bogardus & Co., and with it all the necessary instructions for using the powder.

I wish to bring one charge against the Dittmar Powder company, and that is they do not give the public a sufficient chance to become acquainted with the various grades of powder. In Forest And Streem are found the advertisement of the Dittnar Powder Company, but nothing is said about the different grades. Of nhe same page we see the advertisements of Laffin & Rand, Dupont and Hazard Powder Company, all describing the different grades of their powder, and telling the public what they are used for.

Before I fired this charge of powder I sought information concerning it, but could get none except the little circular, which stated that the powder, and what was the resure of many profers for many profession for at least this year,

sufficiently restored to practice my profession-if I should

ever be so far restored.

If this letter should be the cause of preventing one person from getting into the trouble which I am in, I shall feel a thousand times repaid for writing it although it has wearied me greatly to sit up so long as to write it.

S. P. NASH.

Rifle.

r is now in progress at the cele Union Hill, New Jersey. Capt. Independent Schuetzen Corps, with fifteen of their members, visited the Park on Tuesday afternoon in a Tally-ho. They were welcomed at the Castle by the captain of the New York Scuetzen Corps, Major George Aery, who did the honors handsomely. At the table Capt. Aery first introduced Mr. Banks, of the FOREST AND STREAM, who responded as usual. Capt. Aery then remarked at length, welcoming Capt. Diehl

and his corps. Capt. Diehl responded that his corps came there to do them honor. A band of music soon assembled in front of the Castle, and led the procession through the grounds to the shooting house, where they were well received, and cheers upon cheers were given for the officers and representatives of the association, also for the Forest and Stream. We are too modest to publish Capt Aery's remarks at that time. The Tally-ho left the Castle early in the evening, with the merry strains of the trumpeter sounding upon the air. The party stopped at the Park House, in Hoboken, where a supper had been provided with a menu suitable for such an occasion.

RANGE AND GALLERY.

SCHUETZENFEST OF THE NEW YORK SCHUETZEN CORTS AND FAIR OF THE UNITED SCHUETZEN ASSOCIATION, AT UNION HILL SCHUETZEN PARK.—SCHUETZEN PARK, June 8th.—The ball came into motion this morning. The New York Schuetzen Corps, under command of Major George Aery, assembled at their headquarters, 21 Market street, this morning at 3 o'clock. Line was formed at 9 o'clock, and Adjutant Harenburg ordered to start. First came a squad of mounted police, followed by two platoons of the separate troop, a cavalry N. G. S. N. Y., under command of Lieut. Wiebold, and a large waron occupied by Wannemacher's Seventy-first Regiment Band, playing all the tunes which make American hearts beat. In the first coach, drawn by four horses, were seated Major G. Aery and the last year's king; the places of Cx-Captain Yuengling and John F. Rottmann were not occupied Following the tête were about forty coaches with four and four members. After parading in a few principal streets on the Bast side of New York City, they wound their way down Fourteenth street to Christopher street ferry, where they crossed and drove up to Schuetzen Park. Arrived at the park, the whole party, guests and all, sat down for a funcheon, during which, Coi. E. T. C. Lewis, President of the Park, welcomed the Corps. to which Capt. Aery responded in appropriate remarks. Gen. Lillie and John C. Crevier, the Secretary of the Association—and the sets are set of the United States, when it comes tan an antion— SCHUETZENFEST OF THE NEW YORK SCHUETZEN CORPS AND to when Capt. Acry responded in appropriate remarks. Gen.Linic and John. C. Crevier, the Secretary of the Association—and the best speaker of the United States, when it comes to an orution—also made brief addresses. The shooting at the target, as well as at the two-headed eagle, commenced at 2 o'clock precisely, and was continued until 7 o'clock. The eagle at which they shoot is fastened on a high pole, about 100 yards from the firing point. The pieces—as for instance, the bead the thirds and on the property of the processes for instance, the bead the thirds and one of the processes of the post of t shoot is fastened on a high polo, about 100 yards from the firing point. The pieces—as, for instance, the head, the thigh, and so forth—have to be shot down in rotation. The one who shoots down the last piece, that is, the body, will be declared king. The first piece, the middle crown, was brought down by Geo. Orth. Right crown, Aug. Schopper; left crown, O. F. Keller; right flag, Rud. Klemm. This was on Monday; on Tuesday followed: Left flag, Geo. Rasche; right head, H. W. Wersebe; scepter, F. W. Mertens, Jr.; riobe, Major George Acry; right leg, Wm. Radebolt; left leg, A. W. Lenocke; right thigh, O. Menken; left thigh, John Miller; right neck, J. H. Klee; left neck, Fr. Wilm-

The shooting at the targets on both days, Monday and Tuesday, was not as well attended as was expected, but maybe they will make up for lost time on the last two days. Shooting commences always and every day at 3 c'olcok r. M., and ends at 7 o'clock. The following are the highest scores made up to date:—

following are the highest scores made up to date:—
Ring Target, one half inch rines, possible 75: J. H. Brown 68,
Wm. Klein 65, D. Miller 63, E. Holzmann, 62.
Man Target, possible 69: J. H. Brown 53, H. Ruschen 53, R. Faber 51, G. Joiner 51, Major George Acry 49.
During the afternoon of Tuesday a delegation of the New York
Independent Schutztens, headed by Capt. F. F. Diehl, and accompanied by Mr. Banks, manager of your valuable paper, arrived in a Tally-ho, and were welcomed by Capt. Er, V. owhick Capt.
Diebli responded; but Capt. Acry, proposing three cheers for New
York Schutzen Corps' honorary member, Mr. Banks, brought torward tremendous cheers; and Mr. Banks, slightly affected, responded in a brief, appropriate and eloquent way. Ceremonies

York Schuetzen Corps' honorary member, Mr. Ranks, brought Iorward tremendous cheers; and Mr. Banks, slightly effected, responded in a brief, appropriate and eloquent way. Ceremonies over, they disbanded, everybody going as they pleased. The shooting is going on, and will last until Thursday night, and this is the reason why I have to close my correspondence and send you another full report for next week's paper, when I also will be able to say something about the fair. The fair's gisse-balt shonting, open to all comers, will take place Tuesday, Wednesday, Thursday and Friday, from 1 to 7 o'clock PM. Large prizes, given by different houses, are at stake.

Bostos, Mass., June 14th.—Mammoth Ribe Gallery.—The All Comers Ridin March is caded, closing on the Sist of May, and the following are the prize winners: Mr. W. H. Harrison wins the extra prize of \$20 for the highest number of clean scores, he making four during the month. He also wins the dirst prize of \$15 for the best live scores in the match, namely, 194, Mr. F. F. Richardson wins the second prize of \$8, with 197. Mr. J. Mer-Hill wins the third prize of \$7, with 197, but outranked by Mr. Richardson. Mr. Frank Hollis wins the fourth prize of \$8, with 198. Mr. P. S. James wins the sixth prize of \$3, with 187. Mr. Gordan McKonzle when the third prize of \$3, with 187, but outranked by Mr. James. Mr. F. P. Twids wins the eighth prize of \$2, with 188. Mr. L. W. Farrar the ninth prize of \$3, with 185; and Nr. C. Edwards the tenth prize of \$4, with 185, but outranked by Mr. Parrar. The shooting during the month was of a high order, and the sub-Joined summary will show the standing of the several competitors; 59 jards; rounds, \$5; possible 40; flee scores to win, or possible 200: sible 200;

The new match called the Excelsior Rifle Match, which was commenced on Tuesday, June 1st, has shown some good shooting for so early in the month. Mr. E. F. Richardson was nearly sucfor so early in the month. Mr. E. F. Richardson was nearly suc-cessful in getting the extra prize of \$8, for a clean score of eight consecutive builtseyes. He made six builteyes in succession, miss-ing his seventh, It was a 4 o'cleck nipper, and his eighth shot was a buil, ending the score with a good 38, and he heads the list, Mr. Frank Hollis is second with a for Mr. E. W. Law is third. The following is the standing of the several competitors to date; 50 yards; rounds, 8; possible 40; live scores to win, or possible

BOSTON, Mass., June 5th .- There was a good attendance to-day at Wainut Hill to participate in Everybody's Match and also at mid-range shooting. The day was, in the early stages of the shooting, simply perfect; the wind came from 6 to 76 clock, and only one to two points of wind were required. The sun was also obsoured, producing a perfect light, with the clearest of atmost petrees, producing a period injut, with the centress of atmos-pheres. Mr. W. Charles used his military rifle, for which two points were added, making two 49s. The spectators were numer-ous, and the pretty flowers which make the range so attractive in the queen of months attracted many ladies and children during

bre shadows upon the targets, and the wind was connectish and bre snaows upon the targets, and the vinol was coquettish and sharply watchood by the marksinen. Mr. Arnold was shooting in good form, off the shoulder, at this distance, and after securing five good bullseyes the wind caught his builtet half way down the range, giving him a low shot, for which the marpie was sig-nalled. He however held well on to the bull for his last shot, and named. He nowever near went not to be only in the last shot, and closed for thirty-three out of the possible the littly that the last shot, and kept the thirty-three, contential kept which the last shot and winning first place. Mr. Lee used this inilitary ritte, securing a good thirty-two. There were twelve entries, only the best being given, as follows:— O. M. Jewell 5 4 5 4 5 5 5 -33 N. W. Arnold 5 5 5 5 5 3 5 -33 H. L. Lec. 5 3 5 4 5 5 5 -33

MEDFORD, Mass., Anne 2d.—The shooting a Bellevue Range to-day was excellent, Mr. Frank Hollis making respectively 37, 48, 48. 48, 47, each out of a possible 50, or 28 out of a possible 250; V. Charles also made 45 out of a possible 50. There were fifty-eight entries, and the result is as follows:—

MEDFORD, Mass., June 4th.—There was a large gathering at the meeting given under the auspires of the Raymond Sportsman's Club at Bellevue Range. The weather conditions were propitious for good scores, and Brst-class results were obtained. Medford count; of-hand; 200 yards; ten rounds. Only the best scores are given:

Medford Range

Monson, Mass., May 18th .- Opening shoot of the Sportsmen's Rifle Club; 100 yards; off hand:-

CREEDMOON, June 2d.—The second competition for the "Champion Marksmen's Badge" brought a large party to Creedmoor and developed an excellent average of scores for a military match, and developed an excellent average of scores for a military match, although no individual record reached phenomenal excellence. The distances were 200 and 500 yards; rounds, five at each; weapon, New York State model. It was a beautiful day for shooting, and under the instructions of their officers numerous members of the militia organizations made the twonty-five points required by the rules of the department, which was represented on the field by Major W. G. Burton and Capt. C. F. Robbins. There were los entries, among which the following were the leading scores: H. G. Lockwood 44, W. J. Underwood 44, A. M. Infull 43, H. S. Lovell 43, G. L. Fon 43, C. F. Robbins 44, L. f. Batrues 44, J. F. Schermerborn 44, G. G. Stow 44, F. Alder 41, J. L. Price 60, S. J. Dolan 40, C. M. Woodbury 40, E. Demmler 40, W. H. Heisser 33, A. T. Perham 39, J. O. Wright 38, S. H. Hersey 39, J. L. Paulding 39, G. Fonwell, Jr. 38, H. B. Thompson 38, A. Milis, Jr. 35, J. R. Grobman 38, A. W. Concover 37, F. J. Griswold 37, N. D. Ward 37, D. Hall 37, J. Le Boutillier 37, F. W. Englis 37, G. S. Harrington 39, O. M. Englis 38, W. H. Palmer 38, R. F. Brown 35, G. W. Munson 35, E. W. Price 35, W. E. Marcus 25, G. W. Ernad 35, E. S. E. Sago 36, G. W. Thinther 34, J. H. Junes 34, J. O. Wright 34, J. A. Laccaberry 34, W. B. Shaith 33, C. Wisner 33, F. J. Griswold 37, N. D. Dward 37, D. Wirght 34, J. A. Laccaberry 34, W. B. Shaith 33, C. Wisner 38, F. J. Griswold 37, S. F. Hubbard, Jr. 33, W. Dominick although no individual record reached phenomenal excellence

 J. H. Walden 32, J. B. Haigh 32, L. B. Sherman 32, E. H. Adams 32, J. T. Harper 32, J. N. Stollsbury 32, W. B. Smith 31, G. G. Stow 41, J. E. Gillies 31, J. T. Pyle 31, G. J. Byrd 31, E. T. Schiffelin 39, G. W. Munson 39, D. A. McLeod 39, R. B. Rathbone 30 Over six

bundred pool tickets were sold, and seventy-nine

Over six unitures poir teacts were som, and seventy-size bullseyes were made.

June 50t.—The "Subscription Long Range" match figured at the head of the day's programme, but as only two long range marksmen put in an appearance on the range, the executive officer was obliged to declare the overh off, and open the series of individual off-handed matches for the month. These competitions are those in numbers code. titions are three in number each month, and one shot alternately on Saturdays and Wednesdays, open to everybody and for any rific; distances 100, 200 and 300 yards; five shots at each. There were seventeen entries to-day. Norwithstanding a brisk gale from the South several of the scores proved excellent. The following were the best totals made at the three ranges :--

| | 100 | Yards. | 200 Yards. | 300 Yards. | Totals |
|-------------------|-----|--------|------------|------------|--------|
| R. Simpson | | 23 | 22 | 23 | 68 |

TEAM PORTHAITS.—Before the team sailed for Europe, Abralam Boyardus, the photographer, of Eighteenth street and Broadway, secured sittings from each of the members, and these are now to be had either in single imperials, or in a very tasteful boudoir portrait, showing "Old Reliable" in the center, with his nine chosen men about him. Coming from such a studio, the portraits are all first class, and the team have only to put their works with the rifle on record in as good shape, and there will be nothing to be ashamed of.

CINCINNATI, Ohio, May 10th .- Score made by the Cincinnat Shooting and Fishing Club in the fourteenth competition for the Baker medal; distance, 200 yards; position, off-hand; 15 shots a Massachusetts and Creedmoor targets:—

CINCINATI, Ohio, May 24th.—Score made by the Cincinnati shooting and Fishing Cub in the stateenth competition for the Baker medal; conditions same as above:—

NORWALE, Ohio, June 3d .- The pleasant weather drew out a large crowd of riflemen yesterday, to take part in the regular weekly shoot; distance, 200 yards;

YACHTING NEWS.

EMPIRE YACHT CLUB.—The second match of the season for the Dowling Cun was sailed on the Harlem, June 34, over the usual content of the theorem of the Sophia bound, and the Sophia bound, and Mary Gibson, N. Lockwood, 21ft. 19th. Start was living, Sophia getting away first in a whole-sail wind from the S. White running free to the first mark Gibson about held her own, but after rounding Sophia soon mark Gibson about held her own, but after rounding Sophia soon as well as the sound of

out of his latest production.

CORINGIAN BULLDERS.—Yachting is looking up in Galveston,
Tex., but owing to the shoul water in the harbor all houts halling
from that port are of the extremely beamy, light draft kind, and
sand bags flourish in all their pristine vigor. This, many of us
regret; but the day does not seem to have come for reformation,
regret; but the day does not seem to have come for reformation,
seem to be supported by the columns of FeatEST AND STREAM for news from our Northern friends. The latest addition is the Lottle, a jib and mainsail, 19ft. keel, 9ft. din.
beam and ST. din, deep. She is modeled somewhat fare our fast
City Fire Company, and bils son Henry, in a most creater than the control of the columns of

Newfork Cars Addon-From advices received we learn that in some preliminary scrub contests between the Newfort entboat Georgie and Amed. sent over recently to England for Mr. J. Costs, of the cutter Madge, the British cutters got away with her nand over list. As the news is mesper, we prefer to await further deaths before coming to definite conclusions. The weather was to do with the defeat of the beamy American. The Georgie and Amile is a genuine Newfort cathoat, rather deeper than most. She is 26 th odeck same on w. L. 101. beam, 40 th, die dept. and 30 tt, boom 31 ft., meing pail 19 ft., cruising gall 19 ft., racing main-301 t, boom 31 ft., bring pail 19 ft., beam, 40 th, 11 ft. for list, weather, 12 ft. on the foot and a spinnaker of 27 ft. hoist and 25 ft. foot.

Silf. Foot. 18ft. beed. She is also sampled "citing list for light weather, 12t. on the foot and a spinmker of 2ft. holst and 2ft. foot.

ATLANTIC YACHT CLUB.—The new club book for 1850 is a model in its way. Especially commendable are the addresses of the officers for the way. Especially commendable are the addresses of the officers of the way. Especially commendable are the addresses of the officers of the way. Especially commendable are the addresses of the officers of the way. Especially the commendation of the addresses of the officers of the way. In the product of the way is a complete of the product of the product of the product of all or any size. But we think clubs following length measurement or explaining their "theory" about measurement, for they have a product of the product of

IMPERIA. -This sloop, lately belonging to Mr. C. T. Pierce, of New York, now owned by the Parker Brothers, Boston, has been overhauled, and comes out in black, with gold stripe-the pre-vailing fashion in the East. She is idit, over all, 15ft. Sin. beam, 4ft. 6li. draft, without beam.

4ft. 6in. draft, without board.

—Wayward, formerly owned by Mr. David Sears, Uoston, has been sold to Mr. J. H. Wheelwright. She is 47ft. 6in. long over all, 48ft. 2in. w. l., 16ft. beam, and 4ft. draft, without board.

NIXIE.—This new cutter, a deep-bodied boat, before noticed in hese columns, Mr. G. G. Granger, Boston, has made a trial sail, riving great satisfation.

MATOR RACE—It is probable that a match will be arranged be-tween Lizzie L., Dr. Johnson, and Sidita, Vice-Com, Higgins, both of the Atlantic Y. G., the latter having challenged Lizzie for the pennant now held by her, and which she won in the fall regatta of club list; year.

cub) list year.—At Baltimore, the schooner yacht Renz, June 3d.

Lim the yard of Boachun Bros. The conventional bottle was
broken by Mrs. Albertl, and the yacht was named after her little
daughter Rena. The yacht is 75tt. long, 21ft. bean, 61ft. deep,
with 7ft. headroom in cabin, four staterooms, and saloon 19x1
ft. She belongs to the Baltimore Y. C., details of which have appeared in these columns. Baltimore starts right with a keel
yacht. As all the trading craft, oyster "puncies," etc., on the
bay are keels, our friends in Baltimore, have not had their good
bay are keels, our friends in Baltimore have not had their good
which is the staple in trade of persons who try to
commence themselves that a center-board normally draws less water than a
keel, when, in point of fact, the board draws much more.

keel, when, in point of fact, the board draws much more.

Schoonse, LAUNCHED.—The schonore Republic was launched at Nyack, June 4th. Sie has been built for Com. Henry J. Steer, Brooklyn Y. C., resident of Providence, R. I., from a model whitted out by W. T. Smith, of Nyack, and doctored by sundry amabenia and is deeper in proportion, otherwise she, pruch has more been and is deeper in proportion, otherwise she, practice of all features. Carpets, upholstery, etc., of course of the most gorgeous kind. Her dimensions are as follows: Boff, 6in. ore all; 83ft, 6in. on deck; 75ft, 6in. water line, and 75ft, on keel, hold, 9ft, 6in; dreapth, 7ft, 6in, and she registers 15f; 13-55 tons old measurement. Center-board, 3t ft, long with loft, drop. Hor masts are 18ft, and 63ft, borons, 6ft, and 3ft, borons, 6ft, and 3ft, course, 6ft, and 3ft, and 3ft, course, 6ft, and 3ft, course, 6ft, and 3ft, course, 6ft, and 3ft, course, 6ft, and 3ft, course, 6ft, and 3ft, course, 6ft, and 3ft, course, 6ft, and 3ft, course, 6ft, and 3ft, course, 6ft, and 3ft, and 3ft, and 3ft, and 3ft, and 3ft, and 3ft, and 3ft, and 3ft, and 3ft,

TARANTELIA WRECKED.—Last Sunday the famous catamaren. Tarantela, was run down in the East River, off Per 37, by the steam yacht May. The parties on board, Mr. Fred. Huches, his wrice don, were fortunately rescued. The Tarentella was Wrecked to the tune of \$500.

THE CARPICE—In last week's opening cruise of the A. Y. C., the Coprice, Mr. David Williams, did some very fair saining. She was the last to clear the Narrows and turn the Spit, but came to, off the club house, with a good lead over Genia, Flying Cloud, Sansking, Kafser and Mab. This was not bud in view of her size. She has been overhauled and so much improved that even old hands failed to recognize her.

YACHT AND BOAT SAILING.

BY DIXON KEMP.

Second Edition. London Field Office.

Second Edition. London Field Office.

THE indiprements which the excellent works of Mr. Dixon Kenny have received at the hands of the British press, both lay and professional, although of the most flattering kind, may be accepted more of less as a matter of course. The reputation of the authors as an expert and a closs and conscendrous student of the author of the most flattering kind, may be accepted more of less as a matter of course. The reputation of the author as an expert and a closs and conscendrous student of the author of the most flattering kind, may be accepted more of less as a matter of course. The reputation of the author was almost on conscission in the student of the author of the author was almost and conscription of yearlies in all their variety, and consequently the high praise bestowed upon his volumes, now so familiar to the yachting and literary public on both sides of the Altaniac, was atmost a foregone conclusion and the principles upon which much of the work has been lessed, has altereday received popular recognition in Europe, though they were certainly not as generally nor as thoroughly understood and appropriat, the authoritaritie indorsement resulting from a concise formulation of both the modern theory and practice of yacht design. But without the life, and everything and practice of yacht design. But was allowed and any and the reputation of the stude of a public opinion running at the time is roughly counter to the views put forth. It is for this reason that the verdict with which Mr. Kemp's books have been received in American in the life, and the life with the life, and a practice of the Altania, must be regarded as just so much more weighty and conclusive, as it has been less biased by any previous deposition to fall into a econd with the view canunciared, misses they could stand did into a cond with the view canunciared the day, and that the effect of his work can already be extensively traced in a modification of our customs and prejuction of the conditions of the same which and its more immediate applicability to vacht de-

science and its more immediate applicability to yacht de-cemoving from the olf-fashioned notions, ileas and vazaries at was untenable, irrational, erranous and mere traditional at was untenable, irrational, erranous and mere traditional form of the properties of the properties of the properties of an expectation of the properties of the properties of the anies and geometry underlying design, and which up to a studies and ensured the properties of the properties of the properties of the was supposed or the cough-mouth of other hard-listed in was supposed or the cough-mouth of other hard-listed be neighborhood of a slip yard. In effectually relieving white from the spell of the reign of ignorant bar-room or-ld time cobbb yard whose lightly drew inspiration from and the superclinous dict of burrow-unided hangues-on-old time cobbb yard whose lightly drew inspiration from the principles of design within the grasp of the multivade of reintelligent and wider range of comprehension, Mr. Kemp one very much-more indeed than any other man-to lift lessen from the environs of the gutter to a profession rank-ting many includes ago studies of reflex indertook to Impan-

e highest, by months ago sundry critics undertook to improve ge off the face of the earth by ridiculing it in some of withertons and their bufferous mixture of terms, the withertons, and their bufferous mixture of terms, the major of the state of the s to the seorn of a very limited audience as the They have even learned the meaning of many

terms and given in their adhesion to principles once the objects of their imporent wrath and a self-recoiling sourrillty worthy of a "sand-botter." Cha any author ask for stronger evidence of his success? To convince his most virulent opponents, men who for success? To convince his most virulent opponents, men who for success? To convince his most virulent opponents, men who for success? To convince his most virulent opponents, men who for success? To convince his most virulent opponents, men who for success? To convince his most virulent opponents, men who for success? To convince proof of the proselyting effect which has attended his efforts. But Mr. Kemp has, we imagine, much more welcome and colling roward in the balance of his ded to make a success of the proof of the prosent of the success of the proof of the proof of the proof of the proof of the proof of the proof of the lessons then received in all hult of the proof of the proof of the lessons then received in all hult of the proof of the proof of the lessons then received in all hult of the proof of the proof of the lessons then received in all hult of the proof of the proof of the lessons then received in all hult of the proof of the proof of the lessons then received in all hult of the proof of the proof of the lessons then received in all hult of the proof of

will stand the test of trial, and that "smatt" as our natural witern may be, it will produce self histor realists if we do not seem that the product of the sthem. The Alerts the Units, the Centre-board light draft the various cross breeds given in the book, with the first inchen hoats and the Irish model three-bonners and find the Irish model three-bonners and find the Units and find the Units and find the Units and find the Units and the Irish model three-bonners form in the Units and the Irish model that Irish model that Iris

sail to drive those fellows. Her hoist is only about 50 per cent. of her length on load line!

The closing chapters take up canocing. In Euglard this sport has almost been merged into yacht sailing, and our et no prione as coast-iron center-boards, complicated gover and heavy trug in such constructions. They are then no longer canoes, but virtually double-ended sailing boats, and must be very slow and longy under paddle, though they are said to stand a wonderful amount dix is the most replete of the kind, a sort of "linquie within for anything," und of itself is worth a good deal to have on the library shelf.

shelf.
In this brief review we have not been able to do the book full justice. Throughout it evinces so much care and such thoroughness in dotal that it will be a very long time before its handsome nees in dotal that it will be a very long time before its handsome into and valuable data, are ever superceded by another work of the same kind.

CLASSIFICATION WANTED-NOT HANDICAPS.

CLASSIFICATION WANTED—NOT HANDICAPS.

SOME of our contemporaries will do well not to get handleaus and time allowance mixed up. They are entirely different in nature, and one can never be substituted for the other, supposing for the moment that any such need or desire existed. A "handleap" is equivalent to weighting speci, in other worlding for the moment that any such need or desire existed. A "handleap" is equivalent to weighting speci, in other worlding excess of size, which is not a point of model. The idea that the former can be substituted for the latter is therefore untenable, and the proposition to do so ardses from a superficial concept, and the proposition to do so ardses from a superficial concept, and the proposition to do so ardses from a superficial concept, and the proposition to do so ardses from a superficial concept, and the proposition to do so ardses from a superficial concept, and the proposition to do so ardses from a superficial concept, when owners are willing to race under a penalty, but to imagine that my such feature could be permanently eigerated on the renigr rules of a click without driving away all entries, exhibits a familiarly with the requirements of rucing. It is altogether at variance with facts to assume that we need any stimulus to produce entries. Our regattos are well enough supported as it is, in of fact, year, published in this journal, will show. It is true that in individual instances the entries have not been so numerous as desired, owing to special causes and conditions, but it mediowance never was the cause of a secunt list of starters. No complaint If any doctoring be needed in the opinions of our contemporaries, we must ask them not to prescribe corn plasters for a toothagone, the New York V. C., is about to try a handleap for the caps driving the success, and if is common and the rule of the produce of the point of the point of the contemporaries, we must ask them not to prescribe corn plasters for a toothagone, the New York V. C., is about to try a handleap for

cough in Enginad. No one, however, should not one near turned thereby and jump to the conclusion that the philosophers abolished.

If an attempt were ever made to substitute bandienp altogether for time allowance, the club trying such an experiment might were not the first three properties of the control quackery and let a fleet grow up that can never be classed without resorting to time allowance?

BY BODINES

W

THIS was the way of it; but whether to lament or A applaud the undertaking, now that it is accomplished, becomes a matter for serious consideration.

H. and S., our two famous experts with the rod, had been fishing on Slate and Cedar runs, two tributaries of Pine Creek, Lycoming County, Pa. They returned flushed with success, and whispered slyly in my ear that troutand large ones, too-were abundant there. "O you must go, and lay out some of those old lunkers!" they said. H. was particularly clamorous for going, declar-ing he would gladly accompany me during the following week.

Well, the "following week" came, when I apprized H. of my readiness to start. To my surprise, and, when all his excuses had been named, my disgust, as well, "the streams were too low;" "the sign wasn't right;" "Brown said it would be just right on June 1st, and this was only May 27th;" and so on ad infinitum. I was facked ready for a start, and it mattered not to me whether the sign was in the navel or gizzard, nor what reason Brown had for saying trout would rise on the 1st of June and not on the 27th of May. I was ready, and go I would.

I looked about for other company, and struck Joe Now that was a lucky strike, for he proved to be the jolliest sort of a companion. Joe and I therefore took the State Line Railroad, leaving Elmira at 9.30 on Tuesday morning. We reached Lawrenceville two hours afterward, changed cars for Wellsboro, and changed there again for Antrim, at which mining village we arrived at 3 P.M. Now, the stage—a very dignified name for a well-worn "democrat wagon"-leaves Antrim at 1 P.M., going down Babb's Creek, and then follows Pine Creek to Jersey Shore. This was our route, so we telegraphed the driver to wait for us, which I am happy to chronicle he did with the utmost complacency and good humor.

The driver of this stage was not only an accommodating chap, but very convivial and communicative withal. He had just returned from Brazil, he informed us, where he had been working and starving on the railroad that s being constructed there. Said he found a chance to

"stowaway" in a steamer, by which means he reached home. This stage route offered him employment, so here he was to relate to us his experience.

"Any rattlesnakes" well, you just ber there is! See them?" said the driver, exhibiting a bunch of rattles, which he declared he had pulled from a snake's tail the day before, just as he was escaping from the road to the bushes. "But," he continued, "these snakes are no account alongside of them fellows what grown in Brazil. Gosh! I seen a bow constrictor there that measured clean twenty-two feet long. He belonged to a feller what kept a gin mill. He kept him in a long trough. The fellers used to come there to see him and take a drink at the same time. The blamed critter wouldn't eat but once a year, and then he'd fill himself so cussed full he couldn't do nothin' but sleep for the next six months. One day, when he waked up from one of his long snoozes, he looked around for sumthin' to eat. I was there and saw him. Just then the gin mill feller's boy, eight years old, cum runnin' out the house, got in front of that snake, and may be kicked to death with a musskeeter if he didn't swaller that boy quicker'n you could shu your off eye; he did, by hokey!"

"What did the proprietor do?" we inquired.
"Do? Why he dith't do a cussed thing! I shouted and hollered to him like a wild Injin that his snake had swallered his boy; told him to bring a knife and we'd cut the boy out of the durned snake's belly before he was suffocuted. But do you know that blasted cuss said he'd rather lose the boy than the snake. Durned if he didn't."

With such stories did our driver entertain us along the beautiful mountain road leading from Antrin to Brown's, sixteen miles away. We reached our destination at 6 p.M., and found Mrs. Brown at home, who soon prepared us supper and assigned us apartments in her confortable farmhouse. Just opposite her house, across Pine Creek, was seen the mouth of Cedar Run, which can be the beautifule, and the were impatient to try our flies over its surface. Having p

rme trensly my seen the mount of cedar run, which came turnbling down from somewhere among the mountains to the westward. The water looked clear, cool and inviting, so that we were impatient to try our flies over its surface. Having partaken of supper, donned our fishing suits and selected our casts for the evening, we waded across the large creek to the mouth of Cedar Run. There we cast our flies, causing them to settle upon the water in the most approved and fascinating manner. Joe was the first to make a capture.

"I've got him !" he cried.

"How large is he, Joe?"

"I hope to scream if it isn't a chub, and a blue-nosed one at that," he replied.

Just then I had a strike. He didn't behave very troutlike, so I brought him to the surface without delay—another chub. Then Joe caught a—chub. So did I. So did Joe. I another. Joe ditto. Then we quit, meditated, and went up stream further. Soon Joe caught from a beautful crystal pool, which was fed by a delightful little cascade that fell over a huge, mossy rock—just the nicest sort of an abode for a lively trout—a large and sprightly—chub.

sprightly—chub,
I circumnavigated them (Joe and the chub), and took

very promising pool higher up, where I made quite a tatisfactory cast, and landed the very first—horned dace hat had yet been captured. It now became a matter of nip and tuck" between Joe and I as to who should land "nip and tuck" between Joe and I as to who should land the most blue-nosed club and horned dace. We followed that run; the very run that H. and S. had gone into ecs-tassics over but two weeks before; the run they declared was "alive with trout—big ones, too." We followed it, I say, for more than a mile without even getting the re-motest glimpse of a single trout. We accordingly recled up our lines and retraced our steps toward Brown's, determining to try Slate Run, six miles below on the morrow.

steps toward Brown's, determining to try Slate Run, six miles below, on the morrow.

Mr. Brown being away with the only conveyance in the neighborhood, we inveigled a small boy, by sundry proffers of nickles, to wade the creek, walk a mile further below to where the stage put up for the night, and ask the driver to be so kind-hearted, and yet more obliging, by returning and conveying us to Slate Run. We were emboldened to this experiment because of the long wait he had made for us in the beginning of our acquaintance with him. Soon the boy returned, and shouted as he opened the gate:—

"All right; he'll be here at six o'clock in the morning."

"Bless me if that isn't the most obliging stage driver I "Bless me it that isn't the most obliging stage driver I ever struck," said Joe, as he sat on Brown's cosy veranda smoking a fragrant cigar and quizzing the madam as to how she happened to have located in such a wild country. We soon learned that the cause of our ill success in catching trout was entirely attributable to the fact that we had not gone far enough up the stream. "Go up as far as the dam and you will catch all you want," said Mrs. Brown."

far as the dain and you will catch all you want, Saled Mrs. Brown."

She then related to us how two lawyers from Wellsboro (how I wish I had taken their names) cane there a year ago, and brought four palisful of dressed trout from the pool under the dam,

"Caught them all on a fly?" queried Joo.

"No, sir; they caught them pricipally in a net," replied the madam.

Scarcely had we finished the delicious cup of coffee at

Scarcely had we finished the delicious cup of coffee at Mrs. Brown's breakfast tuble, next morning, ere we heard the shout of the stage driver without:—
"All aboard!"
All aboard!"
All aboard we quickly climbed, and were soon set down at the mouth of Slate Run. Here Mr. Tombs, a plump, jolly looking native of the Alleghanies, met and transported us and our baggage over the creek to his mansion at the mouth of the run mentioned.
"Any trout on this creek, Mr. Tombs!"
"Lots of 'em, sir; and rousers, too. Some chaps were here last week, and caught some whoppers below my dam. You can have fine sport here in the evening, if you know how to throw a fly."
"Glad to hear it; we will certainly try, Mr. Tombs,"

here last week, and caught some whoppers below my dam. You can have fine sport here in the evening, if you know how to throw a fly."

"Glad to hear it; we will certainly try, Mr. Tombs," we replied.

Slate Run proved to be a charming stream. Numerous smaller runs empty into it here and there, at the mouths of which heartiful cascades are seen playing over the most delightful mossy rocks that I had ever beheld. The ravines through which these little runs found their way were exquisitely decorated with mosses, ferns, violets, forget-me-nots and brilliant and fragrant azalias. I wandered in and among them, drinking in their fragrance and beauty, almost forgetting the rod in my hand. At the mouths of these streams, one or two fine trout were invariably taken, and at the "splash dam," four miles up, over forty fine fish rewarded my efforts at fly-casting. Joe, who expected to have joined me here for our nooning, he having taken another run, failed to put in an appearance at the appointed hour; so, according to a mutual understanding in case of tardiness of either party, I prepared my trout dinner. First, I built a fire on the beach, far enough away from grass or leaves to prevent communicating flames to the forest, and while this was burning to coals I dressed a few trout, salted and peppered them well, then rolled each trout in a piece of manilla paper, well smeared with butter. When a dozen had been so enveloped I placed them all in a solid pile and wrapped them snugly in a larger piece of the paper, then rolled the wad in a newspaper, and put the bundle to soak for five minutes in the creek. The woodpile having become a glowing bank of coals, I excavated a hole in the center of them with a long stick, and throw my wet budget of trout therein, hastily covering it with the glowing embers. My tin quart cup was now removed from the creek-strap, filled with water from the brook, and placed on the coals. I selected a shady, grassy spot on the bank, washed two flat stones for plates, placed my chunk of bread and butter

locan their careiess and seemingly anniess lights over the surface of the water.

About 4 o'clock I noticed a break in a pool under an overhanging limb from a great scraggly beach. Immediately I strapped on my creel, took my rod in hand, and started down the stream. A cast under the limb rewarded me with a ten inch trout, sleek and fat, who fought violently to free himself from the deceptive fly. Others were taken on my way down, until I reached Tomo's mansion, at 6 o'clock, with a creel well filled as a reward for the day's exertion.

After tea I succeeded in landing a twelve and thirteen inch trout from under Tomb's dam, and as the two beautiful fish lay upon the porch, where the woodsmen had assembled to admire them, many and varied were the stories that were told of the immense fellows that had been taken from that same pool in days gone by, "I saw a twenty-two incher taken there last season," said a native fisherman.

"With a fly?" I innocently inquired.

"Yes, sir-ee; and a awful splashin' and floppin' he made of it, too, before we got him ashore."

Just then a brawny woodchopper, who sat near me smoking his pipe, whispered in my ear:—

"Ask him how many hoops his fly had on."

Indeed, we had encountered that same fly in the narrow stream leading to the pool under the dam that very evening, and noticed with what care the channel had been dammed, so that not a fish of any sort could ascend the stream without becoming a prisoner in the next to entrap him. This, we note, is one of the means the natives have adopted for "protecting" the streams, offering but a slender inducement to angless to seek their haunts and spend money with them.

In the morning we sought and found passage upon a

wagon load of oats for Brown's and Cedar Rau. We started at 5 o'clock, while the air was fragrant with the perfume of the honeystickle and other wild flowers, and ringing with the melody of the wood robio, robin red-breast, lark and myriads of songsters, whose notes become so familiar to the bovers of nature. Bless me, what a delightful morning it was! Joo declared it to be well worth the journey, if only to inhibe the invigorating morning air while we enjoyed the rugged mountain scenery. The sun soon threw his radiant beams over the mountain top, then into the valley below, lighting upeach dewy grass blade with a sparkling brilliancy, only equalled by nature in this charming mood of hers. How every little violet and buttereup nodded and fairly laughed as the crystal dewdrop rolled from its petals to the grass below, giving yet another merry sparkle ero it hid from the threatening sun. How nimble and jolly secund the chipmunks, as they chased each other over the fences and disappeared into the stone piles with a merry chir-mr-rip so ur proximity grow threateningly near. All nature seemed to be in perfect accord, and no disturbing element was anywhere manifested. Even the crows plucked the farmer's young corn, unmindful of our approach, seemingly conscious that no malice could prevail in the farmer's boson at sight of their despoliation upon such a charming morning.

Reaching Brown's, who had returned since our last visit, his horse and buggy were employed to carry us up the precipitous mountain road to the dam on Cedar Run. In and about this dam we fished all day long, bringing many fine fish to creel, and dining sunptuously, as on the day before. At dark we fished in the pool below the down to rise to our flies during the day. At 9 o'clock we left the pool, entirely satisfied with the day's sport, and drove down the winding, rugged road toward our stopping place. Through the pale moonlight, which now and then appeared through the gathering, threatening clouds, we had glimpses of the valley, nearly a thousand f

guido as safely across the ford to his comfortable home. We had now accomplished two full days of angling, and, having taken an inventory of our feelings and desires, Joe and I concluded that we had had exercise enough, and if she certainly had in abundance. Therefore we sought transportation for Antrin.

And right here commenced our fromble. A circus was advertised to spread its tents in Wellsboro, twenty-seven miles distant, on the following day, and as a consequence every spring wagon on Pine Creek, for miles around, was engaged by the dwellers along the creek to take them to the show. So ta vehicle of any sort or description could be had at any price. While we were debating what to do in such an emergency, the denizens of the valley had commenced their migration to the distant village, that they might be there early in the morning to "see the show come in." Mrs. Brown and her niece had precimpted the horse and buggy which we had used during the day, and intended starting for the show grounds at 3 o'clock in the morning. At last a chap was found who was going to the show with a common farmer's wagon, without springs, and alone. He intended starting at 12 o'clock that very night, and Joe and I—blauned fools that we were—engaged to ride with him. At 1.30 o'clock, in the midst of a rain storm, that be nighted, show-struck plebeina drove up to the house and shouted for us to appear. We piled our begage and ourselves into his dirty farm wagon. Joe took a seat by the driver, while 1 occupied the rear of the long wagon. nighted, show-struck plebeian drove up to the house and shouted for us to appear. We piled our baggage and ourselves into his dirty farm wagon. Joe took a seat by the driver, while I occupied the rear of the long waged box (when to stood still long enough), seated on top of my well-filled leather bag. For the first mile it became an exciting and somewhat interesting contest—to Joe—between myself and the black bag, as to which should get on top of the other the greatest number of times in a given number of minutes. Joe professes to have kept tally, and flatters me by saying that I kept my end up pretty well, considering the opportunity I had. That bag had a way of getting from under me, when we struck a rocky spot in the road (which unhappily occurred every rod or two), that would have democalized a less determined spirit than mine. I could bear the pokes in my rocky spot in the road (which unhappiy occurred every rod or two), that would have demoralized a less deter-nined spirit than mine. I could bear the pokes in my ribs from the sides of the wagon, and even the curva-tures occasioned to my spine occasioned from the thump-lugs of the wagon's tail piece, for they scarcely over struck precisely the same spot; but this everlasting sit-fing down in identically the same place on the wagon bottom as the black bag shot from under me to find its determined position in the opposite end of the wagon, was, to say the least, lumiliating to one's feelings, and calculated to take the bottom out of the most spirited and olucky of individuals.

calculated to take the bottom out of the most spirited and plucky of individuals.

"But everything has an end." Never before was this saying so fully, so consciously, I might add, realized by me. And so came our ride to an end at last, for we reached Wellsboro at 9.30 in the morning—well, imagry, sleepy, footsore (Joe says the soreness isn't properly located) and fully persuaded that, rather than repeat the ride, we would risk our bodily comfort in the regions of the danned.

At this writing we are at home. I haven't seen Joe, but hear that if his stock of brandy and brown pamer.

but hear that if his stock of brandy and brown paper holds out he expects to be at his usual place of busines: in the course of

in the course of a week.

A singular story reaches me from the Pine Creek road,
that it seems to have rained trout along that route last
week. I do not pretend to account for the phenomenon,
but I do know that not a trout was to be found in either
of our creeks when we reached Wellsbore. And all this justifies my opening sentence

—The other day, when a flock of wild geese passed over Vir-ginla City, and wheeled in one of their circles, Otey, the long-bowman and "Lone Archer of the Sierra," sent a shaft manny them. It was a long shot, but it was well almed. It went whizzing through the air and penetrated one of the wings of a fiyer, caus-ng it to flutter and lose plac in the flock,—Sacramento Bes.

SPRING SHOOTING IN ILLINOIS.

THE guns have had a long quarantine across the mounted head of a soble stag, which has been as-ned to them as a post of honor. If they could only eak, they would no doubt tell me how weary they are their ignoble inactivity, how they long for their assured ratious to testify to the strength of their barspeak, they would no doubt tell me how weary they are of their ignoble inactivity, how they long for their necisured rations to testify to the strength of their barrels, and to extend again their noisy welcome to the returning hosts of the winged wanderers of rivers and musches. Their silent petition remains no longer unheeded; the latent enthusiasm of their master reawakens in its wonted force, and he gathers up at last his various implements of the sportsman's craft to equip himself for the coming holiday. He has anxiously watted for it for many a day, and he longs to listen again to the soft melodious drumming of the snipe, and to enjoy once more the delicious tremor which sets his nerves all vibrating, when the sound of the nlarmed cry of the flushed bird strikes his ear. rikes his ear.
It is, however, quite a long way to realize all of these

It is, however, quite a long way to realize all of these sunteipations. In the days of aud lang syne, a distance of a couple of hundred miles would have offered serious obstacles to a snipe shooting excursion. By help of our iron-bound highways distances have been marvelously lessened, and the swift locomotive almost rivals the winds in its speed. All inconveniences of old-fashion travel have likewise been blotted out, and the modern and control of the production of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduction of a fixed into a product of the sunterproduct of the sun palace car is but a transformation of a fixed into a moving panace car is but a transformation of a fixed into a moving home, which traverses day and night hundreds of miles, while its occupants enjoy a confortable night's rest. Such is now once more our own lot. The deeply-wooded hills around Lake Chautauqua soon fade into the distance; the level plains of Northern Ohio are crossed while we are soundly asleep, and by noon of next day the whole scenery has become entirely changed into the transformation as sever by which the rolling rearises of Conthe whole scenery has become entirely changed into the monotonous aspect by which the rolling prairies of Central Illinois are characterized. Severe competition has now brought railroads to such a standard of perfection that the majority are about equally good and afford all of the conveniences the most fastidious traveler could possibly exact. While this, however, is true in respect to passengers of the human species, the same can hardly be said in respect to their four-footed friends and companions who are in the case of the sportsman the most indispensable portion of his outfit. While sleeping and dining cars administered profusely to my own bodily wants, the rough and jarring floor of the baggage car had to substitute the comfortable home kenned of the poor animal in my charge, who patiently endures all possible hardships, as long as he imagines that they are indispensable preliminaries to an enjoyable shooting trip. There is certainly a sore need for a few common sense regulations, ships, as long as he imagines that they are indispensable ships, alsong as he imagines that they are indispensable preliminaries to an enjoyable shooting trip. There is cer-tainly a sore need for a few common sense regulations, which ought to govern the transportation of dogs on tainly a sore need for a tew common sense regulations, which ought to govern the transportation of dogs on railroads, since they are there the more liable to accidents than under other circumstance. As, however, matters stand at present, no uniform steps toward amelioration of the many complaints made in respect to dogs have been taken. They are left without any positive guarantees of their safety to the care of careless baggage masters, who, with few exceptions, are in no manner concerned about the comfort of the charges committed to their care, and charge on many roads purely arbitrary extortion fees. There are but a few isolated exceptions to this unwarranted mismanagement, and the Lake Shore and Michigan Southern is to my knowledge the only road which has devised a business-like programme by which to adjust this difficulty. While traveling on it, the owner of the dog is insured against all accidents and loss, while a peremptory stop is put to the wholesale extertions which are on most roads practiced by baggagemasters upon those whom circumstances place at their mercy. It would be well for many lines we could name, if they wish to increase their patronage, to adopt like wise the excellent rules made in this respect by the Lake Shore. It coats it is in the triffure sum of sevents. likewise the excellent rules made in this respect by the Lake Shore. It costs by it only the trifling sum of seventy-five cents to forward a dog the distance of more than 500 nules from Buffalo to Chicago. Over and above this signal reduction of average charges, a printed receipt is furnished which guarantees the owner in case of loss the payment of two hundred dollars, providing his property payment of two hundred dollars, providing his property can be proven to be worth the same, or even more, if he chooses to pay above these stipulated regular charges, By giving the baggage master a trilling fee to insure his good-will, and the kind treatment of the dog committed to his care, he is sure to find a coxy, warm, resting corner and sufficient water and food to make his journey as

and sufficient water and food to make his journey as countertable as circumstances admit. By payment of the usual extortion fees we landed at last, dog and all, at Chicago, which is in the midst of a sort of hunter's modern paradise, and though some grounds beyond it may be better than others, there is still an abundance of game along all of the roads leading from that city in any direction of the compass. Most of the river courses of the State offer excellent duck shooting, while also during fall and spring large bags of snipe are made on the immense tracts of adurual lands which fringo their shores. There is no doubt that the large armies of migratory water fowl which resort to the rivers and marshes of the middle belt of the United States follow chiefly two principal lighways of migratory travel. One of these is along the lowlands of the consists, where the shallow bays of the deeply indented shores afford an inexhaustible supply of food, while the other division takes its course along the towants of the coasts, where the smalow bays of the deeply indented shores afford an inexhaustible supply of food, while the other division takes its course along the great central artery of the continent, the Mississippi River. Thence they debouch into its innumerable adjoining marshes, bayous and confluents, which thus at proper seasons are literally swarming with water fow! of all kinds.

It is only a few hours of travel from Chicago to some of the lost pointer on the Ulirais Britan which countries or

It is only a few hours of travel from Chicago to some of the best points on the Illinois River, which empties at Peoria into the Mississippi. We left at 10 c'olock in the morning, and enjoyed the same day a comfortable aftermoon's shooting at the pleasantly situated town of Morris, where we obtained the first glimpse of the Illinois River. In the spring of the year, when its various feeders, the Fox, Des Plaines and Kankakee, are overflowing on account of the surplus of rains and melting shows, the Illinois River then truly ranks as a first-class water course. The beautiful valley along which it winds its way sometimes narrows and again widens until its bordering bluffs are often a couple of miles apart. As the immediate shores are low, they are subject to overflows, and are then converted into one vast sheet of water, which has thus, here and there, the appearance of a large lake, rather than that of a river with well defined shores,

There are also many islands dotting its surface. They have undoubtedly been converted into such from a former peninsular condition by the creding power of runing water, which finds no obstacle for new channels during high floods in the soft and yielding nature of the soil through which it flows. They are mostly deeply wooded, and fringed with a heavy growth of willows, in virtue of which, particularly when overflooded, they ofter the most tempting feeding and roosting grounds possible to thousands upon thousands of wild duck and geese, on their passage North or South.

Notwithstanding this great abundance of game, there

their passage North or South.

Notwithstanding this great abundance of game, there are well defined times of the year when they are in full light only, and during spring, even from the 25th of March to the 10th of April, the sportsman is apt to find the ducks gradually disappearing, and the snipe but sparsely arriving. The former come here in heavy flocks about the 5th of March, and from that time until the latter end of the month the sport is at its height. Toward the beginning of April, however, their ranks are getting thinned, and large bags of what are here called big ducks are no longer made. Where fifty mallards or more are in the beginning—a by no means surprising result of a day's sport—a dozen later on is all that can be reasonably expected from an average day's shooting. The in the beginning—a by no means surprising result of a day's sport—a dozen later on is all that can be reasonably expected from an average day's shooting. The weather is in the meantime still backward, and the snipe, which would more than compensate for the falling off of the big game, have not yet arrived to fill the gap. It is fair to assert, in regard to Central and Northern II-linois, that heavy snipe shooting can hardly be expected before the 15th of April. It is true that these birds often arrive as early as the latter end of March, but they are then merely the advance guard of the main body of the great army, which does not move until green streaks of vegetation variegate the monotonous aspect of the yellow and brown fringes of the river bottoms. The first comers are, overmore, very wild and in poor condition. They will not hie well before the dog, and often rise at distances of over fifty yards or more, since they have not settled down to their proper feeding grounds, where later on they lie often close enough to bear approach within a few feet. In some of these respects they do probably not differ essentially from many other migratory species like the robin, whose cheery song may be heard very early in March, though in Western New York at least the main body of these birds do not arrive until the beginning of April. The strongest, hardliest and most venturesome flyers arrive generally a few weeks in advance, and these are mostly, if not exclusively, composed of males. That such is the case in respect to many ducks is borne out by the testimony of the first receipts of the season in the ermon markets, which often display in early Ratch assorterms and the such as the such is the case in respect to many ducks is borne out by the testimony of the first receipts of the season in the ermon markets, which often display in early Ratch assorterms.

are mostly, if not exclusively, composed of males. That such is the case in respect to many ducks is borne out by the testimony of the first receipts of the season in the game markets, which often display in early March assortments of hundreds of male mallards, the fine plumage of which would support the assumption that they are old birds, well qualified to endure long flights.

Arrived at Morris' unfortunately about the time when many of the ducks had come and gone, and when snipe still luxuriated along the warm, food-teeming marshes of the southern part of the State. Where in the latter end of April bags of a hundred or even more could have been made in a single day, half a dozen or so was now meager reward for a long tramp along as beautiful and tenning grounds as any sportsman could wish for. It meager reward for a long tramp along as beautiful and tempting grounds as any sportsman could wish for. It is, however, but a short distance from there to Henry, Marshall County, which is one of the most famous duck localities of the State, and thither, to make up for disap-pointments in snipe, we wended next our way. But a few miles beyond that place is Chillicothe, where there are mysbyle and suring more ducks shipmed for the few miles beyond that place is Chillicothe, where there are probably each spring more ducks shipped for the Chicago market than from any point along the whole reage of the great game grounds east of the Mississippi. It seems to me that some restrictive laws should be passed to stop the immense shaughter hands here by professional market hunters. As long as it is cold the game shaughtered by these destroyers reaches the great inctropolitan markets in tolerably fair condition, but when a spell of warm weather intervenes hundreds of ducks become spoiled and are thrown into dung carts like so much putrid offal. The game dealer himself realizes no profits from a truffe subject to uncertainties of the weather, and thus in the nature of things pays prices far below the actual value which game as an article of choice food should command.

The market therefore becomes overstocked; tainted and few miles be are probably

The market therefore becomes overstocked; tainted and The market therefore becomes overslocked; tainted and fresh ducks are all mixed up indiscriminately, and sold finally at great losses to get rid of them. All this could be altered if properly enforced laws did not permit their killing after the 1st of April. The continually increasing destruction wrought evermore upon them by professional loafers can lead in the long run only to their final extermination. The efficiency of firearns is now, overmore, much in advance of old-fashioned tools, and an army of pot-hunters armed with them now lines the whole length of the Illinois River, where formerly hardly a shot disturbed the flocks of passing ducks, which are now decimated in the most reckless manner.

The amount of have inflicted upon them may be estimated by a single illustration. I was, while at Henry, assured on good authority that a party of from eleven to thirteen market hunters stationed at Chillicothe never mated by a single illustration. I was, while at Henry, assured on good authority that a party of from eleven to thirteen market hunters stationed at Chillicothe never averaged less for three weeks in early spring than 800 ducks each day. This is only one point of many, although probably one of the best, and the destruction of wild ducks will go on for some year and the extraction of wild ducks will go on for some year and the extraction of wild ducks will go on for some year and the extraction of ready fast disappearing. Henry is still at present a coxy corner for a sportsman. The accommodations which are to be had there at the Paskell House unsurpassed by any in the State outside of the large cities, while its bill of fare rivals in excellence that age cities, while its bill of fare rivals in excellence that age cities, while its bill of fare rivals in excellence that age cities, while its bill of fare rivals in excellence that of the best kept hotels in the proper season, and the conforts of life may thus be enjoyed conjointly with the delights of excellent shooting. There are naturally quite a number of numers living in and about that town. The most of them, however, make duck hunting their only specialty, as they find a ready market for their game; and although the prices paid for it are only nominal, they soon swell into respectable figures on account of the large bags, which even the most nakelled tyro can make. A couple of daza of cavass backs or mallards are frequently shot which even the most and nobody seems to consider it worth while to common on such every-day occurrences. Smaller ducks are hold in still lower esteem, and rank about the same among game as perch does in comparison with black bass. Canvas backs will often visit this locality in great numbers, and us many asseventy-five have been known to be bagged by a single gun in one day. It is dut natural that such circumstances give rise to perfection in all of the outfits necessary to the duck hunters' craft, particularly in respect to boats. While bere we had the loan of one designed and built by Mr. Doty, an ardent and true sportsman, as evidenced by his being one of the few resident subscribers to Forrers and Stream; as well as a most accomplished shot. The excellence of his boats, designed and built by himself, seems to doserve here a few passing comments. Their lower half consists of zinc, which admirably combines lightness with absolute tightness, and to it are joined firmly the upper parts of pine wood. Having sharp stems and steems tapering off in long symmetrical lines, they cut the water like an arrow, while their broad beam renders shooting as steady as on terra him.

hims. When there is no fear of capsizing, as so frequently happens in cranky skiffs, the sense of confort and enjoyment becomes complete, since the labor of rowing them is reduced to a minimum on account of the lightness

and structure.

The great first flights of mallards and canvas backs had already gone northward when I arrived, and the principal shooting was confined to the smaller species, which are considered here of little or no consequence. The principal bulk of them consisted of taffed duck, alias broadies, blue and green-winged teal, the redhead, with a slight sprinkling of shovelers, widgeons, blue bills, wood ducks and whistlers. A few mallards appeared to be lingering still, and llocks of twenty or more were often flushed from near the margins of the many densely wooded and now overflooded islands which do the surface of the river. They would, however, decoy only exceptionally, probably by having gained from experience sufficient wisdom to avoid lurking danger.

We carried, on this occasion, as well as on many other previous excursions, a twelve guage Fox gun, with which, though light and insignificant looking alongside of the tan bore guns used here universally, I succeeded in making as long shots at the heavily feathered ducks as the possibly be expected from guns of far heavier attrument for more than three years, and all flightly in the control of the control

FRASER RIVER SALMON

BY MOWITCH-NO II

THE general opinion exists that these salmon die THE general opinion exists that these salmon die after spawning, prior to their return to the see, My convictions are that this opinion, although strongly defended, is entirely an erroneous one, not supported by sufficient data or proof to establish its correctness. Lam free to admit that a large number of salmon never return to the sea, and indeed the immense number found dead and in a dying condition in so many streams is an abundant evidence of this fact, but I contend that this circumstance is simply and wholly the result of natural causes, and not owing in the slightest degree to any inability to return to salt water. The facts of the case may be set forth as follows: From the time the fish leaves the ocean till it returns to it, no food or sustenance is taken (a fact proved beyond dispute), and on its way. causes, and not owing in the slightest degree to any inability to return to salt water. The facts of the case may be set forth as follows: From the time the fish leaves the ocean till it returns to it, no food or sustenance is taken (a fact proved beyond dispute), and on its way to the spawning beds its contact with rocks, gravel and other hard substances bruises and mains it from head to tail. In many instances you will see fish so lacerated and torn as to cause wouder that a fish in such a mutilated condition could make headway in still water, much less in continuing its course through the rough and rapid current encountered in the Fraser at almost every place fifty miles above its mouth. Then the spawning process is a great tax upon the physical powers of all ish, and indeed the same may be said to hold good as regards the act of reproducing their kind upon all animals, leaving them weak and helpless for the time being. Those persons that may have had the pleasures of ily-fishing accorded to them can not have failed to notice the difference between a salmon fresh from the sea and a kelt on a rod. Besides, this fresh water has, so to speak, a softening influence upon the flesh of salmon, destroying in some degree the muscular powers of the fish's body, and this to an appreciable and noticeable extent. Now the whole may be summed up in a very few words; The salmon who started from the sea full of health and vigor, strong in the body and strong in purpose, after many weary days, weeks, and in some cases months, of ceaseless toil wending its way up cataracts, rapids and falls, making leaps, and exercising powers that no other fish is capable of, bent upon the one sole purpose of depositing its ova in proper situations to enable the unerring laws of nature to be carried out, during the whole period taking no food to supply the wasting tissues strained to their utmost extent, finds itself sometimes hundred of miles away from its normal element, the wide ocean, emacaited, wasted, had with the salmon success mention birds of prey, such as gulls, crows, ravens, buzzards, eagles, etc., become so surfeited as to be almost unable to ity. The settler's pig, if not securely penned, takes a hand in the free lunch so generously spread, and if he does not save, certainly he spoils his bacon, as nothing is more nauseous than fishy pork, which evolves, during the process of cooking, an effluviam, to use a homely simile," that would divive the dogs out of a tan yard." In autumn the banks of almost all the salmon streams are lined to such an extent with dead and dying salmon and the air is polluted to such a degree as to almost make one swear to abjure salmon diet as rigidly as a Musselman does pork. Unquestionably those salmon that retain sufficient vital powers to enable them to return to the sea invariably do so, and this circumstance that came under my own observation goes a long way to establish the correctness of my views.

One autumn—during the month of October, if my recollection serves me right—the various creeks emptying into Burrard Inlet, an arm of the sea on the Gulf of Georgia, owing to the protracted drought were so low that salmon could not ascend them at the customary period of spawning. The inlet was fairly alive with salmon, most of them with their ova in a very advanced condition, fully ready for deposit—in some cases so ripe as to freely exude from the lish upon the slightest pressure.

that salmon could not ascend them at the customary period of spawning. The inlet was fairly alive with salmon, most of them with their ova in a very advanced condition, fully ready for deposit—in some cases so ripe as to freely exude from the lish upon the slightest pressure. This state of affairs lasted for many days, and was the occasion of an occurrence that never took place during my residence on Burrard Inlet—a period of nine years—except this one year. A small fresh water pond, fed by the waste of a nill flune, was used for the purpose of storing saw-lose till wanted for use at the saw-mill, a half a nile or so below, when the logs were removed from the point of the purpose of storing saw-lose till wanted for use at the saw-mill, a half a nile or so below, when the logs were removed from the point was made by running a dam according to the point of the point of the point of tides at that particular season of the year. The salmon, driven to extremity, made use of the point by leaping the gate and depositing their ova, after which they leaped the gate back into salt water, and none remained in the pond, which was proved in this way: The water escaped, owing to a break, about ten days or a fortnight afterward, leaving the pond dry, but no salmon were there, while large quantities of ova were visible at the upper end of the pond, the bottom of which was gravel to some extent. Now, were the former theory the true one, why did they not romain and die? I saw an Indian one morning in less than three hours each over thirty salmon, gating them with a codish hook fastened to the end of a twelve or fourteen foot pole, at the foot of this dam; so it will be seen I am not drawing conclusions

from an isolated or small number of cases. The necessity for using this pond occurred only for one season, and never have I known a salmon before or since to use the pond in question for spawning.

1 believe that salmon return to the river of their nativity (perhaps not the particular tributary, but the main river) to spawn. In support of this I think it worthy of mention that each river has its own kind of salmon. These are peculiar to itself alone, and these scaly gentlemen never seem to make a mistake, and go up the wrong one, as salmon that are peculiar to one river are each season of spawning to be found in such river, and in it alone. Sulmo quinnat has never been seen in the Fraser, nor a suckeye in the Columbia. Some varieties spawn each year, others every alternate one. No disease has been observed in the salmon of this river beyond the mainned and diseased condition as above mentioned, caused by bruises and laceration. No parasites are attached to them after a few thays sejourn in fresh water. Salmon in the sea, and for a few days after entering the rivers, are sometimes infested with a parasite locally known as salmon lice, but these die and become detached shortly after being brought into contact with fresh water.

Their only natural enemy in fresh water is the leopard seal. These animals are few in number, and rarely ascend above tical waters, so it might be said that the salmon, when once started on its upward journey, is free from enemies other than the genus homo, ranging from Mr. Lo—who with his primitive appliances seeks to secure enough for present use, and to ensure food for himself and family during next winter—to the canacry proprietor, who uses overy endeavor to outive his neighbor, and put up at least one thousand cases of forty-eight canse each during each dury of the salmon season. Some idea of their immense numbers may be derived from this. One fisherman of my acquaintance caught with a drift net, one hundred fathoms in length, eight hundred and fifty-three salmon on a ten hours' shift

CAPE MAY WARBLER (D. Tigrina).—A specimen of this extremely rare Dendrocca was obtained here yesterday. I send it to you that savant ornithologists may, if they desire, hold an inquest as to identity. I have not hitherto met this beautiful and rare bird any where in this Province. American naturalists seem to know little of its habits or migratory movements. Samuels says of it: "This bird is so exceedingly rare in New England that it can be regarded as a straggler. Of its habits I know nothing, and I can give no description of its nests and eggs." May this pretty stranger be regarded as new, and recorded an addition to our Quebee fauna? I think so. J.N. Quebee Morning Chronicle.

Maynard records having found this beautiful little warbler inhabiting the large coniferous forests of Maine, but we do not remember before hearing of its presence so far north as Quebec,

Do Snakes Hiss?—Richmond, Va., May 21st.—The belief is almost universal that snakes hiss. The "hissing serpent" is almost as common a phrase as the "unierring rifle;" and yet I am by no means sure that screpents ever biss, and am certain that rifles are never unerring. In my younger days I kept several varieties of snakes in my room for months continuously, and have been more than usually intimate with the snakes indigenous to this latitude, but have never heard one his, and do not think that I ever met a man who would affirm that he himself had heard them hiss. It may be thought sacrilegious to cast a doubt upon such a time-honored belief, but I should like to know the truth.

ENGUREE.

We certainly have always believed that some species of snakes hiss—Heterodon platyrhinos, for example; but should be glad to have the question here raised decided by the observations of the many field naturalists among our readers.

among our readers.

A CURIOUS ACCIDENT.—While out trout fishing in May, my friend M. and myself observed a very curious accident in nature. A song sparrow (*Melospica melodia*), in trying to fasten a horse hair for her nest, one end of which was imbedded in the soft ground, got the other around her neck in a way that it formed a running noose, and when we saw her first she was making framic efforts to free herself, every one of which only served to tighten the noose around the poor bird's neck. We caught her and took off the hair, for which service she was apparently very thankful. We made an examination of the hair and found that the whole thing was an accident and not the trick of some country boy, as we at first supposed.

Elmira, N. I,

Elmira, N. Y.

Lannean Society.—The Linnean Society on May 15th dissolved for the summer, to meet again probably in October or November. Among papers read at the later meetings were the following: One by Mr. S. D. Osborne on the Fringillida which breed on Long Island, Eighteen species were given, though of a few the nest had not actually been taken. In this category occurred the names of the savanna sparrow (Passeroulus Saudvicensis), black throated bunting (Spizz americana) and rose-breasted grosbeak (Goniopheu Indoviciana). The most common breeding sparrow, at least along the south side of the island, was stated to be (Poweles grannineus,) the vesper sparrow, though both species of Ammodratus were also characterized as abundant breeders. The breeding season of the sharp-lailed finch, however, commenced earlier and continued much later than that of the seaside. A nest of the purple finch was recorded as having been taken at Bayside by Mr. Pearsall, and several recent nests of the Cardinal grosbeak (Cardinals grighianus), from Staten Island, were mustioned, August 18th was given as a late due for fresh eggs of the goldfinch (Astragalinus tristis.) Mr. H. B. Bailey gave some interesting facts about our common snowbird

(Junco). The species was considered both on its mightion and in its summer home.

About the Umbagog region in Maine, eggs of the first brood are usually laid about the last of May, though sometimes the young, which are not ordinarily hatched until the first week in June, are to be found at the same time. Most of the members agreed with Mr. Bailey in accrediting this bird with greater vocal powers than usually seem to be recognized. Mr. L. S. Foster called attention to some of the skeletal characteristics of the night heron (Nyeliardea grisca newia), as exemplified in a complete skeleton discovered near the shore at Rockaway. This skeleton was found lodged in a bush, and the extensive ossification subtending the compound fractions.

attention to some of the skeletal characteristics of the might heron (Nyeliardea grisea mavia), as exemplified in a complete skeleton discovered near the shore at Rockaway. This skeleton was found oldged in a bush, and the extensive ossification subtending the compound fracture of the humerus—from which death had evidently resulted—indicated a lingering death of perhaps a month, and the strenuous efforts of nature to right itself. A letter of Mr. Franklin Benner, Minneapolis, Minn. under date of April 14th, treated at some length of certification of certification of the matters in that quarter. Waxwings had been about for two months past, and were of very domestic habits, searching for their food about the city door yards and in the vicinity of dwellings. The majority of those which had been taken were conspicuous for the dullness of their plumage, and often the entire absence of the waxen appendages to the secondaries,—Mr. Chas Earle gave a list of birds which had observed near Lake Ronkonkoma, L. I. The sooty term was recorded, and also a specimen of the lark-finch (Chondestes grammacca), new to the island, and adding another record to the increasing list of its eastern occurrences. This bird was taken August 20th, 1870. A paper by Mr. R. T. Morris, on the entozoa of man, treated of some of the internal parasites of which man forms the involuntary host. Characteristic traits were discussed, results of their presence alluded to, and the main points of the varied cycle of existence of some species traced.

Mr. W. C. Weckoff made some remarks on our fiddler

species traced.

Mr. W. C. Wyckoff made some remarks on our fiddler

Mr. W. C. Wyckoff made some remarks on our fiddler crabs, evincing careful observation of their habits—some of which indicated a high degree of intelligence. Protective minnicry in some of the more marked features of their coloration was also shown.

Mr. E. P. Bicknell read a paper on the floral family Violucces, as represented in our northern suburbs. Nine species and two varities of violets were enumerated, with remarks upon their habits, characteristics and relative abundance. Mr. Bicknell also gave a list of the arrival of the birds this season, with remarks thereon.

In this it was shown that in general the arrivals had been early, in some instances unusually so.

Insect Pests in Virginia.—Blacksburg, Va., May 20th.—Editor Forest and Stream:—The timber near this place is suffering serious damage from the attacks of the common May bug (Melontha vutgaris). The multitude of them is attonishing, and the roaring noise of their wings resembles a rising wind storm. They feed only at night, and remain securely hidden by day. They prefer the white oak, but attack also other species of oak, chestnut, and even the black walnut. Ash, maple, elm and other trees seem to be exempt. There are many superb specimens of the white oak scattered over the grounds of the Virginia Agricultural College here, upon which at this moment not a single green leaf is left. Several of the finest of them suffered last year, and were partly killed. It seems impossible that they can again ally. Whole belts of trees in the surrounding forest are completely demuded of foliage. It appears to me serious mischief is threatened, and I have never seen anything of the sort elsewhere. I cannot discover that any enemy is likely to seriously check these beetles. The crows, of which there are only a few here, feed on them chiefly during the spring months. The crow black birds are not here in sufficient numbers to do material good. The common flicker (Colaptes awardus) is an expert in getting them out of the grass, but flickers are few; foxes eat them; sequirels fatter on them, and doubtless other common micker (cotaptes dariaus) is an expert ingectual them out of the grass, but flickers are few; foxes eat them; squirreds fatten on them, and doubtless often birds and rodents help more or less, but none or all of these are capable of doing much good. Man appears to be a helpless looker on, who can do nothing, and does not know what to expect. What say those acquainted with bug-ology? M. G. ELLZEY.

This beetle (Lachnosterna quercina), though seldom sufficiently numerous to do very serious injury, as in the present case, certainly deserves the attention of entomologists. In the Middle States the skunk is one of its most persistent enemies, and destroys great numbers of the larvæ by digging them out of the ground, should be glad to hear from entomologists on the subject.

ARIVALS RECEIVED AT CENTRAL PARK MENEGERIE FOR WEEK ARIVAIS RECEIVED AT CENTILAL PARK MENDGERIE FOR WEEK ENDING JUNE FRIL—One Brazillam monkey (Cebus capacious) presented by Mr. B. Warren Barlow. Four brown monkeys (Cebus Attaelluo), purchased. Two black bear cubs and two young foxes, presented by Major-General Daniel E. Sickles, U. S. A. One crow (Cercus americanus) presented by Mr. P. Jacckles. One red squirrel (Scieturis habeomics, presented by Master John S. Ascough. Two scarlet tamagers (Puranga rubra. One bobolink (Dalehonie), torgarran. One red-breasted grosoback (Hodjundies adosicianus). One hawfinel (Cocothraustes whydras). One toucan Ramphastos ariel). All purchased.

V. A. Conklin, Director.

NOTES AND QUERIES.

"SHAWANGUNK,"—Poughkeepsie, N. Y., May 20th.—Editor Forest and Stream:—Mr. P. C. Plaisted's 'intelligent Indian," in Forest AND STREAM of May 27th, could know but little of the meaning or appropriateness of the name "Shawangunk," if he said it signified "povernor!" Forty years and more agone, I wed in plain view of the shining sides of "Shawangunk Mountains," and the old citizens, whose memory went back to the time of the burning of Wawasing and other Indian attractics, always gave the meaning of Wawangunk." (uronnuneal by them "Shangung as 2011). ing of "Shawangunk," (pronounced by them "Shongum) as Shining of "Shawangunk," (pronounced by them "Shongum) as Sun-ing Rocks. Certainly no name could be more appropriate, for the smooth faces of the bare rocks, in many places, shone in the sun-light like glistening ice, at a distance of several miles. The sight man could make a book of intense interest by writing up the facts and legends connected with the Shawangunk Mountains. Ju-dians, Dutch, French and English, have each by turns possessed the valley, and were often in deadly conflict. 5 J. H. D.

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN,

VI.

THE first thing which the visitor to the Exhibition notices is the great number of things which are produced in the water besides the fish themselves, and the number of articles used in the fisheries of whose the number of articles used in the fisheries of whose previous existence he has been entirely ignorant. This was well shown by the mingled pleasure and astonishment with which an English fisherman viewed the "woolen nippers" in use among our fisherment for gripping the line when hauling in, and suggesting contort in handling a heavy wet cod line in cold weather. No doubt they will hasten to use so simple a contrivance, and others will wonder, as they did, that they never thought of it before, while some Norwegian fishermen viewed a harpoon-gun with admiration, evidently seeing the iron bolt sink through the blubber and into the vitals of leviathan. leviathan.
The ladies are much interested in the American display

the iron bolt sink through the blubber and into the vitals of leviathan.

The ladies are much interested in the American display of furs, prominent among which are the skins of the sea-otter, Enhydra marina, and the fur-seal. Calthrhims uranus. The latter is shown in three stages, viz.: the raw dried skin with its long, rough hair entirely concealing the fur beneath; the plucked and dressed skin, showing the tawny fur and the dyed article as worn by the ladies, and, by the way, it is but little worn by German ladies, who dress neatly but not extravagantly, and do not seem to worry the life out of a husband of moderate means for a three hundred dollar seal skin. Not that your correspondent knows of any ladies who have or might do so, still we cannot say what might be done among savage nations where love, of finery is carried to excess. The seal fisheries of Alaska are illustrated by a series of water color sketches by Mr. Henry W. Elliott, five in number, respectively entitled; "The Fur Seal Rookery at Reef Point." showing the herd on the breeding grounds, the old bulls with their cows, each occupying their own positions; "Gathering the Drive," seal drovers selecting the animals from the herd for the day's slaughter on Zoltoi Sands, one of the twelve hauling grounds of the fur seal on St. Paul's Island, Alaska; "The Drive in Motion," seals being driven up to the slaughtering field near the settlement, St. Paul's Island; "The Killing Field," matives slaughtering the breeding season (in the first picture named they seem to number hundreds of thousands, stretching as far over to manner hundreds of thousands, stretching as far over to mamber hundreds of thousands, stretching as far over to mamber hundreds of thousands, stretching as far over to mamber hundreds of thousands, stretching as far over to mamber hundreds of thousands, stretching as far over to mamber hundreds of thousands, stretching as far over the slaughter to the stretching as far over the slaughter to the stretching as far over the slaughter to the st pictures give not only an idea of the limense numbers of the scale which gather at the islands during the breeding season (in the first picture named they seem to number bundreds of thousands, stretching as far over the rocks as the cye can reach), but also show how the herd is cared for and the proper animals selected for killing and the herd kept up to its proper breeding capacity by the "Alnska Commercial Company" of San Francisco, no more being killed than both the herd and the market will bear, although to all appearances, judging from the immense numbers in Mr. Elliott's excellent pictures, the herd could stand an enormous draft without seriously diminishing its future crop, and one is tempted to conclude that the market has more to do with the number of pelts taken than any other consideration, and we poor fishermen and scribblers, who long more to see our better halves arrayed in the warm and dressy seal skins than our blessed partners themselves do, wish that we could take a hand in the killing and skinning for half a day in order that the domestic Christmas tree might bear

we could take a hand in the killing and skinning for half a day in order that the domestic Christmas tree might bear another fruit which would not only warmly wrap a beloved form, but also cause wondering remarks behind the closed blinds over the way as to its possible genuineness and probable cost.

A series of maps illustrating the range of some of the favorite American fishes and the fishing grounds, prepared by Prof. G. Brown Goode, hang in the hallways and are so well done as to excite (best of all commendation) the attention and favorable comment of the few men who are able to appreciate their value and the thoroughness with which this work is done. The maps are arranged as follows:—

are arranged as follows :-

No. I. Provisional map showing geographical distribution of tishes of the salmon family in the Eastern United States. No. 2. Provisional map showing the geographical distribution of the cod (Gadus morrhum), and the locations of the fishing

Also a relief model of the off-shore banks of the United States, showing the contours, shaded in colors, to the depth of 2,800 fathoms, prepared for the United States Fish Commission by Mr. C. Lindenkohl, together with some interesting fish cultural charts, which will be mentioned under the proper head, a collection of charts used by fishermen, exhibited in the collection of the United States Coast Survey and the Hydrographic Office, and likewise the more popular "Eldridge Charts," published by S. Thaxter & Son, Boston.

The heats and medels of bosts sent by Apparica are re-

likewise the more popular "Eldridge Charts," published by S. Thaxter & Son, Boston.

The boats and models of boats sent by America are remarkable for their clean cut and evident ability to sail as far in a given time as possible, and the sea-going qualities of the famous "dory" are much discussed, the wouder being that it is a good boat to sail in and yet has no keel, something which your correspondent does not un-

derstand, but which seems plain enough to Capt. Collins, derstand, but which seems pian enough to Capt. Comms, the representative American fisherman of the stat!, who of course knows all about it; and then there is the fact that two or three persons have sailed from America to Europe in them, which not only illustrates the seaworthiness of the boax, but also nost beautifully shows the great care which Providence exercises over the lives of fools. There are six dories, with complete rigs for the different kinds of fishing. Here they are, as rigged by Caut. Collins:— Capt. Collins:

apt. Collins:—
No. 1. Rigged for hand-lining on the Banks, sixteen ound anchor, with twenty fathoms of line; one pair light foot oars; two hand-lines on reels, with gear attached, each twenty-five fathoms long, with leads of three pounds; bait bucket and board, spare hooks, two squid lines with jigs, two bird lines with hooks, shark lance, water jugs, etc. Length of boat, twelve and a

lance, water jugs, etc. Lengua o. half feet.
No. 2. Thirteen feet long; used in Gloucester for winhalf feet.

No. 2. Thirteen feet long; used in Gloucester for winter fishing for cod; rigged for shore trawling and handlining with a tub of trawl line; ground line, 1,775 feet of fourteen pound tarred cotton line; 500 No. 15 hooks, three and a half feet apart on ground line; gangings two feet long, of cotton line (thirty threads); trawl buoys, etc.; sail, eleven feet on foot, nine feet hoist, five feet head.

No. 3. Fourteen 5.

etc.; Sall, eleven feet on toot, filme feet hous, ave see head.

No. 3. Fourteen feet long; rigged for mackerel seining; four lines, each two and a half feet long; through holes in ribbon on starboard side, used to fasten the seine.

No. 4. Fourteen and a half feet long; rigged for haddock fishing. This style is strongly built, and more adapted for carrying large loads than for speed, They are built wider and deeper than the fifteen foot "Bank dory," and are used almost exclusively for winter fishing, catching haddock, and after picking fish from trawls and loading the dory, the vessel theu goes to the dory, consequently speed gives place to carrying capacity and sea-going qualities. Rigged with a tub of trawl line; ground line, 1,755 feet of fourteen pound tarred cotton; 560 No. 15 hooks, three and a half feet spart on gaugings two feet long.

500 No. 15 hooks, three and a half feet apart on gangings two feet long.
No. 5. Fifteen feet long; the "Bank dory" used in halibut fishing, and rigged for the same; built more for speed and ease of rowing, for in this fishery the vessels anchor, and the dories have to be loaded and rowed, often for miles. Patent "burdy-gurdy" windlass for trawl, with patent trawl roller, large size, single score, line attached; mast hole in forward thwart; mast, fitteen feet long; sail, fourteen feet on foot, six feet on head, thirteen feet hoist; ground line made of fifteen lines, twenty-five fathoms each, equalling 2.350 feet thirty-two pound tarred cotton line; 150 No. 6.338 "Kirby" halibut hooks, fifteen feet apart on ground line, amonings five feet long; two sixteen pound trawl am "Alroy" hallott hooks, fitteen rest apart on ground mas, gangings five feet long; two sixteen pound trawl anchors, buoys, etc.

No. 6. A style of dory built in America and builtile

No. 6. A style of dory butter in anteries and out attending tweet there, being shipped in large numbers to the French fishermen at St. Pierre, Miquelon. This is fifteen and a half feet long, and of the same depth and width as the haddock dory, very strong, the timbers being heavier and more numerous than those preferred by the Americans. Rigged for cod trawling.

The National Museum exhibits birch bark canoes, wooden canoes, kyaks, nminks and other Indian boats, wooden canoes, kyaks, nminks and other Indian boats,

cans. Higged for God trawning.

The National Museum exhibits birch bark canoes, wooden canoes, kyaks, uniaks and other Indian boats, perhaps the most curious of which is a round skin boat of the Hidatza (Gros Ventres) Indians, from Fort Buford, Dakota, collected by Dr. W. Matthews, U. S. A. This is a frame of twigs or roots, over which is stretched a buffalo skin, making a tub-shaped affair about five feel in diameter and perhaps two feet deep. This is curious, because it so closely resembles the Welsh "coracles," exhibited in the English department, the only difference being that in the latter the frame is of split slats, and the covering is of canvas; still it is said that these latter are but imitations of the skin boats formerly used by Welshmen, and it seems very probable.

A whaleboat, fully rigged, was the cause of a Indicrous mistake. A correspondent of a London paper wrote that "an American whaleboat was on exhibition, as completely furnished with everything necessary for immediate action as a fire engine is with all its men seated." It was printed thus: "An American whaleboat equipped as a fire engine, with the mon seated and ready for action, is one of the features of the exhibition." It no doubt would be if it were true, but Berlin has not disbanded its fire department yet in order to adopt the plan of harpooning a burning building and towing it out to sea.

Holland and Norway are quite strong in boat models, as well as Germany, the North Sea fishing boats bearing a family resemblance to each other and to those of England, who also shows a few. Judging from the models, as well as Germany, the North Sea fishing boats bearing a family resemblance to each other and to those of England, who also shows a few. Judging from the models are round bowed and of a model which might be called "tubby." while the American style is sharper, cleaner cut and invariably schooner-rigged. China shows but

are round bowed and of a model which might be chared "tubby," while the American style is sharper, cleane cut and invariably schooner-rigged. China shows he few boats or models, the most striking one being a boad with a figure of a man, life size, and about a dozan stuffed comorants ranged about the side waiting for the stuffed cormorants ranged about the side waiting for the signal to dive. It is the fashion to slip a ring on the neck of the bird, in order that it cannot swallow the fish, at least so the story goes; but it is noticeable that these birds have no ring on, and no one seems to know if the omission is by accident or design, the latter seeming to the writer to be the most probable, for the reason that if it be customary to use the ring it would be too important an object in illustrating cormorant fishing to be omitted by a people so given to detail.

The Rabbit-Moth Sucker.—Nashville, Tenn., June 6th.—Col. McEven received a most complimentary letter from Prof. Baird on the subject of the rabbit-mouth sucker. It had been described before by Prof. Jordan, though a specimen had never reached him until the one sent by the colonel. In a few days I am promised a specimen of still another new variety of fish which has appeared in the Harpeth this year.

J. D. H.

THE NEW LOBSTER LAW.—The new lobster law reads as follows: "Chap. 282. An Act for the preservation of lobsters. Passed May 13th, 1889; three-fifths being present. The people of the State of New York, represented in Senate and Assembly, do enact as follows: Section 1. Whoever shall sell, or offer for sale, or have in possession

with intent to sell, any lobster less than ten and one-half with intent to sell, any lobster less than ten and one-half inches in length, measurement to be taken from one extremity of the body to the other, exclusive of claws or feelers, shall, for every such offense, be subject to a fine of \$5; and in all prosecutions under this act the possession of any lobster not of the length herein prescribed shall be prima facie evidence to convict. Sec. 2. All forfeitures accruing under this act shall be paid one half to the person making the complaint, and one-half to the city or town where the offense was committed. Sec. 3. This act shall take effect on June 1st, 1880."

Sea and River Mishing.

the advertisement elsewhere.

VSEA TROUT FISHING.—Boston, June 12th.—Allow me to add an item to your very valuable fish and game directory. Such of your readers as desire good sea trout fishing, with pleasant surroundings and moderate priced board at a good hotel, kept by an obliging landlord, can find jest what they desire at Tadousac, at the mouth of the Saguenay. The best time is from July 1st to Aug. 1st. The fish are very gamy, and range in size from one to five pounds. The hotel is kept by Mr. James Fennel, who will also furnish boats and guides. Guides charge from \$1 to \$1.30 per day, including boat; less rates if they are engaged by the month. For any further information address James Fennel, Tadousac, P. Q., Canada. Tadousac is reached by rail to Quebec, and thence by boat down the beautiful St. Lawrence. Fare from Quebec to Tadousac, \$3.50 : distance, 113 miles, which is done in daylight, giving a chance to enjoy the scenery.

W. M. B.

EASTERN TOWNSHIPS, QUIBEC, Jane 8th,—Since the middle of May I have been rambling around the waters of this country with a seven ounce green-heart in hand after Sulmo fontinalis. Brook fishing has been good, but pond (small lakes) fishing but medium. Last Thursday night I brought up at French's Hotel, Scotstown, and the next morning, with W. J. McDuff, a Vermonter guide, I visited the bay, where I camped that night near the mouth of Mountain Brook, and Saturday night returned to the hotel. I fished but a fow hours each day; my catch weighed thirty-four pounds. I saw one otter and moose, deer and beaver signs in plenty. Yesterday I went up to the still waters on the Salmon River, where I caught in a few hours twenty pounds of fine trout, ranging from one quarter to one and three quarter pounds each. Fifty pounds per day could be taken on a favorable day at the "Bog" by any good By-fisherman if he felt so disposed. I saw numerous deer signs on the Salmon River, at the "Bog" by also saw a large number of black and wood ducks, both young and old.
Railroad fare to Scotstown from Sherbrooke, \$2, return ticket, Hotel, \$1 per day, W. J. McDuffs terms, \$1 or \$1.25 per day. A few large trout are taken in the rapids in front of the hotel. These waters are seldom visited by expert fly-fishers.

STANSTEAD

Connecticut Lakes.—Chester writes that the spring has opened favorably, with all promise for an excellent season's fishing. In the early spring deer were unusually abundant about the lake and the trail toward the settlement. Caribou also showed themselves in unusual number, and that the mooso have enjoyed a winter of undisturbed retirement, perhaps the best of evidence is that mone have been seen. Alce american loves to be let alone, and unless driven by invasion from his retreats leaves to the deer and caribou the risky snow-time habit of occasionally straying into the vicinity of the settlements. ments.

ments.
Uncle Tom has been making some improvements about his camp for the comfort of his little circle of summer friends. Those friends will be glad to know, however, that in spite of slightly enlarged capacity his place shall still remain the same most characteristic hunters' camp that it has been, and none the less in keeping with the spirit of the forest in which it stands.

CONNECTICUT—Putnam, June 10th,—The Hon, Charles Cheesboro and Eugene Wheelock, Esq., have started on a monthly vacation among the trout brooks of Northern Maine. These gentlemen are true sportsmen. They have promised us a weekly report of their rambles, which I shall send to you.

shall send to you.

WADIRONDACK TROUT FISHING.—Moira, N. Y., June 7th.
—Trout fishing is at its best now in all the large streams and ponds in this vicinity of the Adirondacks. Several parties from here have been up to both branches of the St. Regis Rivers, and all report the fishing splendid. Two that went to the Sixteen-mile Level, above Blue Montain, caught a nice lot of large trout with a fly; twenty out of one hole near Indian Rock. They say the deer are very plenty now along the level, and that they saw five during the three days they were there. I intend to go up there the last of the month and stop several weeks in that vicinity. The trout fishing is better this month, but the black flies are not so had in July as now, and one can find plenty of good fly-fishing then. I wish to say to those thinking of coming to the northwestern part of the

Adirovdacks this season that they will find Brushton the best place to leave the cars to go to the hunting and fishing grounds. There is a good hotel within a few steps of the depot which has a good livery attached, and there is also another livery stable in the place, so parties will be able to get a suitable conveyance at any time to go to any part of the woods. It is as near and nearer to the hunting and fishing grounds than any station on the railroad except Moira, which is the same, but is a larger village than the latter, which is half a mile from the depot, and bas no livery stable at present. The distance from it to the Blue Mountain House is twenty-four miles. A letter addressed to Giles' Hotel, Brushton, Franklin County, N. Y. (Edward Lirchfield, proprietor), will reach it.

A. CORNISI.

A. Cornish.

A. CORNISI.

New York—Constableville, Levis Co., June 7th.—Fish Creek is a beautiful stream and full of trout. It rises above Lowville, and flows into Oneida Lake. It is sixty-five miles in length, and the angler will find excellent fishing all the way, with good camping grounds every few miles. Excellent accommodations may be secured at private houses at \$t\$ per day. In six hours of fishing the other day 1 caught six trout, weighing respectively thirteen, fifteen and twelve ounces, and sixty others weighing ive and three-quarter pounds. My companion caught one hundred and twenty-five fish. Visitors may come here via Utica, Black River Railroad, thirty-five miles, \$1.0; stage to Constableville, eight miles, fifty cents; livery to the creek, eight miles, \$5 for party of six, there and return. A pair of shoes with hob nails should be provided for wading. Parties desiring further information may address P. O. Box 75.

H. S. B.

The Thousand Islands.—River St. Lawrence, Cape Vincent, N. Y.—Here are to be found almost every species of fresh water fish. The gamy bass and the voracious pickerel are captured in large quantities, and it must be a poor fisherman who cannot secure a good sized string of these fish almost every day. The great sport, however, in this vicinity, is to capture a mascalonge—the king of fresh water fish. Enormous specimens have been caught here—one weighing as high as seventy-two pounds, and many others varying from thirty pounds up, and a host of smaller ones. During the season of bass fishing, the number caught is almost incredible, from fifty to sixty per day being a fair average for the expert angler, and in many cases exceeding these figures. There are a large number of fishing boats manned by oarsmen who are not only familiar but able to conduct the pleasure seeker to the very best fishing grounds, and at moderate prices. In addition, the new and fast steam yacht Reindeer will make Cape Vincent her headquarters during the season of 1878, and will be ready at all tions to tow fishing skiffs and their occupants to any portion of the river at noderate rates, and will also take excursion parties when desired. In the fall this is the duck hunters' paradise. The waters of the adjacent bays are black with water fowl, and the hunter cannot fail to succeed in bagging a goodly score. Other species of game are to be found in their appropriate season.

The Rathburn House is situated on a pleasant site, commanding a splendid view of the River St. Lawrence, and in close proximity to that noble stream. The rooms are commodious and cool during the hottest weather.

Iowa—Manchester, June 7th.—The black bass season opened June 14th, and every boy and man who had a rod was on the banks of the Maquoksta with a soft-shell crab or minnow. The catch indicates great hauls of large bass. A string of eight or ten, weighing from one pound to four and a half, was no very great string. The waters are up again, and the sportsmen will have to wait patiently until the rivers run down. We have the finest bass fishing in the State. We have ten dans within the county, containing two hundred acres, all filled with bass, old and young. The fishways, under the State law, will make fowa the leading State for fish. Her waters are pure and suitable for all kinds of game fish. The Maquokcta runs twenty-five miles through the country, and is made up of springs of pure water. Spring Branch rout, of March, 1879, are nine inches long and weigh seven ounces.

Seven ounces.

A FLY-FISHING FOR SHAD,—New York.—A short time ago there appeared in the Forest and Streem a short letter from (I think) "Hamilton" on fly-fishing for shad, which was followed by a request from me to give further particulars, etc., and which you were kind enough to insert with a few lines of your own, calling on the "shad anglers" to impart their views through these columns—for which please accept thanks. Now it seems to me that the "shad fly-fishers" must be very scare or very churlish not to have responded to your call before this. I am somewhat interested in the matter, as I have been repeatedly told by professional fishermen and amateurs that shad will not take the hook, no matter what the lure, whether natural or artificial. It is useless for me to quote the Forest and Streem against them, as the slight weight of evidence therein contained up to the present has not been sufficient to convince them. Am rejoiced to learn by the last Forest and Streem and a shad has been caught in the Rantan by fly, and sincerely hope the good work will go bravely on until it will be no new thing to get a fine string of fish with the fly-rod.

SHADO.

CANADIAN RESORTS.

VERY many of my American brethren of the rod and gun visit Canada during the summer senson, some in search of health, some for the pleasures of travol and some again to enjoy a little sport. With many of the latter class it is a question often asked, Where shall we go for the best lishing or shooting? To help such in their choice a little general information of the best fishing and shooting grounds may not come amiss. Beginning at the extreme western point of the Province is the Nepigon River, famous for its trout fishing, which is now well known all over the Union. Coming east there are several small streams running into Lake Huron, which perhaps are well fished, but which during the early part of the season afford fine sport. Of these the Sydenlam, Saugeen and Silver Creek are trout streams, and can be

fished from Owen Sound or Southampton. The Maitland is a fine river for black bass in May and the early part of June; there are a number of small streams containing trout that run into it; any of these can be fished from the town of Goderich. A little further south is the Au Sauble, the river "taut Mieux" in Canada for black bass and pike in May, June or September-reached from Widder Station on the Grand Trunk Railway. This is also a good duck ground in late fall, and at same time snipe are plentiful. The next points are the fishing and shooting grounds of St. Clair flats; these are too well known to need description, so I pass on to the River Thames; this river is only medicore. Like many others, it has been spoiled by daws and refuse from mills and works of various kinds, It is one that can be marked "Ichabod," and so not worth going to. Rounding the end of the peninsula wo come to the shooting ground of Point Pelee with its duck marshes of 3,000 acres, which affords good sport in some seasons, but is uncertain. Our next stopping place is the shooting ground of Long Point, by all olds the best duck ground in Canada. This ground is strictly preserved by a company of gentlemen who have leased the whole of the marshes from the Government, but shooters can have access to it funder certain circumstances—reached from Woodstock on the Great Western Railway, via the Port Dover and Lake Huron Railway, Here I may say that the whole of the western peninsula west of London is one of the best quail grounds in the country, while wild turkeys are fairly plentiful in the counties of Essex, Kent and Lambton. Again taking up our journey eastward on the lake shore, the Grand River is the next stopping place. Here are found snipe, woodcock and ducks in season, while black bass, pike, maskalonge, etc., are plentiful—reached from Dunnville Station on the Grand Trunk Railway.

The bass fishing in the Niagara is too well known to need mention, so we cross to Toronto, and there take the road we cross to Toronto, and from there go to

very good.

A paying trip back from the river can be made on the Kingston and Pembroke Railway, and fine bass fishing found at comparatively small expense. Arriving at St. Anne's we find the mouth of the Ottawa River, but if questioned about the fishing the answer resolves itself into this: "Too much sawdust, too little fish." There are some small rivers that run into it—notably the Rouge—that might be worth visiting for bass, but in my opinion the game is not worth the candle, which also applies to all the streams about Montreal or within easy reach of it.

the game is not worth the candle, which also applies to all the streams about Montreal or within easy reach of it.

We are now in Lower Canada, and going down the river the first place is Sorel Marshes for duck, snipe, etc., and the St. Maurice River, at Three Rivers, for bass, pike, etc., but neither of these places would pay anyone to go a distance for all that is to be got. From this last named place a journey of eighty miles brings the traveler to the old city of Quobec, which is the starting point for all the rivers of the lower St. Lawrence. These are all preserved and rented by Government to such as have time and wealth to spend in the pursuit of the lordly salmon, but as they are out of the reach of the average sportsman I will not take up space in describing them. From Three Rivers downward trips can be nade into any part of the back townships, but they entail considerable expense, and it is almost a necessity that a person understands the French language. Of course, interpreters can easily be found, but one cannot take them everywhere, and it is not nice, when you ask a man a question, to see his shoulders elevate to hisers, and listen to an answer as uninitelligible to you as your question was to him, unless it is comprised in the three words, ""Jê comprende pas."

AU SAUBLE.

The Rennel.

—Address all communications to "Forest and Stream Publishing Company, New York."

Colley Rex in the Stud.—We call attention to notice in another column of Rex having been placed in the stud. Rex is a descendant of the best dogs in Great Britain, and his progeny have proved to be of the purest character. He was claimed at the catalogue price at the show, but Mr. Lindsay refused to part with him. This is a rare opportunity for anyone owning a first-class bitch to produce good stock.

The St. Bernard as a Field Dog.—I have often wondered if the St. Bernard dog, either pure breed or crossed, has any especial merits for general hunting purposes. Specimens of the breed are rare except among dog breeders and at bench shows. I have never heard that they possessed any value as hunters, but my experience with the only specimen I have known intimately—and that only a half breed, its mother being a cross between a bull and mastift—bas led me to ask the question. I was spending the summer in Northern Michigan to recruit my health. The gentleman with whom I stopped had been to much expense in procuring a dog suitable to the country and its game, and after many trials seemed to have secured perfection itself. It was an splendid animal, weighing about 125 pounds, with massive jaws and muscles like an athlete. He had scent enough to follow a warm track readily, and was o intelligent and well broken that he seemed to understand and promptly obey every word or gesture. He would no more chase a deer than he would a sheep, but was a terror to all other kinds of game. He was instant death to a coon or woodcluck, and the biggest badger or more chase a deer than no would it sheep, but was it terror to all other kinds of game. He was instant death to a coon or woodchuck, and the biggest badger or wild cat in the woods was no match for him, though he carried numerous scars as souvenirs of his encounters

with these animals. It was, however, as a bear hunter that his virtues were displayed at their best. No bear could make any long run with that dog at his heels, for at every step it was in danger of being ham-strung, while the dog was sagacious enough to keep a proper distance from bruin's paws. This dog had the principal characteristics of the smooth-coated St. Bernards, and I should like to know if FOMESTAND STREAM or any of its readers have had any experience with this dog as a hunter.

CORK.

We have never heard of the St. Bernard being used in the field either in England or America, but in Scotland the St. Bernard has proved a very valuable deer stalker in the well-known forest of Glentanner.

A TRIBUTE TO "PUP."

House of Representatives, Washington, D. C., May 31st.

Editor Forest and Stream :-

The following tribute to a faithful bound may not be deemed unworthy of a place in your columns. The soubriquet, 'Pup," began with him, and ended with him. I never knew a better dog. His achievements were among the hills and in the woodland range along the valley of the beautiful Kanawha. Many were the foxes that surrendered to the fleetness of his foot and the unerring certainty of his nose. We have some good dogs—he was the greatest Roman of them all. A pair of his youngsters promises the early adornment of my small pack, and a strain of his blood is prized above anything our section can boast :-

n can boast:—
Hear! all ye lovers of the chase,
Who follow black, tan, pied, or red,
The brice of dogs, old "Pup.," is dead!
No more will Joppling's echoes ring
His accents clear at carly morn;
No more his eyes will brightness bring,
Responsive to Lan Oakes' horn;
Van Buren's voice on the bill top high,
May greet the Nimrod in the chase,
Delaney's yell from mountain nigh,
Give cheer and relish to the race;
From Mathow's Branch to old Stittfield,
Red fox or gray may frequent to. From Mathow's Branch to old Sittfield, Red fox or gray may frequent go, With foot or ken that ne'er did yield To man or dog, nor fast nor slow. The old peach orchard on the hill, May, listening, hear the opening pack; Tbe Laurel Hollow o'er the rill, Resounding, give the echoes back; Jeff, Plunder, Crowder, and the rest, With Stentoes' shout, may mingle soun. Jeff, Plunder, Crowder, and the rest, With Stephees' sbout, may mingle sounds, Whibe Fleet and Wattless, with a zest, Make rapid nee with fox and hounds. Like burricane or cyclone driven, By measureless, eternal wrath, With lightning's Bash, in bounty given, To 'luminate the reckless path, The eager pack may sweep the plains, As swift as wings of love or light, The fearcess horseman loose the reins, And lash his charger on to "sight." But avere over log or rail, But never over log or rail, Will fox evade, or dog pursue, will for evade, or dog pursue,
A quicker or a colder trail,
Than, wind or storm, old "Pup" would do.
No pointer he, nor setter sly,
To steal on unsuspecting prey—
But loud he raised his battle cry, A warning, as he sought the fray, Descended from an ancient brood, Unflinehing, told, he stood the test; He vindicated royal blood, Nor found his peer among the best, Nor found his peer among the best, His voice was music on the air, As he through mazes fast did wind; His nose wrought out the hidden hair, His foot left hills and rocks behind; His "bottom" never know a flag, In mountain, thicket, heath or vale, I'll mountain, thicket, heath or vale,
By deepening sorge or lofty eng,
He followed, fate-like, on the trail,
Now, all ye hunters, mark the spot,
Where lies the friend who served you well,
In chase, or out, forget him not!
He stood by you until he fell.
His life was long, his labors hard,
'Mong men he never owned a foe;
He leaves a fane no blemsh marred,
He's gone where all the good dogs go.

J. E. K. II'.

THE COCKER JUDGING.—Boston, June 10th.—Editor Forest and Stream:—Your correspondent, "Cocker," in issue of June 3d, is wrong in finding fault with the judge and judging of the "cocker class" at the last New York show, for the very simple reason that there was no such class. The fault, if any, should be found with the classification, which let us examine.

In 1877, the first year of the New York show, there were four classes for spaniels—annely, Irish water spaniels, field spaniels of any other breed, dogs and bitches being in the same class.

J. E. K. (W. Va.)

spaniels of any other breed, dogs and bitches being in the same class. In 1878, besides the foregoing, the dogs and bitches were separated and two extra classes made, one for clumber spaniels and one for eccker spaniel puppies. This was a step in the right direction, but was immediately followed by a very decidedly backward one, for in 1879 the Irish water spaniels—dogs and bitches—were thrown into the same class, and cocker and field spaniels placed together. This was the classification for 1880. Having in previous years had the cockers in a separate class, and having thus formed our ideas of what a cocker should be, it is rather land to have them upset by this, to us, new classification, though it has the sanction of such high authority as Stonehenge, who says, in speaking of the modern cocker, "the above title includes every

kind of field spaniels except the Sussex and clumber."
I hope in future shows we shall have a separate class for cockers. In regard to the particular case as to the award of first prize not being given to a cocker the facts

are these:—

A protest was received by the Board of Appeals and it was claimed that the judge had acknowledged that the winner had considerable English water spaniel blood, and was not a cecker, and therefore was not entitled to the award. Mr. Dalziel stated to the Board that the class was open to all kinds of field spaniels, not being confined to cockers, and in his opinion the prize winner was the best, although decidedly not a cocker. Surely, under the classification no fault could be found with him.

COBWEB.

The Dog Breaking Articles.—Pichmont on-Hudson, June 14th.—Editor Forest and Stream:—I, with several others, wish to know if you are going to publish in pamphlet or book the articles on dog breaking appearing in Forest and Stream: Is increally hope you will, as they are the best and most humane I have ever seen. Your readers do not have to wade through a couple of hundred pages to find out what they want; the thing is in a nut-shell, and to the point. Many things the articles contain are entirely new.

W. F. S.

Hornell Cocker Club.—Hornellsville, N. Y., June 7th.—A kennel club was organized here May 24th. It is to be called the Hornell Cocker Club, and its aim will be to breed cocker spaniels as near perfection as possible, and to train them for the field. The members had great trouble to get stock that was anywhere near the standard, and it would surprise you to see some of the trash that was sent here on approval.

J. O. F.

A JUST SENTENCE.—John Flynn, of White Plains, has been sentenced to three months in the Albany Peni-tentiary for cutting off the car of a dog left in charge of Benjamin S. Dick by a New York gentleman. The dog was a setter, valued at \$150. He is ruined as to value.

Mr. Wanmaker's Engagement.—A. H. Moore Esq., of Philadelphia, Pa., has engaged Mr. E. S. Wanmaker, of Cool Spring, N. C., as field trainer for the Moorefield

—Mr. W. F. Muchmore has moved from his old home at Basking Ridge, to Convent Station, Morris Co., N. J., where he is now prepared to take dogs to board for the season.

— "The British Bloodhound" is the title of a new book which is to be shortly published, from the well-known pen of Dr. Gordon Stables, R. N., author of "The Practical Kennel Guide," "Dogs and the Public," "Ladies Dogs," etc., etc. This will be the first book on this subject that has ever appeared. The Doctor has set himself to the task, and assisted by the best breeders of the day, by many old manuscripts and sketches, and by documents never before printed. he flatters himself he has produced a really sterling work, and one that cannot fail to be read with interest by every one who loves a dog.

KENNEL NOTES.

NAMES CLAYMED .- Robin Adair and Paney - Mr. J. Otis Fellows NAMES CLAIMED.—Robbin Addit and Parsy—Mr. J. Otla Fellows, of Hornelbylle, N. Y., claims the names of Robbin Addit and Pansy for his liver and white cockers, dog and bitch, by Wildair, out of Fannie. Jimmy—Miss Pauline Cohn, of Hornellsville, N. Y., claims the name of Jimmy for her pure liver colered cocker puppy, by Wildair, out of Brownle. Zampa—Mr. W. F. Todd, of Portland, Mc., claims the name of Zampa—for his liver pointer puppy, by Mr. E. Culver's Duke (Frank-Quail II.), out of Mr. P. Lambroyer's Queen (Ben II.-Nellic).

BRED.-Norah-Rory O'More-Mr. Chas. H. Dayton's (Peekskill, BRED.—Novals-Rovy O'More—Mr. Chas. H. Dayton's (Pecisskill, N, V,) red Irish sotter bitch Norah to Mr. W. N. Callender's Rovy O'More. Nellie Horton-Tom—Mr. George E. Browne's (Dedham, Mass.) Gordon setter bitch Nellie Horton—Munit's Duke of Gordon-Tilley's Dream—to Mr. C. E. Balley's Gordon setter Ton—Major Stockton's Dask-Smilth's Fly. Flowa-Rice-Mr. John W. Burgess (Ornage, N. J.) Imported Scotch colley bitch Flora to Mr. Lindsay's Rex. Rist prize winner, New York, 1880. Delta-Ray—Mr. H. W. Livingston's Delta to Owner's Ray.

Sales,-Daisy Dean-The Hornell Cocker Club sold on June 3d Sales.—Daisy Dean.—The Hornell Cocker Club sold on June 3d the black and white cocker bitch Daisy Dean (Wildair-Fannie) to Mr. M. P. McKoon, Franklin, Delaware County, N. Y.; also black and white dog puppy, by Wildair-Dolly, Gipsey-Rory O'More (whelp)—Mr. Chas. W. Bostwick, of Hudson, N. Y., has just purchased from Mr. Wm. N. Callender, of Albany, a Gipsey-Rory O'More puppy, Connaught—Mr. W. N. Callender has sold to Mr. W. F. Bentler, of Albany, N. Y., his red Irish setter puppy Connaught (Rory O'More-Magenta). Chadwick—Mr. W. N. Callender has sold to Mr. L. C. Murdock, Southampton, L. L. his red Irish setter puppy Chadwick (Rory O'More-Magenta). Munster—Mr. W. N. Callender has sold to District—Attorney L. Hotaling, of Albany, N. Y., his red Irish setter puppy Munster (Rory O'More-Magenta).

DEATHS .- Sport -- Mr. E. F. Mercilliott, of this city, has lost by distemper his prize liver and white pointer Sport, Neva-Mr Fisher Howe, Jr., of West Hampton, L. I., lost on the 6th inst his pointer bitch puppy Neva (Strong's Peter-Princess). Neva re-ceived second in her class at New York Show, 1880.

Whelps,-Clytic-St. Louis Kennel Club's Clytic whelped on Whelps,—Clylie—St. Louis Kennel Club's Clytic whelped on June 8th ten puppies—sly does and four bitches—by Faust. Queen Bess—Mr. W. N. Callender's (Rory O'More Kennel, Albany, N. Y.) Queen Bess whelped on May 3lst nine beautiful puppies—five dogs and four bitches—by Champion Rory O'More. Ross—Dr-Wm. Jarvis' (Clarmont, N. Il.) red Irls setter bitch Ross. Champion Palmerston. Flora, whelped on May 28th six puppies—four dogs and two bitches—by Champion Eicho. The puppies are all red, of course, and perfect beauties.

Bench Show scoring eards, with complete table of points, by —nend show scoring cards, with complete table of points, by Edward J. Forster, Secretary Massachusetts Kennel Club. By the table, the value of any particular point of any breed, according to Stonehenge, can be seen at a glance. Twonty-five cents per package, or five packages for \$1, prepaid. Send currency or stamps. Address Edward J. Forster, Charlestown, Mass.

PENNSYLVANIA UNIVERSITY US. COLUMBIA COLLEGE.—Played at Hobokon, N. J., June 11th, and won by the Philadelphilans by one innings and fifty-seven runs. The first inter-collegiate match ever played in this vientity took place on Friday last on the excellent wheket of the St. Goorge Cricket Club's grounds. The University team gave the finest exhibition of free and brilliant batting that has been seen on any New York grounds this season, the cutting being remarkably clean and well timed, while the excellence of their fielding deserves the highest commendation. George Thaper topped the scores of his side with fifty-nine, made in fine style; but not without a couple of slices of luck early in his lunings. The bowling of Hyde-Clarke and Conover was not up to their usual good standard, and we were annaed at the very inferior fielding of the Columbia boys. For the New Yorkers Hyde-Clarke and Conover played well and carefully, and the scores which they contributed were in every way deserved. We annex the full scores:—

COLUMDIA COLLEGE V. HARVARD COLLEGE.—The first match of the Columbia College eleven's trip to Boston, and first inter-collegiate game between the two colleges, played at Longwood Mass., May 18st, resulted in the victory of the New York studdents. The Columbia boys took the Sunday evening boat for Boston on the evening of the 30th uit. and upon their arrival at the Hub found the weather anything but propitious for a rame, but during the morning the lowering clouds gave way to bright sunshine and the match was witnessed by a very large number of spectators. Before noticing the scores we desire to say that the

Harvards are learning cricket in the right way by strong defens and are materially aided in this respect by Browster, their best bat, who plays in first-class form. Practically, the gamo was won by the Columbias by ten wickets, Egan and Stevens going first to the wickets in the second innings and making the necessary cight Thus. The Columbias, however, decided to finish the innings, as will be shown further on. The New Yorkers enjoyed their trip immensely, and Cact. Clarke, to whom we are indebted for the subjoined score, desires to express his thanks for the kind treatment of his team :-

Umpires-For Harvard, Mr. Henry Norman : for Columbia, Mr.

Umpires—For Harward, Mr. Henry Norman; for Columbia, Mr. George Glies, Jr.
LONGWOOD vs. COLUMBIA COLLEGE.—Second match of the Columbia College eleven's trip to Boston. Played at Longwood, Mass., June 1st, and resulted in a victory for the home club by one innings and forty-four runs. Hubbard and Jones, two of the top scores for the home club, were badly missed. Tyler played in op scores for the home club, were badly missed. Tyler played in excellent form, and to show how steady the batting and straight the bowling was, it took Longwood nearly three hours to mak their 112. Score:— LONGWOOD.

OUR ENGLISH LETTER.—Nottingham, May 25th.—Editor Forest and Stream:—Respecting the Canadians, you have seen that they won the first match, beating a Scotch team; also respecting Oxford and Cambridge, the favorites are Cambridge at about three to two, although if Evans of Oxford gets a wicket to suit him (as he did at Lord's on May 17th, 18th and 19th, when playing for England'ss. Daft's American team), the betting would be slightly in favor of Oxford. Vorkshire does not seem to be doing very well up to date, having lost stagnists Cambridge and M. C. C., the latter beging them by ten wickets. Bates has not bowled in his usural form, although batting well. Ullyets seems in fine form. Pinder is not so good behind the wicket as he used to be years back, there being no possible doubt that Pilling, of Lancashire, is much the best wicket keeper in Bugland. The Lord's ground does not seem in the condition as in previous years, as during the match, England w. Daft's American team, the players were continually picking up small stones which were oozing through on the wicket. The practice wickets are also bud. If the wicket which I have mentioned its asample of what is to follow, no doubt it will cause a great deal of dissustification. Among the gentlemen who to two, although if Evans of Oxford gets a wicket to suit him (as cause a great deal of dissatisfaction. Among the gentlemen who are thus early showing flist-class form are Mr. A. P. Lucas, Hon. J. Bligh, A. N. Hornby, F. Penn, and also Mr. J. D. Walker's still playing, though not showing the form which formerly distinguished him. Mr. Evans is bowling well, being a very fast right-arm bowler, rather a high delivery, which is a dangerous approach to a throw. A. G. Steel has not come off up to the present, either in batting or bowling. The men who are likely to do well, and for whom 1 predict a good average at the end of the season, are Hon. A. Lyttleton, Mr. A. N. Hornby, Mr. A. P. Lucas and Hon. J. Blyth. Among the players who are in good form are G. Ullyett, W. Barnes, Bates Lockwood (though rather slow at Belding). Scotton, the left-hand hat, is nyoubhly the bast in Engcause a great deal of dissatisfaction. Among the gentlemen who G. Onject, W. Barnes, Bates Lockwood (Bough rather slow at Belding). Section, the ielf-hand bat, is probably the best in Eng-land. Barlow and Midwinter are slow scorers, the former espe-cially. A. Shaw is bowling as wonderfully as ever, having taken eleven wicket against Yorkshire at Lord's. Morley is in good form, although he unfortunately hurt his foot, which may preclady. At shaw so owling as wonderfully as ever, having taken cleven wicket against Yorkshire at Lord's. Morley is in good form, although he unfortunately hurt his foot, which may prevent him playing for a week or two. Barnes is also howling well, being a lirst-class all-round man, probably one of the best in England. Mr. W. G. Grace has not played in any big matches. I think he would have played at Lord's during Whit week, but sprained his ankle or foot while playing at lawn tennis a short time previously. Nottingham may play fresh blood this year. The new ones who are likely to play are W. Gunn, H. Curham, Esa,), the latter is likely to make a first-class wicket keeper, and there are soveral more good inent in the background, and I think Nottingham will play asstrong or even stronger than last year, as they will be strengthened as above. Middlesex is sure to play strong, especially in batting, as it includes such men as the brothers Lythieton, Webbe, Walker, although they are weak in bowling. Gloucester will play about as strong as last year, being all amateurs excepting Midwinter, though no county can mainfain its position long that has to depend for its strength almost entirely on amateurs. Vorkshire will play about the same, though they are sadly off for young, good colls. Surrey is still weak, Mr. A. P. Lucas and Shuker being tho only two reliable bats, H. Jupp being a slow, steady bat, but not the bat of yore, Blemires, of York, being qualified to play as strong as ever, and no doubt, strengthen in the bowling department, he being a fast left-hand bowler. Lancashire will play as strong as ever, and no doubt will obtain a good position in the counties at the end of the year. Kent and Derbyshire are still week, although Lorn Harris has made every effort to retrieve the fortunes of Kent. Respecting a tenn going to Austrilait, at an affail they will not offer sufficient money to Mr. A. Shaw, so up to the present nothing has been delinitely fared; also a team for America next autumn. I have not heard anything A. SHREWSBURY.

M., Collinsville, Conn.—Please say whether a target divided into rings same as the Massachusetts, with a 10-inch black instead of the regular 8-incb black, would still be considered a fair target to report as a ring target. Ans. In a ring target the amount of black shown may vary without affecting the scores,

W. H. S., Phila.—You neglect to state age of animal, which prevents us from giving you exact directions to rid your dog of lape-worm. Omit feeding for twenty-four hours, then give dose of male-fern; after half hour, repeat dose and follow with large dose of easter oil.

dose of castor oil.

T. F. W., Portland, Mo.—The constant losing of coat by you pointer dog can probably be prevented by giving him a teaspoonful of sulphur once a day for four or five days, and occasionally after, small doses from time to time. It would also be well to give him a dose of sulphate of magnesia twice a week, which treatment at this season of the year is beneficial to most dogs. You might procure a bottle of Glover's Mange Cure, and administer several applications.

T. C. P., Newark, N. J.—My red Irish setter, two years old, is attituded with an old sow diverty under the left over asset. I not

flicted with an old sore directly under the left eye, caused, I prostitled with an old sore directly under the left eye, caused, I presume, by a stone bruise about a year ago. I have tried a number of remedies without succeeding in healing it. Innucliately after being injured a lump formed, and in time began to discharge nutter. I first tried bathing with hot water. This removed it swelling temporarily. About six months ago I put in a scaton with very good results. The swelling decreased and has now disappeared cutricly, but the wound persistently refuses to heal. For the last month I have been giving him a solution of one drachm of iodide of potassium to an ounce of water, dose a teasonally and have weaked the serve with an oltrament conversed. spoonful, and have washed the sore with an olithment composed of one part carbolic acid to seven parts of linseed oil. But the sore remains open Ans. If wound is bridged over by skin, of course it will not heal; but should wound be open from the bottom occasionally touch it lightly with a solid stick of nitrate of silver which will stimulate a healing process. Under the circumstance you had perhaps better let a veterinary surgeon see the dog Apply to John H. Dancer, office adjoining Central Hotel, Orange, N. J.

PUBLISHERS' DEPARTMENT.

UTILITY OF WINDMILLS,-The windmill is the oldest THE OTILITY OF WINDMILES—The Windmill is the ofdest motive power known to man, and for many years has been regarded merely as a thing of the past, or as an addition to a landscape. There have been as many as twenty windmills at Scuth Yarmouth, Cape Cod, all pumping the sea water for the nanufacture of self at the same time. There are still remaining some nuclent mills on Long Island, some of which have a wheel of the results of the same time. scme ancient mills on Long Island, some of which have a wheel fifty feet in diameter, capable of developing thirty-tive horse power in a twenty-five mine wind. They are made principally of wood, and are very clumsy when compared with the mill of to-day. These last are made almost wholly of wrought and malleable iron, combining great strength with lightness. They are made in sizes of from eight and a half to fifty feet diameter of wheel. The majority of them are made, however, for pumping water for dweilness, stock farms, fountains, fish ponds, and for use in this way they are becoming more and more popular every year. Mr. P. Lorillard has a windmill, twenty-five foot wheel, pumping water for three fish ponds. This mill is working two numes, one from an artesian well one hundred and sixty-five feet. pumping water for three fish ponds. This mill is working two pumps, one from an artesian well one hundred and sixty-five feet deep, and the other for a stream eight hundred feet distant, and these pumps are so arranged that one or both can be operated by the windmill. On close observa-tion and measurement it was found that this mill bad pumped to the arc measurement it was found that this bill rad plunped sufficient water in a single in light to increase the depth of a poind containing six across one inch. This mill was erected by A. J. Cor-count, of 70 John street, N. Y., and this class of power is coming into general use. We notice, among those who have them in use on their places, such men as August Belmont, S. B. Chittenden, J. B. Dutcher, Hon. H. J. Sendder, ex-Senator Freylinghuysen, W W. Evans, Thomas A. Edlson, Robert Graves, A. Hudaut, D. D Lord, J. W. Marvin, I. W. England, G. L. Lorillard, H. W. Col-lender, William Hoyt, J. F. Navarro, J. H. Cheever, and others ually well known.

UNQUALIFIED SUCCESS.—The Democrat, Columbus, Ohio, in peaking of Warner's safe remedies, says: Testimonials not umbered by hundreds, but by thousands, are in the hands of numbered by numerous, our by thousands, are in the hands of H. H. Warner & Co., all furnishing ample corroborate evidence that as a curative, for specific diseases for which recommended, they are an unqualified and pronounced success."

Secady, of dog wanted by Geo. O. Goodhue, of Danville, Can. —The gun cleaner manufactured and sold by Dr. T. Yardley Brown, of Reading, Pa, has taken its place among the regular intensils of a gunner's outly. The cleaner is by all odds the best thing of the kind in the nurket to-day. It is worth its cost ten times over. The skess made are for rilles, calibers 35 and 30, and for guns, guages 10, 12, 14, 16 and 20.

-The red setter puppy advertised by X. Y. Z., in another col-umn, is a good one, and anyone who wants a fine dog at a moderate price, should look him over.

tied to us is lost. Trade supplied by American News Company. THE TILESTON MEMORIAL FUND.

HE lamentable circumstances under which Mr. William M. Tileston lost his life are still fresh in the minds of our readers. One of the saddest things connec ted with the calamity at the Madison Square Garden is the sudden destitution of the widowed wife and her little children.

With a spirit worthy of the highest commendation, the Eastern Field Trials Club, of this city, having satisfied themselves of the actual state of affairs, are now actively engaged collecting money for a "Tileston Memorial Fund. In this labor of love the promoters of the scheme deserve and, we doubt not will receive, the cordial and generous cooperation of every sportsman who may read these lines.

Mr. Tileston was for several years prominently identified with the sporting press. His name, as a writer on field sports, was familiar all over the country, more especially to the readers of the Forest and Stream, and we are not mistaken when we say that the response from those who thus knew him will be prompt and generous.

We make this appeal because we are satisfied that this is an urgent case. The money is sorely needed. It will go directly to those for whom it is given. Nothing further need be added. The subscription is open,

The committee having the matter in charge are Messrs Chas. H. Raymond, P. H. Morris and Fred. N. Hall, P. O. Box 1,393, New York, to whom contributions may be

THE TEAM ABROAD.-Rifle shooting is dull now, with the team away and everybody waiting for news of their arrival and setting to work on Irish soil. The last news from Ireland shows that the Irishmen are working at a remarkable rate, and with a fine day (June 10th) six of them ran up an average score of 2104. It is certain that Col. Bodine and his men have a real task on their hands, and it begins to look now more than at any previous time that there was to be a break in the line of American rifle victories.

THE WORK OF A STATE GAME PROTEC-TIVE ASSOCIATION.

THERE is in this State to-day a very definite field of A work for a State game protective association; and it is highly important that this field should be clearly comprehended, and that the efforts of such an association should be very definitely confine? to this field. In the light of the present condition of affairs we may not be accused of uttering truisms if we define the work of a game protective association to be the protection of game. A society which does this must begin at the very foundation, and-

First-sccure right game legislation. We have a game law. It consists of forty-one sections. These are of patchwork growth—tinkered up and amended at every session of the Legislature. The law is notoriously incomplete, inadequate and inoperative. To change this condition of things is peculiarly the province of an association of intelligent and influential sportsmen, gathered from the various sections of the State, each representing the various interests of his locality. Such a body could frame a law which would receive the sauction of every man whose sanction it would be desirable to have. Such a law would possess all the merits which the present statute so conspicuously lacks. And, what is more, until an association of this kind does take up the subject of a State game law we shall never have anything satisfactory.

It is objected that a State association cannot enact laws. We answer that we have faith in the respectability and standing and in the moral and political influence of the sportsmen of the State of New York. Only let it once be thoroughly understood that a State game protective society really means work, and it will speedily become powerful by the hearty and active membership of scores of men who are waiting to-day for such a society. and it could secure at Albany just what game legislation it might be pleased to demand. Having secured such laws as are necessary, an equally

important step is-

. Second—to provide for the enforcement of the game law. Game legislation is altogether too much of a dead letter. Its enforcement is a farce and a reproach to the Provision may be added to provision, and penalty piled upon penalty; what is everybody's business is nobody's business; neither is provision enforced nor penalty inflicted; the night fisherman, the bird snarer, the poacher and the butcher ply their infernal practices in season and out of season unpunished. Fish mongers and game dealers, grasping for the almighty dollar, serve as go-betweens for the restaurant keeper and the hotel proprietor, and shield the nefarious deeds of the pot hunter behind their guise of respectability and their moneyed weight. It requires vigilance to catch the skulking game thief, and it requires nerve to attack the law-defying marketmen. This has been the work of individuals too long. It should be undertaken by a State Association. Will it be?

How best an association should proceed to secure the right execution of the game law it is not now the time to discuss at length. It has long been a subject of serious consideration among intelligent sportsmen; and it is generally conceded that the most efficient system is that of a game constabulary, appointed by the State, and assigned to particular sections, where local and considerations may not interfere with a discharge of duty. With the cooperation of a wide-awake State association this system might prove effective. It is at least worthy of attention.

It might be possible, also, to do very much for game protection by creating and fostering amicable relations between sportsmen and land-owners, removing mutual misunderstandings and making the interests of each identical.

Another and a most important field of effort is to secure the sympathy and cooperation of the press throughout the State. The influence of the home paper will be given not grudgingly nor fruitlessly when it is commanded by the earnest example of an association itself.

These two divisions of the work are of sufficient moment to receive the immediate and continued attention of any society professedly interested in game protection. Another branch of effort, equally important but to come as a complement of the other is-

Third-to replenish and increase the supply. To restock the depleted waters of the State and to introduce new species of food and game fishes is clearly the work of the State Fish Commission, but for the assured success of its labors that commission requires just the hearty support which a live, wide-awake and intelligent game protective society could give it. In the importation of game birds and animals, also, the most brilliant possibilities suggest themselves. There is no good reason to-day why a New York sportsman should be obliged for a day's deer hunting to make an expensive trip to Michigan, where they protect their game better; nor that to the New York business man a quail shoot should mean three days on the cars, and three hours in the field; for there is no reason why our own forests should not be full of deer, nor why in our own valleys and hillsides should not be heard the cheery note of Bob White.

The work which we have briefly outlined is no boys' play. Its accomplishment demands systematic and earnest labor, involving expense of time and money, and some drudgery, of which the public can have no comprehension. Not until a body of men, who recognize these facts, shall associate themselves together and make the accomplishment of this work the chief object of their conventions, may we look for a remedy of the existing state of affairs. This work belongs to the New York State Association for the Protection of Fish and Game Can the Association afford to shirk it?

HOW IT IS RECEIVED.

THE most decided indorsement which representative sportsmen have accorded to our remarks on the State Association last week has afforded us sincere gratification, for such an indorsement gives evidence that the time is ripe for a change, and is in itself also an carnest that the change will come.

Below we publish a number of responses which have come to us, and next week these will be supplemented by others of an equally outspoken character. This matter is one of vital interest to the sportsmen of New York. We invite and urge a full, free and candid expression of opinion from all men who have an opinion on the subject:-Syracuse, N. Y., June 14th.

Editor Forest and Streum:—
You have expressed my opinion in regard to the "New York State Association for the Protection of Fish and Game's on well in your editorial of the 10th instant on the subject, that I have but little to say. Every true sportsman who reads that article will thank you most sincerely for it. It is bold and right. The Association has existed for a number of years under a false name, and it was time long ago for it to either reorganize or change its

At its last meeting at Seneca Falls it did not say one word or perform a single act for the "protection of fish and game." Its chief desire was to proceed to the shaughter of 13,000 pigeons as speedly as might be. Deer, birds and fishes throughout the State needed a friend, but the "Association for the Protection of Fish and Game" had no protection to offer. The business meeting was hastily and unceremoniously adjourned immediately after the next slaughter field was named and officers for the ensuing year appointed. Such proceedings have driven out many true sportsmen and prevented many others from joining. It is now only men who thirst for the sport which the traps afford them who manage the affairs of the Association. affairs of the Association.

It is most desirable to perfect an organization for the It is most desirable to perfect an organization for the protection of fish and game. As you well said in your editorial, it is desirable to have this association become a power of this kind if it will; but if it will not, it ought, in justice, to drop the latter part of its name upon an association of sportsmen who love to protect as well as kill game and fish.

kill game and fish.

A great many sportsmen in this State will sustain you in the position you have taken on this question, and tae hope will prevail among them that the State Association will yet see the ridiculous position in which it has placed itself and endeavor in the Inture to make trap shooting the pastime rather than the object of its annu il conven D. H. Bruce

ROCHESTER, N. Y., June 14th.

Editor Forest and Stream:— Your vigorous editorial of the 10th inst. cannot fail to make a sensation among the many thousand readers who have by this time read the article and weighed the arguments it contained.

weighed the arguments it contained. There are probably a great many others who feel on the subject as I do, neither wholly agree nor disagree with its sentiments.

If the State Association for the Protection of Fish and Game is to be judged solely by its actions at the annual conventions, even its friends would be coupelled to admit that there is some inconsistency between its title and its action on the occasions when the time is mainly devoted to shooting nigeous over the trans. This latter meaning action of the occasions over the traps. This latter pu certainly has no tendency to promote the protectio game, in or out of season, for it is the hope of every who steps to the line that he will make a "clean se game, in or out of season, for it is the nope of every one who steps to the line that he will make a "clean score," that is, kill ten or twenty pigeons that have been caught at the breeding season, and are not naturally in good condition to be used for food. If this is not a fair representation of the matter, at least it is the opinion of one who has had fair success at trap shooting and confesses to find considerable pleasure in the various emotions awakened by a shooting match.

In defense of the State Association, it may be said that it carries out directly one of the professed objects of its

In defense of the State Association, it may be said that it carries out directly one of the professed objects of its existence, and indirectly contributes to fulfill the other function it assumed. The first article of the Constitution is as follows:

This Association is formed for the purpose of securing proper legislation for the protection of wild birds, disk and animals, throughout the State, during the season at what it is improper shall be enseted, and for the promotion of kindly intercourse and generous emulation among sportsmen.

Everyone who has attended a convention of the Asso-Everyone who has attended a contention of the Asso-ciation must admit that it is preeminently a success "for the promotion of kindly intercourse and generous emulation among sportsmen;" at least I never was at a Convention of so many men, where the intercourse was Convention of so many men, where the intercourse was more friendly or the emulation keener, while fair. If the name of the Association might lead one to think that its conventions should be devoted to discussion of game protection, legislation, etc., let it be remembered that as the Association could not enact laws, it might waste a great deal of time framing bills that the Legislature would not pass. Furthermore, the subject of game protection could not be discussed, and anything new produced every year. The subject would long since have been exhausted. The clubs which form the State Association do carry out its protective purpose, and they are encouraged to continue in existence and usefulness by the annual meeting of the main body.

I make no claim of great usefulness for the Association. Its purpose is to afford its members amusement, and that is something not to be slighted in a country where there is a tendency to work too hard and not play ebough. The week passed at the State shoot is to many a needed relaxation from exhausting work, and as such I hope to see it perpetuated. If the number of pigeous shot at were reduced one-half. I do not think the interest would be in any way diminished, for as a test of skill the chances would remain as at present; one is as liable to miss in shooting at his first bird as at the tenth. Neither would it detract from the general enjoyment if the entrance fees to the various matches were cut down one-half. Manufacturers of guns, etc., could, it so disposed, make an interesting exhibition at each convention by showing the weapons, etc., in various stages of manufacture, as some did at the Centemial Exhibition.

EDMUND REDMOND. Its purpose is to afford its members amusement

NEW YORK, June 15th

Editor Forest and Stream:—
Your oditorial of June 10th, alternately attacking and patronizing "The New York State Association for the Protection of Fish and Game," concludes by calling for a reply. Your personal request to the same effect was this day received. Courtesy demands acquisesence, and pressing professional engagements require the enforcement of the maxim, "brevity is the soul of wit." I do not think your strictures upon the Association are quite merited. Its existence of twenty-two years has been accompanied by great increase in game, fish and birds, which result is in a large measure traceable to the efforts of the Association and its clubs. The time devoted to the business meeting of the convention is necessarily limited, and to the causal observer little is there accomplished. But the individual clubs and their members, and the committees, during the recess perform labors, the result of which is apparent in the improved laws upon our statute books, and in the increased variety, quality and quantity of game in our woods and streams. To the efforts of the individual members at home and in the legislative halls are due all our protective game laws.

To the efforts of the individual members at home and in the legislative halls are due all our protective game laws. The tournament has its purpose. It brings together the sportsmen from every part of the State and tends to the cultivation of social intercourse and improvement in skill with the rod and gun. The recent contests may have appeared disproportionate to the work accomplished at the business meeting. Doubtless the retiring officers of the convention and these of the club, under whose auspices it was held, would dispute or explain this if requested. The recently elected officers and the Long Island Sportsmen's Association are charged with the management for next year, and they will not shirk the responsibility.

management for next year, and they will not shirk the responsibility.

We believe that the result will be satisfactory to the large body of sportsmen in this State. The subject of game propagation and protection is of grave importance. Among the members of the State Association are men of worldwide reputation, possessed of all necessary mental and physical qualifications to originate and enforce such measures as may be prudent to effectuate the desired end. An organization is powerful in proportion to the strength of its individual members. To the individual members an appeal will be made in proper time for suggestions, and these will be submitted to the proper committee, who will present to the next Legislature such proposed bills as will present to the next Legislature such proposed bills as by general assent may appear necessary or proper. Further, it is proposed to invite the most competent ornithologists and pisciculturists of this and other States to favor us with suitable essays, to be read at the next convention.

It is somewhat premature to give in detail the precise plan to be followed. The Long Island Sportsmen's Association has already taken action with reference to game propagation and protection upon Long Island, and to that end has appointed a committee consisting of the Presidents of its various clubs.

In conclusion, permit me to say that while criticism is

Presidents of its various clubs.

In conclusion, permit me to say that while criticism is easier than suggestion, we may still expect from such authorities as the Forest and Stream and kindred papers some enligsts the ment as to what the Association can and ought to the value visit and what remedies are demanded. Or what evils exist and what remedies are deupon to cry despairingly, "asve us from our friends." I have the honor to be, your struly, "AbEC (ROOK.)

CAPTAIN BOGARDUS' NEW GUN .- We have this week been shown by Captain Bogardus his new Scott hammerless breech-loader, just received by him through William Read & Sons, of Boston. It was ordered some time since by the Captain, and is an exact counterpart in size and weight of his "old reliable Scott," which he has been using for years past, and which has done such remarkable shooting and scored so many victories. It is to-day as perfect as ever : and though looking like a veteran, yet does not show the hard usage and great strain it has seen. This new gun is one of W. & C. Scott & Son's hammerless, with their own patent side crystal apertures (which is a great feature of safety, as it allows the hammers to be seen at a glance), and also has the regular safety bolt. Two sets of barrels-one twelve and one ten-fit the same stock, and a more superb gun in proportions and general balance and fine workmanship we have never seen. The Captain is delighted with it, and will at once put it in service.

-The Coney Island season is fairly open. There were not less than twenty thousand people the first day at the various immense hotels, and still there was room for The Brighton Beach Road was running rapid, well-filled trains, and the Hotel Brighton was more than equal to the occasion, with our venerable friend Chadwick, formerly of Willard's Hotel, Washington, D. C., and recently from San Francisco (one of the best hotel men in the country), walking quietly around, always present when wanted. At Manhattan Beach the throng seemed still larger, and the Manhattan road was running an extra large number of cars. The music was fine, and there were accommodations for double the number of people.

THE ARMY WORM .- The Government Department of Agriculture is vainly exerting itself to cope with the army worm, which is now ravaging the land. Paris green will kill the pests, provided they eat it, and so will arsenic, if it can be put down their throats. All published suggestions have so far proved ineffectual. The following method has been tried on Long Island, and is sure and certain in its results: A deep furrow or ditch is plowed around the field. When the worms have accumulated in this ditch throw upon them unslaked quicklime and sprinkle with water. This kills the worms destroys their eggs and is good for the land. To protect a conservatory or greenhouse, smear on a streak of lard and danb with sulphur.

The Long Islanders are troubled with another pest :-The Long Islanders are troubled with another post:—
Sapville, L. L., June 14th,—Horewith I send you a specimen of a fly or beetle, called by some people a June bug.
This insect will strip a leaf, like the specimen sent you, in
a very short time. They feed on roses, fruit, young
grapes—in fact, any young plant or tree. In the morning they are in the air, but at mid-day hang in bunches
on trees and vines, and then can be shaken on to sheets,
and scalded. They will take a morning bath in whale oil,
soap suds, dine on Paris green, sleep all night in a box on
a bed of white hellebore. Who can recommend a quicker
killing process than scalding?

-The members of the Independent New York Schuetzon Corns, with their families, have made arrangements for a week's recreation during the summer at Lake Ho patcong, where they will not only have the beauty of the lake, rustic scenery, etc., but will enjoy their rifle shooting, as of old. A new feature will be glass ball shooting. A new departure, and one which we most hearly commend, will be the introduction of lawn tennis, croquet and archery for the ladies. Our wealthy Germans are, as a class, worthy of all praise for provid ing sports and pastimes for their families, and the plan of this year, inaugurated by Capt. J. J. Diehl, will place his name at the head of the list as a provider for such an

-The long-needed Greenwood Ferry promises to be provided in a short time, the undertaking of building the piers and carrying out the enterprise having been assumed by Mr. C. Godfrey Gunther, proprietor of the popular route to Coney Island—the Brooklyn, Bath and Coney Island Railroad,

GAME PROTECTION.

IMPORTATION OF MIGRATORY QUAIL.

QUEBEC, Can., June 12th.

Editor Forest and Stream:

Editor Forest and Stream:—

I received yesterday two cages of migratory quail from Mr. Boynton of New York with only two dead ones in the lot of 200 birds, and they had been dead some time. It is really wonderful how well these birds have traveled. The system of a canvas cover instead of a hard board is excellent, as the birds do not knock themselves foolish. I have shipped 100 birds, or one cage, to Mr Romeo Stephens, of Montreal, who will turn them out in the new park, I believe. The remainder I will divide into colonies of ten birds at intervals of two or three miles, and so people the neighborhood with them. One lot of forty birds I will send adrift to the North of Quebec on the edge of the Lawrentian range, where they can colonize to any extent.

extent. The birds I released to-day were stiff on the wing, only able to fly a few yards, as I had wetted the cover to keep down the heat. They looked very like young partridges (*Perdrica grises*), and will certainly be described as such, so I do not expect to hear of the "quair" again unless I see them myself. I will, however, keep you posted. It is a great pity the birds have arrived so late in the season. is a greet pity the birds have arrived so late in the season because it will take them one month at least to nest and lay kwenty eggs, say July 15th; then one nonth to hatch, say Aug, 15th; so there will be only two months for the young birds to grow before our cold weather commences in October, consequently they will not be strong enough to join the migratory flight in November. These experiments, however, rarely succeed on the first attempt, but perseverance will succeed.

The public, I am happy to say, take a great interest in this importation, for Mr. Public is very fond of a bargain where he has nothing to lose and something to gain; whilst roast quait, quail shooting and Toutours perdricare ideas that please both he and she, especially the hast idea, which requires a French woman or a cardinal to thoroughly understand.

W. RHOADES.

Manchester, N. II., June 14th.
Editor Forest and Stream:—
The 300 migratory quail ordered by the Manchester Shooting Chu arrived here on the 9th inst., in good condition. There were only two dend, and one with a broken wing, which seems remarkable when their long confinement and voyage is considered. They have all been put down in some of our best localities, twelve or fifteen in a place, and in the manner recommended by the Fourst And Stream last season. We have no law to specially protect these birds, but rely upon the honor of sportsmen not to molest or shoot them, and the cobjectation of the fariners for their protection. Whether our efforts will be rewarded or not remains to be seen. Mr. Tobey has the thanks of our club for favors shown. Have been hoping to see some communication to your paper from some one who has imported previously, as to whether the birds have returned to the places where they were liberated.

The 2,600 bird consigned to Mr. Everett Smith, Commissioner of Fisheries and Game, were received in good order at Portland, Me., June 9th, and distributed to the parties who had ordered them.

BOSTON. June 11th. Roston, June 11th, I don't expect to hear from last year's quait until mowing time comes in. In spring and early summer there is little to call people into the woods. Last year the returned quait were found mostly by the mowers who came upon their nests.

Horace P. Tobey,

GAME PROTECTION IN NEW JERSEY.

HACKENSACK, N. J., June 10th.

Editor Forest and Stream:—
I am glad to see you showing up the character of "game protective" associations whose only object is an annual shooting match. We should have gamble game protective associations, and they should be allowed to copyright their title, so that mere pigeon shooters cannot appropriate it.

Our New Jersey State Association is of no practical use in protecting game, and I am not certain that this work can be accom-

plished in any way but by county or town organizations. A local organization can do good work with very little trouble. In Bergen County we have a game protective association of three years' standing. Twice a year we advertise the law in the county papers, offering a reward of \$10 for evidence that will procure a papers, ourning a rewarror grown evacure take with procure a conviction. We also keep posters in convenient places showing the closed seasons for all kinds of game, and the penalties for shooting outof season. If any person is reported to us as a violator of the law, against whom we have no direct evidence, we

send him a letter of warning.

Our work has been productive of good result, and I think the Passaic County sportsmen would do well to follow our example if they find any man "shooting on his own land" out of seaso the law gives them full power to prosecute him.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

Address all communications to " Forest and Stream Publishing Company, New York.

WITH ONE BARREL.

IT is amusing to read of the wonderful shots sometimes made single, double, triple, quadruple, and even quintuple, by different persons in different parts of the country with their wonderful guns! One is tempted to give credence to the story of the man who insisted upon it—in fact he told the story so many times over that he actually believed it himself—that he killed two quality with one hards the brides surjective from the creating the state of the story so may be the state of th

country with their wondering gins; come is tempted to give credence to the story of the man who insisted upon it—in fact he told the story so many times over that he actually believed it himself—that he killed two quait with one barrel, the birds springing from the ground the same instant and both flying off in different directions; he whirled around so quickly after killing the first one that he divided the charge, and down came both of the birds, dead enough! That was a wonderful shot. But while we admire these double shots at snipe and quail, and the long distance which game is brought down with choke bores and bores. half choked, "we must not forget that one-hundred yards, if correctly measured, is exactly three-hundred feet, at which, i our friends will set up a target the exact size of a quail or an English snipe and take a carreful look, will find that the bird would appear to be away a "considerable long space of distance," and that a gunner who was careful of his ammunition would not shoot at it with much hope of hitting his game.

The writer has targeted good guns with first-class ammunition at accurately measured distances, and has found that a target the size of an English snipe at seventy-five yards is a very small mark to shoot at, and yet we have hit. We once put two pellets of No. 6 shot through a business card one and a half by four sinches at seventy-five yards exact measurement. The gun was a good one, far better, in fact, than the average of guns now made; but before the card was hit half a dozen charges were fired at it by as many different persons. An experience of more than thirty years at gunning in different parts of the country, and at almost all sorts of gune except alligators, with all sorts and conditions of guns, has convinced the writer that the average of gune except alligators, with all sorts and conditions of guns, has convinced the writer that the average of gune except alligators, with all sorts and conditions of gun; has convinced the writer that the average of gune except a goose shooting has not been made heart-sick and disgusted when a goose has given him a "good by "as he
flopped away," on buoyant wings," with a broken leg
dangling in mid-air? He won't use cuss words, but he
will wonder why that one T. shot didn't break a wing
instead of a leg. We have killed deer with buck shot,
dead; but not over one hundred or one hundred and
twenty-five feet distance. That festive animal must be
riddled, or he will give you a long, tire-one chase; he
must receive such a shock from the force of the charge
as will place him hors de combat at once, or he will
give you a jolly good run, even if he have but three
sound legs for use. We have "been there," and know
whereof we speak.
We can readily believe that two or three snipe, springing from the ground at once and in an almost direct

We do we specified the two or three snipe, springing from the ground at once and in an almost direct line, may be brought down "with one barrel" loaded with a multitude of line shot, but such good luck is not usual with the average gumer after snipe. The writer knew during the war of two men being killed by the same bullet; one man was following the other, the leading man was aimed at, the bullet passed through him and his follower, and both were instantly killed. The sharpshooter who made that "double shot with one burtel" told me (he was captured) that he saw but one man when he first. Wonders in gunnery will never tree telling stories of their exploits in the field, and the wonderful qualities of their exploits in the field, and the wonderful qualities of their exploits in the field, and the wonderful qualities of their particular guns; and we love to hear them, and we

read them. And we also love to hear the our sounce again and receite his adventures on the field of Mars. We sympathize with such with a feeling akin to a common brotherhood, and if distance is magnified a little and an almost incredible number of the wildest sort of suipe brought down—with one barrel—we can find interest and instruction in the story.

C. E. C. read them. And we also love to hear the old soldier fight

ROCKFORD, III., June 10th.

Editor Forest and Stream :

Editor Forest and Stream.—

I have just been reading in your last issue of some of the remarkable double shots made, and am reminded of one made by a novice who accompanied a party of sportsmen to lova a few years ago on a chicken hunt. The father of the young man came to us just before we were ready to start and said if his son Charley would not interfere with our pleasure he would like him to go with us, as he thought the trip would do him good.

The first day oul—after reaching our destination—we were riding over the prairie and saw a large flock of geses arise from a pond and settle on the ground about one-half a mile to our left. We began to lay plans to capture one or more of them. We stationed ourselves around in clumps of resin weeds and sent the driver with the team to the other side of the game.

The flock arose and passed over the novice and he drew ph his old gun, one that we had been making sport of all the way out, and let drive into the geese, bringing down two fine ones. We gathered the game and then asked Charley-why he did not let the other barrel loses at them. He said he forgot that he had a double barrelled gun.

Thefleve it was the first game he had ever killed on the wing. The geese weighed respectively fifteen and twelvo pounds. A prouder young man has never been seen. He sent the larger bird to his father the next morning as a trophy of his skill. I don't remember that Charley killed anything else during our week's sojourn in lowa, but if we dared to criticise him for a poor shot he always responded: "I got those two geese, just the same."

THE ALLEGED DITTMAR POWDER ACCIDENT.

THE ALLEGED DITTMAR POWDER ACCIDENT.

New York, June 11th.

Editor Forest and Stream:—

We noticed the letter of Mr. S. P. Nash, which you published in your issue of yesterday, but do not at present propose to make any comments thereupon, no matter what our private opinions and suspicions may be, reserving all we have to say until we receive from you such proofs as you undoubtedly have in your possession of the correctness of the statement which you have published, apparently so unhesitatingly, convicting us, star-chamber like without a hearing, and publishing that conviction to the world.

While we place the act in this strong light, we are willing to admit that there may be defense on your part by reason of explanations, and our sense of justice impels us, first, to ask from you the proofs of the allegations before concluding that you either carelessly or willfully misrepressited us and our speciality. If you have not already done so, to satisfy yourself of the truth of the allegations before publication, we wish that you would learn the name of the Louisville merchant from whom Mr. Nash obtained the powder. We would further request you to have the original canister containing the rest of the powder from which the charge was taken, which caused the accident, sent to you, together with the small circular which accompanied the same, and find out whether the canister was sealed or not.

The production of this evidence is simple justice to us, as we have no doubt you will alomit. And without this evidence we think you will also admit that there is no case made out against us, and until this is produced we most emphatically declare our disbelief in it ever having been manufactured by us, or of the possibilities of such results coming from so small a charge of any powder in the world, unless made to specially produce similar results. We shall spare neither time nor expense to ferret this matter out to the bottom and sincerely trust we shall have your hearty coöperation.

Mr. Nash states that no directions for the u

this matter out to the bottom and sincerely trust we shall have your hearty coöperation.

Mr. Nash states that no directions for the use of the powder were on the canister. We can furnish you a dozen affidavits that not a single grain of powder was ever put up or sold by our company which was not sealed and did not show our printed directions on each can or keg. Besides this, our printed circular and loose directions accompany each canister, and we herewith send you a can for inspection.

THE DITTMAR POWDER MANUFACTURING COMPANY.

We shall give the lightney Powder Chapter Clayses.

We shall give the Dittmar Powder Company all possi

ble aid in arriving at satisfactory conclusions in this matter, and to disprove, if possible, the statements in our columns last week.

LONG ISLAND SPORTSMEN'S ASSOCIATION.—The Long Island Sportsmen's Association met at its rooms, 449 Flatbush avenue, Brooklyn, last Friday evening, President George R. Chappell in the chair; Secretary, Abel Crook, Esq. The meeting was a large one, and was marked by much enthusiasm. The reports of the Seneca Falls delegates were received; the Washington Gun Club was admitted to the Association, and other business transacted. Mr. Crook, whose new duties as President of the State Association will necessarily take up much of his time, tendered his resignation as Secretary, but the Association refused to accept it. Several matters pertaining to game protection were then brought up, and the following resolution was adopted :-

nonowing resounced was adopted:—
Resolved, That there be a standing committee of this Association, composed of the Presidents of the various clubs, to be called the Committee on Fish and Game, to report to the Association on questions connected with the protection and propagation of fish and game throughout the State, and especially on Long Island.

New Jersey Tournament.—The New Jersey State Sportsmen's Association tournament, will be held at

Newark, under the auspices of the Essex Gun Club, June 29th, to July 2d, inclusive.

29th, to July 2d, inclusive.

Forrsver Clut, or Newark, N. J., with the following officers:—President, R. H. Breintnall; first Vice President, F. H. Breintnall; first Vice President, F. S. Harrison; second Vice President, Jacob Pentz; Treasurer, Dr. Pindell; Secretary, W. R. Hobart. Among the members elected were the following: R. Heinisch, J. Von Lengerke, H. Felten, A. W. B. Crane, Bishop Freeman, I. Illingworth, J. J. Burnett, Will Hayes, W. R. Williams, J. R. Burnett, S. G. Williams and P. P. Williams.

Williams, o. R. Burnett, S. G. Williams and 1.1. Williams.

The club starts with a good platform, and promises to actively engage in the much needed work of seeing that the game laws are enforced.

TENNESSEE—Maskwille, June 4th.—Squirrels are very abundant this season. A gentleman killed sixteen with a .22 caliber Remington yesterday, within a few miles of this city. He also bagged three female "coons." All other field sports are now stopped until August, when the air will resound with the crack of the gun after doves. Instead of having a prejudice against killing them out here, they are considered a delicacy, and by many preferred to the quail.

ILLINOIS—Savanna. June 3d.—Shooting has been poor

ILLINOIS—Savanna, June 3d.—Shooting has been poor here this spring, until late in April, when ducks and snipe were plenty for a few days. The prospect for chickens and woodcock is good.

A HINT TO GRIZZLY BEAR HUNTERS.--Rochester, N. Y. A HINT TO GRIZZIN BEAR HUNTERS.—Koenester, N. Y., June 5th.—Nearly every hunter of large or dangerous game has, I suppose, at some time or other saved his life by getting up a tree out of reach of a wounded animal others have perished because they could not climb quick enough. I suggest that where there is a possibility of one being forced to seek a tree for safety, the hunter or sportsman should provide himself with quickly-attachable climbers. ble climbers.

This novel suggestion reminds us of a passage in that extraordinary book of alleged "Sporting Adventures in the Far West," in which, among other amusing statements, urged with all gravity, is one to the effect that a hunter should provide himself with a lariat, which "is exceeding useful for swinging at once out of the reach of an angry bear,'

an angry bear."

AUXILIARY RIFLE BARRELS.—Huntsville, Ala., May 31st.—Editor Forest and Streum:—A notice in your valuable paper some months since in regard to Shelton's auxiliary rifle barrel attracted my attention, and induced me to procure one. Allow me to thank you for the means which that notice afforded of obtaining what I consider, together with the breech-loader, the most complete outlit with which a hunter was ever equipped. The auxiliary rifle barrel is destined to take position in the front rank of inventions and second only to the breech-loader. Mr. Shelton may congratulate himself upon his success in producing an arm which must necessarily supercede all others for game. I have had no opportunity of testing it at longer range than one hundred yards, but do not doubt with the folding sight at two hundred yards and further it will compete with the best guns at target practice. The ease with which it can be adjusted, converting the shot gun to rifle, and vice versa, its great accuracy and penetration, recommend it to every true sportsman.

A. Willte.

DRURY vs. LUTHER .- Syracuse, N. Y., June 4th .- Pigeon match DRURY TW. LUTHIER.—Syracise, N. F., June 441.—Pigeon maters shot this afternoon on the shore of Onondign Lake, between Mr. Harry Drury and Geo. Luther, under the Americanized rules, five ground traps, five yards apart, thirty yards rise, eighty yards boundary. The birds were selected from the lot furnished the State tournament at Seneca Falls. The score of Mr. Drury is a remarkable one, from the fact that he had nevershot under these remarkation one, from the fact that he main never should net raises rules before, nor seen them shot. He astonished the old veterms in the way be dropped his birds. Your shots about the eastern end of the Empire State will have to keep at work, or clse this Syracuse boy will carry off the honors on the Island next spring. Mr. Drury shot at J. A. Nichols guin, while Mr. Luther used a D. M. Lefover hammerless, and he made some remarkable long distance shots with it. Mr. Ed. Hudson, the winner of your badge for the best average at the late State tournament, starts for the Ohio State shoot on Monday next; Mr. Luther also goes with him—both may drift into the flows convention before returning home. Hudson has been doing some good work for the past year, at the trap. He says he never shot better than at present.

A GOOD SCORE.-St. Louis, Mo., June 11th -At the recent State A GOOD SCORE—St. Louis, Mo., June 11th.—At the recent State tournament, held at Macon, Mo., June 11th.—At the recent State tournament, held at Macon, Mo., June 1st to 4th, Paul Francke, of St. Joseph, Mo., and H. C. Pierce, of St. Louis, shot a match at fifty birds each, ground traps, English rules, thirty yards rise, Francke scoring thirty-seven and Pierce forty-seven birds. Of Pierce's three lost, two fell dead out of bounds, making his score of actual killed birds forty-nine out of fifty. This has never been equalled in any public match in the world. The day was very dark and gloomy, and a galo blew across the traps away from the scores. The birds were first-class wild ones and hard to see. Plarce had never shot under similar conditions before. Francke. Pierce had never shot under similar conditions before. Francke who is one of the best amateur shots in the State, was not up to his usual good work

CHICO TOURNAMENT .- Chico, Cal., May 221 .- Tournament of Butte County Sportsmen's Club; shot from three plunge traps, five yards apart; 21 yards rise; double birds from three traps; 18 yards rise:—

PROFESSIONAL RIFLEMEN.

Editor Forest and Stream:—
Your number of June 3d contains what seems to be an open letter, addressed by Capt. Wm. H Jackson, of Boston, to the President and Directors of the N. R. A. concerning the status of "professionals" among rifle-

concerning the status of "professionals" among riflemen.

Even at the risk of seeming ungenerous in attacking the position of Capt. Jackson in the absence of that gentleman on his honorably won mission to Ireland, I trust it will be permitted to one who is not a "professional" to take up the gauntlet thrown down by the gallant Captain on the eve of his ocean voyage, and to observe that this new clampion of professionalism ingeniously contrives to give the discussion a wrong twist by charging the growing movement to the jealousy of those poor shots whose honors are diminished by the success of the "cracks," and who are not willing to deserve their much-coveted laurels by exertion, abstemi-

ingeniously contrives to give the discussion a wrong twist by charging the growing movement to the Jealousy of those poor shots whose honors are diminished by the success of the "cracks," and who are not willing to deserve their much-coveted laurels by exertion, abstemiousness and right living.

Capt. Jackson must pardon me for saying that the "jealousy" on our part, of which he complains, is of a far different kind—it is akin to the legitlimate jealousy of the true sportsman toward the pot-hunter, of the gentleman oarsman, cricketer or athlete against those who make a trade of their skill.

Fortunately, however, the parallelism between those sports and ours does not hold altogether true. While the gentleman amateur no more dreams of competing in public with Courtney or O'Leary than he would with Ryan or Muldoon, yet, thanks to grateful and healthful habits of self-denial, of abstemiosness from wine and tobacco and of parity of life, a goodly number of us gentlemon, with but a tithe of the opportunity for practice, and at a sore cost to our purses, too, have attained skill before the butts equal to or surpassing that of the "professionals," as we have shown on many a field. Do the recorded scores, in open matches, of such gentlemen as Laurizen, Summer, Gerrish, Scott, Bruce, Brown, Blydenburgh, Wilder, Burnside, Washburne, Selph, Dwight, Dart, Harkness, Lamb and Laird suffer by comparison with those of the long-range pot-boilers? And have these, and a host of other and younger gentlemen marksmen, ever hositated to meet the "professionals" on a field where individual skill and nerve stand an equal chance with the best?

Our simple claim is that, as undoubted gentlemen mandour povider and balls, we have a right to choose the company in which we anuse ourselves. We do not clasp the book agent, the map peddler or the lightning-rood man to our breasts in eestatic fraternization. Why, then, the gundering and triendly price lists forced upon us, or to turn the arribute with exuses and explanations if he comes in secon

little, dust, not "mud," in the eyes of those who seek a wholesome definition of professionalism by picturing the possible exclusion of Mr. Rigby, under the suggested rule, as the inventor of a breech-loader gun. But, breathing this artful dust aside, do we not find a wide difference between the wealthy manufacturer, employing hundreds of artisans in vast works, where the making of a special long-range arm is but an accidental feature, and the strolling satesman, the gun peddler, hired to shoot in almost daily matches all over the country. A sound definition, which will hit the professional drummer accurately, will not touch such a gentlenam amateur as Mr. Rigby most certainly is.

Perhaps, in time, the gun-makers will realize the bad effect of hiring gun-peddlers to shoot and vend their arms in the public ways. Perhaps they will come to understand that, in the hands of anateurs, the good weapon will do as good work as in the hands of the strolling advertiser, and with far more credit to the maker. For we, the gentlemen, shooting only for health and recreation, as a relief from tougher labors of the brain and hand, know and appreciate the nerits of a trustworthy rifle without the aid of unseemly blatherskiting before the butts.

If unapproachable excellence in rifle-shooting were only attainable by combining it with the functions of the tout, there might be some excuse for the existence of the happily very limited class of prostituted marksment ow whom we give the name of "professionals." In such case, with a sufficient number of gun-dealers behind to back them up and furnish the needful funds, we might in time see a distinct class of purely professional matches, or championship belts and purses, perhaps, or somewhat of that kind, shot by trained experts. But, fortunately, there is no ground for fear that rifle-shooting will reach such a pitch of professional excellence, or that some Hanlan, Bogardus or Schaefer of the long-ranges can ever so fortify his skill that it may not be over-matched on the morrow by so

Tacems a very inopportune time to go into a live discussion of Thesems a very inopportune time to go into a live discussion of the question of professionalism in rifus chooting, when we are about leaving for Ireland to represent America generally, without any question of amateur and expert coming into the composition of the team. But as the discussion has been officially opened by the resolution of the Board of Directors N. R. A., it is proper that there should be a general expression of opinion. I suppose that there will be an act of prohibition of some sort passed to cut out those who, it would seem, in the opinion of not a few shooters, come to the ranges with the sole purpose of discouraging all rifle shooting, while certain presumably rich companies are presumably only these facilities. sumably paying these individuals to encourage the art and pracsunably paying these individuals to encourage the art and practice of ride shooting. The feeling of antagonism to professionals, so-called, I acknowledge is a very strong one, and under our democratic plan of crushing the rights of the minority under the whim of the majority, I suppose we will have to abide by some prohibitive rule or other. The right and wrong of the subject is one thing, and probably enters very slightly into the question in the minds of the major protino of those who are so noisy in the discussion. There are life members of the N. R. A. who would probably come under the ban as professionals. By a clause of the constitution all members are assured equal rights and privileges and how it can be that a life member we was in the employ of and how it can be that a life member who was in the employ of and now so who he defined, and be aromained there shoe, can now be de. Frederick and the state of the state of the state of the now be the state of the state of the state of the state of the state of the gun maked to the state of the state of the state of the state of the maked the state of no better than those who followed other callings when away from

no better than those who followed other callings when away from the range, and no great hubbub was raised about it. It would be well, perhaps, in this connection for our N. R. A. committee to go over the record of the English rifle ranges on this question. There are pienty of amateur shooters there, and surely if there was a read difficulty in the way it had been dissatesy is there was a real minuting in the way trian because covered ere this, yet we hear of ging shop keepers, of rifle manu-facturers and all the grades of those who would come under the proposed American rule.

It is a matter of grave doubt whether the bringing up of the

subject of professionalism is going to both ritie shooting at all For so many years the ranges have been occupied, and under the rule which would define an amatteur in other sports, there is not a single amateur shooter of the target ritle in America. Each of these growlers are ready complet to take the X or XX which may come to their hands as a place winner in an afternoon's shoot. come to their nands as a piace winner in an attermon's shoot. A man would need to ligh about at a very rapid rate, and have the best of skill and luck, to secure enough of these pittanecs even for the most scanty livelihood. There may be a time when, with liberal prize lists, such a professional rifleman may arise; but it is legislating for the dim futurity to pass any rules on that subject now. But the principle is the same, and if the rigorous rule that to touch money as a reward for ritle shooting is to be regardthat to total mounty as a reward of rinesmooth sto to regarded as a crime, then the list of criminals is a very large one, and the army of offenders, by will if not by deed, as wide as the ranks of riflemen. It is ovident that rifle shooting is to be sait guerris in the list of sports. It is not a sport in the ordinary application of the list of sports. It is not a sport in the ordinary application of that word, and must be studied and legislated for without a fixed that word, and must be studied and legislated for without a fixed notion to bind it to such codes as apply to other field sports. One thing is certain, that no committee of the N. R. A. can frame a rule out of which there will not be many loopholes, and which will not be found to operate harshly in some instances. It is a clumpy practice to reach particular cases by general rules, and this will form no exception. A carping, fault-finding spirit on the part of some may force what should be the highest rifle and thority in the country into a very ridiculous position. Rules and regulations may vary, and there can be little dispute under them if drawn with any sort of regard to rules of gratumax and expression; but a vule to define a professional will be from the first subsion; but a rule to define a professional will be from the first subjected to interpretation and application in hundreds of ways, and jected to interpretation and application in nundreds it ways, and disputes innumerable will arise. We will weaken ourselves as against foreign teams, and make our position an impleasant one when foreign visitors corner to our range to the many. I have been successful to the decision what it may, I care not; the rille companies are asable as ever to take care of themselves. But it would be mortified to the contraction of the successful area.

fying for the N. R. A. to once more write itself down an ass.

RANGE AND GALLERY.

THE TEAM IN IRELAND .- The following cablegrams have been

eccived:—
"Queenstown, June 13th.—The arrival of the City of Brussels, "Queenstonen, June 13th.—The urrivat of the Cay of reviseers, with the American Team on board, was reported early this morning. At 4 o'clock a tender went off to her. A deputation from Dublin, consisting of Major Leech and Aldermen Harris, McDermott and Cochrane, arrived at Queenstown on Saturday, but only Major Leech went off in the tender. The greeting between the Major and the 'Old Reliable' was most cordial. The team reports besides that a very favorable massage, with flue weather through. Major and the "Our featured passage, with fine weather through-out, though some of the members suffered from sea-siekness— Messrs. Fisher. Clark and from the members suffered from sea-siekness— Messrs. Bown and Rockwell oscaped altogether. All are now well. The pas-sengers were found to the tender about 5.50, and as the ves-sengers were found to the tender about 5.50, and as the vessels parted company good wishes and a hearty cheer from the seas parter company good wisnes and a nearly cheer from the steamer followed the team. To-day Sir John Arnott entertained the American Team on board his yacht. According to present arrangements the team, on reaching Dublin, will practice at least three days in the week."

three days in the week."

"Cork, June 13th.—The American Team to-day visited the different points of interest in the harbor in Mr John Arnott's yacht. The bracing air of Queenstown has entirely dispelled (all traces

of illines."

Boston, Mass., June 12th.—The regular meet at Walnut Hill to participate in Everybody's Match, took place to-day. The attendance was not as large as usual. E. P. Richardson took first position with a good 45, followed by J. S. Bennett and R. Davis with 46 respectively. Mr. Gould, who was holding well, secured 45. The wind came from the northwest strong, shifting often and accompanied by rain. The following summary shows the results of the vertex.

| suit of the no. | | | | | | | | |
|-----------------|------|------|------|-----|-----|-----|-----|--------|
| E. F. Richards | on . | | | 5 5 | 4 5 | 5 5 | 4 4 | 5 5-47 |
| J. S. Bennett . | | | | 4 5 | 5 5 | 4 5 | 5 5 | 4 4-46 |
| R. Davis | | | | 5 4 | 4 5 | 5 5 | 4 5 | 4 5-46 |
| A. C. Gould | | | | 4 4 | 4 5 | 4 4 | 5 5 | 5 5-45 |
| John Borden. | | | | 4 5 | 5 4 | 4 4 | 5 4 | 4 4-43 |
| O. M. Howard | | | | 4 4 | 4 5 | 4 4 | 4 4 | 4 5-42 |
| C. Richards | | | | 4 4 | 4 4 | 5 4 | 4 5 | 4 5-43 |

Mr. Salem Wilder and Mr. J. S. Sumner, in practice at long range, did some remarkable work, each contestant making 73 at 800 yards, 71 at 900 yards, and 69 at 1,000 yards, ticing at the consion with a total of 213 each.

June 17th will be celebrated by the Massachusetts Rifle Associa-John Trill will be even laren in the massed at which competition will be had in "Everybody's" match, and also in the "500-yard" match. The meeting will open at 11 o'clock A.M.

Boston, Mass, June 11th.—Mammoth Rifle Gallery.—The Excel-

Bosrox, Mass, June IIII.—Mammoth Rife Gallery.—The Excel-sior rife match, which commenced on the lat, is fast becoming popular with all who practice in this gallery. Mr. E. F. Richard-son heads the list with 189 out of a possible 20. He was also nearly successful in getting a clean score of eight consecutive bullseyes, and receiving the extra prize of five dollars for the sume. He missed his seventh shot, which was a 4 o'clock nipper, ending the score with a good 39. For the summer season the shooting has the score with a good 34. For the summer season the shooting has been lively, and as the gallery is a cool place this match has be come popular. The subjoined summary will show the standing of the several competitors for the ten cash prizes in this match. vards; rounds, 8; possible, 40; five scores to, win, or possible 200:

MEDPORD, Moss., June 1201.—The Raymond Sportsman's CHO Is about to occupy a new range, and held its last shoot at Believut to-day. A small number of spectators were in attendance. The members of this popular club who were present did fine work from the rotary trap, Mr. W. B. Wetherell breaking 71 out of a possible 75 balls, Mr. Deneburn finding 42 out of 45, F. H. Raymond 50 out of 55, J. C. Smith 58 out of 65, Mr. Kirkwood 43 out of

mond 50 out of 55, J. C. Smith 68 out of 65, Mr. Kirkwood 43 out of 55, S. E. Johnson 52 out of 69, G. H. Fox 55 out of 69. The above showing is first class, and indicates the standing of the club, who will send two teams to the Lynn tournament, June 17th, who will prove formidable antagonists to all comers.

"The Medford Amateur Ritle Association will open a new match at their range June 17th. The conditions are: 200 yards; rounds, 10; open to all comers; the aggregate of five secres to count as one continuous score, Medford target count. Entry fee for members, 25 cents; for non-members, 50 cents for the first secree each day; resonated way resonated and resonated and secree cash day; resonated and resonated and secree cash day; resonated and reso

for memors; 25 cents; for non-memors, 30 cents for the first score exch day; re-ontries, 25 cents each; which can be also and handi-capped. At the end of the match the persons in each class, who have wen the general prizes the greatest number of times, shall shoot off a score of ten shots, and those making the best average over their winning scores will become the owners.

winners, together with their three best scores:—

First Class.—First Prize—F. Hollis, 48, 48, 48, *3-147. Second Prize—B. F. Hichardson, 47, 48, 48-143. Third Prize—H. Kimball, 47, 47, 47, *2-143. Fourth Prize—W. Charles, 46, 48, 48-142. Fifth Prize—J. D. Osbora, 47, 47, 41-142.

Second Class.—First Prize—C. H. Russell, 47, 46, 46-123. Second Prize—J. Bacobs, 45, 44, 46, *3-139. Third Prize, J. Eastman, 45, 45, 46, *2-138. Fourth Prize—E. Whittier, 44, 47, 45-126. Fifth Prize—D. Abbott, 45, 45, 45-135.

Third Class.—First Prize—A. J. Greene, 45, 45, 44-134. Second Prize—A. W. Webb, 44, 43, 43, 43-133. Third Prize, N. P. Ames, 45, 42, 42-129. Fourth Prize—G. C. Arthur, 42, 42, 43-127. Fifth Prize—W. Lewis, 43, 41, 41-125.

**Number of points handcap.

Prize—W. Lewis, 43, 41, 41–125.

*Number of points handcap,
During the last competition P. Hollis has won the general prize
in the first class the greatest atturber of times; C. H. Russell in
the second class, and A. W. Webb in the third class. A score of
ten shots was shot by each of the above-named gentlemen, the
one making the best average over his winning secrets to be the
winner. The sources of the three were as follows: F. Hollis, 43
C. H. Russell, 39; A.W. Webb, 33. Mr. Frink Hollis came off victorious, and was awarded the general prize, a revolver valued at \$12

—The Schuctzenfest is still in progress at Union Hill, N. J. A series of glass bull matches, under Bogardus rules, are open to all quadeurs, and these matches will continue to-day and to-norrow Classified sweepstakes open to all amateurs. The lestival closes next Monday We will give a full faccount of it the following

Military rifles two points allowance.

CREEDMOOR JUNIOR.—Mr. C. Godfrey Gunther, President of the Brooklyn. Bath and Concy Island Balicoad, proprietor of the grounds located in the Lower Bay and known as Locus Grove, conscious of the wants of the neighboring military, the time lost and expense incurred by them in their annual target practice, has established, on the northerly line of his ground, a 200 yard ride pit range, with four targets, to be known as Creedmoor Junior.

This range can be reached by any of the cars of Hamilton, South, Wall or Fulton ferries going to Greenwood—the terminus of the Court street. Third and Hamilton avenue cars—from which point the range can be reached by steam cars in twenty-live minutes. Excersion it fekees 25 conts. The range has been rented to Mr. Heliwig, of 221 Sixth avenue, New York.

HEKAMPING STRELS.—A man of Trov. N. Y., claims to have CREEDMOOR JUNIOR.—Mr. C. Godfrey Gunther, President of the

ntos. Excursion fickets 25 cents. The range has been tender to Mr. Heliwig, of 221 Sixth avenue, New York.

RECAPPING STELLS.—A man of Troy, N. Y., claims to have invented and patented a pooket apparatus for the recapping of exploded shells used in ritles and other fire arms. Heretofore this operation has been done by hand at a slow rate and not always sure at that. The apparatus is of brass and may be carried in new's poeted. A grooved cylinder, lying borizontally, contains 280 caps set on edge. At one end of this cylinder is a piece of mechanism somewhat resembling an office hand-stamp, having at its base a flange into which the base of the shell fits in such a manner that the vent is directly under a plunger. A spring in the eap cylinder keeps one of the line of caps fed close up to the plunger at a time, and when the shell is put in place and the handle struck with the ball of the hand, a cap is nicely inserted in the base of the stell at exactly the proper point and a hair below the base of the sterior to admit of the rotation of the shell in the socket of the gun. The machine is made in the several sizes adapted to the calibers of shells, and will recap at the rate of 380 in fifteen mmutes, or 100 in less than five minutes. A Hartford, Coun., firm has recently got out a handly implement rate of 350 in fitteen matters and the state of the state of the same purpose. It may be carried by the sportsman in the pocket, and operates as rapidly as the hand can place the shells and remove them.

THE SIGHTING OF HUNTING RIFLES.

NUMBER I.

IT is commonly supposed that had shooting on game is due either to defective rifles, improper loading or noar aiming. But the more I become convinced that had sighting is quite as fruitful a parent of misses as any two of the others put together. It is now almost impossible to get a rifle that does not shoot voil emagh, at least at bunting ranges. The Boxd ammupition now furnished is almost as accurate as one could desire; yet many a mass is scored by the beginner, and even by the experienced hunter, which is due solely to the sights. olely to the sights.

due solely to the sights.

If the ingenuity of man is sublime, so also is his stupidity. How fir the ingenuity of man is sublime, so also is his stupidity. How many thousands of disbes have been spoiled by the loose top of the old pepper castor; and what mighty intellectual threes it must have taken through long languishing ages of time to give birth to a screw-topped one. Yet I think that even the old pepper castor is cellpsed by the monumental stupidity of some rifle-makers in the sights they put upon their sporting-rifles.

Let us look first at the front sight—a huge chunk of basturd the sight of watermelon and mounted one should be a significant of the sight of watermelon and mounted one should be a significant or some significant or signific

monumental stupidity of some rille-makers in the sights they put upon their sporting rilles.

Let us look first at the front sight—a huge chunk of busturd metal, shaped like a silee of watermelon, and mounted on a block nearly half an inch high; so dull in color that you can hardly see it, unless the seu strikes it just right; bigh enough to raise the trajectory several feet, if you happen to catch too much of it; having a beautiful slope at the back, so that the brightest spot will vary all the way from the tip to the back, according to the position of the sun, and so artistically sloped off on either side that other side will be brighter than the center when the sun is on that side. When the sun is just above the horizon, and again when it is overhead, walk out in the light with a rille having one of these marvels of ingenuity on the end. Then, keeping your eye fixed upon it, turn entirely around, so that exist is sight passes all around the circle of the horizon. Do you see how the center of brightness shifts all over from side to center and from base to tip? Do you see how difficult it is to find the true center (even when you have plenty of time to look for in, when the center of brightness is above, below or on one side of it? And can you not see how way it is to mistake it when you do not have time enough, which is often the case on game, especially when it is running? If not satisfied with this experiment, place eight targets at the eight principal points of the compass, and, standing in the sunshoot at then in succession. If not extremely careful to find the ruce center, and often if you are never so careful, you will shoot over, under and to the eides.

Now, in turget shooting there is comparatively liftle dauger, of being misted by this, though even there if is a nuisance, for the shooter always shoots in the same direction, with son in same position; has biently of time to find the center, and can to some extent correct any error caused by the light. But it is servely the solid to that the careful,

you will find it as hard to miss the center as it is to fit a barn with the average American pocket plstol, without standing inside of the barn. A metal sight made in the same way, but sloped a little on the top of the back, will have somewhat the same advanlittle on the top of the back, will have somewhat the same advantage, though nothing can equal ivory or white agait of or certainty in this respect. Agate is, however, quite brittle, and ivory takes grease too casily and becomes duil. But agate may be set in clamps or through a large wedge-shaped hole from the under side of the block; and ivory may be freed from grease in a few moments by boiling the sight in some alkali or in aicohol. The white sight is no round to red or brass for running shooting on some ments by boiling the sight in some alkall or in alcohol. The white sight is not equal to gold or brass for running shooting on snow, or for shooting against the sky, if cloudy. But there is no metal that shows the center with equal certainty in all lights and postlons, and can be so clearly seen at dawn or dusk, in the dark woods or the open plain. The liability to break is the only objective and the control of the control tion, and this is easily obviated by having an extra one.

Of course those may be cut as fine upon top as the shooter may desire; but I recommend flatness of top for the following reasons: there is no unction that the rifleman so quickly lays to his soul which is so flattering and so deluster as the idea that a shot a few inches over or under the mark is a good shot because it is a "line shot." In duelling where there is a mark nearly six feet high within ten paces, a "line shot" means something. In shooting on game where the mark is soldom over eighteen inches wide, (the vital parts much iess) and distant from seventy-flux to two or three hundred paces, and running, perhaps at that, a "line shot" also means something; it means a most three times out of four-perhaps two out of six. It is just exactly here that bad shots, bad rifles, and bad loading show the very least. The "line shot," as it is generally called, means on the vertical line above, or below, and this is just the easiest and most worthless of all shots. The vertiest typo, unless in a cross wind, can hit above or below the mark with great ease. (The poorest rifle, especially at long ranges.) Of course these may be cut as fine upon ton as the shooter may mark with great case. The poorest rifle, especially at long ranges, will strike the vertical line far oftener than the horizontal; and bad loading sends the ball too high or too low thrice as often as it sends it to either side. He who fancies that a variation of a few inches from the horizontal line of the mark is a good shot, will inches from the horizontal line of the main is a good caox, find himself elegantly sold when he tries any game less than an elk or a buffalo. Learn to hit the horizontal line of the mark, and then you may talk about "line shots." Of course the vertical lek or a buffalo. Learn to hit the horizontal line of the mark, a then you may talk about" line shots." Of course the verti-range is important enough, and by no means to be neglected. only mean that of the two the horizontal range is far the more

outportant, and far the harder to attain. Tage is lar use more important, and far the harder to attain. Such being the case, the front sight should be shaped to insure good britten work without sacrifice of good vertical work, and for this purpose a sight flat on top is the best, provided the flat part be not took on the wide.

Now the very best of shooting can be done at a target, and often Now the very hest obsciousing can be done at a target, an offen at game when standing, with a tront sight almost as sharp as a knife-blade. But in a bad light, when the game is dim and indis-titien, for when running, it is as easy to catch with the ope too much of the sight or mistake the point altogether, as it is for a humorist to flood the world with twaddle after he once gets an humorist to flood the world with twaddle after he once gets an established reputation. The flat top obviates this difficulty to almost the same extent that the thread and ball or globe sight does. The only objection to it is that it involves some sacrifice of vertical accuracy. This objection is truer in theory than in fact. Wonderfully accurate shooting can be done with a very broad front sight if it he of such uniform color and brightness that you do not mistake a corner or the base for the center or top, and be clear and easy to see. But even if such a sight caused a variation to the side equal to the variation up and down caused by a sharp sight, one would not be conceiving as much cause by it as by the sight, one would not lose one-third as much game by it as by the signt, one wound not use out-time as indice game by it as by the sharp one, for nearly three-shots out of four at big game are side or quartering shots. It will not burk such a sight to have the back top else, betself by loped off; and with a metal sight this should be always done, and all below it dulled and rusted with acid or iodine. The slope will then shine like a little testar, and not

acid or iodine. The slope will then shine like a little star, and not be easily confounded with any part below.

The principle of Bench's combination sight is first-rate, but the color of the open sight is too dull and the light-strikes too much on the base. Bazee it one-half and solder a bit of gold on the top. Then brighten the back ent of the gold and make it square and russ all below it with acid; or, what is better yet, cut off the open sight entirely and put a small ivory sight as above described, elther behind or in front of the rest. This will leave room to see the globe and part of the ball above the ivory.

There are but two objections to low sights: First, they are easily

the glube and part of the ball above the ivory.

There are but two objections to low sights: First, they are easily hidden by snow failing on the barrels while hunting in a snow storm. Second, you cannot raise the trajectory much by taking what is called a "course bend." The first of these is easily obvitated by carrying rills upside down and occasionally wiping it. And the second I do not hesitate to pronounce the greatest biesen. ing in the long run that a hunter could have conferred upon him tain or on the plain, in the woods, or the open hills.

NEW YORK ARCHERY CLUB .- One of the largest gatherings of New Torks National Cleb.—One of the largest gatherines of atchers in the United States, with perhaps the exception of the fournaments held last year, was witnessed Saturday afternous, June 2th, on the Archery Lawn, Central Park. The occasion was the first spring field day of the New York Archery Club, which had been postponed from Decoration Day Jast. At one which had been postponed from Decoration Day last. At one time we counted some sixty ladies and gentlemen, all shooting at once, and the seeno was one of animation and gayety. The club had a great number of theys over the lawn, together with signals marking the several distances of the American and Columbia Rounds, which were shot over during the afternoon. All the neighboring clubs were invited, and members were present the neighboring clubs were invited, and members were present from the Gedarwood Archers, Pounkheepsie, Nottingham Archers, Shewwood Archers and Lawn Club, all of Elizabeth, N. J.; Spuyten Duyvil Archers, Brooklyn Archers, Manhattam Archers and Ascianu Archers, Williamsburg. Although the club has its annual prize meeting in the fall, Messrs, Sutno & Pond put up three of their double rawhide backed bows, two for the ladies and one for the gentlemen, together with a belt, quiver and case for score book, all of which were open to all.

Miss Brandsyce, of the Nottinghum Archers, of Elizabeth, won the first ladies' bow with a score of 230 at the Columbia Round Miss Morton, of the New York club, won the second bow with a score of 230, Mrs. De Lana won the bett and culver, with a score

score of 200. Mrs. De Luna won the belt and quiver with a s

S. S. Roper won the gentlemen's bow with a score of 234 at

the American Round.

Mr. A. B. Breeze, of the New York Club, presented at the last meeting a magnitheen badge, to be known as the Columbia badge, for competition among the ladies of the olub every six weeks; but a source of 250 or over being necessary to win it. This badge was shot for Saturday for the first time, but 250 not be-

badge was shot for Saturday for the first time, but 250 not being made, it will remain without an owner until the next contest takes place, when some lady may be more fortunate and be adde to wear it until again lost.

The zuests and members all voted the first meeting of the New York Club a success, and with hearty congratulations and expressions of mutual good will toward each other, separated to spread the growth of good fellowship throughout the archery world around and in New York. The following are some of the best scores: best scores:-

best scores:— Columbia Round—Miss Morton, New York Club, 200; Miss Bran-dagee, Nottlugham, 230; Mrs. De Lura, New York Club, 147. American Round—Mr. Roper, New York Club, 234; Mr. McLean, Manhattan, 274; Mr. Auten, New York Club, 205; Mr. Peursall,

Brooklyn, 183; Mr. Sergent, Spuyten Duyvil, 183; Mr. Stoutenborough, Brooklyn, 146; Mr. Young, Cedarwood, 128.

A CHALLENGE TO THE NEW YORKS AND ORITANIS .- Chicago June 12th.-Editor Forest and Stream:-From present appears "nen contest" are about the only ones that are liable to take place between the New York Archery Club and the Oritani Archers. We, therefore, hereby challenge both of the above named clubs to a match at the Single York Round, to take place Saturday, June 19th, at 3 P.M.; we to shoot a team of four men against a team of five from each of the above-named clubs.

against a team of two from each of the above-named clubs.

Knowing how anxious_both of the above clubs are to shoof, we shall consider the challenge as accepted, and proceed to shoot on our new grounds at Lincoln Parkat the above specified time.

H. B. Wilkinson, Secretary North Side A. C.

NEW YORK AND BOSTON .- New York, June 11th .- The Oritani Archers hereby challenges the Pequessett archers, of Boston, Mass, to shoot a friendly mutch, each club to shoot on their own grounds and send scores to the Forest Ann Stream. Match to be at either the Double American or York Rounds. Teams of six.

W. HOLDBRITON,

President Oritani Archers.

ROHE HOOD ARGHERS.—The Robin Hood archers of Nyack held their annual meeting Saturday, June 5th. Reports showed the cith free from dobt and with seventy members on the roli-The first field day will be held Saturday, July 3d. A challenge from the Oritani archers, of Hackensack, N. J., was accepted, the match to come off about the middle of July. The officers are as follows: President, S. R. Bradley; Vice-President, E. Merritt; Secretary, A. Merritt, Treasurer, Mr. J. M. Arnold; Lady Paramount, Mrs. J. Griswold; Robin Hood, J. O. Davidson; Maid Marion, Miss S. Crumbie; Executive, C. O. Griswold, J. Hart, T. De Witt, J. Cleveland, A. Merritt and G. Crumbie.

NORTH SIGNA ARGHERY CLIMS.—On the 4th of June the members

NORTH SIDE ARCHERY CLUB .- On the 4th of June the members of the North Side Archery Club, of Chicago, together with several visitors from other societies, shot the York Round upon the beautiful south lawn in Lincoin Park, in North Chicago. The grounds chosen are the most perfect for the purpose conceivable, grounds chosen are the most perfect for the purpose conceivable, being perfectly level and covered with a ward of thick and closely mown grass. All the surroundings of green trees, flowers and sunshine, enough in themselves, were enhanced in loveliness by the blue and wrinkled background of Lake Michigan, itseked with its froth-crownel wares. A large company of Indies and gentlemen witnessed the shooting, and but for the tempest of wind which swept down the range the day would have been all that could have been destreat. On account of the flereo gale it was not possible to shoot double ends, as no target could have stood for a moment with such a wind at its back. The shooting was done at six targets, three gentlemen at each target, and though no high score was made the shooting was very good, conwas done at six targets, these kernteners at case target, and though no high score was made the shooting was very good, con-sidering the trying wind. A few of the scores were misplaced, so that only the following can be given:—

| Names. | 100 Tels | 80 Yds. | 60 Yas. | Totals. |
|-----------------------------------|----------|----------|---------|---------|
| Will H. Thompson, Crawfords- | | | | |
| ville, Ind | 34-121 | | | |
| Walter Burnham, Chicago, Ill | 32 - 130 | | | |
| Ford P. Hall, Highland Park. Ill | 21 - 75 | | 18- 74 | |
| O. W. Kyle, Highland Park, Ill | | | 15- 67 | |
| J. Adams, Chicago, Ill | | 30-120 | | |

| Ill | | | 17- 75 | |
| W. L. Shepard, Chicago, Ill | 18- 71 | 14- 44 | 16-64 | 48-179 |
| N. E. Swartwou, Highland Park, | | | 1 | |
| III | 14 - 50 | 18- 76 | 9- 33 | 41-159 |
| W. B. Shufeldt, Chicago, Ilt | | | 9 31 | |
| *Granger Smith, Tolodo Ohio | | 26 - 106 | 12- 38 | 38-144 |

Several other gentlemen made good scores, notably Mr. J. O Blake and Mr. John Wilkinson, but the records were misplaced and their scores were necessarily omitted.

and their scores were necessarily omitted.
The occasion was a very enjoyable one, and but for a shower of rain beginning during the last ball of the sixty yards range would have passed without an unpleasant incident. The shower prevented two or three of the gentlemen from concluding the shooting at the sixty yards range. Such meetings, composed of repreing at the sixty yards range. Such meetings, composed of representatives of different societies, should occur more frequently, as they greatly advance the pastime and are the means of the formation of true and lasting friendships. The North Side Club is growing in numbers and skill, and some of its members will be found in the bighest rank among the prize winners at the grand national meeting at Butfalo. A team composed of Messrs. Burnhum, Adams, Wilkinson and Blake would be among the most formidable in this country.

VISITOR.

NORTH SIDE ARCHERY CLUB.-Chicago, June 12th.-Through the rtesy of the Park Commissioners, the North Side Archery Club. confress of the rate commission experies to to use the beautiful south lawn of Lincoln Park for archery practice. This makes the finest ground for this purpose I have over seen, being perfectly level, with the lake for a background, and skirted on three sides level, with the Mac New York by beautiful ishade trees. The club meet for practice every pies sant evening, and hold a field target meeting monthly. The clus is now ready for challenges from all, and for all Rounds.

T. A. L. The club meet for practice every pica-The club

ATLANTIC YACHT CLUB.

ATLANTIC YACHT CLUB.

The was natural that the annual regatas of the atlantic Yacht Club, salled Wednesday, June 20th, should have been looked forward to with more interest than common, us it was the first racing of the year annual to the year singent that common, us it was the first racing of the year annual to when year and the public standard of last year, both in point of speed and general qualities. Unfortunately the racing received a damper in the way of a want of wind, and what promised to be one of the innest matches ever sailed in our waters degenerated into a drift. The results of a want of wind, and what promised to be one of the innest matches ever sailed in our waters degenerated into a drift. The results of all the way of a want of wind, and what some pair could do slit to themselves as they happened to strike a slant here or there. The fact that many yachts could not finish at all, and for hours had barely steerage way, while those fortunate enough to clear Buoy from the southward outside and manged to make the race within the limit of ten hours, is evidence enough of the character of the day's sailing. It reminds one of many another sailed under very similar circumstances of wind and weather. The list of cacdidly which can and did turn out the linest fleet of sloops in America should just happen to have struck for its litteenth annual racing one of the lightest weather days we have had for a long time.

Among the big fallows a fine match between Crussiler and Clytic had kept everyone on the flitton of expectation, appular opinion incitating toward Mr. Maxwell's wholesome schooner, while the "boat sharps" and the "stancing committee" went a little lighter on the same craft, knowing well that Clytic is on a how but has given evidence time and again of being tast on a how but has given evidence time and again of being tast on a how but has given evidence time and again of being tast on a how but has given being a did not be considered and a supervision of the man decided and the consequence of the consequence of the did not be consequence of the consequ

strucic in, and the knowing ones reset jib and trimmed down to the incoming southerly breezs. Vision had a fresh kink in the way of a whole or single jib, stopped up to a stay from the mostwith a double on the single jib, stopped up to a stay from the mostwith a double out single bead-rig. Under the big jib she fort the light wind to more effect, and ran down along the West Rank. Frame host much by a peculiar notion of her skipper, who seemed consistently to forget that be had any heatisals. With the wind subsequently, while on the wind, she seemed content with stay-sail only. It was close work between Regime and Fraita, and, had there been some more whole loss of banketing would have been in order, with a lattle huling business as well. All his was lost, drift frainth struck into a streak, and was off at a good pace with a fair lead. A shift to the S. E. acain put Regime to windward, and she could fetch the Spit with a good tink while Panta and uncantime, but worked the Concy Island bench, and, as soon as the wind back, came about and lollowed Regime down. Lizzle L. must have been similarly benefited, for, in spite of her late start, she turned up at the mark as one of the leading cart. The bood § was rounded as M. H. M. S.

Listic L. was lucky, and carried a brisk but short-lived breeze up to the Gedney Channel mark, which she rounded at 3h. 5an. To the Gedney Channel mark, which she rounded at 3h. 5an. ascaling the state of the level which the rounded will always worked around, while the rest of the fleet went in all directions in search of slants to take them out of the Hook. A few succeeded; the others family gave up. Reging got out first, and meeting a moderate breeze and Fanay about a mile apart. Mr. Stewarf's sloop showed to much advantage in the sea. Coming did heity well, but Fanny gave promise of being a regular old diver, for the way she tossed out to the mast and dipped the held drowned rate seat out on the was proof enough that she must be a terribly wet boat in any slightly dependent of the state of the

NEW YORK YACHT CLUB.

SECRETARY'S CUP, FRIDAY, JUNE 11TH.

SECRETARY'S CUP, FRIDAY, JUNE 11rm.

A FINE fresh breeze from the southward and eastward, which during the day strongthenest to a fower sail wind, and a presented by the day strongthenest to a fower sail wind, and a presented by the day strongthenest to a fower sail wind, and a presented by Mr. Chas. A. Minton, a most inferesting affair. The conditions of the match were novel, inasmuch as all craft suited in one class toom a handcap toninge. The larger free boat the being granted upon the reduced ligures. The datales of this will be found in our issue of last week, and it will suffice here to say that a fair lot of starters was the result, and that the race gave flar conditions will be announced before long. The race of to-day is easily described. It was simply Mischief first, last and all the time. This remarkable vessel gave still further proof of her race with the sail of the sail was simply Mischief first, last and all the time. This remarkable vessel gave still further proof of her race which made them dup up to their kight heads. The manner in which the ron sloop stood up to the carowas was notable, for bright heads the start, but she was sailed altogether to "ind" all day, and had her sheets heen checked a little she would probably have grown in the was sailed altogether to "ind" all day, and had her sheets heen checked a little she would probably have grown in the same fakes. Olde were freely taken against which was the sail of the day would probably have grown in the same fakes. Olde were freely taken against which was the sail of the day would probably have grown in the same fakes. Olde were freely taken against which was the sail of the day as the shelies began to diminish in their pockets. The racing among the schoolors was devoid of interest, unless Child could make someword and the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sail of the sai

SEAWANHAKA YACHT CLUB.

CORINTHIAN MATCHES, SATURDAY, JUNE 12TH.

CORINTHIAN MATCHES, SATURDAY, JUNE 12711.

SO I are as the larger vessels are concerned, racing this week has been becoming somewhat inmontonous. It has been principally a record of Mischief, for the simple reason that this sloop has always worked through the lot down to the Spit in the southeast winds, gained on the log rout to see, and held, here always a subject of the solution of the previous days, 'only a little be regretted that the Corinthian matches of the Seawanhaka Y, O, turned out a repetition of the previous days, 'only a little worse.' Cohing, one of the new properties of the seawanhaka Y, O, turned out a repetition of the previous days, 'only a little worse.' Cohing, one of the signal reputation was sailed hull down, together with everything of smaller tunnage, although for most of the day the wind was light. Creader, a schooner some 18tt, louger, was the only thing worthy the Belavare bullf sloop. Mr. Busk, however, in a sake belonged to a different class, and Mr. Busk did not wish to interfere between her and Clytic. As the sequel proved, Mr. Maxwell did not need any considerations of the kind, however when the head the opportunity, and made no effort to try her on, as she belonged to a different class, and Mr. Busk did not wish to interfere between her and Clytic. As the sequel proved, Mr. Maxwell did not need any considerations of the kind, however the subject of the conditions of the race were the usual ones of the club, and were published in our last issue. The following started:

THE AMES SPORTING CANNON,

Ames Manufacturing Company,

Ames Manufacturing Company,
Chicopee, Mass.

THIS GUN is a small bronze breechpaign clubs, ceiebrations, yachting, signal and
sporting purposes generally. The gun is made
sporting purposes generally. The gun is made
finches long, I inches calibrer, and weigins 20 lbs.; it is mounted on a solid cast fron carriage weighing |12 lbs. It can be readily carried in a processlop by two men, and meets a want long felf for
one carriages are furnished, which can be refliced
and fired indefinitely, and by their use the possibility of fire being let in the gun is obviated.
The shells are illied with common course sportfing powder, and fired by a U. S. service percuscasy of operation; no exposure in loading and
fring; and is the most complete breech-loading
gun made for this purpose.

Shot Gun and Rifle Powders Revolutionized.

Champion Shot Gun and Rifle POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. CaptainBogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

Quy Alaska Letten.

SITKA, April 23d. TAKE advantage of a temporary cessation of bright, warm, dry, glorious weather to write up a little, for during the last eight weeks I have not been willing to stay in doors an unnecessary minute. During the winter months we had our share of unpleasant weather, but the spring, so far, has made full recompense. To day it is raining a little : not enough to show in the rain guage, but the contrast with the days gone before makes us willing to "sit by,"

During March we had but nine days on which it rained, and fourteen on which more or less snow fell; and of the 744 hours, 469 are marked "b. c." (blue sky and passing clouds), 142 with snow or hail, and 66 with rain and 67 cloudy. No fogs. April, so far, has done nearly as well, there having been eleven days with clean twenty-four hours record "b, c," and but six in which rain has fallen during fifty-six hours, and snow fell on six hours of two days early in the month; thus, in 1272 hours, we have had but 122 of rain, 148 of snow, and the temperature has been of the healthiest.

It's time we began to get a little good weather, for have just passed through the most severe winter recorded during forty-five years. I quote from Dale: "The ther-mometer showed below zero but on four, and the lowest temperature recorded was four degrees." This winter, "below zero" has been a moderate temperature, if it didn't get too far down. We have had seven degrees several times. We are improving the sunshine by doing a little shooting; there are quantities of oldwives and shuftlers; the grouse are beginning to report for duty, and are brought in quite plentifully by the Indians, whose desire for bits exceeds that of most of us for sport, to be earned by tramps through a country which, ordinarily rugged enough, is now pitfallen with soft snow. A few mallard also are brought in by the Indians. The standard price for grouse and mallard is "two bits."

Ptarmigan have vanished, and are probably safe from even the Siwashes' pursuit, way up in the mountains, sunning themselves on the snowbanks.

Very little venison is brought in, and it is worthless. The Indians are all busy fishing, and all along the beaches are sprinkled with shanties, where the squaws and chil-

dren are busy smoking and drying halibut, herring and herrings' eggs, the men being away in their cances providing. There are any number of banks, beginning about five miles from here, where halibut of most excellent quality and enormous size are caught. I had wondered how the Indians managed to bandle, in their rather crank cances, great fish weighing sometimes three hundred pounds, but have learned. They do not fish from the cances, but set lines which are attached to floats—generally bladders—to which are fastened little flags on staffs. Among a group of them the fisherman watches, and when the hooked lish has exhausted itself towing the float, he is secured.

loads—generally bladders—to which are fastened little flags on staffs. Among a group of them the fisherman watches, and when the hooked lish has exhausted itself towing the float, he is secured.

The herring are here in force. These are caught by means of of poles and beards, armed with sharp nails at an angle. These are thrust under the schools, which swim about two feet deep, and the fish are gaffed out, "hooked up," as the process, slightly altered in details, by which pike and suckers are in our rivers caught in spring, is called. The herring spawn in salt water, and their favorite places are the quiet bays along the shores, and there every kind of kelp and seaweed is crusted with the spawn, and as the tide goes down and one walks along the beach, every step crushes myriads. The Indians do not collect the eggs deposited on the seawed, but plant at half-tide marks rows of branches of cedar and balsam, which, in a tide or two, become covered with spawn; these are replaced by others, and hung up to dry. The spawn is eaten dried, raw and cooked in various ways, and is very palatable in either.

Into the bays, where the spawning ccurs, a number of small fresh water streams empty—a number unusually large just now, as many come from melting snow banks—but Inoticed no busines or spawn in the immediate vicinity of the streams, and although I examined carefully, saw no signs of herring running up the fresh water streams. The pools and rifts of Indian River are as clear as crystal, and not a fin of herring running up the fresh water streams.

We are getting just now plenty of the fish called cod

as crystal, and not a fin of herring or trout was in either.

We are getting just now plenty of the fish called cod here, and I am in the minority when I take issue with the nomenclature, and again when I pronounce the redfish, which is now plentiful and good, and weighing, in some cases, thirty to forty pounds, to be a "Norway haddock." Clams, which during the winter added much to our happiness, are now seldom in the market, whether it is because of any let up in their value, or because most of the old klootchmen (women) who in winter gather them are now busy with the less permanent herring, I cannot say. Alaska clams are different from any that I have over seen elsewhere. Among our officers there is one born and bred on Cape Cod, whose earliest reminiscences are of clams, which grew both in his back yard and front garden, so I referred to him for information, and saked him "whether the clams here were Calista convexus or Mya-aranarias?" I will spare you the first part of his reply, but after a bit, during which he obtained control of himself, he informed me that they "seemed to be a cross between a soft-shell clam and a quolog; that they had the head and night-cap of the former and the body and shell of the latter." I know that they are very de licious, and with a flavor peculiar to themselves; have just about as much of the genuine clam flavor as do the "little necks." Besides clams we have very good mussels and scallops, and the Siwashes indulge in boiled squids.

get no crabs in the immediate vicinity, but in We get no crabs in the immediate vicinity, but in summer very fine ones are brought from a bay about fifteen miles from here. Up the country somewhere there must be some very large ones. I have procured from Indians crabs of great size, the largest is of dimensions as follows: length 5½ inches, breadth at interaction of nippers 3½ inches, nippers, or mandibles, or whatever may be the name of the bitting apparatus, length 2 inches, armed with, in each side, two teeth, larger than those of a man. These claw-legs are studded with rows of projections one-quarter of an inch high.

I have procured also from the Indians several pieces of two kinds of coral, which they say were found on the adjacent shores. I have sent them to Prof. Baird for identification.

two kinds of coral, which they say were found on the adjacent shores. I have sent them to Prof. Baird for identification.

Neither salmon trout nor brook trout have as yet put in their appearance, that is, in any stream we know of. An Indian woman last week had a small string of the latter, but I couldn't find out where she got them, and you may be sure I tried hard enough. We have seen very few wild geese this spring; I last fall they flew over in great numbers going to the South, but they seem to have staid there, or gone back by some other route. There are lots of robins here now, but I think that they are merely transients; they don't nest in this vicinity; came in flocks last fall and now are returning probably to the Yukon neighborhood, where Dale found eggs.

The spring is very backward in one respect; ordinarily by this time the lower mountains are clear enough of snow for prospecting, but this year the miners, of whom we have quite a colony, are in the dumps. They have come here to hybernate, and have about used up their stakes, and the non-expensive amusements of ball playing and sitting around on the rocks whittling are about all

they care to indulge in. I wish right here to speak a good and true word for them. During the whole winter the miners here have conducted themselves in the most orderly and respectable manner; they have not evinced

good and true word for them. During the whole winter the miners here have conducted themselves in the most orderly and respectable manner; they have not evinced a particle of opposition to any step which has been made necessary for the better government of a few, who are miners only in the sense that fishers are fish, viz., in living on them; and they have given their willing coperation in carrying out such simple laws as we have found it advisable to establish from time to time.

I think that before long there will be a "rush" for the Chillcat country, where it is reported that placer work will pay. Here we have nothing but ledges of auriferous quartz, that require money and time to develop. Up to last fall the Chillcat Indians have objected strongly to the white men penetrating their country, and during the winter they opposed the entry of Mr. Muir and a missionary—and in so doing were about half right, but reports have come in lately that they would welcome the whites; and to-day "Sitka Jack" returned from a trip there on which he started last fall, and tells me that the Indians will be glad to have the white men come. I was confident when I let this party of semi-civilized Siwashes go up there that they would plant a seed which would eventually produce a good crop, and so it has proved; but I've been roundly abused by the missionary organs because the crop did not follow inmediately the planting. As a matter of course, Prof. Muir and party, following so close on the trail of Sitka Jack, found it more or less ornamented with intoxicated Siwashes, It was the native way of welcoming Jack, and if that reverend and scientific party had had a little savey and waited a bit they would have found that Jack's liquor would have from the save some must have had tremendous carrying capacity.

Now the truth is, that is assuming that Jack tells it, no "whiskey" was carried at all—that would have been unwhich the above is quoted, and if that would have the."

which the above is quoted, can't be exaggerated, but if it isn't, Jack's canoe must have had tremendous carrying capacity.

Now the truth is, that is assuming that Jack tells it, no "whiskey" was carried at all—that would have been unlawful—but Jack owns that he did carry a barrel of molasses, and that is strictly in accordance with law. And that barrel of molasses may have been instrumental in opening the Chillcat region to our miners. Undoubtedly Jack, when it gave out and he got sober, mourned for more, and wished himself back among the white men from whom all blessings of that sort flow, and those who mourned with him its early demise believed in the tales he told them of the good that the Sitka Indians were receiving from the whites. Jack himself hade over \$300 last summer at the cannery, and the suit of clothes which he carried with him, starting with it on him and probably entering all villages so arrayed, did more toward converting these primitives than would a bushel of tracts and a cord of Bibles, a blue frock, brass buttons and colonel's stripes, a navy cap, with gold band and device, and, I believe, a sword.

If the miners start for the Chillcat, and several tell me they shall, and get well treated, and strike it rich, that barrel of molasses will become as famous as the "barrel of monesses will become as famous as the "barrel of monesses will become as famous as the "barrel of monesses will become as famous as the "barrel of monesses will become as famous as the "barrel of monesses will become as famous as the "barrel of monesses will become as famous as the "barrel of monesses will become as famous as the "barrel of monesses will become as famous as the "barrel of mones the treated, and strike it rich, that barrel of molasses will become as famous as the "barrel of mones the treated, and strike it rich, that barrel of molasses will become as famous as the "barrel of mones" and "barrel of apple sass" of political and theatrical renown.

Seriously, I believe I did right, and that the visit of my

barrel of molasses will become as famous as the barrel of money "and "bar" of apple sass" of political and theatrical renown.

Seriously, I believe I did right, and that the visit of my trained Indian has had an excellent effect upon his wild friends, and that during the summer a great deal will be done toward developing the northern region, where it is reported there are good placer indications. A little schooner is now outfitting to start.

The first salmon of the season made his debut to-day, that is, if he is a salmon, and not some species of salmon

that is, if he is a salmon, and not some species of salmon trout.

Five of these beauties, from thirty to forty inches long, came alongside to-day in a canoe paddled by a wild looking and awe-struck Siwash, who with his cronching klootchman (wile) and papoose in the bow, gazed upon our guns and us with an expression that showed them to be unfamiliar with the sight. He was a stranger, and was taken in, for he took willingly the two bits each that were offered them for the fish, and no Sitka Siwash but would have asked us treble the price. Through an interpreter I interviewed him. He had spent the winter (and that means the last seven months) on a shanty on the western shore of Kruzoff Island, from which Mount Edgecombe rears its eternally snow-clad peak, and he told me that well up among the foot-hills of that mountain range there was a little lake, from which there flowed into the Pacific a small stream, and that from the headwaters of this stream he had hooked these fish, and each by the gash of the gaff in its silvery side confirmed that part of his story; and that these fish stayed all winter in this lake, and an down the stream in spring.

Now, Mr. Editor, if that Indian told the truth, and the interpreter ditto, either this is not a salmon, or it is a salmon with very peculiar rabits. Before cooking, the flesh of this fish was as

red as that of the reddest fleshed brook trout. Frying for breakfast and boiling for dinner took from it every vestige of red tinge, leaving it almost as white as halibut. Three of the five were females, with well developed

would seek that stream, and would capture some of I Would seek that stream, and would capture some of these fish, but for a reason: Among my curios I have a necklace, not very pretty, but, to say the least, unique; it is composed of, alternately, the incisors and molars of bears and beavers. The latter I should not object to necklace, not very pretty, but, to say the least, unique, a is composed of, alternately, the incisors and molars of bears and beavers. The latter I should not object to watching build their dams, but I do not care to observe too closely, when armed but with a fish-rod, any of the relations of those who furnished the larger portion of my necklace, and lots of them live in the immediate vicinity of this stream. It may be true that "bears when not molested or irritated are harmless," but I am the owner of a bear, a small one, who in some respects resembles Artenus Ward's kaugaroo; he is "an amoosing little kuss," but he gets irritated mighty easy, and when he does it is only because his teeth are as yet not have that I don't have considerable cause for irritation myself.

This cub, by the way, must have been born about the 1st of March. Wasn't that rather early? What to do with this brute when he grows up is a puzzle to me. Some of my friends propose that some day we shall take him ashore, let him run, and several of us provide a foundation of truth for the killing-of-a-bear-in-Alaska-story, which we shall have to tell when we get home—viz., utilizing "Joe" with our rifles.

Matural History.

FRASER RIVER SALMON.

BY MOWITCH-NO III

BY MOWITCH—NO. III.

Concluded.

Sacounted for in this way: About the same time each season, salmon seem to be actuated by the common desire to proceed to the spawning beds, and the ova are developed to a greater degree in some individuals than others, although each variety of salmon starts from the sea at or about the same time. As the ova become fully developed and matured they branch off to the various tributaries then at hand and perform the act of spawning, while those not ready to deposit their spawn keep on till such time as they are ready, and so on till all have completed their allotted task. This, when viewed in the proper light, shows the wise provision of nature in many ways, but more especially in this respect. Did salmon all leave the sea at the same time, with the ova in the same condition, they would necessarily be completed to resort to the same place, which would not afford the necessary room for the countless thousands—millions would perhaps be the best term—nd overcrowding would frustrate and render nugatory the purpose sought to be accomplished.

That cribse snawn. I fully believe, not of my own

ished.

That grilse spawn, I fully believe, not of my own anwledge, but from the testimony of many intelligent shermen who are confident on this point; and certainly fishermen who are confident on this point; and certainly if they do not, and these supposed grilse are mature salmon, the different sorts of salmon frequenting these waters must be many more than commonly believed. There can be no doubt that fish of a small size, in every respect resembling grilse, are frequently caught full of

respect resembling griss, are frequency chaght third spawn.

There is but one mode of capture of salmon by the whites, that is by drift nets varying in mesh from five and three-quarter to eight inches. Traps and weirs have been tried without any great success, and, financially speaking, proved a failure. The principal modes of capture practiced by the Indians, are by means of scoop nets, used at the heads of eddies; traps of various construction. Spears, some of which are exceedingly ingenious in their construction, and always detachable from the spear-pole, are made by different tribes in various forms and shapes, often very primitive in character, but very effective in use. Both day and night are turned to account in the salmon season. In spearing, a pitch-pine fire is used at night, as is the case in other parts of the world. The Indians of Babine Lake (lat. 55° north, long, 136° west), have a most ingenious way of capturing them are a used at mgnt, as is the case in other parts of the world. The Indians of Babine Lake (lat. 55° north, long. 126° west), have a most ingenious way of capturing them with as little trouble as can well be imagined: A dam is built across a suitable stream, on the upper side of which, from bank to bank, a cance or cances, as the case may be, are placed lengthwise across the stream. The gunwales are depressed slightly and allowed to catch under projections of the upper side of the dam, so as to keep the cance in position and prevent it from being carried over the dam. The Indians sit leisurely down on the banks of the stream and smoke the pipe of tobacco or kinnikinic, whichever they may have the most of, confident of a rich return for their scanty labors. The results are as follows: Salmon arrive at the foot of the dam over which they leap, depositing themselves in the cance instead of the water, and when the cance is sufficiently full for the noble red man's purpose he tows it ashore, empties it of its live and kicking cargo, and replaces it for an other supply. Then comes his patient squaw, who proceeds with considerable skill the relief after a side of the supplemental skill the relief after a side of the supplemental skill the relief after a side of the supplemental special to the side of the supplemental squaw, who proceeds with considerable skill the relief after a side of the supplemental squaw, who proceeds with considerable skill the relief after a side of the side of the supplemental squaw when proceeds with considerable skill the relief after a side of the side of for the noble red man's purpose he tows it ashore, empties it of its live and kicking cargo, and replaces it for another supply. Then comes his patient squaw, who proceeds, with considerable skill, to split, dress and dry the fish for their common support during the next long and dreary winter. No salt is used in the drying process, and the fish usually keep remarkably well. The salmon storehouses are usually placed throughout British Columbia in the branches of trees, thirty to forty feet and even higher from the ground, and are reached by means of a notched pole, which makes an admirable substitute for a ladder. Many of these houses are very large, capable of storing many tons of salmon, and appear to be joint stock affairs held by several families in common. Indians inform me that the reason of placing these houses so high is that by this means the dried fish is kept free from the ravages of blow and other flies, and assign no other reason for this custom. Many persons allege that it is to protect the salmon from dogs and other animals; this is an evident error, because ten feet is as ample a protection from dogs as one hundred feet would be, and as for climbing animals—such as coons, martens, weasels, etc.—a moment's consideration will convince any one that coons, martens and the like are generally as profi-

cient in climbing notched or other poles as are Indians. All the salmon of this river are perfectly harmless as regards poisonous effects to any animal. I have known of no injurious results arising through the flesh being caten raw, boiled, fried, roasted or dried, and it is eaten with avidity by dogs and all other carnivorous animals when obtainable. In its dried state it is sometimes fed to Indian ponies, in seasons of much snow and scarcity of their usual fodder, with no noxious effects or objectionable results. On the other hand, from the most authentic and reliable information, the result of long experience and repeated experiments, it appears that Salmo quinnat, the Chinook or Columbia salmon, when eaten by dogs, under some circumstances, is as deadly to Canis domesticus as would be a dose of strychnine, although not as speedy in its results. This feature I do not attempt to account for, but leave it to others with the matter under their immediate observation. Now, as regards the taking or non-taking of a fly, I do not think that sufficient data are at hand to charge the noble Salmo peacificus—to use a generic term coined for the occasion, intended to include varieties peculiar to the Pacific Coast—with an offense of such magnitude. Perhaps it will be well to reliate the story told respecting the scion of nobility who, sent out for the special purpose of reporting on the natural resources of Oregon, at the time of Joint occupancy of said territory by the British and American nations, condemned the whole country as comparatively worthless—not worth the trouble of setting up or having a fuss made about, and perhaps more graphically than elegantly expressed his disgust by the statement "that the whole country was not worth a d——n; even the salmon would not take a fly." Without touching the Columbia, of which river I confess to be ting up or having a fuss made about, and perhaps more statement "that the whole country was not worth a d—n; even the salmon would not take a fly." Without touching the Columbia, of which river I confess to be comparatively ignorant, I am willing to admit that salmon will not take a fly in Fraser River; but this, if from no other cause, might fairly be attributed to the extremely muddy character of the water of the stream. A salmon could not sace a fly, at least in the lower part of the river, were it within six inches of his nose; but I do not believe that they have been fished for enough to let us know whether they will or will not take a fly in the tributaries or clear water streams. One gentleman of my acquaintance (a Nova Scotia and Nova Brunswick fly fisher) showed me a salmon which he stated he caught in the Coquitdam River with a fly, and I have the fullest confidence in the veracity of his statement. You may ask how it is that in a country so long known as this that such a question has not been fully tested and set at rest, pro or con. I will endeavor to explain: In the first place every stranger of fly-fishing proclivities is usually met upon his first inquiry by the assertion of some wiseacre or another who perhaps never saw a salmon fly or rod, that "the salmon will not take a fly, and there is no use in trying." This rather dampens the ardor of the fisherman, and perhaps he accepts the situation and never attempts to prove or disprove the correctness of the statement. Again, it any one does try he probably does so using the flies and selecting the season in accordance with his former experience, derived in other countries, and after a few failures gives it up; but the principal or main using the files and selecting the season in accordance with his former experience, derived in other countries, and after a few failures gives it up; but the principal or main reason is probably this: The little value attached to the salmon here prevents continued trial. The fish has no mouetary or intrinsic value; and although I would not by any means charge salmon fishers with being mercenary wretches, still I may be pardoned for the belief that it salmon could be purchased on the Restigouche, Godbout or similar rivers for five cents a piece. Messrs, Abbey & Imbrie would sell less six-strip bamboo rods for use in those localities. Anything loses its prestige when cheap or easy of capture. People as a rule do not amuse themselves by shooting chickens in their own poultry yard, while I can readily imagine wild jungle fowl shooting to be an agreeable pastime. I was fond of jack fishing when a boy in Ontario, and many a night have I spent at it, robbing myself of the sleep I ought to have taken, to enable me to do my work properly next day. But never have I lifted a spear in this country, although having overy opportunity of doing so next day. But never have I lifted a spear in this country, although having overy opportunity of doing so had I been inclined, and seeing scores of salmon taken nightly by the Indians within a gunshot of my door. I was also fond of trolling with a spoon, and I practiced it to some extent in salt water here, catching as many sometimes as a dozen line salmon in an afternoon, but the sport to me became worthless, and I gave it up in disgust when after bringing my catch home, one sufficing for my use, I had to boil the others for my dogs or throw them away. The pleasure of being able to send a valued friend a present of a fine salmon, which is accorded to you in the East, is denied us in the West. Under any circumstances here, such a gift would not be appreciated; would by some be thought to be a huge joke; while others would feel that an insuit or slight was offered and intended at being the recipient of such a present. So strangely do circumstances change cases next day. But nev try, although havi had I been inclined. present. So strangely do circumstances change cases orld of ours. These reasons may account in a saure for the anathy existing in respect to a in this world of ours. These reasons may account in a great measure for the apathy existing in respect to a sport so highly valued under a different state of affairs. Fearing that, if extended any further, this paper may get tedious, I will close by saying that, to a student of ich-thyology, the salmon of the North Pacific present a field perhaps not equalled, certainly not excelled, by any other part of the world; while to the Canadian Department of Fisheries the establishment of proper hatcheries is a subject worthy of its most serious consideration, as not alone applicable to Fraser River, but to almost every stream emptying into the ocean on the seaboard of "The Pacific Province of the Dominion."

*New Westmister, *Patish Columbia.* in this world of ours New Westminster, British Columbia,

WINTER PELAGE OF LEPUS CAMPESTRIS, -Editor For est and Stream: -Statements respecting the color of Lepus campestris in your recent issues are getting so decidedly "mixed" that I beg a little space in your columns for an explanation of some of the apparently contradictory reports. As often happens in such cases, the truth is not all on one side. The "jack rabbit" of the plains does turn white in winter, and it does not, according to the latitude of the locality. From the plains of the Yellowstone to those of the Saskatchewan, or to the northern limit of the habitat of the species, Lepus campestris turns white in winter, while in Kansas, in Southern Nebraska and Southern Wyoming it, as a rule, does

not, or undergoes only partial change, as is the case generally over the belt of territory between the areas named. Mr. Guild's statement (see Forest and Stream of June 10th) is unquestionably correct for the portion of country to which it relates, as is, of course, your own for the region further northward. In perhaps most species of manimals in which the pelace turns white in winter the amount of change varies at different localities, the whiteness increasing in purity from the South northward, as is well illustrated in our common varying hare, "white rabbit" (Lepus americanus), and in the ermines. In these species the change at the extreme southward is often only partial, while many individuals do not undergo the change at all. In Lepus campestris the winter pelage, even at the northward, never becomes so intensely white as in L. americanus and the Arctic hare, the brown of the under fur being visible on the slightest disarrangement of the pelage, while there is usually a more or less brownish area on the middle of the back in even the whitest examples. As these points are noticed in some detail in my "Monograph of North American Lepenidæ" (North Am. Rod., Coues and Allen, pp. 297. 307), it is unnecessary to devote further space to the sub-J. A. ALLEN. ject here.

Cambridge, Mass., June 11th.

THE SNAKE KILLER.

THE SNARE KILLER.

THERE is a bird, I know not if it has been described by naturalists, inhabiting the southern portions of California and Arizona, popularly known as the "Roadrunner." This bird is a little less in size than the eastern partridge or drumming grouse, and of the same general appearance, but with a long slin tail like the magpie; bill, black and straight and about one-half longer than that of the common jay; solitary in its habits and rarely two are found together. Its ordinary way of escape from its enemies is by running, using its wings to aid it after the manner of the ostrich. A horse must be put to its speed to drive one of these birds from the road, when it chooses to use the road ahead of it, instead of stepping out to one side to let the horse or team go by. It largely affects the arid plateaus or mesus of the region named, where the largest number of the species of cacit affects the arid plateaus or mesus of the region named, where the largest number of the species of cacti abound, and where, lying in the sun asleep, or watching for its prey, is found the large yellow rattlesmake, quite too plenty for the nerves of the eastern traveller. One of the varieties of cactus, pronounced by the native Mexicans as if spelled "chayer," drops every year a burr, —egged shaped, and armed all over with long sharp needles. When this burr becomes dried by the ferce rays of the sun the needles pierce the flesh on coming in contact with it. Indeed it is started by many who have tried the experiment that the burr with its bundreds of barbs is so attracted by the moisture from the hand, when placed near it, that it will of itself move and fasten in the flesh. In the region where these burrs are scatwhen placed near it, that it will of itself move and tasten in the flesh. In the region where these burrs are scat-tered over the plain, our bird finds a nattlesnake askep, perhaps, or coiled and at rest. He runs silently and with speed and seizes these burrs, and quickly makes a circle of this impassable material around the snake. This done he seizes a burr and tosses upon the reptile. The sharp of this impassable material around the snake. This done he seizes a burr and tosses upon the reptile. The sharp barbs pierce the now writhing body of the unfortunate sleeper. Flinging its body about it strikes everywhere upon the wall of burrs and becomes literally covered with the horrid thorns. Thus tormented, maddened, too much londed down with the burrs for flight, the snake bites itself repeatedly and soon is dead. And our bird approaches and with no danger to itself, tears and eats from the body of its victim at pleasure. The circles of burrs made by this bird are seen everywhere in the cacti districts of Arizona. I have named the bird the "snake killer" from its habit of hunting the rattlesnake.

It was a matter of surprise to me on shooting one of these birds, to find that it belonged to the flesh-eating class, instead of being seed and grain eaters, as its general appearance would indicate. I have seen many of these birds, but have never yet heard from it any cry. It seems to be silent and solitary, as I have never discovered more than two in the same neighborhood.

The bird referred to is the ground cockoo chapparal

The bird referred to is the ground cockoo chapparal cock, Paisano or Faisanox (Geococcy californianus), a not very distant ally of the cockoo. Its habits of feeding on snakes is well known to naturalists, and the supposed practice of surrounding its sleeping prey with the fruit of the cactus has already been described. But is it certain that these circles of cactus fruit are made by the bird, and for the purpose mentioned?

SWALLOWS, BATS AND BEDBUGS.—The explanation offered by Mr. R. M. Conway in regard to bedbugs on swallows is very interesting, but rather misleading, inasmuch as he seems to take for granted that he has solved the problem, whereas he has thrown but a very feeble light on the subject. The object of all inquiry is, I suppose, to come to as near a true knowledge of the subject in hand as nearsible. hand as possible.

Mr. C. may not be aware of the fact, but bedbugs do occur on swallows, as will be testified by any close ob-

do occur on swallows, as will be testified by any closs onserver.

As for this parasite on bats, I think no one would deny their presence. I have found them frequently, but on quite a number of little brown bats (V. subulatus) examined last summer I did not find a single bedbug. As I have had no experience at the South, I know nothing of the habits of the bats there. But as no bat was ever seen or known to hang in the bouse or barn referred to in my article of May 6th I am led to conclude that they were not the conveyers of the bedbugs. And if they had been, this would not explain why the bugs are found on the barn and swallows only after the young swallows were hatched. The bats were seen for a month or more Prior to the time.

Bats are not very numerous in that locality, so I cannot think that they hang from the trees, and thus infest them with bedbugs, which afterward get on the swallows. Every year, swallows, bats and bedbugs are as numerous an ever, in their season: but the parasite is no

longer found in the house. As far as it goes, I think the theory advanced in my first article will hold.

The question is, do the hedbugs come from the bass woods, (I hold that they do), and if so how do they get there?

W. P. M.

The Blue Grosbeak in Massachusetts.—On May 29th Mr. Gordon Plummer, of Brookline, Mass., shot in that town a beautiful specimen of the adult male blue grosboak (Goniaphea accrutea). This is believed to be the only specimen of this species ever taken in Massachusetts. None previous to this have ever been recorded. We have the record of one specimen only, taken in New England, which was shot in Maine nineteen years ago, and is now in the possession of Mr. Geo. A. Boardman, the eminent ornithologist.

THE LONG ISLAND INSECT PESTS.—Boston, June 22d.—I noticed, in your last issue, an inquiry from an aggrieved correspondent in regard to the destruction of the trees of his section by June-bugs, as to "what he should do about it." Let him place half a dozen tubs of water around his yard near his favorite trees, sink a kee jin each till nearly level with the water, and place thereon a lantern. If the bugs are very numerous he can take a hogshead and a cedar post. Attracted by the light they bump their heads against the glass and drop into the water, and if oil is dropped on the water, the next morning you will have a bushel, more or less, of the most demoralized animals that ever walked on six legs—or more. The oil clogs up their spiracles and suffocates them, while they can't swim worth a cent anyway. Coöperation is the death of bugs.

J. P. Trun.

ARRIVALS AT THE PULLAR PRINTS TOST OCULAR GARDEN TRON ABRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FROM MAY 25TH TO JUNE THE.—I horned lizard (Phrymosoma cornuta), 2 1 raccoon (Procyon lotor), 1 European land tortoise (Trituda gracca), 5 woodchucks (Arctomys monax), 2 red foxes (Vulpes fulrus), 1 pight beron (Nuctiardea gardeni), 1 bald caule (Haligetus fulus), I night heron (Nyettar-lea gardeni), I baid engelo (Hallaetus letucos), I night heron (Nyettar-lea gardeni), I alla gato (Hallaetus letucos), I nockin pid (Turdes) poligoltus), I alligator (Alligator mississippiensis), I opesum (Didelphys virginiana), I pigeon hawk (Accipiter fuseus), 4 spreading adders (Heterodon platyrinos), I hog-nosed snako (II. platyrinos atmodes) 5 black snako (Sasconion constitutor), 2 water snakes (Propionotus specion), I king snako (Golabora, Sasconion constitutor), 2 water snakos (Tropidonotus specion), I king snako (Olubora, Snako (Olubora, Snako (Colubor snakos (Colubor snakos (Colubor snakos), 1 parter, snako (Dutania, stralis), 1 parter, snako (Dutania, stralis), 1 parter, snako (Dutania, stralis), stralis, parter snakos (Parterios), stralis, parterios part flagelliformis), 1 garter snake (Eutai'nia sirtalis), 1 garter snake (G. sirlalis parietulis), l'indigo snake (Spidots crebennus), il prete sontod. 1 Virginia dece (Gervis virginianus), 1 zebu (Bos indicus), 1 fallow dece (Dama vulgaris), 4 prario dogs (Gynomys ludavicianus), born in the garden.

N. H. NAPP.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JUNE 19FIL—One black snake, presented by Mr. J. Frasier, New York City. One herring guil (Larne argentatus), presented by Mr. D. W. Luhring, New York City. One Virginia cardinal (Caritania virginianus), presented by Mr. F. B. Tilghman, Eight menotraneli (Menboruchus lateratis), presented by Foc. Burt. G. Wilder, Ithaca. Two red breasted toucans (Remphostos disclorus). Two millionic one disclorus dicolorus). Two military macaws (Ara militaris). One flamingo mecanists. Two imitary inecaws (ara mittaris). One intaining (Phonitopherus rubor). One spidor monkey (Atle ator). One cebus monkey (Edebus capusinus)—all purchased. One fatiow deet (Dumar vudgaris). Four white sawas (Cygmus odro). Two black swans (Cygmus atratus)—all born in the monagerie.

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

NO. VII.-FISHWAYS.

NO. VII.—FISHWAYS.

GERMANY and America are the only countries which make any great display in fish culture, if we except England, who sends some photographs of fishes and a very little apparatus. The limits of fish culture as regards apparatus does not seem to be clearly and sharply defined, or at least understood, by all alike; thus: in America, fish cultural apparatus is understood to include only latching implements and their accessories for gathering spawn, feeding fry, etc., and the tanks and appliances for transporting living fishes, excluding fishways as implements of protection and not of propagation, wide in Germany the latter are included and transplanting apparatus is, by the classification of the awards at the Fishery Exhibition at least, placed in the list of apparatus for bringing fish to market. The limits of fish cultures are hard to define; so imperceptibly do they blend into natural history, protection, food resources and other questions of interest that a fish culturis of the broad guage pattern must have a passing knowledge of all these things, including geographical distribution, protective laws, fishways, anatomy, classification and no menclature, as well as to be conversant with the approved forms of hatching apparatus and the character and treatment of the eers of the different fishes which come menciature, as well as to be conversant with the approved forms of hatching apparatus and the character and treatment of the eggs of the different fishes which come within his province; therefore, by an elastic interpretation of the term fish culture, perhaps fishways may be admitted within its meaning.

Europe is not prolific of devices for aiding fish to ascend obstructions in the streams most of the world.

admitted within its meaning.

Europe is not prolife of devices for aiding fish to ascend obstructions in the streams, most of the models shown being the old fashioned ones, having plain partitions at right angles, or merely a series of pools arranged on a slope, whereby the fish leap from one to the other after the fashion of the original Scotch or Irish fish ladders; and in this connection it may as well be stated that the oldest salmon ladder known to the writer was built in Scotland, in 1826, a description of which will be found below among the models exhibited in the English department. A tour through the Exhibition in search of fishways reveals the fact that but three countries make any display of them, a circumstance which leads one to suppose that the other countries have nothing in this line worth showing, and, judging from the known literature of fish culture, it is much to be doubted if the question of the passage of fishes over obstructions, natural or artificial, has been made a subject of special study outside of Great Britain, Germany and America, where it has of late years received a large share of attention as one of the

means to be employed to preserve the fishes and increase the food resources of the respective countries.

ENGLAND.

The models in the English department are all from the Museum of Economic Fish Culture, at South Kensington, and are in wood and plaster, being apparently made without reference to scale, and are as follows:—
Model of fish pass at Denaston Weir on the Leith, Perthshire, built in 1826. A gradually widening sluice-

with the explanation :—

Length of ladder, 250 feet.

Width at top, 9 feet.

Width at bottom, 40 feet.

Gradient, one foot in twenty-seven.

Gradient, one foot in twenty-seven.
This way has projecting partitions reaching nearly across, with openings on alternate sides, and the question arises why the way is made wider below when the water passes through openings of the same size all the way down.

Model of fishway at Warkworth, on the Coquet,

down.

Model of fishway at Warkworth, on the Coquet,
Northumberland, built by J. Tait, Esq., agent to the
Duke of Northumberland. Partitions running all the
way across, their tops sloping upward, having a notch
in the middle. The flow of water is regulated by a
movable section at the upper end, which is hinged at its
innerion with the other portion, allowing it to be ele-

in the middle. The flow of water is regulated by a movable section at the upper end, which is hinged at its junction with the other portion, allowing it to be elevated or depressed according to the state of the water. A model is shown of a fishway constructed on a principle either unknown or at least unpracticed in America, called by Dr. Buckland "a diagonal board on weir," in which the face of the dam is made sloping inclination not given, but about 250°), and a board is set up edgewise running diagonally down its face, throwing the water to the right or left, as the case may be, the fish being expected to rush up by the side of the board, which would seem to have the effect of deepening the water on the face of the slope and also retarding it to a slight degree. A catalogue of the English exhibit has been promised, but at present writing, in the sixth week of the Exhibition, none has appeared, and as there are only very meager descriptions upon some of the articles, we must guess at some things, and as on this model there are the following inscriptions: "See Photo, of Durham Weir," and "See Fishery Reports, p. 44, 1870, and p. 36, 1899," it is perhaps to be inferred that a fishway has been built upon this principle, but not having access to the reports mentioned, at present, it is is mossible to state this as a fact.

Buckland's fishway. This is partly on the prin-

fact.

Buckland's fishway. This is partly on the principle of the above, having two beards, "Idsh-boards," if they nay be so called, which converge and direct the water flowing down the sloping face into a sort of funnel. The face slopes at perhaps an angle of 45°, and these "flash boards" are at about the same angle with the creat of the dam. At the foot of the sloping face is a pool formed by a semi-circle of large rocks cemented into a well, which views the samon a chance to start, while a wall, which gives the salmon a chance to start, while below the wall is the trunk of a tree thrown across to form a sort of lower pool and deepen the water around

form a sore of lower pool and deepen the water around the rocky basin.

Model of a fish pass turned upon itself. Original at Tavistock, in Devon; dam six feet high; a succession of pools; reference to Fishery Reports 1869, p. 26.

Model of pass built in 1871, on the Severn, at Penarth, near Newton, Montgomeryshire. A succession of pools with notches on alternate sides; height of dam, seven feet; difference of level between the pools, ten and a courter inches.

with notines on ancesant of the pools, ten and a quarter inches.

Buckland's ladder. Model of one on the "Stour," Canterbury, said to work well. A succession of pools made by removable partitions sliding in vertical grooves; the bottom of the way being level, the upper pools are

the bottom of the way being iever, the hyperstacepest.

Model of Markworth dam, on the "Coquet," the property of the Duke of Northumberland. On one side of the dam is a fish trap with sluice gates, necks, etc., for taking trout, and a lishway upon the other. This is leased by Mr. W. R. Pape, the gun-maker, and the label tells us that in four years there were 131 tons of bull-trout taken here. (See Fishery Reports 1879, p. 9.) The ladder is made by partitions forming pools, one side being higher than the other, causing the largest flow to be made on alternate sides.

ernate sides. 'Ladder within a ladder.'' Mr. S. Bateson's plan, work near Golspie, Sutherland, Scotland, over a fall of at work near Golsi at work near crosspe, subsersand, scotland, over a ratt of sixty feet. (See Report, Scotch sulmon ladders, p. 131.) A series of steps having on alternate ends a double step, or, as its name suggests, a smaller ladder or easier way within the greater one, which serves to break the force of the water.

Model of Shaw's fishway (American) in wood.
Model of fishway with partitions making deep pools,
the water flowing through a hole in the bottom of each
partition instead of over its top.
Model of old style fishway with alternate projections.
Wodel of above doubled to return near the dam.

Model of old style fishway with alternate projections. Model of above doubled to return near the dam. Model of fishway with alternate projections, those one side being at right angles with the sides of se way, and those on the other slanting up stream at an apple of 45°.

The Royal Prussian High Bailiff (Landrostei) shows a

The Royal Prussian High Bailin (Landroste) snows a working model of the salmon pass near Osnabrucek, on the Ems, at Haneken, in Holstein, having partitions running across with notches on alternate sides.

Mr. Carl Schuster, Freiburg in Baden, has one on the above plan, turned on itself, and a few brook trout four or five inches long in it, which appear contented to remain in the deep pool at the bottom and breathet the well or oxyginated water which comes to them as they crowd to the authean page near the lower newther to receive it. This to the surface near the lower aperture to receive it. 'model is of tin, ten feet in length, if straightened, is one foot in width; the bottom being covered to

In the collective display of Thueringen (the district of In the collective display of Thueringen (the district of the Thuringian or Heroynian Forest) is shown, by the Fish Cultural Society of Ohrdruf, a model of McDonald's (American) fishway, labelled: "The latest model. Cr. Schramm," but no acknowledgment, leaving the observer to suppose that Mr. Schramm was the inventor. Mr. Heimich Ruebsamen, trout culturist at Welschonenderf, near Bad Ems, has a model of the old style of

way, with the alternate projections and the improve-ment of having the bottom covered with boulders and big rocks as well as gravel.

The Fish Cultural Society at Heilsberg exhibit a fish-

The Fish Cultural Society at Heilsberg exhibit a fish-way labelled "for small brook trout." It has partitions running across, with a round hole in the bottom of each. The fall in this model is one foot in two, thereby causing a doubt as to its being made on an exact scale. No par-ticulars are given as to the height of dam overcome, or, in fact, whether it is an actual model of an existing ish-way or an ideal one. If the former, it would be inter-esting to know the height etc., as well as the size of the fish which can climb so steep a staircase.

AMERICA.

AMERICA.

Considerable ingenuity has been expended upon fishways in America, and most of the models exhibited by the United States Fish Commission were made by Mr. Charles G. Atkins, of Bucksport. Me., to a definite scale, which affords the student all the information as to height, length and fall or inclination. They are all made in pine and coated with shellac, making a very attractive collection, which is much admired, the only exceptions being the "McDonald" and the Shaw fishways, which were made and sent by the inventors themselves. They are also classified and arranged in groups according to genera, as "spiral," groove, inclined, etc., and again into species, as, "inclined fishways with steps," and those without. First, we have

genera, as "spiral," groove, inclined, etc., and again in species, as, "inclined lishways with steps," and the without. First, we have "Groove fishway: "Model of Fishway. James Brower, inventor, Muncy. Lycoming County, Pa. this fishway the water runs in a zigzag groove, while breaks its force without the formation of eddies. Pa.

ented.

"Box, step or pool fishways:" Model of fishway,
James D. Brewer, Muncy, Pa. Patented by Daniel
Steck. In this the water is retarded in its descent by
means of transverse sloping floors.

"Inclined ways without steps:" Model of old Pennsyl-

Inclined ways without steps: "Model of old Pennsylia fishway. Built at Columbia, on the Susquebanna er, in 1866. Designed by James Worral. Scale, one-nth of an inch to the foot. C. G. Atkins, Bucksport,

"Inclined wey and fishway. Built at Common yania fishway. Built at Common Kiver, in 1866. Designed by James Worrat. Carlot of the Arthur of the Carlot of th winchester, Mass. Scale, one-eighth of an inch to the foot (1-90). Model by C. G. Atkins. A submerged piece of cob-work, surmounted by a grating, serves to turn the fish into the fishway. It carries a column of water two feet wide and two feet deep, which reaches the bottom with no perceptible increase in velocity, the current being less than two miles an hour. Height of the dam, thirty feet; length of the fishway, 440 feet; the incline, one in fifteen. The lower end is turned upon itself for with no peace, ingless than two miles an mounting less than two miles an mounting less than two miles and thirty feet; length of the fishway, 440 feet; the memory one in fifteen. The lower end is turned upon itself for a short distance.

"With partitions placed obliquely." An adaptation of Foster's plan. Model of one built at Pembroke, McDesigned by C. G. Atkins; has partitions running partly across and sloping slightly upward.

Model of Foster's fishway. Invented by H. H. Foster, East Machias, Mc. Scale, one-fourth of an inch to the foot. Same as the above in arrangement, except that the partitions have a sharp inclination up stream.

Model of oblique fishway. Invented by Alfred Swazey, Bucksport, Mc., in 1876. Scale, one-fourth of an inch to Rucksport, Mc., in 1876. Scale, one-fourth of an inch to

Model of oblique fishway. Invented by Alfred Swazey, Bucksport, Me., in 1876. Seale, one-fourth of an inch to the foot. In this one the partitions run entirely across, but are lower on alternate sides.

Model of the fishway at Lawrence, Mass., on the Merrimae River. The Brackett plan of partitions; foot turned on itself for a short distance.

"With rectangular compartments." Fishway designed by Everett Smith, civil engineer (and Commissioner of Fisheries of the State of Maine), Portland, Me. Scale, 1-32. A long sluice leads the water down stream to the head of the fishway, which is reversed, having its foot near the dam. The ordinary semi-partitions from alternate sides are divided by longitudinal ones into squares, one of which in each section is covered with gravel. while one of which in each section is covered with gravel.

one of which in each section is covered with gravet, while the alternate one is bare.

Model of rectangular compartment fishway on the inclined plane system, in an extended arrangement. Scale, one-half of an inch to the foot (1-24). C. G. Atkins. Turned near the foot.

"Spiral fishway:" Model of Pike's spiral fishway, de-

"Spiral fishway: Model of Pike's spiral fishway, de-vised by Hon. R. G. Pike, of Connecticut. Scale, one-half of an inch to the foot (1-2t). C. G. Atkins. In this way the partitions are very long, and run from opposite

way the partitions are very long, and run from opposits sides.

Model of rectangular compartment fishway on the inclined plane system, in spiral arrangement, devised by Charles G. Atkins, of Bucksport, Me., in imitation of Pike's spiral fishway, Scale, one-half of an inch to the foot (1-24). C. G. Atkins. Showing the great economy of space and material effected by the spiral arrangement. Further advantages of the spiral arrangement are the facility with which water can be admitted at different heights of the river, and contiguity of the outlet to the dam secured, so that the fish will readily flad it. Has an upper and lower sluiceway, to be used at different stages of water.

Model of the fishway at Bangor, Me., on the Penob-scot River; designed by Charles G. Atkins, and built by the city of Bangor in 1877 at a cost of 80,000. Scale, 1-39. Height of the dam, sixteen feet (4.1 meters). This is a working model, and one of the finest make. It has rectangular compartments covered with gravel, and flashboards on all partitions in the upper portion. The sluices are arranged in a sloping manner, in order to admit the water at different levels.

Shaw's fishway: A spiral arrangement of deep pools; designed and exhibited by B. F. Shaw, Anamosa, Lowa, (Commissioner of Fisheries for the State.) Lithographs, with complete specifications, accompany it.

"Moving float fishway:" Model of Everleth's fishway, devised by F. M. Everleth, M. D., of Waldoboro', Me. Scale, one-quarter of an inch to the foot (1-48). C. G. Atkins. The peculiarity of this fishway is the movable attachment at the upper end, which, by its own buoyancy, rises and falls with the fluctuations of the river, thus ensuring that the entrance shall always be at the Model of rectangular compartment fishway on the in-

right height to admit the requisite quantity of water.

"With counter-currents from below:" Working model of the McDonald fishway, by M. McDonald, Lexington, Va. Patented. This fishway is constructed upon the principle of having three sets of transverse partitions sloping upward. The water passing through the sluice from the dam tends to sink in the middle line of buckets, from the dam tends to sink in the middle line of buckets, and emerges at the sides at a lower level, being checked by abutting against other partitions placed below them at right angles which deflect the water up stream, and these currents from below operate as retarders to the fall of the water from above. One has just been constructed on the Savannah River, Ga., which has an inclination of one foot in three.

Stripto Bass and Shad in California.—United States Commission, Fish and Fisheries, Wushington, D. C., June 19th.—Editor Forest and Streum:—Among the fish heretofore taken by Mr. Livingston Stone to California, in behalf of the California Fish Commission, were a number of young striped bass in 1879, and I am just now in receipt of a letter from Mr. B. B. Redding, of San Francisco, dated June Sth, in which he says: "I have just returned from market, where I had the pleasure of inspecting a striped bass about a foot long, caught this morning in the brackish water near Saucelito." Other authorities speak of the great abundance of slad in the Sacramento, and Mr. Redding says he saw one weighing eight and a half pounds. They are now taken in all the rivers of the coast, from Wilmington on the south to the Columbia on the north. A specimen of the Columbia River shad, forwarded by Prof. Jordan, is now on its way to the Smithsonian Institution. to the Smithsonian Institution.

to the Smithsonian Institution.

An additional shipment of young shad to California has just been made by the U.S. Fish Commission, leaving Washington on Saturday, the 12th of June. A dispatch from Mr. Stone of yesterday, from Fort Laramie, announced the entire success of the transmission up to that point.

SPERGER F, BAIRD, Commissioner.

The Remel.

CONDITIONING DOGS FOR SUMMER WOODCOCK SHOOTING.

A LTHOUGH the States of New York, New Jersey and Connecticut have passed laws restricting the sportsmen from shooting woodcock during the early summer, yet, both Delaware and Maryland still continue to allow the slaughter of the half-fledged long-bills in their territory. To those, therefore, of our shooting brethren who have been driven to look for other "fields and pastures new," and who cannot forego, from long accustomed habit, the annual woodcock Turkish bath, we would say a word on the conditioning of their dogs for the work before them.

Volumes have been written on caniology, and chapters have been devoted to the getting up of dogs for the bench, but we find little that is really practicable about preparatory conditioning for the field. We, therefore. do not think that it will be amiss, at this time, to call the artention of the summer shooting fraternity to the abso-Inte necessity of putting their dogs in proper trim before they expose them to the most severe and exhausting kind of all field tests. It is the unfortunate impression of many who own sporting dogs that all that is necessary to fit the dog for a week's woodcock shooting is that his nose should be cold and his eye bright before taking him from off the chain at home. This should not be, and common sense should teach us that to keep up the strain of working well throughout the longest days of the year, and in the hottest weather, requires that the animals should be in more than ordinary good condition of health before submitting them to the fifery ordeal. This can only be brought about by regular exercise and by feeding good, unheating food, aided perhaps with several doses of some cooling, simple medicine a few days before they are

When the shooting in past years was mostly had by the gentlemen of this vicinity, in large mountain districts, where the beating was confined principally to the swales, or to the large timbered swamps, intersected by cool brooks and streams which had their headings in the mountain springs, then, bad as it generally was, some relief could be found by both man and beast. No matter how stifling the day, there was almost always enough air stirring in the gulches way up on the mountain sides to enable the young enthusiast to do a very tolerable day's walking, and with frequent breathing spells, to be up and at the birds until the fiery ball in the west warned him that his day's work was done. Almost every one, in those times, had his favorite ground, and many are the days that we ourselves have all day long helped to awaken the echoes of the grand old crags about us; but the glory of those days is gone, and we for one have learned that we did wrong, and a chronic state of moralizing has driven us to openly confess it, and make amends. But, for all this, we cannot expect to have many followers in our new departure; for even now, in despite of ourselves, we find our eyes fixed on the calendar, to see when comes "the fourth." Sunstrokes, thirst and mosquitoes are almost forgotten, as we wonder if there are five broods again this year at the "old house spring;" but if there are, they are not for us, for that famous spot is in New Jersey.

Turning, therefore, to Maryland and Delaware, whose laws admit of woodcock shooting on June 10th and July 1st respectively, we find the best grounds to be in the low, flat tracts of country, hemmed in with thick impenetrable bush-wood of a rather stunted growth. True it is, that woodcock are found extremely plenty in "the branches," particularly in dry seasons, when early freshets have not at the breeding time inundated the country round. But to beat out these grounds thoroughly it takes a blue-ribboned salamander; no bubbling springs are there to greet the ear and give most blissful drops of comfort. Nor is there any country in our experience where sport is more uncertain; for though there may be scores of birds on the range to-day, a sudden atmospheric change and they are gone. Conjecture then is at a discount; nor are there weary hills to climb to find the shifted birds stored away, safe and sound, along the murmuring rills. Now, if there is one thing above another that tends to buoy up the sinking frame it is the guesswork of finding game-a sort of Japhet-in-search-of-a father kind of feeling that causes one to look and walk and walk and look, no matter how tired and exhausted he may feel, or how blank each cover may be found. We remember once, in spite of ourselves, having been seduced into making the rounds of Harford County, in-cluding Spesutia Island, which took almost a two weeks' jaunt, and at the same time it was as plain as the nose on a man's face, on the very first day, that the young birds had been drowned out early in the season, and the old ones had drifted away to try their luck in some more elevated section. Where that was the moon alone can tell.

But to those who wish to try woodcock shooting at this season, we say have a care for your dogs-if not for the sake of humanity, then for your own. Be early to rise, and do your best work before the day grows unbearable. Endeavor to locate the water-pools on your beat, and every now and again leave the cover and refresh your dogs with a swim. If the depth of the pools and ditches is not sufficient for a bath, then sop up water with your hands, and continually wet their heads and necks. noon time rest a while in an open shady spot, and you will find it will repay you later on when the sun has lost a little of his power.

Dogs on grounds such as we have described are subjected to the attack of ticks; it will be well, therefore, to carefully examine the dogs' coats, and particularly the head and ears, before kenneling them for the night, Should you find any of these wretched torments, as you most undoubtedly will, remove them forcibly, and dress the parts afflicted with some mercurial preparation. insure good sport all dogs should be fitted by training for the field as race horses are for the turf-and this more particularly applies at the approach of the heated Exercise in moderation will remove the surplus term. fat, and there is nothing better at this season to insure good health than the following course of treatment Give several days before taking the field a teaspoonful of sulphur at night, followed in the morning by a dose of sulphate of magnesia, varying from a dessert to a table spoonful. Perhaps the best way to administer this mild cathartic is to dissolve it in water and pour it down the animal's throat, omitting all food until an hour or two after. Later in the day, when the medicine has taken effect, then the usual exercise may be given. Adopt this plan—it is a simple one—which can do no harm, and you will find that it will prove most beneficial.

beneficial.

HORSHAIR FOR DISTEMPR.—Blacksbury, Cal., June 10th.—Editor Forest and Stream:—For the benefit of canine fanciers, and more particularly for the welfare of the dogs themselves, the following simple remedy is submitted: Take hair from the tail of a horse, out as fine as possible, say from the twentieth to the fortieth of an inch in length. Give one heaping teasponful in the dog's foods once a day until the dog is cured. If administered in time three or four doese are usually sufficient. Feed liberally with any light cooling food. In extreme cases, when the animal shows weakness in the loins, make running sores in the breastand back of the neck with seatons, using the cut hair internally. The above remedy will also cure all diseases caused by worms. A friend of mine, dealing in and driving stock on very dusty roads, formerly used up from three to six dogs during one season, always losing them when young. Since using the "hair cure" he has worked a couple of dogs until they have grown old in his service.

Horsehair cut fine will no doubt create local iritation, and rid dogs, to some extent, of worms, but how it can cure distemper we utterly fail to see.

THE BEAGLE JUDGING.—Bloomingdale, N. J., June 10th.—Editor Forest and Stream:—If not encroaching too much on your space as a breeder and lover of the beagle, I would like to say a few words in regard to the most extraordinary judging which occurred in that class at the last New York show. I will premise by saying that I did not own a single dog in the ring. At all shows hitherto in this country I believe prizes have been awarded to dogs rather under thirteen mehos than over, and the public was getting the idea that a beagle was a diminutive hound, when all at once we find three hounds, large enough to be full sized harriers, bearing off all the honors, while some most excellent dogs of the hitherto acknowledged standard, among them the two prize winners in 1879, are passed by without even a commendation. The dogs chosen this year were the largest and evidently the swiftest in the lot. How are either speed or large

size desirable in a beagle? Stonehenge tells us that the intention (of breeding beagles) has always been to obtain a hound of delicate nose, united with so slow a pace as to allow the "field" to keep up without aid of horses. Sportsmen in this country who use beagles for hare hunting know that as the intention is not to run the game down, but drive it to the gun, speed is of little account. In regard to size Stonehenge insists that foot beagles "should not exceed nine inches in height, but for Young England they are often used up to eleven and even twelve inches." It gives the measurement of Damper, a typical beagle, at nine inches. The same authority sets down the size of harriers at from sixteen to twenty hotes. It is evident, therefore, that the prize winners at the late show were full sized harriers, as one measured nineteen inches at the shoulder. If judging at shows is to be done in this manner our knowledge of typical dogs will soon be even more confused than it is at present. size desirable in a beagle? Stonehenge tells us that the

THE NEW YORK DOG LAW.—Mayor Cooper's dog catchers commenced their raid upon the canines of the metropolis on Monday last. They are to receive thirty cents for every dog they deliver to the keeper of the dog-pound, which is situated at the foot of Sixteenth street, East River. The first day's catch was estimated at several hundred. Owners of dogs should bear this in mind, and keep their pets within doors during the heated term.

KENNEL NOTES.

NAMES CLAIMED.—Nern—Mr. T. H. Wyman, of Sobec, Maine, claims the name of Nero for his white and black cocker dog puppy, whelped May 27th, 1880, by owner's Pont out of Flo. Don—Mr. D. W. Culver, of Jersey City, claims the name of Dau for his Mr. D. W. Culver, of Jersey City, claims the name of Dau for his liver and white pointer puppy, by Mr. E. M. Culver's Duke (Frank-Quaill), out of Mr. P. Lumbreyer's Queen (Ben II.-Nellie). Sancho - Mr. J. H. Cable claims the name of Sancho for bis liver pointer puppy, by Mr. E. M. Culver's Duke, out of Queen. Lancewood—Mr. E. S. Wanmaker, of Cool Spring, N. C., claims the name of Lancewood for his red Irish setter dog puppy, whelped March 20th, 1889, by Elcho out of Lorna. Mr. W. writes as follows: "This puppy was presented to me by Dr. Wm. Jarvis, and sciected by him as the choice of the litter. He should develop into something grand, as I consider the dam (Lorna) unapproachable in the thing grand, as I consider the dam (Lorna) unapproacanone in the field for style, grace, beauity, pace, cadurance, stanothness and general excellence. Having trained her, I am competent to judge." Lady Venus-Mr. E. L. Marshall, of Charlemont, Va. claims the name of Lady Venus-Grib in the property of t by Spot, out of Neil. Lady Diana—Mr. E. L. Marshall claims the name of Lady Diana for his lox terrler bitte puppy, by Mr. Oornoll's Natty (Gamester-Feegee), out of Lady Venus (Spot-Neil). Ecangeline—The owner of Evangeline is Mr. R. G. Hall, of Portland, Maine. Datsy—Mr. Fred. Scott, of Bristol, Pa., claims the name of Daisy for his lemon and white pointer gyp, out of Mr. R. T. Greene's Girl, by Mr. Wm. F. Steel's Glenmark. Kneker-hocker—Mr. Geo. Miller, of Jersey City, claims the name of Knicker-bocker for his liver and white pointer dog puppy, out of Girl, by Glenmark. Mattix—Dr. H. B. Wygant, of Peekskill, N. Xv., claims the name of Mattic for his liver bitch puppy, whelped February 230, 1880, by Mr. John L. Mattire Guilford, Mass.) Sam, out 23d, 1880, by Mr. John L. Martin's (Milford, Mass.) Sam, out

WHELPS.—Gretchen—Mr. Alfred W. Bennett's (Boston, Mass.) St. Bernard bitch Gretchen (recently purchased from Mr. L. Z. Collins) whelped, June 18th, twelve puppies, eight dogs and four bitches, whelped, June 18th, twelve pupples, eight dogs and four bitches, by owner's Bon. Grace—Mr. N. Elmore's (Gramby, Conn.) politor bitch Gruce, Sensation-Juno, whelped, June 18th, eight pupples, seven dogs and one bitch, by Guy, Snapshot-Fanny. Five liver and white and three lemon and white. Bella—Mr. Edward L Mills' (Washington, D. C.) orange and white English setter bitch Belle wholped, June 3th, ten pupples, three dogs and seven bitches, by Champion Leicester.

Bred.—Peckham Rye-Bruff—Mr. C. H. Clayton's (New York City) setter bitch Peckham Rye, by Mr. C. H. Raymond's Guy Mannering, out of Mr. Dudley Olcott's Flash, has been bred to Mr. J. C. Parrott's Bruff by Mr. C. H. Raymond's Pride of the Border-

 $\label{eq:presentation.-Mr. M. P. McKoon, of Franklin, N. Y., has presented his friend, Mr. N. Elmore, of Granby, Conn., with a very tine English foxhound bitch puppy.$

PRIVATE PRACTICE CLUB.

MAY SCORES.

870, 510, 500, 489, or seven scores exceeding that which won second 876, 516, 504, 489, or seven scores exceeding that which won second place at the last grand national meeting, and four scores exceeding that which won the medal. The scores exceeding 150 points at 100 yards have no been quite so numerous as last month, only two instances being recorded, Mr. Peddinghaus gettling 33–151, and Mr. Will II. Thompson 43–181. At the 80 yards range Mr. Peddinghaus reached 150 points no less than six times out of eight rounds, with a last score of 171; Mr. L. D. Devol once, with 34–159; Mr. Will III. Thompson five times, with a best score of 41–155. The 60 yards shooting was an improvement over April, though no except of a creat value was recorded as two or three made in The 60 yards shooting was an improvement over April, though no score of so great value was recorded as two or three made in April. Scores of 120 and over were made by Edwin Devol twice, with best score of 21-129; by Maurice Thompson once, with 22-132; by L. D. Devol once, with 23-133; by L. D. Peddinghaus twice, with best score of 22-124; by Will H. Thompson fifteen times, with best score of 24-144; and by Frank H. Walworth once, with 22-132. once, with 22-130.

These 60 yards records are an encouraging feature of our Ameri-These 60 yards records are an encouraging feature of our Ameri-archery, since they prove that at the one runge where we have had considerable practice we obtain scores which would not discredit the veterans of Great Britain. It is at the longer ranges that they so greatly excel us. It is no uncommon thing for their leading shots to score as many points with 21 arrows at 50 yards

as they will obtain with the same number of shots at 60 yards. For as they will obtain with the same number of shots at 80 yards. For instance, we rate a York Round by Mr. Palairet shot with the West Berks Archers June 14th, 1578, wherein he gets 23—102 at 80 yards, and 18—78 at 80 yards. In the same shoot Mr. Everett got 41—169 at 100 yards, 33—185 at 80 yards, and only 18—64 at 00 yards. Mr. Longman, at 160 yards, 30—181 and at 80 yards 17—63. Several of their archers have passed 900 at the Double York Bound, while obtaining less than 300 points with the 43 arroys at 60 yards. The yound to be 100 yards 17—67. the Double York Round, while obtaining less than 200 points with the 48 arrows at 60 yards. The moral to be drawn from such records is this; We shoot well at 60 yards because we have given great attention to that range. If we set ourselves to conquer the 100 yards range we will find that a score of 100 at 60 yards is equal to 140 at 100 yards. When we get our proportionate values at the long ranges we shall see such scores as that made by Mr. Palairet in a match Aure. 20th, 1873 :—

in a match Aug. 22th, 1878:—

100 Yards, 80 Yards, 60 Yards, 108—530

46—210 43—207 [19—113 108—530

Here it will be noted that the hits at 80 yards were greater to the number of arrows shot than at 60 yards. Of course this is not the rule with any archer and should not be, but only careful practice at the long rangers renders such a result possible. This is the last report which will appear until the national meeting, and the Socretary (whose work has been to him a labor of love) sincerely hopes to meet every member of the club at Buffalo and the with all the a friendly passans at a way. join with all in a friendly passage at arms.

Will H. Thompson, Secretary and Treasurer P. P. C.

ORITANI ARCHERS.-Hackensack, N. J., June 14th.-A. number ORTANI ARGERERS.—Hackensvele, N. J., June 14th.—A number of the Orland irrebers met for practice yesterday, including the team of four. The latter made a score at the double American Reund of 2.75. Best score, Col. F. Brandrett, 818; the lowest on the team, W. Holberton, 405. Among the Dest individual scores made during the afternoon's practice were the following: Robert Lawrence, 40 yards 182; Col. F. Brandreth, 40 yards 184, 50 yards 185, 60 yards 122, 461 on the American Round; C. de R. Moore, 133 at 40 yards; C. C. Moore, 153 at 40 yards, 124 at 50 yards; W. Holberton, 150 at 40 yards, 124 at 50 yards; W. Holberton, 150 at 40 yards, 124 at 50 yards; W. Holberton, 150 at 40 yards, 124 at 50 yards at Columbia Round. The monthly meeting for ladies and gentle-more badgers takes place on the 23d.

ANOTHER Score CARD, -Northampton, Mass., June 16th .- I for ANOTHER COME LATER-HOLDING WHICH I have already for my own use. It seems to me somewhat more compact than the one you recently published in Foresz and Straam. I have filled out a score (one actually made at the date indicated) to show

the manner of its use. The figures 1, 2, 3, etc., indicate the round the imminer of its use. The grunts 1, 2, 5, etc., indicate the round; the hits in each color are placed under the figure designating the value of the color, and the totals placed underneath. When the end is completed, the totals are readily ascertained. This size of page is intended for private use, but it can be extended to suit any demand. I have arranged them in a small book, containing some three hundred scores, which can readily be carried in the

ROCK ISLAND, III., June 18th.—Mr. G. W. Malcohmson, of Red
Wing, Minn., made the following score, with thirty-six arrows, at
40 yards, May 25th, with a side-string bow made at the Rock
Island Archery Works: 9-90, 7-37, 7-75, 5-13, 9-97,
7-75, 9-97, 7-35, 9-97, 7-77. Total, 23t; average, 6 5-9 to cach

A NORTH SIDE MEMBER.—Chicago, Ill., June 19th.—In your report of the meeting of archers at Lincoln Park, on 4th Inst., "Visitor" speaks of Mr. Granger Smith, of Toledo Club. He has evidently confused him with Mr. Howard M. Smith, of the Toledo Club, who was present but did not shoot. Mr. Granger Smith is a full-liedged member of the North Side Archery Club, of Chiengo, and the writer had the pleasure of seeing him make, a few days since, with 24 arrows at 69, 101, and 48 arrows at 80 yards, 106. Hence the reason we are proud to claim him.

T. A. L., N. S. Archery Club New York Archery Club.—The report published in these columns gave a score of 274 to Mr. McLean, of the Manhattan Archers, which should have been credited to Mr. H. Hayden, of the Spuyten Duyvil Archery Club.

JUNE IS A CLOSE MONTH FOR GAME

—Address all communications to "Forest and Stream Publishing Company, New York." ----

Publishing Company, New York."

California Ahead.—San Francisco, Cal., June 11th.—In your issue of the 3d ult. I notice, under the heading of "A String of Field Scores," a communication from "Ad Vance," of Montgomery, relating what he apparently supposed to be some very extraordinary snipe shooting, wherein he remarks that "I do not think this score has ever been beaten." Well, I will tell him how and where and by whom it was beaten, and badly, too. A man named P. S. Mullen, now and for many years past in my employ, and whose veracity at all times, places and circumstances is beyond any doubt or question, relates a case that occurred near the town of Olema, Marin County, in this State. While out hunting one December morning in 1870 he came across some good snipe ground, from which he took between the hours of 7 A.M. and I P.M.—six hours—just seven dozen snipe. During this shoot he killed dead, with one shot, four of these, using a No. 13 More gun, weighing six pounds six ounces, two and a half drachms of powder, and three-quarter ounce of No. 9 shot. His hunting partner killed during the forenoon of the same day and on the same ground sixtyone more, getting two with one shot, one of which was on the wing and the other on the ground, a little further distant. If this has been beaten I should be pleased to know where and who did it.

P.S.—To corroborate the above you can interview Mr. Crittenden Robinson, the champion wing shot of this State, an old and intinate acquaintance of Mr. Mullen, and now in your city.

SHOOTING MATCHES.

Union Church, Jefferson Co., Miss., June 12th.—The regular practice match of Union Church Gun Club was held at their shooting grounds to-day, only five of the members participating; 21 single balls; 18 yards rise; Bogardus rules; weather unfavorable, cloudy and rainy at times :-

J. S. Gillis, 18 yards—111101100111101111011 dilled 14, missed 7. C. Newman, 18 yards—001110111110000111011—killed 18, missed 8.

M. Newman, 18 yards—1111011111111110110-110-killed 17, missed 4.

J. S. G. New Orleans, La., June 17th. Glass-ball match shot June 18th

NEW ORLEANS, I.a., June 1101. Glass-ball maten shot June 18th between Mr. L. C. Le Breton, of New Orleans, and Mr. Fred Miles, of St. Louis; 100 balls; Mole's rotary trap; 18 yards rise; rotary trap rules. Resulted in favor of Mr. Le Breton by a score of 86 to Mr. Miles' 83. BATH, Me., June 17th.—The Sagadahoe Association for the Pro-

nath, according to the Tub Sugantine Association for the Pro-tection of Fish and Game held its first of a series of three matches at glass balls for the Association Budge this afternoon at Bath Driving Park; 15 balls from a Card rotary trap; 18 yards. June 24th, at Hoboken, N. J.—St, George (2d) vs. Mr, Duncan's Princeton team.

GIRARD CRICKET CLUR'S VISIT TO NEW YORK.—The Girard Club of Philadelphia turned up in the metropolis last week, and played and won two first eleven matches, one from the old Manhattans and one from the old St. George. Besides this, they put a second eleven in the field against the Manhattans one of the days when the first was working destruction at Hoboken. We went over the first day to see them play the Brooklyn club, and if only took half an eye to "photograph them into our heart." It is a grand battling cleven, a fair bowling one, with good fielders, and a crack wicket keeper. The accession of the Hargreaves family to this comparatively new organization, of course, places it at once in the foremost rank of American clubs, and we consider, from what we saw, that the Young America will have at last to work hard when the Girard eleven is in full practice.

GIRARD IN MANHATAN.—Played at Prospect Park June 18th.

GIRAID W. MANHATAN.—Played at Prospect Park June 18th. Won by the visitors by 97 runs on the first inning's totals. The Manhattan captain won the toss, and took the innings, and his eam did good work enough against the fast bowling, but were ill almorad as how to obstruct the wickets from Tom Hargreeves' exceellent underhands. The fielding was not up to the mark its, and the dozen extras were put on before the second wicket was disposed of. Gregg, with the gloves, did well, and there was more old time shying by the prothers that was good to see. Norley professional) handled his bat nicely, particularly when the ball was to the off; and Wilson's old-style square-leg hitting, and Morris' well timed and careful placing of the ball did much to gloss over the rather poor exhibition of several of the other patsmen. The innings closed for 87. On resuming, after an excellent luncheon, the Girards commenced what turned out to be if formidable innings. Five of the team secured double figures, and six bowlers had a try with the ball. Hooper, by far, did the best work, and Morris' behind the wickets was sharpish. The locking was good, as only one catch was missed, and Middleton especially deserves credit for his clean picking up and excellent turn. Hosford made a rattling good eatch at deep long-field, which ended Tom Hargreaves' career on the first ball. The veteran, Joe Hargreaves, contributed 41, but his blue cap was not faided enough to show that he had had much practice. The facture of the match was the superb and brilliant batting of Grooks, a Lanceshire man of the Tom Humphrey school, whose could be succeed as the full score—

Umpres-sarranes and shrewsoury.

The Hamilton Cricket Club is looking forward to some good cricket, more especially with the Staton Islanders, that they may in some degree return their kindnesses of last year. The weather all through Canada has been capital for cricket—in fact almost oo fine, the ground being in danger of being baked.

Dr. D. J. MALTBY .- Our readers will recall with interest the interesting sketch of "Bear Shooting in North Minnesota," published in our issue of May 13th, over the signature "M. D." Its author was Dr. D. J. Malthy, of Detroit, Minn., a brief notice of whose death, on the 8th inst., has just reached us. Dr. Maltby's letter could not fail to inspire in its readers a personal interest in himself and a hope to know more of him. The short obituary notice before us is a simple record of a busy life. a fine christian character and a loving circle of friends. Having entisted in the Ninety-fourth New York Volunteers in 1861, he participated in eight pitched battles was taken prisoner twice, and after the war resumed his medical studies at Watertown, N. Y., thence going directly to Detroit. He had numerous friends in this city, where he attended a course of lectures in the fall of 1877. At the time of his death Dr. Malthy was thirtyseven years of age. He leaves a wife and three children.

SOMETHING NEW IN PYROTECHNICS .- The new form of pyrotechnics, which are for sale by Messrs. Hartley & Graham, are so much superior to the old style of fireworks that we think they must in a great measure displace them. The device is an exceedingly simple one, so simple, in fact, that one wonders that it was not invented before. The star cartridges are to all appearance like an ordinary shell, but they are filled with the same materials that are employed in Roman candles, sky-rockets, etc., and we have fireworks shot out of a gun. The advantages are simplicity and rapidity of firing, a complete absence of the dirt and danger attending the old methods, and, not the least important, a very decided difference in the cost. For political celebrations in the public streets these star cartridges are far preferable to all other pyrotechnics, because there are no sparks to endanger the spectators, and no dangerous sticks to fall. For the lawn and for yachting purposes these cartridges prove equally adapted. Fourth of July and other displays of fireworks have hitherto been attended with expense and damage; the invention of star cartridges obviates both.

-The International Fishery Exhibition at Berlin will close on the 29th of this month, and Prof. Goode and staff expect to sail for home either on July 1st or 8th, arriving about the 15th or 22d.

THE AMERICAN AWARDS AT BERLIN.

A MERICANS have every reason to be satisfied with their representation at the Berlin International Fishery Exhibition. Notwithstanding the limited time afforded by the tardy action of Congress to make an appropriation for the purpose, Prof. Baird, having the extensive resources of the National Museum and the Fish Commission to draw upon, prepared an exhibit which has proved superior in variety and completeness to that of any other nation. The American display at Berlin has received very much attention from the intelligent visitors who have visited the Exposition, the ultimate effect of which must be to very materially increase the foreign demand for American fishing products, and so to largely stimulate our commerce. The immediate result has been a harvest of prizes for this country, which is among those to which a gold medal and an address of thanks will be transmitted.

The award which will give the most genuine satisfaction, not only to his personal friends but totall who are interested in the growth of this branch of the nation's economies as well, is that of the first honorary prize to Prof. Spencer F. Baird, of the Smithsonian Institution, Washington, and the United States Commission of Fish and Fisheries. The action of the Berlin judges is a recognition of the preeminent services of Prof. Baird, who has done more than any other individual to advance the science and industry of fish culture. The Forest and Stream speaks for the fish culturists of the United States when it indorses this award as just and welldeserved. We may add just here a bit of news which has just come to us from our Berlin correspondent. namely, that Prof. Baird has just been made an honorary member of the Société d'Acclimatation, Paris, by the unanimous vote of its members, in recognition of the great work he has accomplished in advancing fish culture to the rank of an industry worthy of being prosecuted by great nations.

Other American awards at Berlin were: Gold medals with special honorary mention: The United States Finance Department and the United States Fisheries Commission; gold medals: United States Fisheries Commissioners Leonard, of Bangor, Me.; Atkins, of Rockport, Me.; Ferguson, of Baltimore, Md.; Green, of Rochester, N. Y.; McDonald, of Lexington, Va.; Mather, of New York; Stone, of Charlestown, N. H., and Chase of Detroit. Silver medals: Alaska Commercial Company, of San Francisco; the Beardsleys, of New York; Booth, of Chicago; Potter & Wrightington, of Boston; the Portland Packing Company; the Russia Cement Company, of Rockport, Mass.; Rosenstein Brothers, of New York; Thorne, of Massachusetts; Thurber, of New York; Ward, of America; Hagedorn, of New York; Everson, of Brooklyn, N. Y.; Wilcox Crittenden, of Middletown, Conn; Chase, of Detroit, Mich.; Merriman, of New York; United States Fisheries Commissioner Brown Goode, of Washington; the Forest and Stream Publishing Company, of New York; Noble, of Richibucto, Canada, and Scribner, of New York. A large number of Americans received bronze medals, diplomas and honorary mention, of which the particulars are not yet at hand. A farther and fuller account of the awards will appear in due time from our representative at Berlin.

THROUGH THE MOUNTAINS OF VIRGINIA.

T gives us much pleasure to lay before our readers the following plan of an extended camping trip through the Blue Ridge and Alleghany Mountains of Southwestern Virginia,

It is proposed that a party of gentlemen shall start from Lynchburg, Va., on Wednesday Sept. 1st, and striking at once into the Blue Ridge, traverse all the most desirable districts for sport and scenery in that country; go as far north as Bath County, and return to Lynchburg on Wednesday, Sept. 29th. The precise route will be determined by the gentlemen who have projected the expedition, and whose familiarity with the section is sufficient promise that it will be well chosen, both for sport and for enjoying the rare natural scenery. The country is far famed for its beauty and the magnificence of its landscapes, and at the same time it will possess all the charms of novelty. September, the month chosen, is that in which the most enjoyment can be had in outdoor life; in that climate one may be tolerably sure of fine and temperate weather. The anglers of the party will get the cream of the black bass fishing in the higher waters of the James, and excellent trout fishing is also to be had; for those who prefer it there will be "pheasant" and deer shooting; and for all pure mountain air and an ever-changing series of panoramic

The mode of travel will be the most comfortable that it is possible to provide, namely, by Jersey wagons, carriages and saddle horses, while extra saddles will be taken, so that the carriage horses may be employed for excursions to and fro while the party is in camp. will be provided with servants and everything necessary for making travel and camp as thoroughly comfortable

and luxurious as possible. The journey will be made by easy stages, with outriders to secure the best camping grounds, and when the special attractions for the sportsman, artist and tourist warrant it the party will remain in camp two or three days. In short, the party make it a rule to derive the most pleasure and profit from the trip, and while the general plan will be thoroughly perfected before the start, it will be so elastic as to be modified by the relative attractions of the route. Arrangements will be made for the regular transmission of

The projectors of this admirable scheme are our wellknown correspondent, "Ringwood," and Major R. C. Saunders, of Careyswood, Evington, Campbell County, Virginia. The latter gentleman, besides knowing the mountains of Southwestern Virginia better, perhaps than anyone else in that part of the State, is also preeminently fitted for conducting and making pleasant such an expedition. He has in former days owned a great deal of property there, has hunted through the mountains for twenty successive falls, and is widely known and respected among the mountaineers, both personally and by reputation, which, as will be readily understood, is in that country peculiarily advantageous. It will be the endeavor of those engaged in conducting the expedition to make everything pass off well, and we can see no reason why it should not be done. The tickets for the trip, from Lynchburg and return, will be \$100 each. This will include everything, except blankets, which the gentlemen joining the expedition are requested to provide. One half of this sum will be payable on August 1st, when the lists will be closed, and may then be sent to Major Saunders as above. The remainder will be payable on disbanding at Lynchburg. The number of tickets will be limited.

Readers of the Forest and Stream who may be desirous of joining the expedition are urged to give in their names at once. The party will be a party of gentlemen, whose companionship will be thoroughly agreeable. There will be no objection to ladies, nor will there be any reason why they should not enjoy the trip.

We be speak for the party who shall leave Lynchburg next September a complete realization of all the pleasant experiences the anticipation of such a trip presents to the mind.

CAMPING OUT.

AMPING out does not necessarily mean roughing it. You can with a little experience and forethought have nearly all the comforts of home, with many other comforts, that locked up denizens of the city can only wish for. Your bed can be made of the choicest hem-lock boughs, soft as eider down. You can bolt down the fresh air from the mountains, the zephyrs from off the lake, the wind that comes sighing through the forestany one of these, or all at once, it's only a question of lung capacity-until the eyes sparkle and the cheeks glow with the stimulus begotton by the almost intoxicating air, while the chest expands with strength, and hands and face attain from sun and storm the bronze and brick color that tell of health and vigor, and your nose, meanwhile, shall brighten up and shine like the danger

signal on a locomotive.

To the camper-out there are many elements lending their aid to augment his beatitudes. His pleasures are only measured by the lapse of his vacation. Woord by all the charms and blandishment that June can offer, idle as the day is long if he chooses, calling no man his master, free to tramp away over the hills before the dew is off the ground, or free to lie in bed all day, it approximates more nearly to perfect bliss than anything else this world can offer. It is a butterfly life, this floating carelessly and almost unconsciously upon the summer air, bidding farewell to the conventional restraints of society, becoming boys again, forgetful of worldly trials and living only in the sunshine of merry retrospection and a care-free present.

Buy through tickets and escape from your brick and mortar bondage. Come along to unrestrained freedom. to an unbroken quietude of mind. Do not let business overshadow and annihilate your love of quiet sport by flood or field, but give rod and gun their proper share of time, and your reward will come though you never ruffle a feather nor raise a fin. Give care a cross-buttock and get away from yourself. Come where you can lumor every caprice and taste the sweets of idleness; where the gloss of pretense is rubbed off; where fashion becomes demoralized and style becomes paralyzed; where there are no store clothes, no "biled shirts," no plug hats; where you are free from the discordant combination of cats' cornets and curs; where you can lay your troubles at nature's feet, for the cornucopia of her charms and blessings are absolutely inexhaustible.

If failing health requires a stimulant not too severe, come where you will find a ceaseless supply of that price less panacea, pure air, which is more inspiring than an invitation to drink. A genial, life-giving atmosphere it is; so pure and balmy that it would almost give life to a cremated body.

The greater part of our misery in this world is caused

by our yearning for something better. We are rarely satisfied with what we are and with what we have, and are too frequently complaining. One of the places where this mental condition does not exist is up to your knees in a trout stream, with the trout taking hold.

There are some annoyances, the principal one being the little black flies, the musquitoes and the midgets; but do not allow them, though they attack you on all sides by legious, to preclude your enjoyment. The old campaigner knows how to successfully repulse their attack. There are the days of no luck, when the trout refuse to rise, but the angler who returns at dusk with an empty creel has not necessarily wasted his time, for if he has cultivated his observing faculties his day will have been "idle time not "idly spent." He will surely learn some new lesson and perhaps discover some secret of nature, for there are plenty yet undiscovered. He may have walked off some superfluous flesh, knocked some pretty ailment in the head, and renewed his lease of life.

A moderate indulgence in the sports of forest and stream is certainly conducive to health and longovity: carried to excess it may tend to unfit one for the sterner and more important duties of life. It would perhaps operate much as medicine properly prescribed for the various body diseases does—be beneficial up to a certain stage, which being attained it would be more safely dispensed with. Guides are not as a class noted for longevity,nor do they retain their strength and activity up to the age that the occasional fishing and shooting man does his. He takes his medicine when he does not require it, but because he may be obliged to, and it does him no good. This may or may not be the reason, but the fact remains. MILLARD.

THE NEW YORK STATE ASSOCIATION.

ROCHESTER, N. Y., June 14th.

Editor Forest and Stream:—
Yours of the 1th inst. was duly received, in which you request my opinion concerning the future programme of the New York State Association for the Protection of

Yours of the 1th list, was duly received, in which you request by opinion concerning the future programme of the New York State Association for the Protection of Fish and Gamo.

As the name implies, we are supposed to do something in the way of more efficient game laws, and also in the encouragement of the propagation of fish and and the introduction of game birds to restock the now depleted waters and fields of our State. It is not surprising that to the observer it would seem as if we had lost sight of our object, and only met for the purpose of selecting the place for our annual meeting, and then to indulge in a fournament for the balance of the week. Not a word is said about the protection of fish and game.

In that we are wrong. If we were to have animated specches and essays urging upon the various clubs forming our Association, the importance of restocking our fields and streams with game birds and game fishes, it would have the effect to excite a spirit of emulation among them, and every club's standing then would be determined by what it had done for the general welfare, and not by its number of crack shots who can make a clean score at the traps. It is well known that a few years ago quail (so called) were abundant in all parts of our State do than obtain quail where they are plenty and liberate them here, thereby insuring us good shooting until another severe winter destroys them, when, of course, we must do it again. Stocking fields and streams of course calls for a better enforcement of the game laws. Let it be known that the game constable has his local club at his back, with money and influence, and it will make his work easier and more effective.

The propagation and protection of fish seems to be well provided for, but with game birds it is different. One is under the fostering care of the State, the other must be cared for by the various clubs of the State, I believe this would be done if discussion were had in our State convention, and its importance fully impressed upon the delegates. The ga

ings, discuss the game law of the State, section by section, and present the result of their deliberations to be acted upon by the State convention? Another thing might be done: put off the selection of the place for holding the annual meeting until the second or third evening of the convention, then we must fill in the space, and something of interest to sportsmen generally would undoubtedly be brought out. Delegates would come prepared to express their views and experience, and out of it all would be obtained much of practical importance.

space, and something of interest to sportsinent generally would undoubtedly be brought out. Delegates would come prepared to express their views and experience, and out of it all would be obtained much of practical importance.

What about the tournament? While it would undoubtedly interfere somewhat with the deliberations of the convention, I am not yet in favor of its abolition. If it is to usurp the legitimate business of the convention, the sooner it goes the better, but I believe it can be left, kept in its proper place, and furnish innocent recreation to the delegates and others in attendance. I am not of those who condemn trap shooting as a cruel amusement, or as being the cause, except remotely, of the diminished number of pigeons. To the super-refined there is an element of cruelty in all field sports, and to those not so sensitive there is something repulsive in the stories of big bags of game made, and spoled by the lot weather. The destruction of pigeons by the netters who send them dead to market by the car load, and also the great destruction of squabs for the same purpose, is the primary cause for their diminished numbers. The old birds are as unfit for food, when first caught, as a setting hen. In our trap shoots they are fed and kept long enough to be in good condition for market. But I am not going to quarrel with those who differ with me about trapshooting, and will only say that if we can in the future, as in the past, keep our tournaments free from all taint of gambling, I am not opposed to it.

Perhaps some may think, because I agree with you in so many things, that I agree with your views expressed in your editorial of last week. So far as the beneficial influence of our Association is concerned, and that we should more properly be called the "New York State Association of Pigeon Shooters," rather than the "New York State Association is roonering on the true of influence of all the clubs forming our Association is in favor of the protection of fish and game, although it may not, as it shou

you will not have written in vain.

I have written you at much greater length than I intended, and still there is much more that might be said.

We need good, honest criticism, and no doubt it was the welfare of our Association that inspired your article,

WM. J. BARCOCK,

Editor Forest and Stream:—
Permit one of your readers to say that in your article,
"The Work of a State Game Protection Association,"
especially in the second clause, you "thit the nail on the
head." I am informed that six weeks ago "floating" for
deer had commenced "up in the woods"—as we call the
North (to you) Woods. Local authorities can or will do
nothing to stop it. Some arrests were made last season,
but all "fell through" in some way or another. This
year I have heard of no attempt being made to stop it.
Judges, justices and attorneys all participate in the hunt,
and when some poor Frenchman gets arrested and put in
jail he sends for some prominent legal gentleman and
says: "Can't you fix it so I can get out of here? you
know how it is yourself, Judge," and soon the public
hear that said Frenchman has his liberty. You are on the right track, go ahead.

SING SING, N. Y., June 15th.

Sing Sing, N. Y., June 15th.

Editor Forest and Streum:—

Your editorial article on the New York State Association for the Protection of Fish and Game. In issue of June 10th, is an honest and fearless expose of a long standing and constantly growing abuse. If there is in this State a considerable body of men who really desire that our game should be properly protected, it seems almost strange that they should for so long have been willing to allow another body of men, with aims and practices totally different, to usure the title properly belonging to the former. No one who will take the trouble to follow the proceedings of the so-called New York State Association for the Protection of Fish and Game for the past few years, can find in them anything pertaining

Association for the Protection of Fish and Game for the past few years, can find in them anything pertaining seriously to the protection of fish or game, and much that directly militates against such protection.

For this reason those who wish to act in the matter of game protection have a right to demand the Association in question to change either its course or its name, and if it will do neither, then the game protectors, if there are any, ought, out of respect for themselves and their good name, to organize for the purpose of doing the work the others fail to do.

Game protection will now receive the approval and support of the general public, and the name of game protector

Game protection will now receive the approval and support of the general public, and the name of game protector can never earry with it the healthy, manly and legitimate sense that it should so long as public butchering of birds, torn from next and young, is the only evidence of existence shown by the largest Association assuming that duty

One is ence shown by the largest Association assuming that duty unst be believe believe to the result of the shooting, but to charge the New York State Association for the Protection of Fish and Game with utterly neglecting the work its title so plainly demands of it, and with by the distribution of the state of the protection of Fish and Game with utterly neglecting the work its title so plainly demands of it, and with by the distribution of the same may to the perfectly proper; but trap shooting by game protectors certainly is not. A political convention devoted of the same ground, be amenable to censure. That this session meet by the form of its dereliction cannot be demied; but that

point need not now be enlarged upon. The way seems now opened to those who are dissatisfied with the conduct of the Association to give some force to their opposition; and it is the writer's earnest hope that the views, pro and con, of those interested shall be fully expressed, and if it shall be found that the opposition is sufficiently strong, to take proper action.

With a one-fourth part of the time, energy and money devoted to tran shooting by the scenled New York State

With a one-fourth part of the time, energy and money devoted to trap shooting by the so-called New York State Association for the Protection of Fish and Game, an earnest and honest organization could put game protection on a worthy foundation, and double the sportsman's resources in this State. Charles A. Draper.

PLY_FISHING FOR BLACK BASS

THIRD PAPER-ARTIFICIAL FLIES.

ITHIRD PAPER—ARTESICAL FLIES.

LY—FISHING and the art of making artificial flies dates back at least to the ancient Greeks and Romans. During the palmy days of the Roman Empire, the rod, line, hook and artificial fly were well known. Noël de la Morinière tells us that the lines were generally made of horsehair, single, double and plaited; and according to Ælitanus the hair was colored in different ways. The fishing rod was chosen with reference to the supposed weight of the fish to be caught, and the resistance it could offer. The hooks were of counter or iron and posed weight of the fish to be caught, and the resistance it could offer. The hooks were of copper or iron, and coated with tim. The art of making flies of feathers and other materials has, perhaps, never been carried further in our own time, even in England itself. It is possible that the national love for fly-fishing was introduced into Britain by the Romans.

**He with count durings of travillation that I grouped the country of the country of the residual time that I grouped the country of the

other materials has, perhaps, never been carried further in our own time, even in England itself. It is possible that the national love for fly-fishing was introduced into Britain by the Romans.

It is with some degree of trepidation that I approach the subject of artificial flies, for I am afraid that I hold some very heretical notions on the subject. But of one fact I am positively convinced, and that is, that there is a good deal of humbug in this matter, as evidenced in the many tine-spun theories and hair-splitting arguments that are advocated and advanced (portaining to the construction and use of artificial flies) by some anglers, but which theories do not hold good in practice.

In England, more especially, do anglers proceed to extremes as theorists in the matter of artificial flies for trout fishing. They seem to be divided, principally, into "colorists," or those who think color of paramount importance to form, and "formalists," or "entomologists," who maintain that form is everything, and profess to imitate the natural fly, in its proper season, in every particular of form and tinting. But there is no evidence that one class is more successful than the other, as anglers. On the other hand are the followers of Mr. Pennell's system, or plan, who confine themselves to, and advocate the employment of, but three "typical," flies—green, brown and yellow palmers, or "hackles"—and claim that they are sufficient for all practical purposes, and can be made available for different waters and herents to this inter theory are fully as successful, from all accounts, as those who have a list of nearly at housand mannel flies to choose from, and enjoy the satisfaction of having reduced the perplexing matter to a delightful simplicity, and of obviating the troubles of a repeated changing of the cast of flies as practiced by others—they must sometimes feel a regret deep in their hearts for casting down and sweeping away the idols and chorished traditions, and to a certain extent the poetry of fly-fishing, by their ic

These rules, so far as they apply to black bass fly-fish-

These rules, so far as they apply to black bass fly-fishing, are few and simple:—

1. Flies should be small, rather than large, the average trout-fly being usually large enough.

2. On bright days, and with clear, low or fine water, flies should be quite small, and of subdued, dark or neutral times. tral tints.

tral tints.

3. For cloudy days, and high, turbid or rough water, larger and brighter flies should be used.

4. For very dark days, or from sunset until dark, or or on moonlight evenings, gray or whitish flies, of good size, should be employed.

should be employed.

I shall not go into an entomological description of flies and their counterfeits, for it is neither requisite nor advisable, in view of the necessary limited scope of these papers. I will merely state that the majority of artificial flies are of two kinds, and are intended to represent the perfect winged insects of certain orders, and the larvæ of others; thus, most trout flies are the pretended imitations of some of the species of the orders Diptera and Neuroptera, the former comprising the two-winged insects, as the gnats, mosquitoes, miages, etc.,

and the latter the four-winged insects, as the May-flies dragon-flies, etc. The larval form of fly is supposed to represent a caterpillar, and is called a "hackle," or, more or, more represent a caterpillar, and is called a "hackle," or, more correctly, a "palmer." It must be borne in mind in this connection that an artificial fly, when wet, presents a much different appearance from the same fly when dry, and our flies should be tied with reference to this con-

connection that an attention of the same fly when dry, and our flies should be tied with reference to this contingency.

It is not my intention to give any instruction in the art of fly-tying, nor do I deem it at all expedient, for it is an art that can not be taught by written directions, without he aid of explanatory cuts and diagrams, and even then in but a moderate degree. The best way for one to obtain an insight into the mysteries of the art is to carefully dissect and take apart the flies of the best makers, for in the taking apart one can acquire more or less of the modus operandi of the putting together.

The most approved hooks for bass flies are the Sproat, O'Shaunessy, Dublin Limerick, Cork Shape Limerick and Hollow Point Limerick. I consider them best in the order named, though the O'Shaunessy is thought by many to be the best. It is the same in all respects as the Dublin Limerick, except that it is a little heavier in wire, and it differs from the Sproat only in the barty, the latter having a shorter barb, with the point straight, or pointing toward the extreme end of the shank, forming a true centre-draught hook. The barb of the O'Shaunessy is a little longer, and the point is turned slightly outward, like the Hollow Point Limerick. But any of these hooks will give good satisfaction; they are made in the best manner, and of the best material by Harrison, who is head and shoulders above any hook maker in the world. The most suitable sizes for bass-flies are Nos. 2, 3, 4 and 5, the last being the smallest that should be used under ordinary circumstances, though for the smallest flies Nos. 6 and 7 may be employed.

Flies may be tied on a silk-worm gut snell several inches in length, or may have simply a small short gut loop. Those with loops can be used as "stretchers," or tail-flies, but when used as "droppers," or both fies, they must be attached to the leade, by a half length of gut, say four inches long.

tail-fies, but when used as "aroppers, or boos-nes, may must be attached to the leader by a half length of gut, say four inches long. Many "trout-flies" are used, and with good effect in black bass fishing, for readly the form and color of the fly does not seem to make much difference with the bass; he does not seem so "fastidious," as it is termed, in his choice of flies. Most of the "general" trout flies are taken as patterns for bass flies, as the Coachman, Professor, Soldier, Grizzly King, Queen of the Water, King of the Water, this, Kingdom, Quaker, etc., and all of the Palmers or "Hackles."

As every angler will become partial sooner or later to certain flies, and adopt them as favorites to the exclusion of others, I deem it unnecessary to allude to but few, except in a general way; and those that I shall particularize are such as I have used many times with most gratifying results.

I have had more uniform success, day in and day out, with the black, brown, red, yellow and gray hackles

with the black, brown, red, yellow and gray hackles palmers), than with the winged lifes; though some of the latter I have employed with excellent success for high or rough waters, and those with light-cofored or white wings cannot be surpassed for twilight fishing, or for very gloomy days.

The following flies, tied for me by C. F. Orvis, expressly for Florida waters, I found very taking at suitable

times:—
McLeod.—Body, emerald green, with gold twist; tag, yellow and red floss: wings, dark brown; tail, green drake, with red ibis and mottled yellow; hackle, yellow; antennæ (feelers), scanlet.
Imperial.—Body, red with silver twist; tag, silver; tall (whisk), red and white; hackle, black and white; wings, large, grayish white, bordered with black; feelers, reacher.

Green and Gold.—Body, emerald green, gold twist; tag, scarlet; tail, white and red; hackle, yellow; wings,

tag, scarlet; tail, white and red; hackle, yellow; wings, olive green.

La Belle.—Body, pearly blue, silver twist; tag, red and gold; hackle, blue; wings, pure white; tail, red and white.

White and lbis.—Body, pearl, gold tinsel; tag, peacock herl; tail, red and white; wings, white and scarlet; tag, red; hackle, white and scarlet.

Royal Coachman.—Body, scarlet, and peacock herl; tail, pin-tail duck; hackle, brown; wings, white.

Mr. Orvis also tied the next two flies, from patterns furnished by myself, and which have for years been favorite flies with me, when winged flies are at all admissible. As I am the originator of them, I have named them Oriole and Polka. They are totally unlike anything in nature or art, but the bass seem fond of them, nevertheless. The Polka has some general resemblance to the Albey. theless. The Poika has some general recombined the Abbey.

Oriole.—Body, black, with gold tinsel; hackle, large, and black; wings, bright yellow; tail, mixed black and

white.

*Folka.—Body, scarlet, gold twist; hackle, red; wings, black with white spots (guinea hen or woodpecker); tail, brown and white, mixed.

The flies which follow, are part of an assortment fied by Abbey & Inbrie, and have been remarkable and unusually successful with me, whenever winged flies were called for:

*Frofessor.—Body, yellow: hackle (legs), brown; tail, scarlet bits; wines, wellow.

Professor.—Body, yenow; macase (regs), orown; tan, scarlet bis; wings, yellow. Queen of the Water.—Body, dark yellow, gold tinsel; hackle, red; wings, mallard and mottled.

Arizzly King.—Body, green; hackle, gray; tail, red; wings, pin-tail duck.

Ganerang.—Body. neacock herl; hackle, red; wings. Governor.—Body, peacock herl; hackle, red; wings

dark brown.

Soldier.—Body, scarlet; hackle, red; wings, gray.
Montreal.—Body, red; hackle, scarlet; wings, wild

Abley, Captain, Jungle Cock, California, Gold Spinner, Widow, Ferguson, General Hooker, Blue Jay, Page, Academy, Rouben Wood, Blue and Drab, Pheasant, Seth Green, Governor Alvord, Claret, Tippulium, Davis, Hoskins, Tanner, White and Green, Motley, Green Mantle, Premier, Black and Tan, Superior, Black and Gold, Purple Bass, etc., etc.

The three "typical" hackles of Mr. H. Cholmondely-Pennell, and which he uses to the exclusion of all other flies, are described as follows:—

Green.—Dark green body; very dark green hackle for both legs and whisk.

both legs and whisk, Brown.—Body, dark orange; fiery or cinnamon brown hackle for legs and whisk, Yellow.—Body, golden yellow; darkish golden olive hackle for legs and whisk,

These flies are admirable for black bass, however they may be for trout, and the angler who carries but a limited assortment in his fly-book should include these "hackles," in various sizes; they will not disappoint him.

"hackles," in various sizes; they will not disappoint him. J. A. HENSHALL.

TEXAS BLACK BASS.—Waxeshachie, Texas, June 16th. Editor Forest and Stream:—It seems I was wrong in giving the name of rock bass to a fish whose proper name appears to be large-mouthed black bass. I cannot dispute such authority as Mr. Henshall in fish nomenclature, and an glad to have been set aright in the matter. It is as that gentleman states, however; I was perfectly sincere in my declaration, and, according to my authority, correct also. Mr. Henshall is in error in supposing me to be a native Southerner, as I was born and raised in Clinton County N. Y., and old St Regis, Long Pond and the Saranac lakes are as well known to me as are the vast plains and sluggish streams of my adopted State. I first met with the large-mouthed black bass in Lake Emma, a small sheet of water in Portage County, Wis. The waters of this lake abound with these fish to the on-tire exclusion of every other species. My attention was first called to the extreme voracity of this fish by the following interesting incident: One evening, about the middle of June, while walking along the shore of the lake, accompanied by a friend, I observed a young kildeer running on the sand ahead of us. We captured the bird, and after examining it I opened my hand and allowed the bird to go, but instead of flying back to the beach it started directly out over the water, going probably fitty feet from the shore, when it became exhausted and tumbled into the lake. It then began fluttering toward the shore, but its struggles had barely commenced when there was a mighty rush and swirl of the water, a splash that threw the spray four feet in the air, and with one mournful despairing squeak our bird disappeared for ever from mortal sight and ken.

The next day I caught five fine specimens, varying from one to three pounds in weight, and as they were strungers to me I immediately consulted my sporting Koran, Frank Forester's "Fur, Fin and Feather," and there found it so accurately desc

commiss of our local press toward the estatonshinent of societies for the protection of fish and game and the passage of laws to that end. It is to be hoped his endeavors will meet with encouragement and success, and he certainly will receive the hearty support of all sportsmen in this section.

C. S. W.

**FLORIDA BLACK BASS FISHING—Twin Lakes, Fla., June 14th.—Am glad to see that Mr. Henshall, in his second article on "Black Bass Fly-Fishing," advocates the handling of the reel on the under side of the rod. It seems to me that anyone after fishing with the reel on the upper side a half hour would very willingly allow the reel to turn the rod where it belongs, and so relieve the strain on the wrist and help the balance of the rod. Your Texas correspondent wished to hear of some experience in fly. wrist and help the balance of the rod. Your Texas correspondent wished to hear of some experience in flyfishing for Southern bass or "trout," I had considerable
sport last year in this way, killing sixty-eight, weighing
from a half pound up to four and a half. Caught them
in clear water lakes and St, John's. But the waters of
Florida are so rudy and grassy that fly-fishing is attended
with difficulties, and is rather expensive in loss of flies
and leaders. I have found the "Coachman" the most
killing fly, Any combination of red and white, not too
brilliant, is good. But the most royal sport is with the
Phantom Minnow on the upper St. John's and tributaries.
It is rare until it gets to be labor, and then it is time to
out.

S.

A RARE OPPORTUNITY .- Prof. Linden should have no difficulty in finding a companion for the attractive trip described below. He writes :-

difficulty in finding a companion for the attractive trip described below. He writes:—

I intend to revisit the shores and islands of the lower St. Lawrence, and want the company of a thorough sportsman, willing to endure the roughness of the journey; as well as to participate in its pleasant attractions. The objective chief points are the southern coast of Labrador, and one or more localities on the island of Anticosti, with incidental short stays on the trout rivers, near Dalhousie, Percé and Gaspó. The route will be via Quebec to Campbellton and Dalhousie, and thence by a local steamer to Gaspó. From the latter place a convenient mail schooner runs twice in the month to Anticosti, Mingan and Natashquan, on the southern shore of Labrador. Tox harbor, on Anticosti, with the near-by east point of the island, affords fair trout fishing and an exceedingly rich field in the way of seal shooting and the many species of sea birds which frequent it by thousands. Permission for trout fishing may be obtained on the Labrador River, while those of Anticosti are free to all comers. Expenses for passage on the schooner to and from do not exceed fifteen dollars, and board at the country hotels along the route range from one dollar to one and a half per day. The cost of the whole journey, comprising about six or seven weeks, may be roughly estimated at the maximum figure of \$200 from New York and return. It is proposed to start from Quebec about July 8th and to arrive at Mingan before July 20th. A regular steamer now runs between that beautiful place and Quebec, by which the uncertainties of the Journey are greatly obviated. For further information address, without delay, Prof. Chas. Linden, Buffalo, N. Y.

VFLY-FISHING FOR SHAD.—Hartford, June 19th.—In response to the inquiries in regard to fly-fishing for shad, I would like to give my experience. There seems to be a I would like to give my experience. There seems to be a widespread disbelief in the possibility of taking shad in this manner, but if any one will take the trouble to go to Holyoke, Mass., on the Connecticut River, he may at once have his doubts removed. In company with my friend, Dr. Hudson, the President of the Board of Fish Commissioners of this State, I left hore Friday afternoon, determined to try my new Bethabara wood nine ounce rod. We reached H. after an hour's ride, and found that Mr. Chalmers, who was the first to catch a string of shad on a fly, had made preparations for mo—Dr. El, did net fish—and had put his man and boat at my disposal. As Mr. Chalmers reported a catch of fourteen to his rod for the previous evening, I expected rare sport. But, alas! I had only a fisherman's luck, only one rise. To make it all the more aggravating, the boats on each side of us were hauling them in, though the catch was poor, strong west wind came up just at the hour for fishing, from 7 to S.P. M., and made the water very rough and casting difficult. But that shad can be taken with a fly was demonstrated to my entire satisfaction, and on another occasion was only and taking them is to anchor in a

another occasion I shall hope for better luck.

The common way of taking them is to anchor in a moderately swift current some distance below the dam, and then with a long hand line or a stout pole to let the leader, adorned with four or five flies, float down with the current. The fish are then hauled in hand over hand and taken into the boat with a net.

I counted nearly fifty men and boys fishing from the bridge above us. They use a long line and a sort of grappling hook to lift the fish up with when hooked on the ity. The river was also covered with boats. I counted seventeen at one time, and many of them had four or more lines out at donce.

lines out at once.

lines out at once.

If any of my brother sportsmen wish to try it they can do so until Aug. 12, as fishing with lines is not forbidden until that time. If they go to Holyoke they will find a good hotel and plenty of boats to take then out. The best fishing is in the evening from 6 to 8 o'clock and in the early morning. White, red and brown files are the favorites. Mr. C. tells me that he is accustomed to use light tackle, and to cast as in trout fishing, and as he catches more than anyone else, doubtless this method is the best. I tried it faithfully, but with the result before mentioned. The fish are very gamy, and a five pounder will give sport for half an hour on a light rod. M. D.

mentioned. The fish are very gamy, and a five pounder will give sport for half an hour on a light rod. M. D.

**MAGALLOWAY RIVER.—Little Boys Falls, Magalloway River, June 13th.—Never in the history of mankind have mosquitoes and black flies been so terribly numerous in this section as at the present time. They are literally to be seen by the millions. They smile at tar and sweet oil and the only protection is a pair of gloves and a good head net. I started for my annual tramp May 20th, making my first camp at the Diamonds in New Hampshire. In the big pond I found plendy of trout from one-quarter to one-half pound, and in the little pond took a few pounders. None came up to see any kind of a fly. After three days I tramped twenty miles to the Wentworth Pond, near Umbagog. Here they would not take bait, but rose desperately to the "Red this," "Silver Doctor" and white flies at sunrise and sunset. During five days' stay I got six trout that weighed over two pounds each, and enough to cat that averaged one pound each. Then, with Annas Ward for guide, started for Parmachones Lake via the Magalloway River. We ran over to Lincoln Pond for a day and had splendid sport, at Escohes Falls we took a fish that pulled her hard to the three-pound motch—a regular wolf. I believe that the Mctullucks, two ponds that he fly that averaged two pounds each. Waded in the water up to my hips to get the beat up the "rips" in the thirty-mile "rull." At Parmachenee—the prettiest lake in the northern woods—I had fine sport, but no heavy catches. Joe Danforth's camp has been removed from the middle of the lake, and is now at the upper end, or head. Sportsmen, on reaching the mile carry, by firing two shots will receive two answers from Joe. Then, upon firing a return shot, Joe will send his wagon to bring them to camp. Shall go across to the upper Connecticut Lake to-morrow. This entire country is overrun with fishermen, and I am afraid that nets are being used. A party came up to one of the ponds at 4 P.M., Friday, and returned at 10 A.M

CAMP KENNEBAGO—Indian Rock, Rangeley, Maine, June 14th.—A large number of the members and guests of the Oquossoc Angling Association have visited Camp Kennebago this season. Up to June 11th sixty-four of the Oquossoc Angling Association have visited Camp Kennebago this season. Up to June 11th sixty-four names had been registered, among them J. H. Kimball, Bath, Me; L. B. Reed and James A. Williamson of New York. Mr. Reed had an exciting experience in the capture of two trout at a cast, weighing three and three-quarters and one pound respectively, taken on a seven ounce split bambor od. He was an hour and fitteen minutes in landing them. The fishing is remarkably fine this month.

month.

Rangeley Lakes, Indian Rock, June 17th.—A large number of fishermen have been scattered around our lakes for the last month, and few, if any, have gone away dissatisfied. Messrs. Chase & Sargent, of Haverhill, Mass., have probably made the largest catch. During their stay of three weeks they took two hundred and twenty-seven trout, one hundred of which weighed respectively three pounds and over; five weighed eight pounds and over, So much for a fish story; now for game. Two days ago a large buck cariboo was seen from the steamboat Oguossoe swimming across the river not lifty yards below the club house of the Oguossoc Angling Association, and this morning two deer paddled themselves across on to the same side not twenty rods below the house. Mr. Dana, of your city, was one of the witnesses of this event and can corroborate my statement. Doesn't this look a little as though the woods were full of them.

The Pond-Biddeford, Me., June 14th.—The writer, in company with Dr. Quimby, Frank E. Libby and John Berry, of this city, have just returned from an excursion to Tim Pond, in the northern part of this State. We were in camp only three days and caught about set hundred trout, three hundred of which we were able to bring home and distribute among our friends. The

fishing at Tim Pond is unequalled in any place in Maine. Trout are very gamy, but not large. They run from six to fifteen inches in length. In a good breeze over the lake a person can have magnificent sport. Black files are plentiful, more so than usual. The camp of Mr. Kennedy Smith is a sportsman's home in every sense of the word. He knows just how to cater to one's taste, and is always ready to do anything and everything for one's comfort. We advise our brother trout fishers to give him a call this season, and we guarantee them all the trout they want and a desire to visit him again. F. HAINES

SALMON IN THE SACO-Biddeford, Me., June 21st .-Salmon in the Saco—Biddeford, Me., June 21st—There have been taken during the past two weeks thirteen salmon in the Saco River, just under the falls at this place. This is quite unusual, as seldom have more than one or two been taken during a season heretofore. These have been taken in nets by those dipping for alewives and striped bass, and have weighed from eight to twelve pounds each. One was lost by the breaking of the net, supposed to weight twenty-five pounds. Some very large salmon have been seen within a week trying to leap the falls between Saco and Biddeford. It is hoped by all lovers of fishing that we shall have a fishway constructed here another year. The Saco River thirty years ago feemed with salmon, and we are in hopes to see them here another year. The Saco River time, year teemed with salmon, and we are in hopes to see the here again.

June 22d.—Seven more salmon were taken in the Saco River to-day, making twenty in all thus fur this scason, instead of thirteen as I wrote you. One to-day weighs fifteen pounds, the others about nine each. F. H.

fifteen pounds, the others about nine each. F. H.

THE BEAVERKILL CLUB—New York, June 19th.—How
is the following record for two fly-rods on Balsam Lake,
Willswemee Lake and the Beaverkill ? Saturday, June
12th, 33 trout; Monday, June 14th, 117 trout; Tuesday,
June 15th, 154 trout; Wednesday, June 16th, 107 trout;
Thursday, June 17th, 29 trout—total, 331. All line fish,
Protection pays. The members of the Beaverkill Club
do not expend a large amount of time and money in
travel and expenses and then full to find fish.

The Bifle.

THE IRISH-AMERICAN MATCH.

WITH our next issue we hope to be able to lay before our and his men were sent over to shoot. The team arrived safely at 4.30 o'clock on the morning of June 18th. A letter from a team member to the FOREST AND STREAM says of the trip that "some member to the FOREST AND STREAM SAYS of the trip that "some of the tam were quite sea sick and did not get fairly on deek until the following Wednesday. Clark, Fisher and Laird were very sick, but are all right now. Jackson, Rathbone and Donaldson have bad colds this morning; sitting up so late last night for the ship to get in gave them severe colds. We passed the time on shipboard in the usual fashion, betting on the run, etc., playing cards, with an occasional shot at the guils and stormy petrel that followed the ship."

The team did not reach Dublin until Tuesday, the 15th, having to endure two days of lionizing. Col. Bodine, however, is in dead earnest, and will sot his men to work at the earliest opportunity. There was the usual blunder made as to the buggang, which did

earnest, and will set his men to work at the earliest opportunity. There was the usual blunder made as to the buggange, which did not follow along after the American style of traveling by cheek, but instead remained behind at Cork. It came up to Dublin on Wednesday morning, the 18th, and no time was lost by the American Team in rattling out to Dollymount. The Irish Team were at work going over the ranges, and they were at 800 yards when the visitors squadded down at the adjoining targets and made a few sighting shots. It may be significant, but not a single bullseys was made as an opening shot. Rathbone and Rockwoll made an opening center, Scott got an inner and Brown an outer, while the others missed the target entirely. The wind was not unfavorable blowing up from the targets.

able, blowing up from the targets.

The regular practice of the American Team began on the 17th, and all of the men fired the full complement of forty-five shots except Jackson, whose rifle broke down. The score stood:—

| | 800 | Yards. | 900 Yards. | 1,000 Fards. | Total. |
|-----------|-----|--------|------------|--------------|--------|
| Farrow | | . 74 | 68 | 74 | 216 |

| Brown | | | 57 | 65 | 190 |
| | | | | | |

On the 19th came a sort of a test between the two teams in the On the lift came a sort of a test overest the victors in the shooting for the Long-range Challenge Cup by the Irish ritlemen and into which competition the Americans were invited. The two teams have corefully avoided discounting the match in an by shooting a full score beforehand on the same day, sidway by shooting a rail score beforement on the same and, such yaide. In the shoot of the 18th seven of the American and ten of the Irish Team competed, the ranges being 800, 900 and 1,000 yards. Ten shots were allowed at each range, with two sightling shots. There was a drizzling rain and mist, which much hindered the sightling shots. As the Americans are accustomed to shooting in a good light, it was admitted that the practice could not be taken as a test of their merit. The, following are the individual scores:

| | AMERICAN | TEAM. | | |
|---------|----------|------------|--------------|--------|
| | | 900 Yards, | 1,000 Yards. | Total. |
| Farrow | 48 | 46 | 44 | 138 |

Monday the 21st found the men at it again, but the flags were not up as promised, and Col. Bodine having decided that only six men should shoot on the American side, and not whom the six should be, the men were, in reality, practicing each on his own merits, without any team practice. Eathbone was himself again, he having struck his particular brand of tea and braced himself up on it. The day was a fine one, clear and still, the scores

800 Varils 900 Yards, 1,000 Yards, Total Bathbone Farrow . . Rockwell Jackson . . Scott... Fisher.

This is the last report which has come to hand, and show the men, with proper handling, may do something creditable. An the men, with proper handling, may do sometaining creditable. An error is made in keeping the men up to so near a date before the match as single atoms, rather than having them put together with equals, and shooting with the proper system of give and take. Instead, the 2674 average for the first six in the last mentioned practice, it should have been 210 at least.

On the Irish side all is cuthuslasm and hard work. One can

standing :-

On the frish so all is chimissism and airn work. One can harken to the notes of busy preparation for beating the Americans at the butts and feasting them at dejemen, and in the ball room. The two tacks, so distinct, are undertaken with an equal amount of heartless and good will, and as heretofore Major Leech is the great guiding spirit in all that is being done. The associais the great guiding spirit in all that is being done. The association has changed its offices from Grafton street to Suffolis street, closely, where Messrs. Rigby, the gun makers, have placed a suite of apartments at the disposal of the Knights of the Ridle. In this sanctum sanctorum conspiracies are hatched and carried through with eelerity, but they have, all of them, either of two objects—to secure the overthrow at the ranges of the sons of Columbia, or to add to the pleasures of their sojourn. The Major, who has been chosen Captain, has already drafted a lengthy programme of competitions, which are to form the basis of selection. The dates fixed for these competitions have been largely availed of by shooters in various parts of Ireland and in England. availed of by shooters in various parts of Ireland and in England. The final selection of the team will be "made by public competitions, open to those qualified to represent Ireland in the International Match for the Elcho Shield at Wimbledon." The competitions are divided into two branches, and may in the rough be startly described and the least the control of the second of the least the least the second of the least the second of the least the classified as primary and final.

The dates on which the men shot were May 8th and 12th, the ome or Dublin folk firing close to the old ground at historic The dates on which the men shot were hay sit and plan, the home or Dublin folk firing close to the old ground at historic Dollymount, whilst others looked after the bullseye at places which to them were most convenient. There is a large number which to them were most convenient. There is a large number of "colts." or novices, patronizing the pastime nowadays, whose fame has not yet crossed the Atlantic, and Messrs. J. P. Murphy, Honry Coghlan, French, Brewster and Warren are among them, unknown outside the ritle circles of the metropolis. These gentlemen are amongst those down at Dollymount, or, to speak more correctly, Rabey. Then, of the old 'uns, we had John and his cousin William Rigby and William Russell Joynt, tolling away in their old postures on the green swarf in front of the targets. Joshus Milner, who is perhaps the best known out West, will make preparation for the match, but neither Edmund Johnson, "Jim" Pollock, R. S. Greenbill, R. G. Goff, Henry Dyas (the "infant boy"), or Ward, of Chester, have as yet signified their in "Jim" Pollock, R. S. Greennil, R. G. 1001, Henry Dysis tille in-fant boy"), or Ward, of Chester, have as yot signified their in-tention of taking arms. Indeed, both Messrs, Johnson and Pol-lock have intimated that they will be no more than anxious spec-tators at this coming match. Johnson will be a decided loss, as he was a really brilliant shot, but the Grafton street goldsmith has been of in Egypt on a holiday, and only returned the other day to find his hands full of business. Whilst the home men were day to into its game excellent work at Raheny, their brethren in arms at Belfast, Fermaugh, Canan, Dundalk, and in London, were pound inr away at the common enemy—the bullseye. Captain Fenton of the Seyonty-seventh, adjutant of the Irish Centennial Team of the Seventy-seventh, adjutant of the Frisa Centennal read.
Major Young, Mr. Plunkett, member of Parliament for Gloucester,
and Mr. Vignoles shot at the Hounslow ranges, near London,
and they report satisfactory work. Then McKenna, Barrett, Jr.,
Brithwaite and Walkington shot at Belfast mother. Murphy at
Dundalk, Capt. Somerset Maxwell over his private ranges at Arly
Cottage, Mountaingart, whilst at Cavan (Dromkeen House,
demeane), Capt. Sanderson, Major Jones and Mr. Adams put up

some encouraging scores.
"Old Reliable," William Rigby and John Rigby are quite in their old form, which means that when they are down at Rubeny. the bullscyc has an especially rough time of it. The captain has reserved to hinself" the power of attering or adding to these rules to meet a contingency." The reservation, it may be said, sounds like a sweeping one, and so in truth it is; but under the circumstances the Major has, as he himself would put it, "done the right thing." Quite as much have those rille matches been regarded as buttles between makers of weapons as amongst those who display a skill in their use. In the early contests it was always found most difficult to ascertain whether the Rigby muz-zle-loader or the American broech-loader had the advantage. In team shooting there was no gainsaying the fact, admitted on all sides, that the weapon of our good friend, Cousin Jonathan, was the more successful. However, in what may be termed individe the bullseve has an especially rough time of it. The captain sides, that the weapon of our good friend, Cousin Journalian, was the more successful. However, in what may be termed individual or single handed contests, such as the Bennett Long Range Match in 1874, and the Abercera two days' match in 1875, the top scores were made by the frish rifles. Subsequently American armorers succeeded in still further improving their methods, and the remarkable scores made by Bruce and others in the and the Femarkanies scores induce by Bruce and outcirs in the Palma Match of 1877, at Creedmoor, all but conclusively settled the superiority of the breech-loading match rifle. No one an-peared to be more thoroughly convinced of this than the captain of the English Eicho Shield Team, and, in the 78 match, almost all the English Eight shot with ofther English or American breechloaders. They, however, sustained a crushing defeat at the hand toaders. Inc., Dept., seven and the bighest some as the land of the Irish Eight, seven of whom used their old and tried muz-zle-loaders, and put on records the bighest score as yet put up in England. In '79, the success attending the breech-loaders was no better, and the riflemen from the Land o'Brown Hosther were victorious. At the termination of this match, Mr. John Rigby, when called out to return thanks for the cheers given for

Ireland (Mr. Rigby had made two hundred and fifteen points, the Ireland (Mr. Rigby had made two nundred and nitreen points, the highest recorded at Wimbledon), said that the Irish Eight would gain their noxt victory by the ald of a breech-loading weapon, and since then the Dublin gun maker has been hard at work to and since then the publishing on linker has both safe to what to perfect the arm he conceived, and to-day the Rigby brecch-loader is in the hands of many of the Irish rifle shots. The Rigby system consists in a certain combination of rifling and builbet applicable to any breech-loading action, the specialty lying in the barreland ammunition, and not in the method of breach closing bullets are much harder than those of the Sharp or Reming-The buildets are much tarder than those of the Sump or account, or neither than the friction between it and the barrel is reduced to the smallest possible amount. English powdor is used, and it is claimed that the necessity for elaborate cleansing is obviated, and moreover, misless that are unaccountable to the shooter are completely explosible. It is quite on the cards that the frish Team will use these new weapons, and if only a part of all that is slaimed for them be true, the Americans will have to look well to their laurels.
On Whit-Monday, May 17th, the shoots began. The scores on

To determine who is to constitute the teams and reserves, a fur-To differentiate who is to constitute the cannot have the and is the of June, each man to fire, on each day, fifteen shots each, at 800 and 900 yards, and twenty shots at 1,000 yards. This competition took place on the North Bull, by the kind permission of Mr. Vernon, of Clontarf Sastle, and as the ground was new to some of Vernon, of Clothart Castles, and as the ground was new to some of the riflemen, each man was given two sighting shots at 800 yards on the first day only. The following gentlemen, having been nominated by the Captain, obtained places without being re-quired to enter the second stage: Maj. Young, Capt. Fenton, Mr. John Rigby, Those invited to enter the second stage were as follows; R. Barnott, Jr., Belfast; Capt. Somerset Maxwell, Cavan; James Murphy, Jr., Dundalk; Henry Coghlan, W. R. Joynt, P. J. Murphy, R. B. Warren, J. K. Milnor, Wm. Rigby, L. F. Banks,

Dublin.

The 4th of June was very unfavorable, blowing great guns at all the ranges, and on the second day, June 5th, the wind was choppy in the extreme. The scores, out of a possible 250, at each range, stood as follows:—

| ŧ | Friday, | Saturday | |
|---|---------------------------------|-----------|--------------|
| 1 | June 4th. | June 5th. | Grand Total. |
| ł | Milner 222 | 227 | 449 |

CHOICE OF A HUNTING RIFLE .- Corpus Christi, Tex., May 29th Editor Forest and Stream .-Sur: I have waited patiently for the new rifle which would supercede everything as a game weapon in safety, accuracy and rapidity of firing, and to this end I have closely examined all the markets afford. It has not come, unless you take the Winehester rifle, which so far is not in the race, having distanced its competitors. This is plain language, but it is astrue as all plain language should be. I have used the Remington, the Sharps, the Maynard and the Ballard, but while each have their merits, they all have there demerits. For a long time the Winehester was looked upon by me with suspicion, for I feared that there was danger of an explosion in the chamber holding the cartridges, and consequently have never owned one. I will do so, however, so soon as I can dispose of my Pacific rifle, now on hand. I have done considerable shooting with the Winehester, and I can see no difference in its shooting capacities from that of any other first-closer file, while as to its safety have never

better, and I can see no difference in its shooting capacities from that of any other list-clease rifle, while as to its safety. I have never known but one to explode, and that was when the owner tried to shoot it with the muzzle of the barrel illod with mud for six Inches. It simply split open and let the gas out.

Now I am not complaining that other rifled on not shoot well, and for simple target practice have very little choice among the many first-closs rifles; but in a country like Fexas, where a man not unfrequently xels a dozen shots in almost as many seconds; it is vexatious digring or striking a shell out with a kindic or driving it out with a road. I have been through this mill nayself many times in the past year, and I am forced to let experience teach me. Some people, you know, learn botter by experience than any other way. I have come to the conclusion that the Winchester rifle has no superfor for safety and accuracy of shooting, while for rapidity of firing and case in handling it is par excellence by far the best weepon in the market.

while for rapinity of firms and consider a samaniagates parameters by far the bast weapon in the market.

I am not writing this for the benefit of the Winchester Rilling Company at all, for I know none of them, and never expect to know them. I never even met an agent of theirs in my life, but I think it only the proper thing for a man to do when he has I think it only the proper food given much to do when he as learned by experience agood thing to give his fellow men the benefit of that knowledge. And I know of no better channel in which to disseminate knowledge adapted to the sportsanan than the FOREST AND STREAM, for wherever I go if I strike a sports-man Jinds and the six authorither to your paper. I trust all will be conally candid in their criticisms on sporting articles, so we may now from each other what is the proper thing to spend our money for.

THE SIGHTING OF HUNTING RIFLES.

NO. II.

THE back sight is not of so much importance as the front, and One who has nover tried it would be surprised at the accurate shooting he could do with a small front sight and nothing behind but the open barret. Still a back sight is essential for good and reliable work at any considerable distance.

Rold mist be the heart of him who dure attack the Instinonable "healt charter is sight, and I shall contine myself to merely instinating, and that with much fear and trembling, lest I be deemed an iconoclastic monkey, that there may be good shooting done without a buskhorn kind sight. And even if the buckhorn is indispensable, the horas need not be over a foot bigh. The principal use of the horas or sides is to prevent the reflection of light and all consequent glimmering from the corners of the holton motch; and this can be done perfectly on a flat-topped back sight by a little tincture of iodine, ink, or sait water frequently applied. All talk about the sides enabling the eye to find the notch quicker is gaseous, for this all depends upon what the eye is accustomed to. But there is one use that these horns of hillil perfectly—the cutting off of that comprehensive view of the situation that is indispensable for good shooting at crossing or quartering game, and my humtle vision has not yet found any advantage to offset this. Bold must be the heart of him who dure attack the fashionable

toring game, and my humble vision has not yet found any advan-tage to offset this.

Suppose, now, you cut down the big, bungling thing until it is as flat as the "beautiful Christmas story written expressly for this" etc., etc. Then with a duil kuife and hammer sirkle a shal-low notch in the center; then cut away the sides until it is of about half the original which; then widen the notch very gradu-ally until the front sight just fills it, but be very careful how you depen it, for deep notches in the back sight are another fertile cause of shooting too high ct. 100 low. Now get this sight well cause of shooting too high or too low. Now get this sight well rusted with iodine or something else and try it a few days before you pass judgment. If in a few days' trial, throwing it up to the eye you cannot find the notch as soon as the notch in the buckborn, then slope away or cut down the shoulders until the notch stands in an apex, or in a little cupola, and I'll warrant it now as easily found as with the aid of any amount of big sides. now as easily found as with the and of any amount of big sides, secops, etc., though it will take a little practice to do it. There is no earthly need of a broad back sight. One-third of an inch wide is plenty, and even a quarter is good enough, and a deep, wide noteh is a nuisance, the former making it difficult to prewide noted is a mosaite, the former making it diment to pre-serve the elevation, the latter causing too much of the glimmer of light and consequent uncertainty of both center and eleva-tion. One can do as good shooting over a straight, narrow base sight without any notch at all as with ordinary sight, the superior accuracy of the horizontal line shooting balancing the inferior retrical line shooting; which latter, however, is far better than one would suppose. As between the big buckhorn sight and a straight-topped piece of iron one-fourth of an inch wide without horn, notches, or scoops of any kind, I would not hesitate a straight-topped piece of iron ome-fourth of an inch wide without horns, notches, or scoops of any kind, I would not heistate a moment to take the latter, on account of the superior horizontal work that can be done with it. But1 do not mean to say that good shooting cannot be done with the buckborn sight. I only contend that the sides are too much in the way of the sight for good running shooting. And this can be largely obviated by cutting mays most of the sides, still leaving a slight scoop in the center. The question of shape, however, is so much one of what he eye is accustomed to that it is idle to expect much unanimity of opinion upon it.

Of somewhat the same nature as the question of shape is that of fineness of the sight. The cye can get used to very fine sights, and very good shooting can be done with very cense ones; but fine ones are bad in the woods and bad lights, while they are always liable to deceive one by the fineness of the point of the front sight. The notch of the back sight can, however, hardly be too fine or too shallow for any one whose eyes are good.

For a back sight, Lyman's patent sight possesses some great advantages. I found out long ago that about as accurate shooting could be done with the common peep sight when the holewas reamed out to double the ordinary sign, and can be so peep sight on game, and enables one to do first-rate shooting at moving marks, using the open I rout sight. The way finds at moving marks, using the open I rout sight. The way finds at moving marks.

Ins reaming tenues as the understand since interest attenting at tenues of peep sight on games and combine one to the first-rate shooting at moving marks, using the open front sight. The eyen finds the center of the large hole as soon as the gun comes up and finds the center of the large hole as soon as the gun comes up and finds it near enough for practical purposes. I also vasily improdes a find of sight by understand purposes. I also vasily improdes a country of the sight part of the sides around

sights on a hunting-tifle are a delusion and a snare. The remark is fat with truth; yet it is misleading, nevertheless. No one has spoken more strongly than I have of the hunter's fattal facility in overestimating distance, or of the difficulty of judging distance under the ever shifting conditions of the field. But the remedy is not to discard elevating sights. Just so surely as the game is beyond the natural point blank of the rifle, just so surely must the line of fire be held above it. Whether this be done by taking a "coarse bead" on the front sight, by holding over the animal with a "fine bead," by having the rifle sighted to an artificial point blank, by a fixed high back sight, or by adjusting an elevating sight, the difficulty of elevating distance is precisely the same. And of these four ways, the most reliable is a good elevating sight, and with the same. And of these four ways, the most reliable is a good elevating sight, quickly and accurately worked, provided you have it thoroughly tried and marked at different distances. The worst of all is the "coarse bead," which is nearly worthless beyond 150 or 200 yards. Holding over is also quite uscless at any considerable distance. The fixed high sight, or artificial point blank, is very good for the pinns, or where the majority of shots are much beyond the untural point blank. But it is be fixed for 200, and with most rilles for 150, it is fust as necessary to hold under at haif the sights on a hunting-rifle are a delusion and a snare. The remark

vond the natural point blank. But if it be fixed for 200, and with most rilles for 150, it is just as necessary to hold under at half the distance, as it would be to hold over at the whole distance with a rille not so sighted. And beyond its point blank, it is little better than a rifle level sighted. As I said before, Lyman's elevating principle is better than the common sliding sight, and rises high enough for all distances at which it is worth while to shoot at gauen at all. But I fy ou use the common sliding peep sight on the stock, try this plan: Sight your rifle with the open sight to 100 yards, and use this for all work up to 150—that is, what you think is 150. You will find that

"Our indiscretion sometimes serves us well, When our deep plans do fail,"

When our deep plans do fail," and will get more game at what you consider 150 yards by shooting level, than you will by allowing for the distance. Next find the 150 yards point for the sliding sight, and put a drop of solder on the track so that it cannot get below. Then mark the 200, 250 and 300, etc., yard points. Now, if you carry it at the 250 point, a moment's glance will causble you to slide it to the 200 or 300 mark, and you can slide from any point to the 150 without looking at it, because the solder stops it. And you had better use the 150 mark for what you think is 200, etc., or, in other words discount all your estimate of distance about 25 or 30 per cent, and even more in the woods, or at long distances. A peep sight of some kind is absolutely indispensable for accurate work at over 200 yards, and it had better be used even at 150, it possible. The common step-ladder elevators of the buckborn

rate work at over 220 yards, and it had better be used even at 159, it possible. The common step-indder elevators of the buckborn sight are of very little use beyond the second or third step. I know that the dirt can be made to fly close to a stump or rock at 390 or 400 yards with them, and even further. But game does not tarry because dirt files around its heels, or over its back. It is hard enough to touch it at that distance with any sight, and noth-

ing will do but the best you have.

It is the same with leaf sights, or any other mode of elevating open sights on the barrel. The first elevation is pretty good, the second passable, the third dubious, etc.

Telescopic sights are not such an advantage as one would sunpose; for the globe and peep are good enough to 300 or 400 yards, provided you know your distance. And this important provise makes nearly all snorting at game beyond those distances almost useless, especially when the difficulty is increased by effect of sun, shade, wind, etc.

A short time ago a correspondent of Forest and Stream pub-A short time ago a correspondent of FOREST AND STREAM published a lotter from a friend in Montana, dated Beb. 20th, or thereabouts, in which he stated that on one day he had killed ten deer, and the next day in going for them killed five more, and added, "What do you think of that?" The friend who published the letter opened this question to the world in general. Anyhody who knows anything about deer, knows that deer in the far North by the 20th of Feb., especially after such a writer as the last has been in Montana, are so poor that they almost need to be propped up to shoot at, that the bale is almost through the hite, and they almost need to be the proped up to shoot at, that it he she is almost through the hite, and they grain is so thick that the bide is almost worthless. The half-starved deer generally yard and buddle when the snow is very deep, and at such times are always very tame. Our friend might have utilized the bair for plastering, and the rest of the carcasses, with the hide on, for lanterns. He might also have found ready sale for them for half-racks, as they would need no erving, there being nothing to preserve; for I know not what

else he could do with them.

What do I think of that? Excuse me; I have too much respect for pork to institute any comparisons.

If sporting papers will continue to publish such things, I wish

they would make a special department of it, so that it will be easy to skip. I would suggest for it the name of "Blood Snuffer's Corner."

T. S. VAN DYKE.

RANGE AND GALLERY.

CINCINNATI, Ohio, May 3lst.—The sixteenth competition (and which proved the final one) by the "C. S. and F. Club" for the Baker Medal took place to-day, and was won for the fifth time by Mr. Weston, who now becomes the owner. He was closely followed by Mr. Gindelin, and as each had won it four times much interest was manifested as to the result, which lay in doubt between them up to the last shot fired. The following is the score; distance, 200 yards; position, off-hand; is shots at Massachusetts. Creedmoor target:

TUE ATALANTA.—This schooner, with her owner (Mr. W. R. Ver-milye) and Mr. Chas. G. Franklyn and party, arrived at Hallfax. N. S., June 18th, bound to Labrador. All well.

THE GWENOLEN.—This sloop, built by Woods Brothers. East Boston, now owned by Messis. Loveloy & Binner, of New York Law proven both fast and weatherly. She is a keel heal, 21 ft. 4, 12 ft. beam and 7 ft. draft, with about 1,500 pounds from on her keel. Bridonce that draft, keel and low ballast are compatible with speed.

with appendix use draft, keet and low ballast are compatible with appendix the state of the low sassied June 13th in a lively wind from northeast, accompanied was sailed June 13th in a lively wind from northeast, accompanied Kobbins' Reef Ducy; thence around Fort Lafayette, back to start; distance, ten miles. In the cabin class Lotes won by a close shave of 59s, from Commodore Beams' keel sloop Marie, the Montesty being distanced. Excelsion, in the class for open stoops, and a suited and Family B.

Excellent Values Comp.

and Famy B.

EMPIRE YAORT CLUB.—The fourth annual regains of this club was sailed June IIIh over the usual club course to Gangway Buoy was a supersection of the course of Gangway Buoy ways. Tragarthen and H. W. Beccher won in the cubin sloop classes, Blanche, Theo, W. Recess and Sophia Emma the open sloops and Tarantella in the class for entamarans.

The INTIDUID.—This schooper (N. Y. Y. C.), Mr. Lloyd Phoenix, has been reported as having arrived safely at Cowes. England.

LAUNCHED.—At Trenton, Ont., June 18th, a new six-ton cutter, built by Cuthbert, for Mr. Geo. D. Nichol, of Toronto. She will be put in commission as rapidly as possible.

KINGSTON REGATTA—An open regatta will be sailed at Kingston Out, on Dominion Day. "Three classes, drst prizes \$100, \$60 and \$30, and second prizes \$30, \$30 and \$40. Thried prizes of \$10 and \$5 in the two smaller classes. The Oswego foce will have yet to Kingston with the steam barge classes will go to Texas and enter a race there." Entries to be made to the Secretary, Mr. Jos. Swift, before Wednesday evening, June 30tb. Entrance monoy, \$10, \$5 and \$3.

ing, June 2006. Enterance money, 516, 55 and 52.

The Kentra.—At the recent World's Regette at Providence the Herreshofts furnished one of their famous launches, the Kelpie, as judges and press boat. The Rhole Island Press, to speaking of the efficient service rendered by her as judges, police and press boat, asys: "She has behaved finely during hor three days' service, and won many encominus, and so has Capt. Chas, K. Herreshoft, who handled her. Always well and prompt to to the cight for the offentines perplexing service upon which he wassengared, and the gentlemen of the committee speak in the highest terms of satisfaction of his services." Their torpeds boat opposed the day by successfully intig a torpedo, the water being throw to a height cavecesfully intig a torpedo, the water being throw to a height caveced for the complete and the providence of the control of the control of the surface

ROYAL CANADIAN,—The Royal Canadian Y. G. sailed their opening cruise from Toronto, June 18th. There was a whole sail breeze from northwest. The Commodore, Mr. Boswell, hoisted bis flag aboard the Madcap, and the following yachta answered the signal: Alerm, H. Blesco; Orlole, H. Leya; Cognicse of Deferia, Major Gilford; Rited, Mr. Kersteman; Inoipine, Mr. W. H. Howand, and Nagarra of Law To Conneces partied company squadron tactics by signal from the flagship.

SALISBURY POINT REGATTA.—Was sailed June 18th, Course eight nules. Won by La Papiollon, Kimbai and Lundberg, in lh. 35m. 58s., seating Psyche, Sciid, Clara, Mand, Ripple, Millinee, Gracie and Madalide.

THE GOOD OLD KEEL.

Taffords us great pleasure to publish the following terse and I alfords us great pleasure to publish the following terse and witty appeal in favor of the good old keel, from no less an authority than Henry Sterrs, Esq. The composition was delivered as a speech before the New York Yacht Club at their recent annual dinnor, and pointedly refers to what is patent to un-prejudiced observers, that keel yachts can be built every bit as fast as center-hoards:—
"I had hoped that some one of the owners of the keel schooners

would have responded to this toast. The subject of keels and center-boards has been for a long time a prolific theme for discussion, and the respective owners of each of these kinds of vessels have proved conclusively to the world in general and themselves in particular that their own boats are much superior to the others in speed, comfort and safety in all kinds of weather, particularly when it blows. They thoroughly understand the subject, and

when it blows. They thoroughly understand the subject, and talk very learnedly about it, to the editinction of the public at large, and with great satisfaction to themselves. "The matter has been so often and so thoroughly argued by both sides that I am afaid there is little left for me to say which would be either new or interesting, and if I fail to convince you that the keel schooner is the best versel, the keel schooner owners will the keel schooner is the nest vessel, the keel schooner owners will have nobody to blame but themselves, in not having chosen someone more competent for the task.

"I want it distinctly junderstood, however, that I am not to

suffer professionally for any remarks that I may make which might be construed as detrimental to center-board vessels, for if any non-board owners believe in center-boards, and want one built, I am ready to take back all I have said or may say to their dis-paragement. I learn that one of our oldest and best yachtsmen is to respond to the center-board schooner toast. He will undoubtto respond to the center-board vessels are vasily superior to keel boats. He will tell you what is perfectly true, judging from his own experience, but when you take into consideration that his experience has been limited to the ownership of two boats—one a keel schooner, not a first-class boat, and the other one of the Reci senconor, no a insertions to an area of the other control of the most famous and fast salling center-board craft that this or any other club ever possessed—I think it will be obvious that my center-board friend's opinion in this case should not be entitled to that weight which it would have is the minds of all yachtsmen to that weight which it would have in the inities of an year-state on any other subject connected with yeaching. I myself have had not any such apportunity of comparison, and therefore can look at the subject unbiased by any previous projudices. But even were it otherwise, it is susseptible of proof by mathematic that the keed, boat is much the batter and more reliable vessel.

It can be shown that we get better proportions in the circumscribed area of the parallelopipedon in keel boats than In center-boards. We also get a much lower center of system, and center-noards. We also get a much lower center of System, and while the meta center may not be as high, still we can regulate the distance between the meta center and the center of system better in the keel boat, and these two points are the true guides to stability and safety. Again, by getting a greater distance beto stability and safety. Again, by getting a greater distance between the center of system and the water line in keel boats finan can be done in center-boards, we certainly deriven benefit from the increased pressure of water between these two points. Furthermore, the stability being mostly artificial, the requisite amount of stability to the amount of power or sail can be accurately determined, thereby insuring a thoroughly safe boatwhich result has not been and cannot be reached with centerboards.

"I have now demonstrated theoretically, practically and mathe matically that the keel boat is the only kind of craft worthy of notice by the thorough sca-going yachtsman.
"Hefore concluding, I will trespass upon your patience for a few moments to glance briefly at the keel boat from three im-

portant points of view not hitherto touched upon namely the

portant points of view not hitherto touched upon, namely, the historical, the postical and the artistic.

"First, the historical point of view. The very earliest keel boat of which we have any suthentic second unit sentered upon the page of history as the Ark, commanded by Capt. Nonh. The newspapers of that period having all been destroyed, we have no records of her qualities as far as regards speed, and we find her name connected with but one important race, namely, the human race, which to-day would cut a very small figure had she rot hears it stands howevery. A No It been variety three annears. human race, which to-day would cut a very small ligure had she not been a stanch, seaworthy, A No.1 keel yacht. There appears to be no doubt that at one time at least she was fast, very fast, upon Mount Ararat, and her captain and crew appear to laree been eminently satisfied with her performance in that regatiar She distanced all her competitors, and left them so far behind that they have never been heard of since. As they are now some that they have never been neard of since. As they are now some 6,000 years behind time, they would probably be ruled out of the race, even should they yet arrive. It is probable that the rest were center-board boats, which fact would account for their failure to put in an appearance, as the weather upon that occasion tature to put it at appearance, as the without doubt, camb of price was exceedingly storiny, and they, without doubt, camb of price in the heavy gale which prevailed, and which nothing but a keel boat could have hoped to live through. This 'melancholy result appears to have put a damper upon center-boards for many succeeding centuries, and it is only within the last lifty years that they have begun to emerge from obscurity, and are now strug-gling to recover from the utter demoralization consequent upon that untoward event.

that untoward event.

"Since then the cele loat has sailed triumphantly down the sea of time, and has survived the wreck of empires which it raised to the zenith of commercial prosperity. We behold the keels adapting themselves to the various tastes of the successive nations of antiquity, diverse and changing as to her upper structure, but always with the same deep, underlying principle of keel. At one time she appears the gorgeous galley of Cleopatra, adorned with sliken sails, bearing that illustrious but scantily-clad young woman on her various missions of love and vengeance across the blue waters of the sparkfleg Addalle. Again we behold her (not Cleopatra, but the keel boat) carrying Commodore Julius Carsar with his cohorts of Roman noses to the shores of Great Britain and distributing civilization and the ars and selences among the and distributing civilization and the arts and sciences among the and distributing civilization and the arts and sciences among the benighted inabitiants of that heathen island. Still later, we see her wafting Captain Columbus and his crew of adventurous mariners over the trackless wastes of the unexplored Atlantic, on a voyage of discovery, with whose momentous results probably most of us are more or less familiar. Where would now be the British llon had it not been for Commodore Caesar and his keet boats? Instead of standing on the Tower of London, with bristing mane and erected tall, rearing definee to the world, be would have been stiting upon his baunches in his native care on the british of the Thanes, glaring with hungry ever upon a on the banks of the Thames, glaring with hungry eyes upon a howling wilderness. Where would now be the American eagle, had it not been for Captain Columbus and his keel boats? Not where he now is, perched upon the dome of the Captal at Washington, surrounded by a halo of Star Spangled Banuers and Fourth of July orations, and waxing fat upon the inexhaustible supply of of July Orations, and waxing it in a point liet measurable supply of buncombe which flows continually from the halls beneath him. Instead of enjoying all this luxury, be would be sitting upon a stump beside some solitary lake in the Rocky Mountains, igno-niniously watching for a chance to steal from some fish-hawk his hard-carned supper. Without the assistance of these keel boats one-half the globe would be a trackless forest, and the civ-ilization of the world would be confined to the mainland of the

Eastern continent.

"Thus we see, that the keel boat is preëminently the boat of history, and is associated upon its pages with many of its most glorious and important achievements. We also find that it is the only kind of ressel recognized by literature, poetry, painting and the arts. We read of "The hardy membranics" but it.

and the arts. We read Of ""Tho hardy mariner whose keel plows through the realm of un-discoverd seas," and not 'the hardy mariner whose conter-board plows through the, realm of undiscovered scas." Also

" 'The thunder laden fleet

Whose cleaving keels o'er the rebellious crest Of angry ocean ride,'

and not

Whose cleaving conter-hourds o'er the rebellious crest
Of angry ocean ride.'
"Instances innumerable like these might be cited to prove that poetry not only deals exclusively with keel boats, but also con-siders the keel itself an essential element in their construction. siders the keel item at essential telements in their consecution. This fact is applicable in an equal degree to painting. Who everswe an idealized boat represented on the cunvas with a center-board's Take, for instance, that celebrated series, Cole's 'Voyage of Life.' Do we behold that allegorical infant embarking in his allegorical boat with an allegorical center-board sticking up in the middle? By no means. A genius at once as poetical and practi-cal as Mr. Cole would never think of intrusting as important a matter as the 'Voyage of Life,' to anything else than a keel boat, "And now to return to the level of actual life, and the circle of

And now to return to the level of actual risk that the Greek of our own observation and experience. I would ask what description of craft has reflected the greatest credit upon the association to which we belong? What kind of a vessel was it that twenty five years ago left this port, and, having crossed the Atlantic to meet on the other side the assembled yach fleets of Europe, sailed a true, in which the safe distinguishing they compared to the contractions that sailed a race in which she so far distanced her competitors, that when the news arrived that she was ahead, and the question was

who is second? the answer came back, 'There is no second—the keet pucht America!'
"What kind of a versel was it, that a few years ago went from here to Cawes and anuscal herealt by salling around the fast yachts of that locality, and, after waiting six months in the vain hope of finding some one hold enough to accept her challenge, left in disgust? The lect boat Sappho.

"We find, therefore, that the keel boat is the boat of history, the boat of poetry, the boat of painting, and the boat of the prac-tical sailor. It has been handed down to us from the remotest nges, hallowed by classic associations, indoread by all the nations of antiquity, and through all the vicissitudes of thousands of years has never been superceded or excelled. It has been the accessful boat of our forefathers from time immemorial, and will be the successful boat of our posterity through all future coporations!

THE DOGS AT HEIDELBERG.-The students' dogs at Heidelberg, one of the great German universities, is thus pleasantly described by Mark Twain in his new book, A Tramp Abroad :"-

"A Tramp Abroad ?"—

Nine tenths of the Heidelberg students were no badge or uniform: the other tenth were caps of various colors, and belonged to social organizations called "corps." There were five corps, each with a color of its own; there were white caps, blue caps, and red, yellow, and green ones. The famous duel flighting is confined to the "corps" boys. The "Kreip" seems to be a speciality of theirs, too. Kneips are held, now and then, to celebrate great occasions—like the election of a beer king, for lastance. Solemnity is simple; the five corps assemble at night, and at a signal they all fall loading themselves with beer, out of pint mugs, as fast as possible, and each man keeps his own counts—usually by laying aside a lucifer match for each mug he empties. The election is soon decided. When the candidates can hold no more, a count is instituted, and the one who has drunk the greatest number of pints is proclaimed king.

It seems to be a part of corps etiquette to keep a dog or so, too. I mean a corps dog—the common property of the organization, like the corps steward or head seavant—then there are other dogs, owned by individuals.

On a summer afternoon in the Castle gardeus I have seen six students march solemnly into the grounds, in single file, each carrying a a bright Chinese parasol and leading a prodigious dog by a string. It was a very imposing spectacle. Sometimes there would be about as many dogs around the pavilion as students; and of all breeds and of all degrees of beauty and ugliness. These dogs had a rather dry time of it, for they were tied to the hences and had no amusement for an hour or two at a time except what they could get out of pawing at the grass of the part of the part of the past or trying to sleep and not succeeding. However, the part of the parasol and the pavilion as students. However, the past of trying to sleep and not succeeding. However, the past of the past of the past of trying to sleep and not succeeding. However, the past of the past of the past of the past of the Nine tenths of the Heidelberg students were no badge

time except what they could get out of pawing at the gnats or trying to sleep and not succeeding. However, they got a lump of sugar occasionally—they were fond of that.

they got a lump of sugar occasionally—they were fond of that.

It seemed right and proper that students should indulge in dogs; but every body else had them too—old men and young ones, old women and nice young ladies. If there is one spectacle that is unpleasanter than another it is that of an elegantly dressed young lady towing a dog by a string. It is said to be the sign and symbol of blighted love. It seems to me that some other way of advertising it might be devised, which would be just as conspicious and yet not so trying to the proprieties. and yet not so trying to the proprieties

The Cape Hunting Dog.—Among the most recent additions to the Zoölogical Society's collections in Regent's Park, London, is a Cape hunting dog. It is a queer beast, with shifty ways that give it an oppeanne of irresolution and occasionally of crazy bewinderment, induced, no doubt, by the consciousness that its features justify its being looked upon as neither dog nor anything also, but something halfway toward the first hyena and about as far from the last wolf. In a wild state it is a creature of intense fencity, and as active as it is farce, exception; nocks from province to province, rayacing creature of intense terocity, and as active as it is herce, sweeping in packs from province to province, ravaging the colonist's flocks and hunting down the wild herds of the plains. Nothing is safe from it when at liberty, and in captivity it is said to be untamable. Probably, therefore, no other occupant of the society's gardens will find its now life so miserably circumscribed, so flat and dull s will this wild hyena-hound of Africa.

NOTES AND QUERIES.

FISH HOOKED IN GILLS.—Why do writers on angling write of ish with "hooks in their gills?" Are fish often, or ever, caught

FISH HOUSED IN CILLS.—Way to writers on anging writes in shall when hooks in their gills?" Are this often, or wer, caught in that way?

Fish are hooked in the jaws or in the stomach—sometimes by the side, back or tail, but I do not romember in fifty years of anging to have seen one clabon with a book is its gills.

Sportsmen's Goods.

THE AMES SPORTING CANNON,

Ames Manufacturing Company, Chicopee, Mass.

THIS GUN is a small bronze breechpain closeling cannon, similar to the neo of campaign clubs, celebrations, ynching, signal and sporting purposes generally. The gun is made of U.S. Government standard bronze, is 12 Inches long, it inches caliber, and weigins 20 lbs.; ing II2 lbs. It can be readily carried in a procession by two men, and meets a want long felt for a small, convenient and safe gun. Metallic shells are milled with a standard browning and free indefinitely, and by their use the possibility of fire being left in the gun is obvited. The shells are filled with common coarse sportsion exp. The gun is simple in construction; easy of operation; no exposure in loading and firing; and is the most cumplete breech-loading gun made for this purpose.

The Rennel.

Muskoka and the Georgian Bay Islands.

THERE is nothing so pleasant as reading an account of a fishing or hunting trip with pleasant companions and plenty of sport, except the trip itself; and I, for one, although enjoying the sketches very much, al ways feel a want, in most of them, of practical infor mation.

Persons of ample means can, of course, take advantage of any narrative they read, and go and do likewise still I have no doubt there are numbers of your readers who, like myself, are very eager to go on just such jaunts, but not able to go if they are too expensive; also many others who would be saved much trouble and loss of time and expense if they had any practical experience to guide them.

The following is an account of a trip made among the lakes and hills of Muskoka and the Georgian Bay Islands waters.

Our party consisted of four—Capt. S., his wife, M., her companion, Miss F., and myself. Our outfit was as follows: One barrel containing provisions—ham, corn meal, dried beef, syrup, tea, coffee, etc.; one bag of hardtack (not the veritable hard-tack of the old salt, but Canadian, large, square and very palatable, costing five cents per pound), one canvas sailor's donkey or waterproof bag, for each of the men; one trunk for the ladies, a bundle of bedding covered with a buffalo robe, and a box ten inches square by forty inches long containing guns, fishing tackle, ammunition, etc., and a small hatchet; one tent ten by ten feet, five and one-half feet high at eaves, so no inconvenience of stooping, and have ing a partition in center. The tent was in two pieces, top and sides, and made into a bundle like a carpet-bag. The poles came apart in the middle, so that they, with the fishing rods, made a very small bundle. No boats, as we expected to get them at our destination.

We procured a passage on the large schooner Midland Rover from Goderich to Midland City, and left "G." on Thursday, the 10th of July, 1879. Weather rainy all day, but very pleasant in the evening, with a light southerly wind. We remained on deck chatting, sing-ing and enjoying the novelty until almost midnight. As

the vessel was only taking lumber on her return trip, we had the deck all to ourselves.

Friday, the 11th, the weather was foggy and drizzly, wind very light all day. Busied ourselves arranging fishing tackle, etc. In sight of Cove Island Light at the end of the Indian Penisula at midnight.

Saturday opened warm and sunny; hardly any wind; only sailed ten or twelve miles last night. We found ourselves off the Flower Pots after breakfast. As the vessel was going very slowly, Capt, S. and I lowered the cance into the water by ropes at each end, and, towing her to the bows, we both got into her from the dolphin strikes and paddled off to visit the "Pots." They were three in number at the time of our visit, although formerly there were seven, the remainder having been overthrown by storms, or human vandlas. They are composed of immense blocks of stone weighing many tons, over thirty feet in height apparently, and stand in the water at the southeastern limit of the island, which is nothing but a mountain of rock covered with evergreens and shrubbery to its very summit. The Flower Pots have the appearance of cones inverted or standing on nothing but a mountain of rock covered with evergreens and shrubbery to its very summit. The Flower Pots have the appearance of cones inverted or standing on their apexes, and, in my opinion, were formerly parts of the mainland, or rather main island, which have become detached and worn to their present; shapes by the action of the water. The lake, or rather bay, for we enter the Georgian Bay as we pass Cove Island, was very clear at this place, and we were able to see the bottom at a great depth. After enjoying a slight stretch on shore, we picked a few wild flowers for the ladies and paddled off after the vessel, catching up to her when she was opposite the Bear's Runp, an island of rocks covered with evergreens, and of such a shape as to entail on it the eunhonious name given above.

evergreens, and of such a snape as to entail on it the eu-phonious name given above.

The cook gave us a very fine salmon trout for dinner, which the men had caught before we came up. The night was light and sturry, as we slowly forged through the middle of the largest of fresh water bays. I re-mained on deck enjoying the scene and a cigar until

1:30 A.M. Sunday morning. Light and sunny; breeze still light; caught a large black bass with trolling hook, and almost caught a trout, but he flung himself off the hook as he was leaving his native element. The captain stated that he caught nine salmon trout on the last trip up, but that we were now going too slow for fishing. The line used in deep sea trolling is about the thickness of a slate pencil the capen is some three by two inches, and the

we were now going too slow for fishing. The line used in deep sea trolling is about the thickness of a slate pendic; the spoon is some three by two inches, and the hooks some two or three inches long.

At dinner time we passed the Western Islands (the spot where the ill-fated steamer Waubuno was supposed to have foundered last fall with all on board). We arrived in Midland about 6 A.M., having experienced a very delightful voyage up. Midland we found to be a very enterprising town, situated on the eastern shore of a small bay of the same name opening into the Matchdash Bay. Its chief industry is lumbering; and it is also, at present, the terminue of the Midland Railway, of Canada, which was finished to here the present year.

Monday we intended to leave on the Midland Railway for Bracebridge, via Orillia, but owing to an accident which happened to one of our number we were obliged to wait over until Wednesday, when we left by the noon train, reaching Orillia at 3 F.M. Left Orillia 4 4:15, via Northern Railway for Gravenhurst, where we took the steamer Winona, and, after a pleasant voyage of some sixteen miles on lake and river Muskoka, we reached Bracebridge.

steamer Winona, and, after a pleasant voyage of some sixteen miles on lake and river Muskoka, we reached Bracebridge.

Bracebridge is the chief town of the district of Muskoka, and is situated at the head of navigation on the Muskoka River. We found the hotels full of sportsmen and guides, all getting off for a shoot in the woods or a fish in the rivers and lakes, so plentiful hereabouts.

On Thursday, after a good deal of bargaining and talking, we made arrangements with a livery-keeper to take us to Baysville, some sixteen miles from Bracebridge, and come for us for the sum of \$12, which we at first thought was rather exorbitant, as we all, bag and baggage, only made one load, but going over the road changed our minds. We started after breakfast and made the sixteen miles in time for supper at the other end, and, of all the model I ever saw, that is the worst—some forty-nine hills, all of bare rock, at one time called the "Devil's Gap." The wagons had to be unloaded, and everything hatled over it in stone boats, it was so precipitious. I halled over it in stone boats, it was so precipitious. I halled over it in stone boats, it was so precipitious. A large wagon, filled with boxes and bags, etc., etc., a halfalo robe stretched over, and all bound securely with ropes; on the top of all the ladies in large hats, and the male portion of the parties in havelocks. Our driver added not a little to set off the group. We were honored by the livery-keeper himself, as ladies were an unsual article in that country, and had to be driven carefully. He was a talt, dark, fine-looking, strapping fellow, and had formerly been a guide and trapper before this region had been opened up, and he was very entertaining with his stories of olden times in the woods we were going through.

through, We found Baysville a lively village, situated on a

branch of the Muskoka River, about two and a half miles from Trading Lake, of which it (the river) is the outlet, As usual with Canadian towns, the nucleus of the village was a sawmill, located at the first falls on the river, and in consequence was at the head of navigation. Wedrove

was a sawmill, located at the first falls on the river, and in consequence was at the head of navigation. We drove immediately to the river bank, and pitched our tent for the first time. We procured our fishing permits from Mr. Wm. Higgings, who is the sub-inspector for this region. We also got our boats, etc., through him. He is the principal sporting character in the neighborhood, and keeps a number of hounds.

It seems like olden times once more, to be sitting around a camp fire with the varying light reflecting on the white cances at our backs.

Friday morning we struck tent and left Baysville for Trading Lake, all of us in one boat twenty-feet long, and vouchsafed to be a good sea boat. We also towed a flatbottom skift containing our luggage, which had been considerably decreased by our constituting Baysville a storehouse, and leaving the trunks, etc., there. As our injured companion required some rest, we determined to camp at the foot of the lake over Sunday, and so pitched our tent in an open glade on a bank possessing an extensive view of the lake, where we remained until Monday amusing ourselves by getting enough lish for our an extensive view of the lake, where we remained until Monday amusing ourselves by getting enough lish for our own use, eating berries, and exploring the neighboring islands. We caught one speckled trout weighing four pounds. The view from our tent was very pleasing, indeed. In front, as far as the eye could reach, stretched the beautiful, cool lake, its surface dotted with islands, the banks in some places very rocky and high, and indented principally on the northwest with deep flords, which give to the lake its second name of "Lakes of Bax."

Bay."

Monday, July 21st, 1879. Up very early; sunrise reminded me of those lines of the poet beginning thus:—

"The morn, in russet mantle clad, Walks o'er the dews of you high eastern bill,"

"The morn, in russet mantle chad,
whits o'er the dews of yon high eastern bill."

Struck camp after a hurried breakfast, and made for
up the lake, with a fair wind, turning our large boat into
a sail craft by the help of an oar and part of our tent,
The flat bottom we surnamed the "pollywog," on account
of her propensity to waddle in towing.

The upper part of Trading Lake is divided into two large
bays, one running to the northeast and the other to the
northwest. We decided to take the last as our scene of
operations, and dimed at noon on the point of the peninsula separating both the bays, and constituting the halfway mark also. Reached the end of North bay at 6:30
r.M., having enjoyed a delightful sail of eighteen or
twenty miles from the foot of the lake with a fair wind.
Pitched camp in a grove of pine trees about six or
eight feet above the level of the lake. Back of us, and
on all sides, the mountains rose to considerable height.
Black flies were rather troublesome; the other pests are
out of season.

or season. ed Gould, the champion hunter and fisher of these regions, lives about half a mile from our camp, across the end of the bay. He was very obliging to us during our stay, letting us have his canoes, etc., whenever we our stay, lettis wanted them.

anted them. We remained in this locality over a week, fishing, We remained in this locality over a week, fishing, shooting, etc., etc., and enjoying ourselves thoroughly. We found that, as regards fishing, we had made a great mistake omitting to bring worms with us, as this being deep fishing period, the trout all lying at the bottom were gorged with minnows, and would only look at special bait, such as worms, of which there are none to be procured in the country. However, although we did not catch as many as we had hoped to, those we did get were large, and we have no doubt'if we had been a month or six weeks earlier we could have caught immense numbers, as the water appeared to be teeming with them.

them. As for shooting, we had some good sport with ducks, and a number of very exciting chases after loons. These are large birds of the duck species, about the size of geese, black on top with a white breast, and are unpulatable as food on account of being too tough. The down is very thick and close, and is said to ward off any ordinary shot or bullet. When skinned and cured the pelt is used in the backwoods for the seats of chairs, etc., and in towns and cities for boas, muffs, etc., and is very durable.

auracie.

At night the birds emit a weird, mournful cry, like a person drowning. They cannot rise in the air except against a very strong wind, and then they have to fly some distance before accomplishing the feat. To counterbalance this disadvantage they can remain under water a long time, and swim very rapidly while so immersed. We chased one for a long time one day, and had eventually to get fould and another man to help corner him up. When we got him he was almost full of buckshot. Friday, Capt. S. going off on a trip with Gould, I got a canoe of Gould, and taking the ladies, took a trip up the north branch of the Muskoka River, which empties into the bay just opposite us. We juddled up to the falls, some three or four miles, and on our arrival there, unanimously concluded that the scenery we had passed through was the finest of its kind we had ever seen. The At night the birds emit a weird, mournful cry, like a

river turned almost at right angles every quarter of a mile or so, and seemed to have been cut out of solid lanks of evergreens some soventy or eighty feet high, which were reflected in the water almost as perfect and distinct so they would have been in a mitror. Every now and then, on suddenly skirmishing in our birch around a sharp corner, we would disturb a covey of young ducks feeding on the wild rice growing close to the banks. We spent an hour or so fishing below the falls, and experienced very good sport indeed.

Saturday, S. and I canced a long distance up the North River, making some three or four portages and traversing some twenty or twenty-five miles, but had very little luck.

some twenty or twenty-nee miles, but had very little linek.

Monday we struck camp and left for Baysville, wind dead ahead, rowing. At 11:30 A.M., wind getting fresher, we ran under the lee of Lone Tree Island, for shelter and refreshments. Twelve A.M. we started again; 12:30 we rounded to in a bay to leeward of half-way point, lying under the shadows of the hills.

"Far from mon's homes, where the clift breaks away, And the warm scented trees droop dewy green."

A thunder rain-stom coming up from the westward, we pitched our tent and made things taut for the night. Nine A.M., wind going down a little, and it being a lovely moonlight night, we held a council of war, and determined to up sticks and continue on down the lake. We had a weird but delightful pull for some four hours, and reached our first camping ground at 1 A.M.

We left Baysville Thursday morning, and, taking our

mined to up sticks and continue on down the lake. We had a weird but delightful pull for some four hours, and reached our first camping ground at 1 A.M.

We left Baysville Thursday morning, and, taking our old track, arrived at Midland at 5:30 Friday evening.

Saturday we hired a Mackinaw skiff and half-breed boy of eighteen years for the remuneration of \$1 per day and keep. For the benefit of the uninitiated I will remark that a Mackinaw skiff is a schooner-rigged sailboat of from twenty to thirty feet long without water ways, and they are very safe, fast boats when under good management. Taking our camping outfit, the captini and I, with the boy, left for the islands down the bay to pich a camping ground, leaving the ladies boarding at a private house in town. Reached Prince William Henry Island, or, as it is called by the Indians, Boseley Island, about 6 A.M., running into a bay on its eastern shore, pitched our tent and caught a number of large lass for supper.

Smalay was a glorious day. Capt. S. and Joe, our half-lreed, left in the boat after dinner for Midland, and were going to stay oven night and bring the ladies out with them in the morning, leaving me to keep bachelor's hall, but as I had one or two visitors from the Indian village situated on the south of the Island a mile or so away, I was not long by myself. Monday turned out fine; got up early, made a raft and paddied off to rock in the bay a quarter of a mile or so from shore, and caught a good string of fine large bass and pike. Folks got out about I P.M., and as the ground was rather rocky for camping where we were, we moved camp to a large bay at the back of the island. Our present camping ground is the best we were, we moved camp to a large bay at the back of the island. Our present camping ground is the best we were, we moved camp to a large bay at the back of the island. Our present camping ground is the best we were were the moved camp to a large bay at the back of the island. Our present camping ground is the best we were, we moved camp

"By the glossy waters of a bay,
The golden tangles of the sunbeam play,
And quiver in the breaking waves."

The bank rising gradually from the water, smooth and grassy, and dotted with cumps of scrub oak and blackberry bushes, one could almost imagine he was in a park. It was formerly the site of an Indian village, the ruins of which are still visible. Rumor has it that at the time of which are still visible. Rumor has it that at the time the French were massured and driven out of Ventarynishene (about twelve or fifteen miles from here) large quantities of gold and silver were buried on this spot, and some credulous persons of the present generation evidently put faith in it, as the ground in the vicinity of the ruins is all full of holes, apparently of recent excavation. Some of the holes are as large as cellars, others on a smaller scale. Scattered through the bay were numbers of rocky islets arising precipituously out of the water, off which we found good fishing, bass and piles of large size being numerous. We remained on the island a week, lishing, shooting, etc., ducks having begun to fly.

water, off which we found good fishing, bass and pike of large size being numerous. We remained on the island a week, fishing, shooting, etc., ducks having begun to fly. Thursday, an Indian coming along in his dug-out, I took my birch cance and we went for a long paddle among the islands to the northeast. We got some very good fishing and also had a lively hunt after a hare, and had to give it up on account of a thunder storn coming up and chasing us back to our tents, which we reached about dusk, having traversed over twenty wiles.

miles.
Saturday morning we struck camp and moved into Midland, where we found the Rover almost loaded with lumber. Leaving Midland at dusk, we reached Goderich on Tuesday at 7 A.M., after a pleasant voyage down the lake, very similar to our trip up. As we arrived off Goderich Town we were forcibly reminded of Coleridge's lines, running thus:—

"Oh dream of joy—is this indeed
The lighthouse top I see?
Is this the hill? Is this the kirk?
Is this mine ain countree?"

"Is this mine aim countree?"

"Is this mine aim countree?"

The lighthouse, a church and the hill are almost all one can see of Goderich from the water.

We resolved unanimously that the Georgian Bay part of our trip was by far the most pleasant, and also the cleapest, as, if we had remained there all the time, our expenses would have been reduced two thirds.

The lishing among the Georgian Bay Islands is good, bass and pike predominating in the small bays and maskalonge and salmon trout outside. The bass and small pike can be caught by still fishing, the larger fish by trolling: but I always find, wherever I have been, that a great deal of time and expense will be saved by procuring, in the first place, guides to show you the best fishing snots.

sigots.

A party of four or five could, by starting from Godericli, easily spend two or three weeks among the islands at an expense of say ten dollars each, which would include hire of a large sailboat, provender, etc., and a guide. As regards equipment, I have tried a great many things: American patent camp beds, Canadian ditto, and can say that all a person wants is a buffalo skin between two, a blanket apiece and one strong suit of coarse tweed clothes, with a change of unnentionables. Throw in a large ulster for heavy weather, and your outfit for the outer man is complete. I generally carry a suit of oilskins as a precaution.

SPRING NOTES FROM MINNEAPOLIS, MINNESOTA

MAY 1580

May 1st-52°, 83°, 64°, -A large fish hawk, measuring sixty-five inches from tip to tip of wings, was shot near

the city to-day. This bird is not at all common here.

May 2d-72°, 91°, 66°.—First Bartram's sandpiper. Marsh marigold (Caltha palustris) in bloom.

May 3d-662, 909, 709.—Chimney swifts. Evening grosbeaks on Nicollet Island. This is the last time the grosbeaks were noticed. The very warm weather at this time doubtless hastened their departure, as they usually remain much later.

May 4th--70°, 86°, 67°,—Night hawk.

May 5th--66°, 82, 70°,—Rose-breasted grosbeak, red-eyed

vireo, warbling vireo, blue yellow backed, blackburnian, golden-winged, chestnut-sided, yellow, Tennessee, and Nashville warblers, lark-finch, cow-bunting, king bird.
A pair of robins building in a tree across the way.

Wood anemone, plum trees, oaks, ironwood, etc., in bloom. The slippery elm has passed from blossom to fruit. The very warm weather of the last few days has forced everything ahead, so that we have passed directly from a late to an early spring. A great number of birds have arrived, many of them several days ahead of but a day or two since were bare and bushes which but a day or two since were bare and winter-like, are sufficiently in leaf to cast quite a decided shade.

May 6th—72°, 91°, 69°,—House wren, Harris' finch, chewink, redstart. Baltimore oriole, whippoorwill, solitary sandpiper, willet, olive-backed thrush, Traill's flycatcher. Great abundance of white-throated sparrows.

Two kinds of wild gooseberry (Ribes cynosbati and rotundifolium) and the larger bellwort (Uvularia grandiflora) in bloom.

May 7th-53°, 56°, 46°.-White-crowned sparrow and orange-crowned warbler.

Ruc-anemone (Thatictrum anemonoides), Juneberry (Amelanchier canadensis var. alnifolia) and cultivated red currant in bloom.

May 8th-52°, 70°, 53°.—Cape May warbler, Maryland yellow-throat, clay-colored buntings, Ridgway's sparrow, bobolink, barn swallow and Carolina rail. A set of four eggs of the long-eared owl (Otus wilsonianus) obtained from an old crow's nest, from which I took a set of five crow's eggs last year. The nest is about twenty-five feet from the ground in a tamarack tree in a dense tamarack swamp. The eggs were in very different stages of incubation, one being nearly fresh, while another contained a large embryo. Red-winged blackbirds nesting. Numerous Bartram's sandpipers.

In bloom : hoary puccoon (Lythospermum canescens), swect white violet (V. blanda), blue violet (V. cucullata), dandelion and crab apple trees.

May 9th-52°, 68°, 54°.-Red-headed woodpecker.

In bloom: columbine (Aquilegia canadensis), red-berried elder, Indian turnip (Arisæma triphyllum), whitloe grass (Draba caroliniana), strawberry, white birch, etc. May 10th-55°, 65°, 59°, -Upon skinning a clay-colored bunting to-day I found the flesh literally full of white, worm-like parasites. Every part of the body, from the head to the root of the tail, contained the parasites, but they were fewer in the muscles of the breast than elsewhere. In the small amount of muscle on each leg there were thirty or forty of these worms, and so numerous were they in some places that the muscles were much enlarged. Although thus afflicted the bunting was fat,

and seemed in good condition generally. Early meadow-rue (Thalictrum diæcium) in bloom.

May 11th-58°, 82°, 65°.-Yellow throated vireo, Wilson's black-cap (Myiodioetes pusillus), Wilson's thrush, Alice's thrush, Savanna sparrow and water thrush (Siurus nævius).

Many oven birds in full song, clay-colored buntings, redstarts, a Harris' finch, chestnut-sided warblers, Tennessee warblers, blue-headed vireos, etc.

In bloom: yellow violet (V. pubescens), Canada ginger, Asarum canadense), wake robin (Trillium cernuum), red cherry and red raspberry (Actea spicata var. rubra).

May 12th-62°, 64°, 60°.-Much rain; cool. A scarlet tanager.

May 13th-56°, 68°, 60°, -Black-poll and bay-breasted warblers, short-billed marsh wren. Brown thrush's nest containing three eggs. Tennessee warblers very numer-

Creeping crowfoot (Ranunculus repens) in bloom.

May 14-60°, 76°, 62°. +Indigo bird, orchard oriole. In bloom : painter's brush (Cas:tilleia coccinea), lark's. spur violet (V. delphinifolia) and blue-eyed grass (Sis-

yrinchium bermudiana).

May 15th.—63°, 80°, 63°. May 16th—65°, 78°, 70°.—Buckbean (Menyanthes trifoliata) in bloom. The plum and crabapple blossoms have about all fallen.

May 17th-67°, 85°,-Yellow-winged sparrow, Cana-

dian flycatcher, black tern and a blue-winged vellow warbler (Helminthophaga pinus). The capture to-day of a male of the last-mentioned species is the first time that I have detected this warbler here in six years' collecting. It is certainly a rare bird, and may be simply accidental. Dr. P. L. Hatch includes it in his list of 1874, a single specimen having been secured.

A lark finch's nest containing one egg.

New flowers in bloom: water-leaf (Hydrophyllum virginicum), bird's-foot and arrow-leaved violets (V. pedata and hastata), choke-cherry, wild cranesbill (Geranium maculatum), everlasting pea (Lathyrus ochroleucus), wood betony (Pedicularis canadensis), ground plum (Astraga-lus caryocarpus), dwarf blue-berry (Vaccinium pennsylvanicum), wild black current (R. floridum), dwarf raspberry (Rubus triflorus), golden corydalis (Corydalis aurea).

May 18th-75°, 82°, 622.-Catbird's nest, just completed, Heard the veery singing for the first time this spring.

Bellwort (U. sessilifolia) small honeysuckle (Lonicera parviflora) and long-flowered puccoon (Lithospermum longiflorum) in bloom.

May 19th-64°, 77°, 60°,-Ruby-throated humming bird. Along the edge of a certain piece of woods a pair of hummers breeds each year, and during the nesting season the male may be found at almost any time sitting on the dead top of one or another of two or three particular trees. Here he passes hours, his repose interrupted by only occasional brief periods of absence. He was at his post again to-day after the long winter's absence, while the female doubtless was engaged at no great distance in arranging for the nest. This quiet, inactive way of whiling away the time does not seem to accord in the least with the usual restless disposition of the humming

An oven bird's nest containing four eggs of the owner and two of the cow bunting. The nest was in an old wood road, close by where there was a nest two years ago.

The gold thread (Coptis trifolia) and showy orchis (Orchis spectabilis) are in bloom.

May 20th-49°, 56°, 49°,-Great-crested flycatcher and olive-sided flycatcher. A crow's nest, containing four large young, and a cooper's hawk's nest, containing four slightly incubated eggs. These two nests and the one from which the long-eared owl's eggs mentioned above were taken, are in the same corner of a dense tamarack swamp and quite near together.

In bloom: star-flower (Trientalis americana), stargrass (Hypoxys erecta), stemless lady's slipper (Cypripe dium acaule) and false Solomon's seal (Smilacina trifolia).

May 21st-47°, 60, 53°,-There was sufficient frost last night to kill and blacken the young leaves of the small oaks, sumach leaves, ferns, etc.

A wild pigeon's nest, containing one egg nearly incubated ; two rose-breasted grosbeaks' nests, each containing three fresh eggs, and a cow bunting's egg in addition; ing three fresh eggs, and a scarlet tanager's nest just completed. The wild pigeon breeds here regularly, but only in isolated pairs. I have found many nests, but never one containing more than a single egg or a single young bird. Yet most, if not all, of our authorities say the pigeon (Ectopistes migratoria) lays two eggs. Is it a fact that two eggs are generally, or even occasionally, laid?

fact that two eggs are generally, or even occasionally, laid?

May 22d-57, 68°, 52°,—Black-billed cockoo,
Spring cress (Cardimine rhomboideus), rock cress (Arabis lewigatus), and swamp saxifrage (Saxifraga pennsylvanica) in bloom.

May 23d-60°, 61°, 58°,—Spiderwort (Tradescantia virginica) and golden ragwort Senecio aureus) in bloom,
May 24th-63°, 78°, 70°,—Yellow-billed cockoo, Wilson's phalarope and a mourning warbler. The last is a rare bird in this locality, though common in the heavy timber a hundred miles further north. Three Carolina doves' nests, with two eggs each; one of them was within two feet of the ground in a dead bush in open brush land. A loggerhead shrike's nest containing six eggs nearly hatched. One red-winged blackbird's nest with four eggs, and many just being built in hazel and oak bushes near a pond. Found a robin's nest which was onearly tipped from its place in the crotch of a tree that the two young birds it contained lay upon the side of the nest. The robins however had not deserted it and the female was sitting upon the nest, unsteady as it was. Many cathirds' nests, most of them just completed; one with five eggs.

Many catbirds' nests, most of them just completed; one with five eggs.

Upon knocking the top off from a muskrat house on the edge of a slough, mine young muskrats apparently but a day or two old were disclosed. They were hairless and showed not the least sign of their eyes opening. The nest was of dry grass and not more than an inch or two above the level of the water.

In bloom: Arrow-wood (Viburnum lentago), meadow parsnip (Thaspium barbinode) sheep sorrel (Rumex acetosella) and carrion flower (Smilan herbacea).

May 26th—729, 77°, 57°,—Whippoorwill's nest, two fresh eggs; three wood thrushes' nests, two containing eggs, the third not finished yet. Heard several Nashville warblers singing in a tamarack swamp, where they doubtless breed each year. Their song is very much like a weak reproduction of the Tennessee warbler's piercing trill.

Flowers in bloom: dwarf cornel (Cornus canadensis) bishop's cap (Mitella nudo), bush cranberry (Fiburnum opadus) silky cornel (C. sericeus) and Smilacina bifolia. May 27th—50°, 62, 51°2—Saw a swallow-tailed kitc. Found two chestnut-sided warbler's nests, one containing three fresh eggs, the other still incomplete. These nests were in low bazel bushes on the edge of a wood.

Took five nearly fresh eggs of the yellow-billed wood-pecker from a hole in a partly dead poplar tree in a piece of heavy timber. The hole had been newly excavated by the birds, as was evident from its clean and neat appearance and the great quantity of chips upon the ground at the foot of the tree. The entrance to the hole was but an inch and a half in diameter—so small that the birds had to struggle considerably in passing in and out. The male was most devoted to the nest and displayed much distress and boldness at the intrusion. He remained in the cavity until a hole had been chopped through the solid wood into the nest. A downy woodpecker's nest in the top of a tall dead poplar stub; eggs somewhat incubated. Found three power's nests about an old abundend farm. One of them contained young birds, while another was just in process of construction. The situation of the lutter was quite novel. The birds were building their nest against the smooth side of the building so that a large nail which projected about two inches from ing their nest against the smooth side of the building so that a large nail which projected about two inches from the wood would be embedded in the body of the nest, and so hold it firmly in its place. The nest was begun just below the nail, so that it could be built up to and around it. The idea was a good one and showed some engineering ability upon the part of the pewess. The yellow pond lily (Nuphar advena), small yellow lady's slipper (C. parvilforum) and wild rose (Rosa blanda) are in bloom.

May 28th—90°, 82°, 65°.—A warbling virio's nest, one egg; song sparrow's nest, three fresh eggs, and a cow bunting's.

May 28th—30°, 83°, 55°.—A warbling virio's nest, one egg i song sparrov's nest, three fresh eggs, and a cow bunting's.

In bloom: Large yellow lady's slipper (C. pubcscens), lupine (Lupinus perennius), Senega snakeroot (Polygala senega), yellow water crowboot (Ranunculus multilidus), clintonia (borealis), pitcher plant (Sarracinia purpurea), locust tree (cultivated) and the hairy puccoon (L. hirla).

May 29th—67°, 78°, 59°.—Found a least flycatcher's nest containing four fresh eggs. It was placed on a low horizontal limb of a large oak tree in a pasture. The nests of this species are here usually placed in an upright unequal fork of a small tree or sapling in deep woods. The present case was, therefore, exceptional, though I have found them somewhat similarly situated before. An oven bird's nest containing four fresh eggs, and a cow bunting's, a yellow warbler's, with two eggs, and two red-eyed vires nests just completed.

The horse gentian (Triosteum perfoliatum), frost grape (V. cordifolia), bitter-sweet (Celastrus scandens), and small white lady's slippers are now in bloom except the large white (C. spectabile), which blooms about the middle of June.

May 30th.—70°, 75°, 59°.—Vellow-headed blackbirds are May 20th.—70°, 75°, 50°.—Vellow-headed blackbirds are

middle of June,
May 30th.—70°, 75°, 52°,
May 31st—52°, 65°, 50°,—Yellow-headed blackbirds are
building their nests.
In bloom; the Yennsylvanian anemone, four o'clock
(Oxybaphus nyctagineus) and wild raspberry (R. strig-

(Oxybaphus nyctagineus) and wild raspberry (R. strigosus).

With the close of the spring ends this outline record of some of the more noticeable occurrences in nature. The senson has been one of many fair promises repeatedly broken. At first it seemed as though the spring would be an early one, but the prospect soon changed, and all through March and April there was a predominance of cold, rough weather. About May 1st a sudden change to excessively warm weather occurred, and the vegetation which had been held in check by the cool weather was urged into unwonted activity. The same sudden advance was noticeable observer, particularly among the birds. As great a change took place in the appearance of woodland and prairie in a few days, as usually occurs in two weeks. The birds arrived in great numbers, many of them several days or a week ahead of their usual time, so that species usually appearing at different dates were migrating in company. This change obtained throughout the month of May, nearly everything being slightly in advance of previous years. The migration was soon out the month of may, most, or in advance of previous years. The migration was so over and the birds busy with their nesting duties.

FISHING NOTES FROM MIRAMICHI.

ALMON and trout have been very late in putting in an appearance here this season. Neither next fishermen nor anglers did anything before the 1st of June. Since that time a good many salmon have been caught in the bay and river, although they have not yet come within the reach of our anglers to any extent. Messrs. John White, Skinner and Law, of St. John, Robert Orr, of Frederickton, Ernest Hutchison, John Johnson and the writer, with a few others, have done Indiantown for sea trout, about 1st of June and afterwards. Messrs. White, Law and the Skinners had excellent luck for a day or two, taking four or five hundred of excellent weight and condition. The rest of us were there just as the St. John men left, and had ill luck. By going alone to special places on the Remus, I managed, in a day and a balf, to take sixty trout and a nice ten pound salmon; but my companions, who fished nearly all the time near Judiantown Brook, took scarcely anything. We did better at the Ox Bow, on the Little Southwest, however, though the fishing has not been first class anywhere so far.

Some good sized trout have been taken at Bartibog of late, but three-pounders are scarce there, only about half a dozen having been caught this season.

intac a fortnight ago, and went down stream some seven miles below the portago road leading to the river from the Bathurst road.

They secured some splendid fish, but had a tough time of it, as there is no road on either side of the stream, and is has to be waded all the distance by horses or men.

Several trips have been made by different parties to the Big Hole on the Northwest Miramichi, twenty miles

Several trips have been made by machine the Big Hole on the Northwest Miramichi, twenty miles above Newcastle, but there were no signs of salmon until a day or two ago. We shall have good salmon fishing there for two or three weeks, and thereafter, through July, above, at the Square Forks of the Sevogle, the Big Falls and other favorite pools hard of access, but "good when

he had at Bathurst, only four miles from the pools, on the line of the Intercolonial. The charge on the rough water is \$\frac{1}{2}\$1 a rod per day, The fishing on the Northwest Miramichi is free and excellent.

The Restigouche Club, composed, as you know, of New Yorkers, is in full possession of what used to be public fishing in the Restigouche and Metapedia. I do not grudge its members their fine privileges, but regret that the angling available to us ordinary mortals who have not a piethora of this world's goods is being marrowed year by year. We have, however, one consolation, which is, that being to "the manner born," we know some fine pools beyond the ken of lessees and clubs, though we have to reach them through portages and fords by catamarans and gunfloats. A neophyte at the business was taken with us last season on a trip after salmon. It was none of your holiday affairs, but a case of roughing it the most carnest and hearty manner. To reach a point some thirty miles from "the last house" we had to follow the previous season's trail even when it led into and through the river. When our destination was reached and the sport was begun, our neophyte, who had shown game, said it was glorions "even if we had to swim some to get here." If any members of your New York clubs wish to have Broadway and Fifth avenue soaked completely out of them, send them along in July for a cruise to some of our special pools on Miramichi tributaries. If they of our special pools on Miramichi tributaries. If the can "stand the training" I will guarantee the salmon.

BASS AND MASKALONGE FISHING.

THE THOUSAND ISLANDS.

WELL," said my friend C., as he came in my office one day last week," I'm off for the Thousand Islands to-inorrow."
"What for?" I inquired.
"Fishing, of course, and a couple of months' cool wreather"

"Fishing, of course, and a coup."
"Yes, I suppose that it is somewhat cooler up there. But what are you going to fish for?"
"Fish for? Why, bass and maskalonge—going to catch 'em, too. Never failed yet, when I went there. Bass fishing has just commenced, and Pd rather catch them than brook trout, although I know the men of the fashionable clubs consider it inferior sport. But I don't see why they should."
"Why not?"

fashionable clubs consider it inferior sport. But I don't see why they should."

"Why not?"

"Well, when you catch a bass, you get a larger fish, and one that is fully as gamy, makes a harder fight, is stronger, and up to just as many tricks. They are just as fine for food, to my taste, when taken from the cold waters of Lake Ontario, as the average mountain brook trout. You may smile at this, but such is my opinion; and there are others that agree with me. If you will become convinced very soon. Sportsmen are beginning to understand how gamy they are, and the result is that the Fish Commissioners have stocked half of the available streams in the Eastern States with them. Bass fishing is better mow than ever before. How seldom you land, in ordinary fly-casting, a trout that weights more than a pound. A two-pounder, taken wild from lake or river, is the event of your fishing trip, and save in Maine, or occasionally in the Adirondacks, one of that weight is very rare. Yet how few black bass you take that weight sey result a rarity as is a two-pound trout. I fish for black bass with brook-trout tackle, except that I use a trifle larger files. The rod, the line, and the leader are the same. A three-pound base seizes the fly. I straighten the line and hook him. He shoots twenty or thirty feet to the right like a flash, then zigzags thirty feet to the left. Seeing he is yet fast, he does what the trout never does, leaps four feet straight up into the air, quivering and shaking, and then alighting head foremost, he makes another dart and another leap. I have had then junps is times in quick succession in their modavor to shake the hook from their mouths. The trout makes no such frantic endeavors, although I am saying nothing against the sport for tout catching. The trout being less strong, gives up succession in their endeavor to shake the hook from their mouths. The trout makes no such frantic endeavors, although I am saying nothing against the sport of trout catching. The trout being less strong, gives up the fight sooner. The bass will struggle and leap until he turns over on his side of sheer exhaustion, and even then he is good for one or two more darts and leaps when he gets sight of the landing net. With my ten-ounce rod and trout flies, I have been a half hour bagging a three-pounder. A two-pound trout will give up in from eight to twelve minutes. In my opinion there is more sport in catching half a dozen two-pound bass, than three times the number of trout as they average in ordinary streams,"

"Where are black bass to be found in greatest numbers?"

"Where are black bass to De Tound in greatest numbers?"

"The best ground easy of access to New York City is unquestionably in lower Lake Ontario and the St. Lawrence River for twenty miles below where it flows from the lake. All along the Jefferson County shore, and at the islands opposite, bass are very plentiful. There are most excellent sheals off Grenadier Island, near Cape Vincent, at Galloo Island, at the Duck Islands, and at the head of Amherst, Long Island, and Carleton Island, all of which cluster around the opening of the river. The fish run larger there than in the rivers of the State. All the region of lower Lake Ontario is famous fishing ground. Go to Cape Vincent and hire boatmen to take you to the grounds. Going down the river, from the latter named place, the famous Thousand Islands begin,

and among them the bass fishing is especially good, although it becomes worse the further down you go. There is little use in going much below Alexandria Bay. Near Claybon good sport may be had, but not se excellent as about the islands in the lake."
"Bass do not rise so readily to the fly in the lake waters as in the St. Lawrence River; but they take bait readily, and may be captured on trolling rigs. I have known two hooks to take one hundred and litty fish of an average weight of two pounds in twelve hours, off the Grenadier Island shore. An average eatch there by ordinarily skillful anglers is from thirty to fifty fish in a day's sport. Just as good grounds may be found at the Duck Islande, which are some twenty miles from Cape Vincent, directly out in the lake. The Carleton Island Club, of Utica, that goes to the island from which it takes its Just as good grounds may be found at the Duck Islands, which are some twenty miles from Cape Vincent, directly out in the lake. The Carleton Island Club, of Utica, that goes to the island from which it takes its name, four miles below Cape Vincent, has frequently numbered three hundred fish as a day's catch by its half dozen boats.'

'The season begins about the 1st of June and lasts until "The season begins about the 1st of June and lasts until the middle of September. June is proably the best month in the streams, and July in the lakes, but I have taken larger fish from the lakes about the first of September than at any other time." But how about the maskalonge fishing? Well, as to that

in the streams, and July in the lakes, but I have taken larger fish from the lakes about the first of September than at any other time.

But how about the maskalonge fishing? Well, as to that it is a different kind of sport. Maskalonge, of course, are not as plentiful as bass, and they are more particular in their likes and dislikes as to weather and bait. You cannot catch them every day, and you must study the weather and winds carefully if you want to succeed. Those who have spent a season on the St. Lawrence know just when to exchange their bass tackle for the heavy trolling spoon, that is indispensable[for this business. A thirty or forty pound maskalonge is an ugly customer to handle, and I know of parties that have worked over an hour, faithfully, too, before they could get one alongside the boat, and the gaff hook into him. It is a red letter day in the annals of most sportsmen that witness the capture of a forty-pounder, though I have seen and captured many of them, and know of cases where as high as half a dozen were taken by one boat within as many hours. When one of this size strikes your hook your first impression is that you have hooked a log or something of the sort. You will begin to pay out line and yell at the outsman to back water for fear of breaking the trolling rig. About then you will discover that the supposed log is possessed of the animatedest sort of animation, and you will think that there is a two-year old ster at the other end of the line, judging from the pulling. Now commences the work and sport. Keep a taut line all the outsman to back water for fear of breaking the trolling rig. About then you will discover that the supposed log is possessed of the animatedest sort of animation, and you will think that there is a two-year old ster at the other multiply of the proposed of the sort. To all appearances he is tire all the outern for another fight above the water. Thus it continues, varied with occasional rushes toward you, to the right, to the left, show, below, always working to ge look for another one."
"Are the fishing grounds difficult of access?"
"Not at all, Go to Capt, Vincent and inquir

"Are the fishing grounds difficult of access?"
"Not at all, Go to Cape, Vincent and inquire for Ed,
Fox. You will find him readily, and he knows just
where to send you. He has cultivated an intimate acquaintance with every portion of the river in that vicinity, and will direct you so that you can't miss the best
points. Furthermore, he won't take a cent for his information, and the more fish you get the better it pleases
him.

New York, June 26th.

New York, June 20th.

**Bass Fishing in Illinois.—Peoria, June 10th.—I am provoked to write you by the article of Charles Linden, entitled "Spring Shooting in Illinois," in your issue of the 17th inst., who is wrong in saying that Peoria is at the mouth of the Illinois River. He says he went to Henry, forty miles above here, and, if so, he ought to Know better than to make such a mistake.

I make a point of this because I want to say that at Copperas Creek Dany, twenty-nine miles below here, is to be found, at the proper stage of water, as fine black bass fishing as one can wish for. Some five or six years ago the State built a dam, with suitable locks, at Henry, forty miles above here, to init, rove the navigation of the river. After that dam was finished, the fishing below it was very fine; but recently another dam has been built at Copperas Creek, about seventy miles below Henry. Since that was finished, the fishing at that point is the finest we know of in the West. At present the water is too high, as boats and fish pass over the dam, the volume of water in the river being remarkable for this season of the year. We think there is no doubt but that by July 10th and on till October there will be plenty of sport at Copperas Creek dam. The bet-froute by which to reach the dam will be to come to Peoria; from here either regular packets or other boats leave for the dam

and points below nearly every day. There are no hotel accommodations that I am aware of, at least it is the custom to camp out for long stays, or take luncheon for short ones. There is also, near the dam, Spring Lake, It is prailed with the river and about three-fourths of a mile distant on the east side of the river. It is fed by springs, and connects with the river about two miles above the dam. The water in this lake rises and falls with the river, is always cooler than the river, and generally clearer, and is full of bass, perch, crappies, etc., and always affords fine sport. We have never heard of hy-fishing in this section for bass. Everybody uses minnows. I am reading with much interest the articles of Dr. Henshall, and wish they would come oftener. I am a subscriber to Forest AND STREAM through the courtesy of a friend. When the first numbers came I hadn't time to read them and threw them aside; finally I took several home from the office, thinking I would look them over out of compliment to my friend. To sum up, I wanted to go a-fishing right away, and I began adding to my meager supply of takle, much to the profit of your advertisers. I have a split bamboo from Hoskins on the way, and by the time the water goes down will be ready for business. I have seen no letters published from this section. Your journal has proved itself powerful enough to interest one who formerly had very little time or fancy for such things.

We have no doubt that the errors noted in Prof. Linden's article were purely inadvertent; and we take the more pleasure in publishing our correspondent's letter, as the concluding part of it is added testimony to the good influence of the Forest and Stream,

A Dead "Rise."—Miramichi, June 19th.—On Wednesday (8th inst.) I was fishing at the Ox Bow, Little Southwest Miramichi. My companions were Dr. Holden and M. C. Baillie, of St. John, and Mr. Joyce, of Chatham. The wind blew upstream from an easterly direction, but we were doing fair work with trout of from one-half to three pounds. I struck a two-pounder which showed considerable game, and had played him sufficiently to justify my beaching him, which I proceeded to do. Just as he was within a foot or two of the shore, however, off he went, leaving on my hook a smelt of ordinary size, but partially digested. On making examination I found that the smelt was firmly hooked about half an inch from the caudal fin, and I had as much trouble in unhooking it as an ordinary trout would have given me if well hooked. A good many smelts were in the river at the time, and the trout were feeding upon them. In the case of the one that rose to my fly on this occasion, the smelt had been swallowed as far as possible, and the process of digestion was going on, the tail of the victim meantime protruding from its captor's mouth. When the latter rose to take my lly and I struck for him, the hook became fastened into the smelt as I have described. I have frequently seen smelt as, I have described. I have frequently seen smelts, to the number of two or three, thrown from a large trout's mouth whon struck heavily or played vigorously after being hooked, but I never before hooked the dead fish when striking at the live one.

Rye Beach Fishing.—New York, June 24th.—Col. Withers, of Rye, while fishing near Rye Beach last Monday, caught fifteen blackfish in about two hours. He says that the fishing has not been so good there during many seasons as it is at present. His largest blackfish on Monday weighed six and a half pounds. It has since been eaten. He presented it to Mr. Minott Mitchell, a gentleman will and favorably known in real estate and petroleum circles, who is summering himself at White Plains this year, where he says he simmers more confortably than he would in his city residence. Mr. Mitchell invited some choice spirits to partake of the fish, and they accepted. The writer hereof regrets that ho was not included in the party. Mr. Mitchell has had unusurally good luck blackfishing this summer, but nothing invited some choice spirits to partage of the list, and they accepted. The writer hereof regrets that ho was not included in the party. Mr. Mitchell has had unusually good luck blackfishing this summer, but nothing like that of his friend, he says. His chief ambition now is to catch a seven pound blackfish for the purpose of presentation to Col. Withers. T.

New Brunswick—Boston, Mass., June 23d.—Have just returned from York Co., New Brunswick. Captured six bears and all the trout wanted, in the waters of Cransax bears and at the trott wanted, in the waters of chan-berry and Kilburn. Fishing has been good for trout in all the waters till lately. It needs heavy rains for successful fly-fishing, especially for land-locked salmon,

Wisconsin—Appleton, June 10th.—Bass fishing was never so good on the lower Fox as it is this season. Large strings are taken daily by professionals and non-experts. Roberts' "Resort" is being extensively patronized by parties from Chicago and Milwaukee. Island Park, further up the Lake, has a fine hotel now, and fishing in the adjacent waters is superb.

FLY-CASTING.

Synacust, New York, Jane, 1889.—Editor Forest and Stream:— Fishing clubs are being formed throughout the State, and when they are formed they mean business; and I venture to say that the labor performed and the money expended for the propi-gation and preservation of fish, and the laws enacted through the influence of the Onondaya Fishing Club alone for the past two years, exceeds that of the State Conventions for the past five

Article Second, of the Constitution of the State Association Article Second, of the Constitution of the State Association reads: "It shall be called the New York State Association for the Protection of Fish and Game." Good. But any member of a club who has taken an active part in getting ready for the holding of Convention knows that the whole burden of the club a State Convention knows that the whole butter of the Chin consists in getting the birds from after, building coops for them, a grand stand upon which to see them shot, suitable grounds for this purpose, providing conveyances for the shooters and spectahas purpose, principles and over the country announcing the great State shoot; while if the club happens to have a mounting the great State shoot; while if the club happens to have a furnished the strength of the shoot; should be shown that a country the shoot should be shown that a country should be shown that a country should be shown that a country should be shown that a country should be shown that a country should be shown that a country should be shown that should be should be shown that should be should convenience, to be near the shooting grounds, even going so far sto dam up a small brook, rippling through a cow pasture so full of weeds that not twenty feet width of clear water could be Progued. The locality unknown to the visiting sportsmen

and only to be found after persistent effort and hunting through the shorting grounds for some one to tell you, and the time security in the day, that, unless you are on hand the day before and find the committeeman and thus learn the locality, the chances are you will arrive after the contest is over. But, says the managing club, the entries for fly-casting are so few we cannot afford to waste any time on you. I roply: Not when there is any interest taken by the namagers to make the contest attractive. Oswego, Watertown and Syracuse did not lack in entries, although watertown and syracuse and not tack in entries, atthough the actual value of all the prizes offered in either did not equal that of a single prize offered in a number of shoots,

At the present price of fly-rods, so far as money is concerned, a

At the present price of fly-rods, so far as money is concerned, a main hald better stay at home and buy him one, for it would cost less than to go to a Convention and win one. But a gentleman sportsman, with rod or gun, loves to point to some little sourcent as a tropby of his skill; and I venture to say that the "Game Fishes of the United States," as first prize for fly-casting at the Seneca Falls Convention, would have drawn more entries than all the \$50 rods that could have been offered. For the fly-fisher is g man who loves to read.

Hish Culture.

of TENNESSEI SHAD.—Nashville, Tenn., June 19th.—A shad supposed to be one of the offspring of those deposited in the Cumberland River a few years ago was caught when the pounds. Hickory here the other day, weighing three pounds. Hicko shad are quite common here, and often very abundant.

The Hennel.

MR. DALZIEL'S LETTER TO THE LIVE STOCK
JOURNAL.

INCIDENTS of the New York Show," is the heading of Mr. Dalziel's last letter in the Live Stock Journal under which the famous English judge expresses his views of the different classes of disappointed exhibitors he met with at the New York Show. In referring tors he met with at the New York Show. In referring to the many protests against the judging, Mr. Dalziel writes us below. We deem it best, however, to republish the protests in question, that we may make clear to our readers the two points upon which he touches in particular.

The first was submitted to the Board of Appeals, but that body only entertained that part of the protest which referred to the judging of class 40, "Red Irish Setter Dogs." It read as follows:—

referred to the judging of class 40, "Red Irish Setter Dogs." It read as follows:

To THE WESTMINSTER KENNEL CLUB.—Genilemen:—We the undersigned exhibitors in the present dog show, do respectfully the property of the present dog show, do respectfully the property of the present dog show, do respectfully the property of the present dog show, do respectfully the property of the present dog show, do respectfully the property of the present dog show, do respectfully the property of the part of the general solution of the part of the present dog shows on the part of the general solution of the part of the general solution of the part of the general solution of the part of the owners of other dogs in Irish class I hand the part of the owners of other dogs in Irish class I hand the honor of being associated with the Hon. John H. Wise of Richmond, and S. T. Hammond, Esq., of Springfield, and two more fair-dealing, painstaking, and, I believe, competent men, I have never judged with.

"When the Irish Red Setter class came into the ring I pointed out that the dog Byron was, I considered, an Irish red and white setter. Mr. Wise, read from, as I then thought, the schedule, that while it was provided, was admissable. This was really read from the description of Stonchenge, in condensed form. The mistake being afterwards discovered, the red dogs were judged alone: and the judges, impressed with the grand form of Byron, ananthously recommended that he should have an extra first prize, and to this the Committee cordially agreed. No English reader with be surprised at this; it is here of everyday occurrence; and the West-minister Kennel Club Committee would have been justified in giving 100 extra prizes had the judges recommended them to do so.
"I leavy the Irish setters with one word to the West-

mended them to do so.

"I leave the frish setters with one word to the Westminister Kennel Club:—These dogs are not 'Red Irish,' as their catalogue reads, but 'Irish setters,' red or red and white.

"Now I will deal with the protest in general. As is yeard the Westminister Kennel Club care out a remium.

usual, the Westminister Kennel Club sent out a premium list, with copy of rules and regulations governing the show; and those who made entry of their dogs knew that they did so under the conditions therein clearly

Rule 8 says :—

"Rule 8 says:—
"The scales of points given in the third edition of the "dogs of
the British Felands," by J. H. Walsh ("Stoneheage"), will be used
by the badges, them necessary, in judging the dogs."
"The meaning of this clearly is that if the judges
failed to agree, point-judging according to Stoneheage
should be resorted to.
"At the New York Show no such necessity arose, in
the opinion of the judges, whatever disappointed exhibtiors may have thought.
"Rule 10 says:—
"The decision of the judges will be final in all access a year!

Withe decision of the judges will be final in all cases, except where mistake, fraud, misrepresentation, or collusion can be shown; in any such case the Committee of Appeal must decide all questions, except those of merit, and the dog may be rejudged.

and questions, except those of ment, and the dog may be re-judged.

"Can anything be clearer, and where, I ask, do the protesters that their lowes standit!

"I inclose a full copy of the rules, Mr. Editor, and shall be glad if you will give your opinion as to whether there exists one justifying these protesters or the West-minister Kennel Club Committee in entertaining them; for I hold it was their duty to protect their judges from the insulting charges of unlairness or incompetence, especially when made by persons of whose competency to form an opinion there was no proof. On the, con-trary, in the only instance I had an opportunity I proved the utter incompetency of a protester against the awards in spaniels, before the Court of Appeal, putting a most

elementary question on the breed, which he admited his inability to answer."

The second, was from A. E. Godeffroy, Esq., which was not acted upon by the Board of Appeals. It was as follows :-

follows:—

MR. GODEFFROY'S PROTEST.

THE WEST-MISSTER KESSLI CULE.—Genitation:—L beg to protest deaths instruct a least specific test deaths instruct a least specific test deaths in the second prize. The other death is not death which is a second prize. The other hand Yero Shaw, as necessary as solid white in a built-terrier. Yours respectfully,

A. E. GODEFFROY.

A. E. Goderroov.
On this Mr. Dalziel writes: "And now, one word with
Mr. Godeffroy. I will deal only with his objection to my
awards in St. Bernards. Mr. Godeffroy objects that I
gave first prize to a dog that had no dew-claws. My having done so would surprise no one in England who has gave first prize to a dog that had no dew-claw's. My having done so would surprise no one in England who has rend my frequent procests against the high value put on them. It is pretty well known that I consider these appendages as useless as they are ugly. Mr. Goddefroy refers to 'Stonehenge' and Vero Slaw; but great authorities as these gentlemen may be, Mr. Goddefroy must learn to know that it is not every judge who will bind himself by their opinions or their crotchets.

"I believe Mr. Godeffroy has in his kennel the blood of old Champion Tell; and I should suppose from his protest that he is ignorant of the fact that Tell, like Prince Sains Courage and many other grand specimens, was as innocent of dew claws as the dog I placed first lin New York. And would Mr. Godefroy be 'surprised to hear' that I have in my possession a letter on the subject from our great naturalist, Darwin, in which he describes dew claws as 'accidental monistrostities,'
"As the rules provided only for protests in case of 'mistake, fraud, misrepresentation, or collusion,' I think an apology is due to my co-judges and myself from the gentlemen who entered and published these protests, who were one and all voluntary exhibitors, having bound themselves by the rules governing the show, and that with all the advantage of knowing be forehand to whose judgment their animals would be submitted.

The Editor of the Live Stock Journal, in answer to Mr. Dalziel's query, says: "There is nothing in the rules which on this side of the water would have made such protests admissible.

WORKING DOGS IN THE MOUNTAIN SWALES FOR SUMMER WOODCOCK SHOOTING.

It is in the swales, on the sides of the grand old mountains, and in the springy basins on the top, where in ordinary seasons the woodcock can be found. The towering mountain, whose knob seeme to have been squeezed by the hand of Kühleborn, the spirit of the stream, from whose fingers the legend tells us that fine rills of water-gush forth, is by far the best. The lofty trees seem to catch from the slowly drifting clouds the water which trickles at our feet, and down whose steep sides the slope is broken here and there, by level spots on which the springy grass grows high and the waters gently ooze. Here on these giant steps the woodcock nests and rears her young; nor does she quit her seelnded home for the meadow awamps below, unless driven by a protracted drought. Should the season be fairly wet, and frequent summer showers replenish the tiny rills, the woodcock and her brood find ample boring ground, and they are not forced to leave the gloony music of the whip-poor-will for the still more doleful clinking sound of the rusty cow-bell in the valley pasture lands at the nountain foot.

It is in these odd crannies, that many a woodcock hides away, and thus escapes from the intrusion of the sporting world. If it had not been for secret spots like these, many of which still continue to hold the weird traditions of the past, the woodcock in certain localities would have been ulterly externinated.

of the past, the woodcock in certain localities would have been utterly externinated.

To us the acme of woodcock shooting is in such like places. Of course, there is a deal more hard work in climb-To us the acme of woodcock shooting is in such like places, Of course, there is a deal more hard work in climbing the mountain sides, but when the ground is well known, excellent and varied beats can be mapped out for a week's sport, and a good bag at the end is generally the result. There is something exquisitely beautiful in mountain swale shooting, as each nesting place has its own lovely view, and each so entirely different from the other. One may be grandly wild with nothing but a sea of forest trees mounting to the skies, and at the next turning in the bed of the swale a peep at some lovely cultivated valley framed in on either side with craggs and the darkly wooded slopes brings one back from thoughts of the outer world. But there is rarely an Eden spot without some drawback, and here it is again the snake which destroys much of the pleasure of the sport, and frequently in fact deters, from fear, the sportsman attagether from shooting in the fastnesses of the mountains. Therefore, before passing on to the more important work in hand, it may be well to give here the mode of treatment should the sportsman or the dog be bitten by a reptile, either the rattlesnake or the copperhead, comment should the sportsman or the dog be bitten by a reptile, either the rattlesnake or the copperhead, commonly called the 'pilot.' The absorption of the poison through the blood is so exceedingly rapid, that it is utterly impossible under any circumstances to remove the whole of the venon. In the case of the man, the cardinal principle is, lirst cleanse, the wound by washing, and if it is of such a character that a slight incision with a lnife can be made, let it be done at once, and the poison sucked out by means of the lips. Second, it is necessary to sustain the nervous system through the terrible depression which must enevitably insue. This can perhaps most readily be done by free and copious draughts of whiskey, to which, carbonate of ammonia from five haps most readily be done by free and copious draughts of whiskey, to which, carbonate of ammonia from five to ten grains can be added every fifteen ninutes. When quinine can be procured, fifteen or twenty grains every four hours should be administered in connection with the stimulant. If the carbonate of ammonia is not at hand, use spirits of hartshorn which can be found in almost every farm house. A test of its strength should however, be made, as it is apt to vary. This is done by taking a teaspoorful of pure water, and by dropping the hartshorn into it until the water becomes turbid, its strength can then be tested and the doses thus regulated should in succession be increased.

should in succession be increased.

When the dog is bitten, lacerate the wound, which cleanse with water, and apply the hartshorn, also giving whiskey in small doses until the animal cannot stand. Of course it is much better to suck the poison out, and

under certain circumstances we would not hesitate to do this to save the life of a valuable animal.

To resume; For practical work in the hot weather there is no dog for us like a astrong, light-colored pointer. It is necessary that he should have a deal of white about him, that he may readily be seen as he passes rapidly back and forth in the maze of rhododendron and mountain brushwood. To lay down any particular rule for beating out these swales is impossible for each one varies so much from another that the sportsman's own judgment must decide the knotty question. But we have noticed one important point; that when practicable it is best to beat up the ravines, for when the birds are moved and driven on ahead they do not make as long lights as when approached from the side above them. In such eases they are apt to top the scrubby brush, which hides them at once from view, and on balanced pinions sail down to some favorite haunt far below on the mountain side. That woodcock have their own well-known retreats is understood by those who have made aspecialty of this kind of shooting. It is entirely different from the shooting in large, level tracts of timber or sprouts, where the bird has a thousand different places in which to alight. But here the bird may be flushed and shot at half a dozen times, before he will leave the water course. True, the woodcock may not always at first be found in the bed of the swale, but still if he has been undisturbed he will be found close at hand. The boring and markings of the bird on the edges of the brook will inform the sportsman that birds are present, even if his dogs fail to detect the scent. He will, therefore, stand a double chance, and save much time by keeping well to the bed of the swale, and working his dog at short distances across. In this particular shooting, the gun can assist the dogs more than in any other. In the early season, when one bird is found to true into the main one the swile should be the centre of the beat, and when other minor streams are found to minor streams are found to run into the main one the springs from which they head should be carefully looked out.

EASTERN DOGS FOR PRAIRIE CHICK ING.

Editor Forest and Stream :—

In a recent issue of FOREST AND STREAM I notice a communication from Iowa entitled "Dogs for Prairie Chicken Shooting," in which the views of the writer differs so essentially from my own that I ant tempted to present a bit of my experience for the benefit of Eastern sportsmen contemplating Western trips. I am a believer in the doctrine that thorough triendly discussion tends to climinate many important facts otherwise unnoticed, and that gentlemen sportsmen can confine themselves to courteous English, and if not convinced can agree to disagree with a good grace. Through no wish to extol my own prowess, but for fear your correspondent might remark that I am only an ignorant Yankee, with no knowledge of prairie shooting, I would state that I trained dogs on Western birds, principally prairie chickens, every season from 1877 to 1865, which gave me a fair channet to learn something of the business. Since that time I have followed the same business, more or less, on New England game, especially rufled grouse, and our strongest point of difference concerns his statement that "dogs trained on prairie chickens." I would like to see him take a brace of his high-flying prairie chicken dogs into the dense thickets for rufled grouse on these rough New England mountains and show No. I work the first day or the first week, or for that matter, ever show as fine work as is done by our dogs that have first received a special, thorough education on this bird. I would much somerengage to make good workers on prairie chickens of half a dozen good lively dogs broken on Eastern game than to take a brace of regular prairie flyers to tone down into shape on ruffed grouse. I have always found it much easier to increase the peace and range of a good lively dog than to circumscribe the limits of one to whom high-flying and wide ranging had become a second nature. Of course, it could not be expected that an Eastern dog could become an expert in a single day when the habits of the game and nature of the countr

FLEAS AND MANGE.—Tolland County, Conn., June 21st.
—Editor Forest and Stream:—Fleas are very often the cause of a skin irritation resembling mange, which, if allowed to run on, will assume the forms of the regular disease. Take your dog, once a month, muzzle him, and

wash him well, first with kerosene (white oil), whale oil and neatsfoot, mix equal parts of each. For a pointer about one pint in all. Then clean off with soap, and rub dry. This will not only kill the vermin, but also keep them off for some time after. The dog thus treated will never have the mange if housed in a clean place. For the first appearance of the disease try mild ointments first, such as sulphur and lard. But first of all muzzle your dog, and keep him so until well. The best cure is prevention, for the red mange once well into a dog's skin will kill him in time, and all you can then do is to relieve him as much as possible.

MARS.

him as much as possible.

PHOTOGRAPH OF FAUST AND BOW.—We have received a photograph from Mr. Chas. II. Turner, Secretary of the St. Louis Kennel Club, of Mr. J. M. Tracy's excellent painting of the pointers Faust and Bow. The picture from which the photograph is taken is about thirty-six inches in length by eighteen inches in height, and depicts the dogs in the field surrounded by autumnal foliage. The subject is a very beautiful one; Faust stands "hard and fast," while Bow is in the back-ground backing him. Mr. Tracy has also painted a sister picture of this, which is even said to be of greater excellence; in this one, Kesswick is pointing and Jessamine backing. Another grand picture from the brush of Mr. Tracy is Mr. Turner's painting of Berkley, which has been pronounced a gem by all the competent judges who have been fortunate enough to see it. Mr. Tracy is an artist of rare merit, and his animal drawing is both careful and accurate. The St. Louis Club have no control over the oil-paintings, but photographs of them can be had on application to Mr. Tracy, St. Louis, Mo.; price 75 cents each

The Illustrated Book of the Dog.—We have just received from Messrs. Cassell, Petter, Galpin & Co., 596 Broadway, part No. 11 of Mr. Vero Shaw's excellent serial. It is a grand number, containing a very finely finished colored lithograph of the typical deerhound, Spey, the property of Mr. Thos. Morse, a long and wonderfully well compiled chapter on coursing, a description of the Whipper, or Snap dog, and the staghound, and a complete list of the packs of foxhounds, over one hundred in number, in the United Kingdom in 1880. This book should be in the hands of every American lover of the dog.

KENNEL NOTES.

DEATH—Buff.—Mr. A. H. Sharpless' (Catawissa, Pa.) fine Bis-mark setter Buff died on June 7th from injuries sustained from colliding with a locomotive on March 1st. Buff was out of Mr. J. H. Roberts Maud, she out of Mr. W. R. Rolight's Dot, by Dr. Brooks' Bismark.

Brooks' Bismark.

SALES-Berkley-Ruby (whelp),—Mr. Edw. O. Ladd, of Everett,
Mass., has purchased from Mr. John Fottler, Jr., President of the
Massachusetts Kennei Club, a Berkley-Ruby bitch puppy, whelped
April 8th. Berkley-Rub (whelps).—Mr. Thos. A. Addison, of
Chelsea, Mass., has made the following sales of his Berkley-Rube
dog pupples: one to Mr. J. P. Hawes, Boston, Mass; one to Mr.
H. A. Spencer, Chelsea, Mass; one to McEben W. Lothrop, Chelsea, Mass., and one to Mr. G. Frank Holmes, Chelsea, Mass.

sea, Mass., and one to Mr. G. Frank Holmes, Unuser, Mass., Calins the name of Flourish.—Mr. Edw. O. Ladd, of Everett, Mass., claims the name of Flourish for his Irish setter hitch puppy whelped April 8th by Berkley, out of Ruby. Jupiter Tonans.—Mr. Burr Hollis claims the immed Jupiter Tonans for his black, white and tan ticked English foxhound dog puppy, by Catchem, out of Drum, presented by Mr. M. P. McKoon. This puppy is said to be a splendid specimen of the foxhound. Larne.—Mr. J. W. Jackson, of Opelousas, La., chaims the name of Lorne for his pointer dog, whelped May 10th, out of 8t. Louis Kennel Club's June, by Faust. Latte.—Mr. J. W. Jackson, of Opelousas, La., claims the name of Louise for his pointer bitch puppy, whelped Nov. 7th, out of 8t. Louis Kennel Club's Janniy, by Bow.

BRED—Queen-Croxteth.—Mr. A. E. Godeffroy's (Neversink Lodge Kenneis) champion pointer bitch Queen to Croxteth. Moga-Rover II.—Mr. A. E. Godeffroy's (Neversink Lodge Kennels) red Iriha setter bitch Moya to Rover II. Filt.—Mr. G. D. Maedougall's (Lachine Kennels, New Brighton, S. I.) cooker bitch Filtr (all liver), littler sister to Cora (First Montreal and First New York, 1880), has been bred to Cunningham's Blou, all liver (first Montreal, and should have been first New York). See Fourest AND STREAM, London Field, Toronto Town and Country, etc. Purs due about Avenus 18th. Pups due about August 26th.

WHELPS—Beauty.—Mr. A. E. Godeffroy's (Neversink Lodge Kennels) imported black and tan setter bitch Champion Beauty whelped on Juno 28th seven puppies—five dogs and two bitches— by Mr. A. H. Moore's imported Bob. Two puppies are since dead. Flirt.—Mr. Geo. D. Macdougall's (Lachice Kennels, New Brighton, S. J.) cocker spaniel Flirt, on May 8th, whelped three dog puppies, by Mr. McKoon's Captain.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

New York Archery Club.—This club has had no shooting for two weeks, owing to the Park Commissioners having forbidden the use of the archery lawn in the Central Park until after it rains again. It makes it very had for the club, as it has several challenges on hand, and but poor scores can be expected from any team that has little or no practice. From present prospects it may be two weeks longer before they can shoot again.

ORITANI ARCHERIS.—The monthly meeting of the Oritani Archers took place at Hackenseck, June 23d. Col. Frank Brandreth won the gentleman's badge with a score of 307, at the American Round. Mrs. W. Holberton won the ladies' badge with a score of 165 at the Columbia Round and a one yard handicap at each dis-W. HOLBERTON.

PRIVATE PRACTICE CLUB.-Highland Park, Ill., June 14th.-To

PRIVATE PRACTICE CLUB.—Highland Park, 181, June 18th.—To the members of Class III., Private Practice Club:—
I hereby challenge you all, my fellow-members, to shoot the club bound of forty-eight arrows at olight y pards, and twenty-four arrows at sixty yards, on Saturday, the 26th inst. Please report your scores to Dr. B. B. Weston, Highland Park, Lake County, III., who will compile them for publication in FOREST AND STREAM.
My score will be sent to each member on the \$8th.

C. GRANVILLE HAMMOND.

BROOKLYN vs. NORTH SIDE.—Chicago, June 25th.—In the match between the Brooklyn team of five and the South Side team of four (latter from this city) the North Side team came off victo-rious by a small majority. The match took place Saturday, 10th inst., and scores exchanged by mail:— NORTH SIDE TEAM.

CANADLIN TOURS.—Both the Young America and Staten Island
first clevens contemplate paying Canada a visit this month. The
Young Americas leave on Saturday next; play at Port Hope, 5th
and 6th; Toronto, 7th and 8th, and Hamilton, 9th and 10th. The
Staten Islanders will leave this city on the 17th inst, and play the
Peninsulars at Detroit on the 19th and 20th, returning home through Canada.

St, George and Staten Island Match.—Although this match has been named for two dates, it has twice fallen through on ac-count of the last named club failing to come to time. Therefore the Islanders have not yet had occasion to put in force the 're-volving law" which was passed with so much enthusiasm early in the season. After the list of out of fown matches has been gone through with, we may expect to see these two rival metropolitan clabs meet in friendly contest.

-We hear that Mr. J. Nelson Caldwell, of Philadelphia, will play in the future with the Young America eleven.

St. PAUL'S SCHOOL 78. St. GEORGE.—Fourth annual match. Played at Hoboken, June 28th; won by the students by 25 runs on first innings, Scores :-

home club by eight wickets. Potals of score: Chester, first innings, 23; second innings, 31; total, 59. Baltimore, first innings, 41; second innings, 29 (for two wickets); total, 60.

41: second innings, 23 (for two wickets); total, 63.

BELMONT (23) rs. STATEN ISLAND (24),—Played at West Philadelphia, June 19th. Drawn, although the home club had the best of it. The Belmont put a rattling good team in the field, including several men that would strengthen any first eleven the club might see fit to play. The batting of Al. Scott was a terror to the Island bowlers, and but few ler balls passed the wickets. Collins also, was a tough one; but the Island bowling, barring Roberts, was very loose, and deserved the punishing it received. J. Scott bowled wonderfully well throughout. For the visitors, Roberts played cricket for 40, as did Irving for 15, and Outerbridge for 16 Smith heid bis own, and by his determined stand saved his club the loss of a ball. We call particular attention to the renarkably fine bowling of Roberts. It was universally acknowledged to have been the best ever witnessed on the Blemont grounds. Score:

In reviewing the week's play, a Staten Islander expressed his views as follows: "The Belmont eleven was the best in every respect that we met; then came the Germantown, Young America and Merion. I am authorized to say for the team that we wish to acknowledge our thanks for the continued kindness we received from all the cricketers that we met, and more especially to the gentlemen of the Merion and Belmont Clubs." The following are the batting averages of the tour:—

M. C. C. vs. CANADIANS .- "A peculiarity in the official card pub-Si. O. S. CANADANS.— A peculiarity in the olicial card pub-lished of the Marylebone match is not unworthy of notice, in the preface of "Mr." to the name of each Chandian player. Of itself there might be little significance in this, but the affix of the cus-tomary 'Esq.' on the Marylebone side suggests comparisons that do not seem to bear out the early announcements of the status of to not seem to be declared and the early almontments of the stands of the Canadians. If it be true that they were paid so much a man, as has been stated, their position is even more clearly defined than that of the Australians, and in reality there is not the slightest distinction between the two teams."—Land and Water.

St. Georges vs. Mr. Dungan's Team.—Played at Hoboken, N. J., June 21th, and was won by home club by 52 runs of first innings totals. Score:—

E. C. W., Trenton.—The reduction of hoist from 24 to 19tt, keeping foot 35tt, head 19tt, and leech 37tt, will work very well. Your sail will sit all the better for it, and the hoat will gain in stiffness. The reduction in ballast would be but modernte, as the sail area would be decreased only about eight per cent.

H., Detroit.—Only book on boat building is Neilson's—price \$1.25. Can obtain it for you. A new and improved edition will soon come to band. For small yachts and salling boats, see Dixon Kemp's "Yacht and Boat Sailing," containing a vast amount of information, but the plans and figures must be modified according to your wants. With such books as guildes, you can acquire the principles, and then apply them to local practice.

quire the principles, and then apply them to local practice.

YACHTSMAN, N. O.—The race declared off must be resalied under same conditions. Same positions at start and no fresh entries. If the race of the 7th inst, was sailed under the rules of the Southern Y. C., the decision of the Judges holds good. Although there is no special rule in the sailing regulations of the S. Y. C. against fouling stake boats, rule 13, of the Laws, gives the judges jurisdiction in such matters, and specifies their decision as final, unless they choose to refer to the club. No fouling of any sort is prohibited by the spirit of sailing rules in general We think the judges must be upheld in their decision, unless the boat fouling the stake was compelled to do so through being crowded onto it by another yacht not having the right of way. See answer to "H."

See answer to "ft."

H. N. O.—The case of fouling while hauling around stakeboat you instance is covered by the following rules, adopted by all leading clubs: "When rounding buoys, the yacht nearest thereto shall be considered ahead, and while under ordinary circumstances no yacht will be permitted to touch any buoy, etc., still, if her touching is the fault of any other yacht, she will not thereby lose her claim to the prize." Also the following rule of the British Yacht Rading Association: "When rounding any buoy or mark of the course, if two yachts are not clear of each other at the time the leading yacht is close to and actually rounding the mark, the outside yacht must give the other room to pass clear of it, whether it be the lee or weather yacht which is in danger of fouling the mark. No yacht shall be considered clear of another reach unless so much alsed as to give a free choice to the other yacht unless so much ahead as to give a free choice to the other on which side she will pass. An overtaking yacht shall not, however, be justified in attempting to establish an overlap, and thus force a passage between the leading yacht and the mark after the latter yacht has altered her helm for the purpose of rounding." latter yacht has altered her helm for the purpose of rounding." According to the statement of the case you make, we should say the latter sentence covers the matter, and the overtaking yacht's bowspirt fouled the stern of the leading yacht after the latter had put her helm over. If so, the second, or overtaking yacht was the cause of fouling, and should be disqualified, Our American sailing rules are very deficient, and we counsel the adoption of the Y. R. A. rules by the Southern Y. C., as covering the whole ground more thoroughly, and being explicit.

[From a Special Correspondent.] OUR WESTERN LETTER.

DENVER, Col., June 11th.

OUR WESTERN LETTER.

Denver, Col., June 11th.

The present depression in mining stocks in New York is apt to lead the Eastern man into a misunderstanding of the true state of mining matters in Colorado. Nothing could be more unjust or more hurtful than to judge of Colorado mining at large, by quotations from the New York Mining Exchange. The observer of those quotations will now see mining stocks quoted at one quarter of the price at which they were quoted six months ago. And he may thereby infer that the Colorado mines are a bubble. It may be true, I may say that it is true, that some of them are bubbles—not bubbles man fact, but bubbles when they come to be stocked at five or ten times their true value, and what any one on the spot could have told you six months ago was five or ten times their true value, and what any one on the spot could have told you six months ago was five or ten times their true value. The mines themselves were all right; but the men who got hold of them and manipulated them were not all right, They were short-sighted, too. They have nearly killed the goose that haid the golden eggs. They have bred such a distrust of Colorado mines, that they will find it difficult to restore any confidence in them. Their opportunities for money-making—looking at the matter from a sellish standpoint—are gone. No mine hereafter will float with their names on it. If they operate at all, it will have to be under cover of the names of other men. But, great as the burt is to themselves, they have hurt Colorado still more. Their conduct has served, and will serve to block to some extent the advancement in the development of Colorado mines, Men in the East see, right under their noses, the mining swindles that have been perpetrated. They do not see, nor know, all the sound mining industry that is going on here. It is too far away. You speak to them now about mines, and, unless they have been here, they will most likely say: "No, I don't want anything to do with it." I know that the depression in mining stocks i

season has witnessed an enormous influx of men who come to engage in that work. In the spring the arrivals of alach men in Denver daily ran from 500 to 1,000. The streets of the town were full of them. The hotels were crowded, and the large overflow was taken up by the hundreds of persons who rented furnished rooms to the strangers. All these men were on their way to the mountains. They came from all over the country, and many from Canada. Some days the Kansas Pacific trains came in in sections, so great was the load. Some idea of the extent of the immigration may be got from what happened to the price of real estate in Denver. Denver is nothing if not a depot for supplying the wants of the men in the mountains. Its population, directly or indirectly, lives on that. Just as Denver thrives or fars, it is a sure indication that the number of men in the mountains and the work being done there is increasing, or that the mining industry is drooping; and nothing is a surer test of the prosperity of Denver, than the price of its real estate. Well, three was a general advance; and the quiet citizens of the East may open their eyes, perhaps, when I say that in some quarters of the city the advance through the winter was from 300 to 400 per cent. Scores of new buildings are going up everywhere. Some of them would do credit to the handsomest streets in New York. Hotel accommodations have been greatly extended, and are still inadequate.

The new arrivals of the spring did not stay long in Denver. The snow still lay deep on the mountains: and season has witnessed an enormous influx of men who

New York. Hotel accommodations have been greatly extended, and are still inadequate.

The new arrivals of the spring did not stay long in Denver. The snow still lay deep on the mountains; and very, almost unprecedentedly, deep in the regions beyond the main divide. That was an insuperable obstacle to prospecting. But the new comers, eager for their silver hunting, could not bear to defer long their start for the mountains. Every now and then there passed through the streets some canvas-topped wagon, drawn by its two mules, bound for the Gunnison or Breckenridge, or what not. The untained faces of the uninitiated prospector could be seen under the canvas, the wagon was brand new, and the shovels and axes that could be seen sticking out had plainly never been used. Less frequently could be seen the little "jacks," two or three together, with packs of great size on their backs—all bound for the mountains. So, in a few weeks, most of the thousands of prospectors had gone. I have no idea that they will all get rich. There are but few prospectors who ever new, and the shovels and axos that could be seen stricking out had plainly never been used. Less frequently could be seen the little "jacks," two or three together, with packs of great size on their backs—all bound for the mountains. So, in a few weeks, most of the thousands of prospectors had gone. I have no idea that they will all get rich. There are but few prospectors who ever have got rich. But those to whom they will sell their prospects will get rich, for there is not the slightest doubt in the world that they will find prospects to sell. There is no humbing about Colorado as a place where there are large mineral deposits. There are plenty to be found. They have to be uncovered; they have then to be developed. After that capital is to be put into them at their true value; then they are to be worked—not mismanaged, and not to be stolen from, and they will, and the State will, yield riches to an enormous extent. But many times there will be sure to be errors of judgment. What I mean to say is, that the New York mining market is not a true indicator of the character of mining interests here; that there are good mines here, mining interests here; that there are good mines here, each of which has its proper price; and that, despite the depression in New York, the mineral richness of this State is being rapidly developed.

State is being rapidly developed.

The business of silver mining in Colorado has a system about it which is probably unknown to persons in the East who have not, by a visit to these regions, been an eye-witness to it. By silver mining I do not mean the mere working of a mine which has been ascertained to be good, has been developed, and which contributes its regular monthly quota to the United States Mine. That, to be sure, is real mining, but what I mean by silver regular monthly quota to the United States Mints. That, to be sure, is real mining, but what I mean by silver mining at large is not only the ultimate working of a mine, but its previous discovery, development and sale to the persons who do ultimately work it. All these are regular stages in the growth of a mine; they are the successive chapters of its history. A word about this regular growth will throw some light which will perhaps be desirable to some of your readers on the subject of acquiring a paying mine.

be desirable to some of your readers on the subject of acquiring a paying mine.

In the first place, as to the discovery of mines, one who was not familiar with this corner of the earth would be surprised to see the number of prospect holes, or "holes," as they are here called, which show, or are expected to show, mineral. When a person stands in a mining camp and looks about him he will see the mountain sides on every hand plentifully dotted with heaps of fresh, yellowish earth. They each indicate a "hole" men feet deep or more, and about five feet in diameter, and look, at a distance, more like scattered rifle pits than anything else. These prospect holes will extend for miles about the camp. When it is taken into consideration how many mining camps, largo and small, there are in this State, one can get a faint idea of the number of holes there are for sale. It is not every hole which, at ten feet, can show mineral. Some of them do, but with the majority of them greater development is necessary to strike ore. Ten feet is the minimum depth to which holes are sunk, in the first instance; not that there is any particular virtue in ten feet of tepth, only that is supposed to represent work worth a hundred dollars, which amount of work is needed annually to keep the title to the claim good. A ten foot hole, indeed, does not of itself entitle the diager to locate and record his claim so as to make it his. By law, he has first to make a discovery of mineral. But the law is generally disregarded in this respect; and claims are often staked off and recorded on a mere digging, without the discovery. The disadvantage of this method to the locator is that, by law, it permits another to come and prospect on his claim. The law is at the back of the intruder; and, so far, he is secure. But the sentiment of the mining camps is against him; and his procedure is called claim; jumping. The likelihood is that if he persists in it he will either be shot or hanged, or "run out" of town. The mining camps is probably right and humane (regarding the locator) in its feeling, yet it is no good to a young camp to have all the country about it, while as yet Eastern capital has not come in to develop the discovery holes. The people at camp who engage in mining have, perhaps, spent all their money in digging the shallow holes. New coming prospectors can find no place to dig. The camp has not yet attained celebrity enough to a tarract capitalists, and there is lies stagmant for montus, to the detriment of its inhabitants—although it may be a very deserving camp—until the capitalists come in whereas, if the claims on which no actual discovery had been made, but on which them greater development is necessary to strike ore Ten feet is the minimum depth to which holes are sunk

the owner had sunk his last dollar, were open to be prospected on by fresh prospectors who had money, the camp would develop more rapidly.

This brings us to tho second stage—of sales by prospectors. These men scidom get rich. One reason is, that if one of them ever gets money he almost immediately squanders it; but the fact is that they seldom get much. They make a discovery or sink several ten-foot holes. The operation—the hunting for and selecting a spot, and the work—takes time. When it is through, or soon after, the prospector has reached the end of his purse. He then wants to sell his property. But Eastern buyers are not yet in the camp. If there are any buyers at all they are Western men, who have come prepared to pay only low prices. A sale perhaps is made for a few hundred, or a thousand or two dollars. The prospector takes the cash and goes off for the new fields, the well-known "biggest thing yet," which is as shifting as the pot of gold at the base of the rainbow. In the new fields he goes through the process over again. So his life is spent. Occasionally there is one who keeps cool, has luck, and prospers; but most of them rove and gather no moss, and love the change, excitement, hope and independence. In this way the mines get into the hands of the chang buyers.

We now come to the third stage—the period of partial and preliminary development of the mine. The cheap buyer has to pay something for his cheap purchase. One great reason why he has been able to buy cheap is because the property is wholly or comparatively undeveloped. It may be that it shows none at all, but shows indications that mineral will be reached a little lower down, or is in the near neighborhood of some hole that does show good ore. The cheap buyer, in short, takes his chances. He buys an uncertainty. Maybe the hole will prove a second "Robert D. Leq," and maybe he will be able to sell it again at not more than \$500 advance. At all events, when he has bought, he generally goes to work on a moderate scale to development that pro it comes out, for the development that produces it, he will dovelop his property pretty thoroughly. If the purchase turns out badly he may abandon it entirely (and some man a year after may take it up and strike rich ore in twenty-four hours); or he may, as I have said, sell out at a slight advance; but if the development is quite favorable the mine then reaches its fourth stage—that is, it is put on the market to Eastern purchasers.

Of mines at this stage I need not speak at length. I

that is, it is put on the market to Eastern purchasers.

Of mines at this stage I need not speak at length. I
wrote something about them in my last letter. It is
undeniable that they have been made the subject of
swindling operations. Rarely they have been sold above
their true value; oftener they have been sold at or below
their true value; of them they have been sold at or below
ther true value; of men who have then stocked them at
far more than the mines could bear, and sold the stock
for more than it was worth. That business has probably
seen its best days—fortunately for the East and West
both. But many, many sales have been made to discreet,
prudent, investigating Eastern nen, of mines at, and
generally below, their real value; and these purchasers
work the mine to their profit.

The fifth stage is when the mine gets into the hands of
these ultimate owners and is systematically worked. At
this point there is as much need of care as ever. Many a
mine in the thother days failed to pay, solely because of a
dishonest or incapable superintendent, while the same
mine, in fresh hands, has afterwards paid handsomely.

I have tried to sketch, briefly, the general history of
mines, successful and the same and the system of the prospect
have been and will be found exceptions to this general
description, but probably nine out of ten of the prospect
holes of Colorado follow the course I have described.
When one sees the great number of "holes" there are in
the State, one only wonders that so many are valuable.

TRAPPING WILD PIGEONS.

ON the Philadelphia and Eric Railroad, ninety-five miles from Eric, in the midst of a vast forest, reposes the little village of Kune. Without architectural beauty, and lacking in many of the comforts which are to be found in most modern towns, Kane nevertheless presents to certain classes of people attractions rare and raluable. The village is situated upon the highest point of land on the Philadelphia and Eric Railroad, and the clear, pure air thus insured at all seasons is productive of robust appetites and correspondingly perfect health. This advantage alone is sufficient to draw a large number of Philadelphians to Kane every summer, and with it must be considered the fact before mentioned, that upon every side for miles extends an unbroken forest, with its This advantage alone is sufficient to draw a large number of Philadelphians to Kane every summer, and with it must be considered the fact before mentioned, that upon every side for miles extends an unbroken forest, with its innumerable charms for the lover of nature. There is yet one inducement to pleasure seekers unmentioned, one which comes with regular irregularity and one whose various phenomena are interesting and wonderful alike to the scientist and to the unpretending student of nature—the immense flock of wild pigeons which nests about once every five years in the vicinity of Kane. There are three such flocks in the United States—one in Michigan, another in Missouri and the third and largest, that with which we have to dead, in Pennsylvania. These flocks drift about from season to season following the crop of nuts and rarely going beyond the boundaries of their own States. The woods in the vicinity of Kane are largely beech, except in the valleys or marshes where hemlock prevails and the immediate cause of the birds nesting where they have this year was an immense crop of beech nuts last fall.

I could not learn how, but certain it is that in some way the birds learn the location of the richest harvest and are always on hand at the right time to enjoy it. Last fall a few pigeons were observed in the woods near Kane, and the "old settlers," with an air of confident knowledge peculiar to dis settlers and editors, said that with the spring would come the flock. The few stray birds remained in the neighborhood all winter, and during March the prophecy was verified by the appearance of countless millions of pigeons.

The birds built their nests over a territory of about twenty square miles, and began hatching April 1st. Their presence in such vast numbers soon draw together a crowd.of gunners and others hent on destruction as a constraint of the prophecy was verified by the appearance

crowd of gunners and others bent on destruction as a

means of enjoyment or of gaining a livelihood, and from

122

means of enjoyment or of gaining a livelihood, and from that day to this a ceaseless slaughter has continued. We reached Kane at 1330 P.M. and sought accomodations at the Thompson House, which, however, had not yet opened its doors to summer travel. An inquiry at the Kane House resulted differently, and we registered there. We were up early the next morning, and at 6 e'clock were on our way to the "roost," in an easy riding carriage drawn by a team of spanking grays. Our road lay through dense woods, and was not more than fifteen feet wide. On each side the trees rose a solid wall nearly a hundred feet into the air. The grandeur of that still morning scene, the invigorating air the prospect of a long and pleasunt ride, all the surrounding circumstances tending to exhibaration in the highest degree, However, "it is a long lame that has no turning," and after traversing twenty-one miles, the driver delivered himself of the information that the nesting ground had been attained,

Only a few pigeons were in sight, flying from tree to tree, but the trees were full of nests. In a few moments a gun was fired in the immediate vicinity, and instandly hundreds of birds became visible. It is anlawful to shoot birds within a mile of the roost, or to trap them anywhere, yet the law is broken in both ways continually and with impunity. The nesting ground is from one and one-half to two and one-half to likes wide and about twelve miles long, and in this space and vicinity there are several hundred gunners and about eight hundred trappers constantly engaged in slaughtering the helpless birds. One hundred and fifty barrels, each containing 350 dead birds, and as many crates, holding from six to eight dozens of live ones, are shipped every day from the different towns within a day's journey of the roost. Such work as this is not only wicked, but it is in the highest degree foolish. If the trappers and hunters would remain outside of the roost and take the birds in their frequent flights to and from home, they would be a source of revenue all summer. As it is, the natural result of the birds' departing must come, and that in a very short time. Indeed, the trappers admit that the birds are already beginning to leave, and Frank and I were a source of suspicion to these law-breakers, as we had no guns and exhibited no evidences of legitimate business. We had expected this, however, and had brought a pocket full of cheap cigars; a small number of these, judiciously distributed, had the desired effect, and a few only of the many trappers with whom we conversed failed to become talkative under the influence of the weed. been attained.

Only a few pigeons were in sight, flying from tree to tree, but the trees were full of nests. In a few moments

brought a pocket full of cheap cigars; a small number of these, judiciously distributed, had the desired effect, and a few only of the many trappers with whom we conversed failed to become talkative under the influence of the weed.

The first requisite in the pursuance of the trapper's art is a stool pigeon. A bird is selected while young and and made to perch upon her owner's finger. He is then raised about six feet from the ground, and the finger gradually lowered. Finding his support sixling, the candidate uses his wings and flutters or hovers to the ground. Being again raised, he again hovers to the ground. Being again raised, he again hovers to the earth. This training is continued for weeks and sometimes months, and is not discontinued until the habit of hovers to the earth. This training is continued for weeks and sometimes months, and is not discontinued until the habit of hover the support of the bird's nature. A net about ten by forty feet is procured and one side fastened to stakes in the earth, so that it will flop over—if you will allow such an inelegant expression—like a trap door. Close to the net, and where it will rest when "spring," is spread buckwheat, or other grain, and salt, for the birds are as fond of salt as a deer of a salt lick. The stool pigeon is then fastened to bent suplings in such a manner that by pulling a string it will be thrown over the bait. The trappers lie conceaded in a "bow-house," a hut built of hemick boughs, and await results. When a flock appears, the stool pigeon is made to hover, and the birds, thinking he is free like themselves, and in search of edibles, light, and soon find a net between themselves and freedom. The prisoners are placed in a coop until a wagon load has been captured, and are then taken to the nearest express office for shipment. Live birds have been as hight, and soon find a net between themselves and freedom. The prisoners are placed in a coop until a wagon load has been captured, and are the taken to the nearest express office for shipment. Li

to take care of themselves in ten days from birth. They leave the roost for food and return at irregular intervals, but the mature birds have their unvarying periods of flight. The hunters take advantage of this, and, posting themselves on a hill anywhere within five or even ten miles of the mesting, shoot the birds by hundreds as they fly away for food or home to feed their young. The nesting is in Forest County, twenty-one niles southwest of Kane and sixteen miles southesst of Sheffield. To those desiring to reach the ground I would advise going direct to Kane, which, although further from the nesting direct to Kare, which, although turther from the nesting than Sheffield, would be preferable for several reasons Good hotel accommodations can be had for \$1.50 per day, and a good livery stable is located in the village. A team and carriage, together with a competent guide, may be procured for \$5 per day. direct to Kane, which, although further from the nesting

may be procured for so per day.

The CAUSE DISCOVERED.—Most of the readers whose eyes scan these pages have suffered from haddethe, lessifude, names or pains in the back; but we don't if they knew what the cause was liver. This is a truth which has just become known, and the result which Warner's safe Kidney and Liver cure has accomplished. The above named troubles are caused by disordered sidney and liver, and the remedy which cures the cause bantshes the pains which parts from 1s.—[446,

THE VICTORY IN IRELAND.

THE rifle match between the American and Irish Rifle teams at Dollymount, on Tuesday last, added another to the series of American victories, and the list remains unbroken. For some weeks past the brilliant shooting of the Irish riflemen has been a source of much discomfort and some apprehension to many on this side the water. The shooting of the Irish riflemenwhen the match came off was far in advance of anything shown in their practice; but on the American side the figures are almost beyond belief, so superior are they to anything now on record in long range shooting. day, in its climatic conditions, was of course very well adapted to the making of fine scores. The Irishmen did not get the boisterous. rattling, stormy weather to which they are accustomed, nor did the American team get the hot, dry day in which they would have been at an advantage, since they could the better endure such a condition. There was a medium day, with an overcast sky. The wind does not appear to have been very difficult to manage, and altogether it seems that the dozen men, who had schooled themselves to grasp success under any and all conditions of adverse wind and light, found themselves finally brought to the test on a day to their own liking. Nothing then remained to them, with the fine day before them, than to pile up the bullseyes until, when reduced to plain language, it seems almost fabulous to say that such averages as 215% and 218% were made; that no less than five perfect range totals are in the scores, and that but a single miss and a single outer mer the record of 540 shots fired. The match will form a bright spot in the annals of rifle shooting, and the series of Irish-American matches seem destined to live on by the very momentum

of their brilliancy.

The match result may be a sore disappointment to the Irish rifle maker, who for four years past has been busy at work in the preparation of his breech-loading match rifle. The old muzzle-loaders had been abandoned, since after repeated trials they were found incompetent to cope with the match rifle in its breech-loading form, as we have it here in America. Mr. Rigby, to be sure, has failed to secure a victory by his new rifle for his home team, but he has succeeded in making for the credit of Ireland a match record second to nothing ever before a copy of the Telegram with its target illustrations,

shown by any team of British shooters. The match was singularly lucky in being such a close one at such high figures. On the whole, the victorious riflemen were so nearly beaten as to moderate any extra jubilancy, while the beaten riflemen were so nearly victorious that there should not be a shade of shame in their disappointment.

There was much to criticise in the manner of the selection, and on the principal that success justifies the means for its accomplishment it might be proper to keep silence on that topic now. In time it may be of interest to know the facts in the case, and the FOREST AND STREAM has accordingly put on record in its columns not only the manner of selection, but its opinion of the mode. There are many details of the match of which the notes sent by cable, and from which our account of the match is written, fail to inform us. It is not at all unlikely that with closer pushing the American team might have done even better-possibly have turned the 1,300 point-but there was no defection in the line. The team displayed that best sign of a well organized body—shooting in a bunch. With an area of differences of but six points in a team of six men, the American squad may be regarded as showing no stragglers. There were no laggards in the party. In the Irish team there are but eight points of difference; and it is a curious fact in connection with the match that John Rigby, the Nestor of rifle practice in Ireland, should have had the lowest score in the whole dozen experts at work.

It is hardly fair to say yet that the inferiority of the new Rigby breech-loader is established. It may be that the gentlemen of the home team at Dollymount have not vet learned all the fine points of their weapons. They certainly secured the finest sort of work from them, and we must confess that the experienced John Rigby, with the lesson of the American breech-loader before him, has met the problem of a first-class long range rifle success. The real truth is that for a dozen years—from 1862, when the Elcho Shield matches were established-British shooters generally were content with a very wide margin of misses. It was expected that a certain number of the shots fired were to go wild of the target. was the American rifleman who first seriously made the "highest possible" his goal, and toward it he has at last succeeded in pushing the riflemen of Great Britain; those of Ireland being the more ready to learn the lessons which Americans had to teach. Again and again the aged pupil has tried to surpass the youthful instructor, but success has thus far leaned only in one direction, and the naturally buoyant spirit of the Irishmen will no doubt sustain them now, and urge them to be "up and at 'em again," It is to be hoped that they will soon give Creedmoor another visit; and while we may not promise them such a day as the 29th, they may perchance bappen upon the Irish day they are so long expecting, and beat us on our own range.

The high character of the scores brings up a question which has often been discussed-viz., the advisability of so modifying the means of discrimination of excellence that finer differences of merit may be discovered. Perhaps this may be met by a lengthening of the distance fired over, or perhaps the carton system may be adopted. When there are so many bullseyes made in a match it becomes a fair matter of inquiry whether some way of determining the relative value of bullseyes is not in order.

Walnut Hill, Bennings and Creedmoor have put forward admirable champions, who could after a two weeks siege of Irish hospitality pile up such scores as are found in our rifle columns. It is not likely that a stronger Irish team than the present will ever be pitted against the Americans. The Irishmen have improved wonderfully, and it speaks volumes for their merit when out of the 270 shots fired by her champions not one will be found in the outers of the target.

Col. Bodine may now return home to the warm welcome which he is sure to get. He has shown himself to be the "Old Reliable" in meeting the best team ever organized against American riflemen and seeing them one dozen better in the way of scoring.

Apart from all shooting interest in the match, it has a special importance as a means of making two great peo-ples better acquainted with each other. The Irish people are proud to welcome a really American body of citizens, under whatever pretext they may visit the old country and if the match has no other significance it at least opens a broad current of friendship and good will.

OUR RIFLE SUPPLEMENT .- In addition to the exhaustive account of the Irish-American match, published in our Rifle columns to-day, we furnish our readers with an illustrated supplement, showing the exact position of each shot fired by the two teams at the 800, 900 and 1,000 yards ranges. For these diagrams we are indebted to the courtesy of the New York Herald, which, with usual enterprise, displayed on its bulletin board each stage of the shooting, while the match was still in progress, and on the following morning published full scroes with the diagrams.

Much interest in the match was manifested in this city. Great throngs were gathered before the bulletins in the afternoon, and even delayed going home until they had

THE FLY-CASTING TOURNAMENTS.

N our Sea and River columns to-day we publish a communication calling attention to the lack of interest manifested in the fly-casting tournaments at the New York State Convention, and to the insufficient provisions made for the trials. The writer expresses what has long been in the minds of the anglers of the State, and now that the subject is started, we trust that it may be taken up in earnest.

Angling is, par excellence, the solitary recreation of contemplative minds, and the Lone Fisherman is, by general acceptance, the type of the craft. But that is hardly a sufficient reason why the competitors at our annual fly-casting tournaments should be so limited in number and so severely let alone by the other delegates present. The truth is that this part of the week's programme has been given too much the character of a side show, the success or failure of which had no appreciable effect upon the eclat of the occasion.

An examination of the records of the convention for the years 1873 to 1880, as contained in the Forest and STREAM, shows that the numbers of competitors in the fly-casting tournaments have always been meager, ranging from six to ten, and never exceeding a dozen. This representation is in striking disproportion to the number of skilled fly-fishermen in the State, and to the claims of the delicate acomplishment itself. The day of small beginnings, which was not to be despised, has never given place to the greater things which should follow

This is manifestly wrong; it is putting the art of casting the fly on a plane decidedly below its merits.

We shall not attempt to point out where all the blame rests, for of that we are not fully convinced ourselves; but it is enough now to suggest that the remedy lies with the anglers themselves, and to designate one or two changes which are of imperative impor-

For the past ten years it has been generally understood that the first prize in fly-casting would, as a matter of course, go to one of two men, who, year after year, divided the annually dwindling honor between them. The first thing to be done, then, is either to bar out from the competition those men who have had things all their own way for so long, or else to provide another competition where less expert anglers shall have some chance of winning a prize. True, neither Mr. Seth Green nor Mr. Reuben Wood entered the lists this year, and it may, therefore, be objected that the drawback we have mentioned did not exist at Seneca Falls, and the field was open to all. But the interested public had had no assurance that Messrs. Green and Wood were not to compete; nor has it any assurance that they will not compete next year. Until it is understood that a competition in fly-casting does not imply a competition with these experts the trials will be sparsely attended, and will excite little interest. The Seneca Gun Club, who had in charge the arrangements for the last convention, conscious of this trouble, sought to obviate it by adopting the course we have suggested; but at least one of these experts very naturally retorted that the club was overstepping the bounds of its authority. We trust that those who do have the authority will consider the subject, and by taking early action insure a greater success in 1881 than in years past.

Mr. Seth Green and Mr. Reuben Wood have fairly earned a position outside of the ordinary fly-casters. Their skill and deftness are acknowledged, and they may safely rest on their laurels. Should they voluntarily offer to withdraw from the regular yearly competitions, and instead give an exhibition of their art for the entertainment and benefit of the younger anglers, the action would be at once appreciated as graceful and becoming. An expression of this kind from them in the FOREST AND STREAM would have a vast deal of influence in determining the success of the anglers' tournament on Long Is-

land next year.

The second thing required is that fly-fishermen'throughout the State should manifest their interest in this matter, and so elevate the importance of these contests. When their charms are suitably presented, they will be acceded to and provided for. Then, prizes which legitimately belong to the successful competitors with the rod will not be given for excellence in other branches of sport; nor will the fly-casting be ignored and slighted.

-After a brief and fitful existence amid the beautiful surroundings of Springfield, Mass., our late esteemed contemporary, Out-Door Sports, has succumbed to the inevitable and gone over to the majority. complaint was too much localism, which led to inanition, the immediate cause of the untimely taking off. In short, the field chosen by our friend was so utterly devoid of the nutritive herbage necessary to newspaper subsistence that the melancholy event we now chronicle was a foregone conclusion. We tender to those who watched over Out-Door Sports, as well as to those who did or did not support it with their subscriptions, substantial conso ation at the rate of \$4 per year, or \$3 for six months.

BOOKS FOR SUMMER READING.—"Canoe and Camera: or, Two Hundred Miles Through the Maine Forests." by Thomas Sedgwick Steele, price \$1.50; "Camps and Tramps in the Adirondacks, and Grayling Fishing in Northern Michigan," by A. Judd Northrup, price \$1.25;
"Trouting on the Brulé River; or, Summer Wayfaring in the Northern Wilderness," by John Lyle King, price \$1.50; "Bodines, or Camping on the Lyconing," by Thad. S. Up de Graff, M. D., price \$1.50. For sale at this

-When the State Association meets at Coney Island, our Western friends will have in addition to the many attractions at the shore, the opportunity of seeing how the Brooklyn, Flatbush and Coney Island Railroad is operated, which can dispatch trains of from eight to twelve cars every three minutes when necessary. They are drawn by engines as large and powerful as those of the Pennsylvania road, and weigh about thirty-two tons each. They have run as many as 250 trains in a day with out any crowding or inconvenience. The road is laid with all steel rails, and operated by telegraph and Rosson electric signals, which work automatically. The whole is under the supervision of Supt. Wm. E. Donovan who has been twenty-four years in the service and is a natural born railroad man as well as an expert telegraph operator, and when work is lively he never trusts subordinates, but is always on hand.

MIGRATORY QUAIL

W E publish this week additional reports of the safe arrival of the migratory quail, and shall be pleased to hear further of the birds. Those who may this year observe the return to their nesting ground of former importations are particularly requested to transmit such information to us, for there are a great many interested ones who are watching for news of this

CHATHAN, Ont., June 20th.

CHATHAN, Ont., June 20th.

Editor Forest and Stream:—
Two hundred migratory quail arrived here in good order, on the 9th inst., only one having died on the way. They were turned out at the Big Point Preserve, thirteen miles from here, on dry ground adjoining the marsh. Yesterday three members of the club went down and reported them calling in all directions. Their call is something like a young turkey. They were found very hard to put up, but by walking past three abreast to the spot from whence the sound came they generally managed to raise them, but not until they had been almost walked upon. They flew very fast when they did get up. One of the members, a slow shot, dosen't think he will care for them.

of the members, a slow shot, dosent think he will show that for them.

They have taken more to the wet ground, but have not gone far from where they were turned out. Our keeper is scattering food for them, which no doubt tends to keep them from wandering off. They are very fond of corn, which seems to be large grain for so small a bird. I saw one swallow a large peanut, shell and all, that was put into the cage when they were in the express wagon. W.

NOTTOWAY COURT HOUSE, Va., June 21st.

Editor Forest and Stream:—
There have just been received at this station two hundred migratory quail from Turin, Italy, sent by Mr. Louis de Fernex, to be put out on his sporting farm near this place, which he has recently beught of Mr. C. D. Epis. We learn that Mr. de Fernex intends to put out many varieties of fish and game on this farm, and is entirely pleased with the farm, as it has large quantities of game on it; he is also pleased with the health and climate. How is this for old Virginia by one from sunny Italy.
There are quantities of game here this season of all kinds, and particularly quail as we have had a dry spring, which was favorable for their raising their young.

VIRGINIA.

BIDDEFORD, Me., June 18th.

BIDDEFORD, Me., June 18th.

The quail, for which some of our citizens subscribed, have been received in good condition, and distributed by George F. Calef, President of the Fish and Game Society. They were let loose in Biddeford, Saco, Buxton, Hollis and Parsonfield. Other parties have secured and let loose another large lot in Kennebunk. All apparently doing well.

Our river, the Saco, seems to be pretty well stocked with salmon, for they have caught some fifteen, weighing from ten to twenty pounds. Mr. Ed. Hanson caught a nice one this morning, Friday, June 18th, weighing eleven pounds. Our Fish Commissioner ought to take notice of this and have fishways constructed. The river once was famous for salmon, but none have been caught for a long number of years until now.

C. J. C.

PROTECT THE NESTING QUAIL.—The following hints from a Rockland (Me.) correspondent are timely and worthy of adoption :-

over them, and it is too late. The farmers are all right, and would gladly do anything in season, but are not expected to tramp through the grass searching for birds' nests. Hundreds could be saved by a person passing along before the mowers with a stick, rustling the grass and discovering the nests, so that a turt of grass might be left to cover the nest. After the birds get to coming back they will nest earlier, and the young will be out of way of the haymakers.

P. S.—I let out 101 quail on the 10th, received from Hon. Everett Smith, who is deserving of great praise for his efforts in introducing the quail into Maine. They were all strong but five, and they were good runners.

James Wight.

THE TILESTON MEMORIAL FUND.

NEW YORK, June "8th

Editor Forest and Stream:

Total. \$449.00 T loclose copy offletter received from Mr. P. C. Ohl, and would add that we are informed by soveral clubs that they are making up lists, an example which we trust that others will follow. Yours truly, \$100.00 T like Dr. HALL, Secretary.

PLAINFELD, N. J., June 23d. PLAINFELD, N. J., June 241.
Mr. P. H. MORIUS.—Dear Str:—Yours concerning circular, etc., relative to the fund for the family of the late Wm. M. Tileston to hand. -The same will be presented at meeting of the New York Game and Fish Protective Society June 24th.
I will also state of being at present engaged painting a picture of an Baglish snipe, which I will donnte to the Yund, suggesting

same to be raffied for, your committee setting a price on the

The list I have headed with \$10; regret I cannot do better, but trust the call will be liberally responded to.

Yours very respectfully, PERCY C. OHL.

GAME PROTECTION.

GAME PROTECTION.

WORK FOR GAME PROTECTORS,—Editor Forest and Stream:—Your editorial upon what should be the true work of the State Association for the Protection of Fish and Game meets with a responsive echo in the hearts of thousands of devotees of the rod and gun. I confess that I feel very strongly upon the subject, and, while I do not presume to criticise either individual action, nor the intentions of the honorable body, it seems that their past proceedings are open to severe censure. For the past twenty years these representatives from different clubs have met in solemn convention, and with a grand flourish of trumpets have incontinently proceeded to the slaughter of thousands of pigeons, and then adjourned. At the last meeting, not even the pretense of work was indulged in; and the barren stubbles and woodlands of Western New York, which once resounded to the cheery whistle of the gallant Bob White, attests better than I the practical results of the State Association for the Protection of Fish and Game. We all realize how our game is disappearing under the indiscriminate assaults of "pot-hunters," and others who, often enrolling themselves under the banner of sportsmen, and equipped with pot-metal gun and bag of portentious dimensions, sally forth for the slaughter of everything they meet, from a sparrow to a young hog, while the farmer, realizing his loss, and not discriminating between people who carry a gun, wages war against all who shoot. The farmer must be shown that his best friend is the true sportsman, who protects his stock, fences and game. If we will only unite, gentlemen sportsmen, in enulating the good deeds of each other in preserving and introducing game, as we now do on deciding personal provess at the trap, in a few years we will not only have the birds, but also the good-will and assistance of our farmer friends, I do not condemn trap-shooting per se, but object most decidedly to the practice that has obtained of trap-shooters banding together under the misnomer of sportsmen's clubs,

NEW YORK, June 22d.

Editor Forest and Stream:—

In answer to your request, I beg to say that I did not attend the annual meeting of The New York State Association for the Protection of Game that was held this year, nor have I for a number of years past. I have no doubt the meeting was a genial assemblage of skilled shots, in which test trials with the shot gun, rifle and pistol absorbed several days of time. One evening was devoted to a supper, and but a few moments to casual and ineffectual talk upon the laws for the protection of game, their manner of enforcement, or the habits and history of game and fish. This, at least, has been my experience of the action of those meetings I have attended, and for that reason I have not been at the recent meetings of the Association. I prefer to find and kill my game in the open field and forest. I am frank to say that I consider this a higher amusement, more bracing to one's manhood, more congenial to gentle and humane tastes. There are, however, many gentlemen who prefer trap-shooting. If this was divested of its money prizes and its betting accessories, there would be no objection to it as an amusement. As now managed, it brings together a great crowd of people who come to make money, and whose habits are totally at variance with those of a true sportsman. The different county societies for the protection of game have been the salvation of game in the State of New York, and have largely aided in its conservation in other States, and they have est-blished a code of laws and decisions which will always aid by example and precedent those who are seeking to further this work. The State Association does but little in this regard. It would seen, therefore, as if its title was inaccurate.

A WORKING SOCIETY.—Plainfield, N. J., June 21st. worthy of adoption —

I want to say a word of caution in regard to the nests of the migratory qual. Having learned some things last year, I have not to learn them over again. All the nests found last year were in the hoy field, and were found while haying. In a number of cases the bird was killed or wounded on the nest, and so the eggs (in one case there were fifteen eggs) were lost. In other cases, where the grass was mown clean from the nest, leaving no cover, the nests were forsaken. But in some cases, where the grass was mown from one side of the nest, and it was discovered in season to place a cutt or grass back and over it, every egg (in one case iffeen) was hatched. A bunch of grass as large as a water pail will save fifteen qualt; but where the birds lay so close it is hard to find them till the machine has passed of my tribe, ask for a little space to express my opinion of my tribe, ask for a little space to express my opinion

about game protective societies, and the threatened violation of the woodcock law, as in your two last issues you speak so disparagingly of the present societies that sportsmen would hesitate of joining a society for the protection of game if his money was to be used toward some pigeon shooting tournament.

Now, the society of which the writer is a member has solely for its purpose the protection and propagation of game and fish, and as the law of this State forbids non-residents from killing game within its domain unless members of a game protective society (which means \$2 per year), it is but just that said money be devoted to the propagation and protection of game. Such an association was needed, and such an association we have. Its members are empowered with authority to arrest any violator anywhere in the State. This society is known as the New Jersey Game and Fish Protective Society, organized May, 1879; Secretary's address, W. L. Force, Plainfield, N. J. The society is in a very flourishing condition, and if sportsmen, farmers, land owners and others desire to see game and fish protected they should join it. In reply to "Wr." who mentions in yours of the 10th the intention of property owners, somewhere in Passaic County, going in a body on the 4th of July to shoot woodcock, claiming they have the right to shoot them on their own land, it seems to me that any bird, wild by nature, and protected by State laws, unless proven to be of damage, cannot be killed on one's own land. However, if "W." or any one else, will give this association the necessary information of any one violating the game laws, the ofender will be prosecuted to the law's fullest extent. This September law for woodcock as, "If don't shoot them some one eise will," but say, "If don't shoot them some one eise will," but say, "If won't shoot them and no one else shall." VICE PRESIDENT. years to raise a brood in peace. Don't say, "If I do shoot them some one else will," but say, "I won't shu them and no one else shall."

VICE PRESIDENT

Game Bag and Gun.

JULY IS A CLOSE MONTH FOR GAME.

NEW JERSEY STATE SPORTSMEN'S ASSOCIATION.

HE third annual meeting of the New Jersey Sports-THE third annual meeting of the Association was held in the spacious parlors of the New the Continental Hotel (the headquarters of the New Jersey sportsmen), in Newark, on Monday evening, the There was a large gathering of delegates from the different clubs and the best of feeling prevailed. Sheriff J. J. Toffey, of the Jersey City Heights Gun Club and President of the State Association for the year, presided in his usual felicitious manner. Representatives from the following clubs were present and took part in the exercises : Essex Gun Club, of Newark ; Forester Club, of Newark; Palisade Gun Club, of Jersey City; Jersey City Heights Gun Club, Rod and Gun Club, of New ark; Raritan Shooting Club, Our Gun Club, of Jersey City; Englewood Gun Club, Eureka Gun Club, Wagunhas, of Englewood Gun Club, Eureka Gun Club, Wagunhas, of Newark; Morristown Gun Club, Midway Gun Club, Fairview Gun Club, Hickensack Gun Club, Little Falls Gun Club, Newark Shooting Club and the West Side Game Protective Association. Several new clubs presented their credentials and were received as members of the Association. After the reading and adoption of the minutes of the last annual meeting, a committee of one from each club was appointed by the President to make arrangements for and to select the club to manage the next annual tournament. They reported very unanimously to give the honor of the same to the Fulisade Gun Club, of Jersey City. The following officers were then unanimously and with good feeling elected for the ensuing year: President, B. S. Zayne, of Palisade; First Vice-President, Dr. J. Burdett, of Jersey City Heights; Second Vice-President, Jacob Fentz, of the Essex; Treasurer, W. C. Conover, of the Midway freelected; Recording Secretary, Justice Von Lengerke, of Falisade (reflected); Corresponding Secretary, J. J. Q. Bird, of Jersey City Heights, also a reelection.

It will be remembered that the running of the State

Justice Von Lengerke, of Palisade (reëlected); Corresponding Secretary, Dr. J. Q. Bird, of Jersey City Heights, also a reelection.

It will be remembered that the running of the State tournament for the present year was given at the last annual meeting, unanimously, to the Jersey City Heights Gun Club, as to that club was due the honor of initiating a movement for the formation of the State Association, and it was by the efforts of its officers and members that the first annual tournament, last year, was such a triumphant success. But owing to unforescen difficulties in the securing and fencing of the grounds of their eith in time this year before the flight of the wild birds would be over, Jersey City Heights very reluctantly were obliged to decline the high honor, and it was therefore given of a late day to the Essex, of Newark. Too much praise cannot be given to this club for the Herculean efforts to make it a success. Coming so late—only two weeks to obtain prizes, arrange grounds, print programmes and attend to the ten thousand other incidentals of a four day's tournament the—club has done wonders, as the programme will testify. The prizes are rich and ample. The grounds at Erb's have been fitted up regardless of expense, and the arrangements in every way bid fair for a very creditable result. There seems to be a genuine good feeling among all the delegates and the earnest wish for the Essex boys to meet with the success they so well deserve.

After the election of officers a very lively and interest-

nest wish for the Essex boys to meet with the success they so well deserve.

After the election of officers a very lively and interesting discussion ensued on the proper enforcing of the game laws and the propagation of game and fish. Eloquent speeches were made by Dr. Burdett, Dr. Johnson, Jacob Pentz, Mr. Beecher, President Toffey and others, and it was very evident that the recent hot shots in Fonesta and Streem and hit the mark in more than one case. On motion of Mr. Pentz the following was unanimously adopted: That a special committee of three be appointed to see to the more efficient carrying out of the present game laws, and for the procuring of qualit to be let out in certain sections of the State, and also for the

procuring of fish for the stocking of the several rivers and streams; and that 50 per cent of the money now in the hands of the Treasurer of the State Association be appropriated for that purpose. At a late hour the association adjourned to meet in a body on the following morning at Erb's Park, where the shooting will commence at 10 A.M.

adjourned to meet in a body on the following morning at Erb's Park, where the shooting will commence at 10 A.M.

Some More Double Shorts.—Community, N. Y., June 22d.—"Nimrod's 'story, in your last, of Charley's double shat is somewhat similar to my first double-wing shot. It was some twenty-five years ago, and also in Iowa. I was looking for some wild ducks I had seen alight in an old corn field, armed with what had once been a flint-look shot gun, but it now had a cap lock. I saw a large flock of wild geese flying toward me, and determined to try and shoot one. So I took aim leng before they were near enough, and kept them covered as they rapidly approached. As they got nearly abreast, I began querying whetner they were as near as they were in passing, and finally, to make a sure thing of it, I took down the gun to see. They were just passing a favorable point; and, before I could again get a good aim on them, concluded they were too far away, and so took down my gun without pulling the trigger. I was so provoked at myself, I resolved next time to shoot when I thought them near enough any way. No sooner was the resolution made, when two more were seen coming after the others. Stragglers probably. I determined to fire this time, sure. I draw on them; and, when I thought them about right, fired. One immediately dropped his leg, and soon went three hundred yards from where I stood. The other one turned at right angles, and fell dead some six hundred yards now, A prouder boy was never seen. That was a most lucky old gun. One day I saw some prairie chickens alight in a meadow not far from the house. The lock of the old gun was out of order, so it would not stand cocked. But I loaded it as quickly as possible, crept alone the fence till I was in range of a chicken, drew back the hammer with my little finger, took aim, let the finger slip off the lock, and not only killed the chicken aimed at, but one a few feet further on in the grass. One day a flock of blackbirds alighted in a stubble field near father's house, an

THE FOOLS NOT ALL DEAD YET.—Elmira, N. Y., June 23d.—Inclosed please find a piece which I cut out of our daily paper this P.M., showing that all the fools in the country are not dead yet. F. B. H. "C. P. Watson, of Big Pond, met with a curious accident last Thursday while attempting to take a primer off a No. 12 loaded metalic shell. The sheld disclarged in his hands, tearing his right fore finger off at the second joint, and tearing the thumb off of the same hand, and filling the hand full of powder and just grazing the leg."

SHOOTING MATCHES.

TORONTO GUN CLUB.-Toronto, June 19th.-The Toronto Gun Club had one of the most successful shoots they have had for some time. Gold and silver medals were given for the two high-

and Drint Central theat on second. Divided to good.

Second Team—Worcester Club, third, 381 gold. Marlboro Club,
fourth, 382 gold.

Our tournament was a brilliant success in every sense of the
word; the day was as fine as heart could wish, with very little
wind, and every one was well pleased. We organized in part our wind, and every one was well present. We organized in part our State Association. Eleven clubs were represented, officers elected, and funds raised sufficient to defray all expenses. President, D-Kirlewood, Boston, Mass.; Secretary, F. H. Lander, Lynn Sportsmay Chub, Lynn, Mass.; Treasurer, F. W. Webster, Lynn Candon, Lynn, Mass.; Treasurer, E. W. Webster, Lynn Candon, Lynn, Mass.; Treasurer, E. W. Tie on ten birds was shot off at 25 yards, 5 birds each, first

gold medals. The first goes to the winner of the greatest number of matches. The second goes to the one who breaks the greatest number of balls during the series, aside from the winner of the first medal. Mole revolving trup, fifteen glass balls, 13 yards rise

TIM BERDOODLE.

TEAM SHOOTING.—Astor House, N. Y., June 28th.—Editor Forest and Stream:—As team matches are now very popular, and, as I think, there are a sufficient number of expert wing shots in the United States to make up a team that can best the world, I have been urged by friends to organize such a team, say of five or six men, to pay wist to England and more there similar teams from the crack chibs of the old country. I am now in New York waiting for my triple match with Geo. Rinnell, whom I defeated in ing for my triple match with Geo. Itimell, whom I defeated in 1875, and won thereby the Championship Badge of the word. Whether the concests at Concy Island on June 30th and July 2d turn in my favor or not, I shall go right on with the team project. I propose that the entry list for the American feam of wing shors shall be open to all comors. Those wishing to compete for places shall address me as soon as possible at Astor House, New York or through sporting papers. I will shoot a test match with each of the men entering for place, and intend to spend the summer in visiting the various cities of the Union for that purpose. These tied matches to be at 100 brids, each. English rules, thirty varies trial matches to be at 100 birds each, English rules, thirty yards rise, and at the wildest pigeous procurable; the results to be carefully recorded, and at their conclusion all the gentlemen to meet at a grand tournament, say at Saratoga Springs, in the latter part of August or at some other central location mutually agreed upon, to make the final selection. I should be pleased to hear from Eastern shots at once, so that the matches in this section could be disposed of before starting to the West.

Of course it is not expected that a start will be made for England before next spring, as it would be of very little use to attempt such a visit except in the summer season. It is important, however, that all the arrangements should be made well in advance, that no blunders shall lead to a misrepresentation of American why shots shorad.

Mr. Sigler lost a bird by having his gun above the elbow. In ties of eight Dr. Talbot killed his last bird and was challenged for

shooting it on the ground; but, as the judges were undecided, he was given another bird, which he killed. There was quite a large attendance of shooters considering it was the first day of the shoot, and everything promises well for good shooting to-day and to-morrow.

The Rifle.

THE IRISH-AMERICAN MATCH.

THE fourth of the series of Irish-American contests

THE fourth of the series of Irish-American contests with the rifle was fought at Dollymount range near Dublin, on the 29th ult., and for the fourth time the Irishmen were compelled to admit that the Americans were the better marksmen.

The Americans since their arrival in Ireland have been compelled to lead a pretty active life on account of many festivities, but they are not much given to such things, and Mr. Frank J. Donaldson, the Secretary of the American National Rifle Association; Captain Jackson, of Boston, whose bronzed face and manly figure attracted much attention; Rockwell, the Boston stationer. National Guardsman and member of the State Legislature, and Mr. Laird, the Government clerk from Washineton, have had to sustain most of the "lionizing." Colonel Bodine has had a very emphatic way of leading his men away early from evening fêtes, so that they should get plenty of sleep and keep the clear eye and col head so incessary to an expert rifleman. The members of the team have been if anything rather overconfident—not in conversation, for a more modest set of men it would be difficult to find—but there was rather an individual testing of the range than a display of team displine such as was expected. It was not until Saturday last that the men really did take a "long, strong pull" together. The men were all of them very auxious about the weather. The Irishmen wished for just enough of that Irish boil-terons—ness and changeableness to upset the Americans—'just a little twist of weather," as one one of the Irish team exwere all of them very auxious about the weather. The Irishmen wished for just enough of that Irish boisteronsness and changeableness to upset the Americans—' just a little twist of weather,' as one of the Irish team expre-sed it. The visitors, on the other hand, wanted an American day imported for their use. They would gladly have had the mercury high up in the thermometer, and a wind from whatever quarter it cared to blow, A 'fishtail' wind might reduce the score somewhat, but the Americans felt confident that they were as well able to shoot with this most troublesome of all breezes as the Irishmen. The day really was a cross between these two extremes. The weather during the opening hours was threatening, but no rain fell.

At 11 o'clock the crowd began to assemble on the long sand bank opposte Dollymount. Transway and jaunting cars had been well patronized all the morning, and discharged their visitors at the end of the long, narrow bridge which connects the North Bull with the mainland. It was the same ground upon which the victory of Col.

At 10 o'clock the crowd began to assemble on the long sand bank opposte Dollymount. Trannway and jaunting cars had been well patronized all the morning, and discharged their visitors at the end of the long, narrow bridge which connects the North Bull with the mainland. It was the same ground upon which the victory of Col. Gildersleeve and his team was won in 1875. There were four targets, with a gap between the two pairs. The North Bull is a long sand bank opposite the pretty little village of Dollymount, from which it is separated by an inlet varying in depth and width according to the tides. The range is a mere hill of low drift sand, on which stiff grass is growing, Compared with Creedmoor it is bleak and uninviting. In the rear of the targets in place of the green sodded bank of the American range there is an open space, and the sea is seen as a thin, gray streak, beyond which appear houses, of course out of range. On a fine day the view from the range is striking and attractive. It is bounded to the north by the distant dusky outlines of Lambay and Ireland's Eye, and by the broad slopes of the Hill of Howth, which in clear weather appear checkered with varying this of green and purple, amid which are seen masses of blue, gray and brown rock. To the left are thickly-wooded uplands stretching far inland, with intervals of undulating meadows, contrasting prettily with the sombre green of the foliage above them. Here are the cottages and villas of the suburbs of Clontarf and Dollymount. Turning to the right the spectator obtains a splendid view of the bay and its southern boundary. Westward from Killiney his eye follows the dim outlines of the Dublin and Wicklow huts, with clusters of charming a splendid view of the bay and its southern boundary. Westward from Killiney his eye follows the dim outlines of the Dublin and Wicklow huts, with clusters of charming a splendid view of the bay and its southern boundary. Westward from Killing his eye follows the dim outlines of the Dublin and Wicklow huts, with clusters

There were motioes, too, such as "Hail Columbia!"
"Welcome to Clontarf Plains!" and "Our Guests," at
various points. The Irish team was first on the ground,
but the Americans, having once arrived, soon settled
down to business and opened their cases of cleaning
utensils and examined carefully their rifles, their wind
gauges and Vernier sights.

Major Leech offered to toss up for choice of targets,
but Col. Bodine said he would be perfectly satisfied with
the targets upon which the Americans had been practicing since their arrival. The men as squadded were: At
target No. 1, John Rigby, William Rigby and J. K. Milner; at the next target, were George Fenton, J. Russell
Jaynt and S. S. Young, who shot in the order named.
Targets 5 and 6 were set apart for the Americans. R.
Rathbone, W. M. Farrow and F. H. Brown followed each
other in that order on target No. 5, while on the next
target, No. 6, the shooters in order were H. F. Clark,
S. I. Scott and Homer Fisher. Mr. Latid, who, with Dr
Scott, represented Washington on the American team,
was the coach at target No. 6, while Secretary Donaldson filled the same post for the squad headed by Ratibone.

A number of American travelers were present on the one.
A number of American travelers were present on the

son miled the same post for the squad headed by Ratibone.

A number of American travelers were present on the range. Col. Bodine exercised general supervision, seeing to it that his team was not interfered with in any way and keeping back the crowd that closed in about it. It was 12:30 when the firing began, John Rigby discharging the first shot and briuging out the "magpie" disk for an "inner," Rathbone, who led off for the Americans, scored a bullseye, as did Fenton on the Irish side in opening for the other squad. Clark on target No. 6 got only a "center." The opening round left the teams equal, though five of the Irishuen had opned with bullseyes, while two of the Americans had sloped into the center ring about the bullseyes. Young, who is an Irishman, living in England, uses a Farquinarson-Metford rifle, but all the other members of the Bone team have the new Rigby breech-loader. Scott, of the American team, shoots with a Remington rifle. Farrow has the long range Ballard, and all the other Americans use the Borchardt model of Sharp rifle. Having started in and reached a tie, each of the marksuen carefully adjusted his sights for the second shot and a dozen bullseyes allalong the line was signalled by the markers. In the next round Rathbone dropped again, as did John Rigby, the veteran of the Irish team. All the men had discovered that it was a day for high soores, and Major Leech, so far as he was able, was putting in practice a sort of team discipline. Wh. Rigby was as slow and considerate as ever, while the Americans, too, shot very slowly. More care in the fifth round by the Americans and a "nipper" by young Joynt, of the Irish team, put the teams on on even footing, but Rathbone was unluckly again in the sixth round and in his first six slots sorrole our three bullshame. snot very slowy. More care in the inth round by the Americans and a "nipper" by young Joynt, of the Irish team, put the teams on on even footing, but Rathbone was unlucky again in the sixth round and in his first six shots scored only three bullseyes. A little freshening up of the wind in the seventh shot caught Clark and gave him a center, but all the other members of the team were warned in time and got bullseyes, as usual. The teams were warned in the seventh shot caught the continue of the seventh shot caught the seventh should be seventhered to the seventh should be seventhered. him a center, but all the other members of the team were warned in time and got bullseyes, as usual. The teams were now shooting very evenly, and except the opening inner of John Rigby every shot had landed within the radius of twenty-seven inches which bounds the center. In the inith and tenth rounds the same care was kept up, John Rigby had on the first score a center, and William Rigby followed with a similar shot in the next round. The trist manager felt that his men were falling behind, The Irish manager felt that his men were falling behind, but at such an early stage in the match no great anxiety was felt. In the eleventh round Wm, Rigby hit the "magpie" section of the target. His cousin John Lecame flustered at seeing the "old reliable" making such misshots, and he, too, made an inner. In the last three rounds of this distance the Irishmen made a great effort, the Americans had closed their work and had put on record a total of 436 or but fourteen points short of perfection in the highest possible. This the Irishmen record a total of 436 or but fourteen points short of perfection in the highest ipossible. This the Irishnen could tie or possibly pass. On the thirteenth round they had reached 376, and two bullseyes all around would bring a tie. The word was passed along, and by taking plenty of time and extra care that result was accomplished and a great cheer went up when the fine double

plished and a great cheer went up when the fine double score was announced. It will be seen from the scores that at the 80 yards range, of the ninety shots fired by the American squad, twelve were centers, one was an inner, while seventy-seen were in the bullseye. On the Irish team the figures were eight centers, three inners and seventy-nine bullseyes—the three inners were made by the Highys. The wind had been very steady during the norning, and the Americans were anxious to be on with their work, so, hastily disposing of lunch, at 2:30 they were again at the firing points ready to open the 900 yard stage. The cooling of the guns by the half hour rest had upset the calculations as to elevations, and the opening at 900 yards brought only twenty-seven in a possible stage. The cooling of the guis by the half hour vest had upset the calculations as to elevations, and the opening at 900 yards brought only twenty-seven in a possible thirty to each of the teams, maintaining the tie. The firing at this range was fully up to the average of the 800 yard distance. Clark was doing far better than at the lower distance, and the really line weather for shooting led the Americans to stand ready to drop to the firing points with the utmost readiness after each shot, in order that nothing might be lost by change of weather. Rathbone, of the Americans, was putting in consecutive bullseyes right through the mid range of the match, and went back to 1,000 yards with a score of 145 in a possible 150, while Clark, having put in a perfect 900 yard score, retired to the last range with 148 points in the same possible. Scott, who had been very ill the day before, was causing some anxiety to Cof. Bodine. His score of sixty-nine at the 900 yards range was the poorest so far made on the American tide. Among-the Irisimen the shooting was very even, and would have been deemed extra fine. They find dropped eight points in the range total from that reached at 800 yards, while the Americans, by holding up to the same total, had that much advantage. William Rigby had scored an inner, while John Rigby and Joynt had been equally indiscreet. Alliner and Fenton, by five centers each, had reduced their scores to seventy, while Young was the only Irish shooter who did extra well at this range. Once during this range there was a dispute about one of Brown's shots, but an examination of the this range. Once during this range there was a dispute about one of Brown's shots, but an examination of the target showed it to be a center in place of a bulleye, though for a time it looked like a miss to the squat at the firing point. The analysis of the shooting at the

inid range showed that in ninety shots the Americans had secured seventy-eight bullseyes, ten centers and two manes. Farrow and Scott making these last. On the firsh side there were seventy-one bullseyes, sixteen centers and three inners—the two Righys and Joynt being

e inner makers.
The admiration and enthusiasm excited by the match The admiration and enthusiasm excited by the match up to this point will be readily understood by the absence so far of anything like it miss or even an "outer" in the entire shooting at the 390 and 900 yard ranges. The cheering of the crowd was equally distributed to the contestants and to a number of cele brities who now strived on the ground, among them Earl Cowper, the Lord Licutement of Ireland, and Edmund Dwyer Gray, the Lord Licutement of Ireland, and Edmund Dwyer Gray, the Lord Ruyor of Dublin. The popular excitement was unabated throughout, and the spectators never lost their interest in the proceedings. Ranged upon three sides of the restangular space within which the contestants were grouped, the crowd craned their necks after every shot, and burst into storms of applicase whenever a special bullseye or display of skill excited their admiration.

sides of the rectangular space within which the contoxiants were grouped, the crowd canned their neeks after every shot, and burst intostorms of applianse whenever a special bulkeye or display of skill excited their admiration.

There was no delay in getting back to the 1,000 yard range, and at 1890 the firing for the final distance opened. The sky was clouding up, mere wind was coming on and rain seemed inminent. The crowd held on, however, for with a margin of less than two bulkeyes, the interest ran high. The opening at the 1,000 yards struck the key-mote of success, for the Americans put in six bullseyes, while Milner with an inner and the two Rigbys with a center each made a very scattered opening for the firsh team and increased the lead for the Americans. The frishment were again beginning to see defeat before them, and having no efficient team system to fall back moon, were soon hopelessly confounded. Each man for himself was the rule, and on the second round, when each of the frish marksmen had steadied himself for a bullseye, unlucky Milner sent a bullet no one knows where, and the first and only miss of the day was put on record. Young, too, was beginning to waver, and shot irregularly. These shortcoming became known to the Americans, and considering that they had a sure thing of the match, were a trifle careless and not so exact as they would have been had the pushing been closer. The Ridgys had evidently become disheartened, and they followed cach other off the target again and again. There was a rally towards the end, and lwice the frishmen put in perfect scores at this range, but the odds against them had become too great. Once there was a rary of hope, when Brown put in an outer, the only one of the day, through a slight "pull-off," but on the next shot he revered and the hopes of a break on the part of the Americans were above that figure, and Scott came within a single point of a highest possible. When the last shot was fired from the frish wing of the field, ready senditions and the butts. Cl

Maj. Leech produced a rule prohibiting any examination.

This in brief is the story of the match, as fought out on Tuerday last. The exact record stood as follows: on Tuerday last.

THE AMERICAN TEAM SCORES. H. F. Clark-Sharps Ride.

To show the excellent quality of the work accomplished, the following figures taken from the scores of the important long range matches shot since the new targets came into use in 1874 are given. In 1874, taking the scores of the six leading members of each tearn that shot for the Eleho Shield, the figures are as follows: Scotch team, 1,188; English, 1071; Irish, 1055. In 1875, when the Irish team won the shield with the advice of the American when the frist ten on the ground, the scores want it fish team, L[107] Scoreh. Land, the scores from each team were English team, and the heading six scores from each team were: English team, L[107] Scotch, L[11], and Irish, L[108]. In 1877 another Irish viciny, occurred, with the scores as follows: Irish team, L[137] Singlish team, occurred, with the scores as follows: Irish team, 1,133; Roglish, 1,183, and Scotch, 1,1006. Another victory for the frish team was scored in 1578, the totals of the scores of the leading six men being; Irish team, 1,204; English, 1,202, and Scotch, 1,166. Last year the Seatch team took the shield, and the scores of the best six men of each team were: Scotch team, 1,141; Irish, 1,129, and English, 1,13. When American rillomen defeated a "erack" Canadian team in 1875, the figures were 1,108 for the Americans and 1,575 for the Canadian six. In the Centennial match, when the Palma was first shot for, the shooting extended over two days, and five teams were carged. The totals of the scures of the the Palian was first shot for, the shooting extended over two days, and five teams were engaged. The totals of the scores of the leading six men on each team are as follows: First day—Scotch team, 1,20; [rish, 1,20; American, 1,196; Australian, 1,185; Canadian, 1,177. Second day—American team, 1,175; [rish, 1,162; Australian, 1,167; Scotch, 1,124, and Canadian, 1,101. In 1877, when Sir Henry Haltord came over with his British team, made up of the best English, Scotch and Irish riflemen, the scores were i First day—American team, 1,29; British, 133. Second day—American team, 1,29; British, 123. Second day—American team, 1,29; British, 120. In each of the matches above mentioned eight men were cugaged on each side, but the figures are the rotals of the leading six scores, gyring, of course, the advantage of the leading six scores, gyring, of course, the advantage of the second of the leading six scores, gyring, of course, the advantage of the second of the the totals of the leading six scores, giving, of course, the advanthe relias of the reading six sources, Kiving, of course, the dayan-tage of throughout two men who may have failed. The only read dapplicate of the present match was the last Irish-American match shot at Creedmoor on September 21st, 1856, when, with six men on a side, the secres were: American team, 1,465; 1rish, 1,467. In that match the average for the Americans was 211-45 per man, out of a possible 23, and for the Irish, 213 5-6. In the n to-day the averages were: American, 215; Irish, 2131, men who have tought in this factor are men of experien In the match of All the

in the Irish team John Rigby stands out bold and foremost In the Irish team John Righy stands out bold and orreader. Though the active, energetic, blarney-posted Arthur Blennerhassett Leech is the nominal captain of the team, John Rigby is its real captain and head. He is the leading member of the bouse of John Rigby & Co., Dub in gun makers. His is a general armory, and you can purchase there a fowling piece for the knocking over of woodcock, or another style of weapon for the knocking over of your best friend should be say aught to displease you. In es past the "saw handle," muzzle-loading duelling pistols, for which the house became famous, were in great demand, but of Into years the demand has fallen away. Taking the Elcho Shield peoord in, J. Rigby is found in the first Irish team in 1865 with a

score of 124, old target, again in 1866 with 143, in 1867 with 132, in 1863 with 142, and a like score 1869. In 1870 his score was 145, and 149 in 1871. He led the team of 1872 with 154 points, and when in 1873 in 1871. He lad the team of 1872 with 151 points, and when in 1873 the Irishmen were successful for the first time, he was a members with a score of 154. In 1874 his score was 164, new target, and when in 1873 the Irish were again successful, he was in the squad wift a score of 188. 179 was his score in 1887, and in 1878 he headed the winning Irish team with the best score ever made in the match, 215 points. Last year he was again head of the team, with 195 points. He was in the first Irish-American match, and led the Irish team with 185 points. He was not in the second or third matches of this series, nor in the Palma matches of 1876 or 1877. He

matches of this series, nor in the Palma matches of 1876 or 1877. He is tail and straight in stature, and an expert workman, a scientific rifle shot and an educated gentleman.

William Rigby is a cousin of John Rigby, and is associated with that gentleman in the firm of John Rigby & Co. He has visited America as a member of Irish teams, and in his quiet, almost solemn way of shooting, impresses the spectator as a formidable adversary. He is about forty years of sge, and usea position exactly similar to Miluor's in fitting. He has been a pretty steady reversementing on the Irish circle and hear aversary. exactly similar to Millner's in firing. He has been a pretty steady representative on the Irish eight, and has in private competitions enjoyed a good run of success. In 185 he led the Irish eight, Shot also in 1866, 1867, 1869, 1871, 1873, 1874, 1876, 1876, 1877, 1873 and 1878. He was in Sir Henry Halford's British team at Creedmoor in 1877.

Joshua K. Milner is a genuine Irishman. He is a young man ils years being about thirty, and in build he is lithe rather than his years being about thirty, and in build be is lithe rather than bulky. As a rifle shot he has enjoyed great experience, and as a member of the Irish eight on several occasions has done gallant work. While at Creedmoor some years ago his spurt of fifteen consecutive builseyes at 1,000 yards under him the champion. His posture in fring is a peculiar modification of the back position—the burrel rests upon the upturned toes, while the heel is trucked into the right arm-pit

Then, together from is another of the Irish team men of great experience. His great, stallwart form and broad, resolute face have been seen on other occasions at Croedmoor. He is thirty years of age, full six feet tall and weighs 137 pounds. In all his years or age, and sax receited and weights for pounds. In all his shall-bore experience Lieut. Fenton enjoys the peculiarity of never having scored a miss in a match. He has fired at Dollymount and at Wimbledon, and has been on the Irish eight several

times. He was for a long time a firm advocate of the prone, or "beily" position in firing, and thought it as good as any other, though he now shoots in a back position.

J. Russell Joynt is one of the "colts" of the Irish team. He is a young man, but is able to do good work, and each year witnesses a steady improvement in bim. He has shot on the Irish

eight on several occasions.

S. S. Young is an Irishman with an English residence. Ho is English in his habits and place of practice. In 1873 he led the Irish eight when they captured the Elcho for the first time. Un-

Its a legal when tacy captured the bleno for the first time. En-like all the others mentioned, be has never been to Creedmoor. The doings of the American team men are comparatively well known to readers of the FOREST AND STREAM, and a few personal facts about each will be given. Col. John Bodine, who has been selected as captain of the team,

is a native of New York State and a descendant of one of the old Huguenot families which settled in . Dister County. He is about fifty-three years of age. His business, until recently, has been agriculture, railroad and steambout freights; but at present he is attached to the Court of General Sessions in New York City. He experience as a rificman dates from 1845, and even then he was a remarkably fine sportsman. Later be began long range shooting, and has become so elegant a marksman that he has won the name and has become so elegant a narksman that he has won the name of "Old Refliable. Ho was a member of the first American team that contested with the foreign riflemen in 1873, and in other matches. In 1875 he was again a member of the American team in the great match against the Irish riflemen at Dollymount, and in 1876 was a member of the American team which competed successfully against all comers. He is about six feet in height and of fine presence.

W. Milton Farrow was born in Belfast, Me., in 1844. He is W. Milton Farrow was born in Bolfast, Me., in 1841. He is about five feet nine inches in height, and of sparse figure. From early boyhoud he has been devoted to gunning. In 1876 he took an interest in long range rifle shooting, and organized a rille club at Newport, R. L., where he then lived. He went to Greedmoor in 1877, where he practiced at long range, and in 1878 won a place on the American team which contested with and defeated be Canadians. He was the eleventh man in the competition for a place on the American team which shot the "walk over" for the international trophy in 1878. In the same year he won the first brize in the chambion match at 200, 600 and 1,000 yrads, with a the international trophy in 1878. In the same year he won the first prize in the champion match at 200, 600 and 1,000 yrads, with a score of 130 out of a possible 190. Last year he spent most of his time in Europe, and returned with a large number of prizes, among which were the Albert prize of £100, shot for at Wimble. don, and a Sevres china wase, offered as a prize by the President of France, in a match for "all comors." He shoots with a Balton of France, in a match for "all comors."

H. F. Clark was born in Dutchess County, N. Y., in He is five and one-half feet in height, of spare figure, dark he is not and one-min term to the first neight of spare ngure, after complexion, and has gray eyes. He is a dontist, and represents the Empire Rifle Club, of which he is president. He was for seventeen years connected with the National Guard; at one time was lieutenant colonel of the Twenty-first Regiment, N. G. S. N. Y. He has done or the I wenty-first negiment, N.G. S. N. Y. He has done considerable shouting with a military gun. He began shooting at long range in 1876, and in the fall meeting that year at Creedmoor won the first prize in the short range match apainst 232 competitors. In 1877 he tied the scores of Jackson and Hyde for the Stewart prize in the aggregate match, which was shally won by Mr. Hyde. He also won the third prize in the champion's match at the same meeting. He was a member of champion's matter at the same meeting. He was a memory of the American team of 1878, which shot the "walk over" for the international trophy. Samuel I. Scott is a dentist at Sandy Spring, Md., where he

was born in 1848. He was a farmer in his early days, and after was norm in 1846. He was a larmer in his early days, and afterward learned dentistry. He began rifle shooting with the Margland Rifle Club about three years ago. He joined the Columbia Rifle Club, of Washington, D. C., in June, 1879, and has won sev-Rifle Club, of Washington, D. C., in June, 1879, and has won several prizes. His first noteworthy score was at a match last year, when he made 99 in a possible 100 at 500 and 600 yards. He won all the first prizes in the infla and short-range matches in the same tournament, and in a match at 1,000,1,100 and 1,200 yards made 180 in a possible 25. Last fall, in the competition for the Wimble-don cup, he won the second prize.

thomer pisher is a native of Connecticut, thirty-nine years old. For several years he has been in the gun business at No. 28 Brondway. He began long range shooting in 1877, and has ordi-narily made good scores. He has won many short range prizes and in competitions for places on the American cann of 1877 was narily made good scores. He was not the American ream of 1877 was next below T. Lamb, who was selected as a reserve. Last year he won the first prize in the third class of the long range tournament at Creedmoor, and last April he won the Remington \$300

Ransom Rathbone was born in Salem, Conn., in 1831, and

until late years has been in the leather business. He is slightly round shouldered, has a dark complexion, a spare figure, dark halr, is dive feet ten inches in belgilt, and has blue eyes. Ho be-gan long range shooting in 1875, and in 1876 won a place on the American team, making the highest individual total score ever made up to that time in an international match, making at the with J. K. Milner, of the Irish team. He shot in the Irish-American match immediately after the international match. He was also a member of the American team of 1878, shooting in the "walk over." In a match at 200 and 500 yards flast year he made twenty successive bullseys, with F. H. Holton, and in shooting off thetle made another clean score, and won first prize.

made inducter clearl score, and won first prize.

J. F. Brown was born in Chester, N. H., in 1833, and now lives in Chelsea, Mass. He standssix feet in height, is strongly built, has a dark complexion and blue eyes. He began long range shooting on the Walnut Hill range in 1877, and had won a laree_number of His greatest achievement was making thirty-one conprizes. The greatest temperature was making unity-one security bullseyes on the long ranges, closing with a score of in a match between the Massachusetts and Walpole clubs, was a member of the American team in 1878, and in the "voover" made scores of 210 on each of the two days.

over" made scores of 210 on each of the two days. The series of Irish-American matches has no connection with the Palma competitions which were started in 1876, and which settle the international long range team championship of the world. The series, of which the fourth has just been won by America, opened in 1874 by the visit of Major Leech and his ream to this country. In July, 1873, the Irish team for the first time had captured the Eicho Sheld, shooting against teams of Englishmen and Scotchmen, and with a score better than anything which had ever been made by Irish ridmen. A general challenge was sent out "to the Bildomen of America" and accepted by the America Irish and the Irish was sent out. "to the Bildomen of America" and accepted by the America Irish products a service of the Irish products of the Irish products of the Irish products of the Irish products of the Irish products of the Irish products of the Irish products of the Irish products of the Irish products of Irish prod sent out. "to the Bildomen of America" and accepted by the Amateur Rille Club of New York, of which not a single member at that time had ever won a long range match; nor was there an American-made rifle capable of coping with the fine Rigby muzzle-loaders. During the winter of 185-4 the American factories supplied the rifles, and by dint of hard practice a team was put into the field which on Sept. 20th, 1874, was successful. At that time the old square bullseye was used, counting four, and making the range total sixty, with the highest possible per man 180 in the day. The totals of that match stood:—

year following Col. Gildersleeve led his team to Ireland, and after year following Col. Glidersloeve led his team to Irelind, and after a most hospitable reception the second match took place on June 20th, 1875. It was like an American summer day on which the match was fought. The cable was brought into play, and each shot as fired was bulletined in New York. The Irish team had been strengthened as was supposed by new men, but they fired in an individual sort of, way without team organization, while Col. Glidersleeve's mon displayed the perfection of team discipline, and each man in firing took his cue as to windage allowance for leart discipline, and with the perfection of team discipline, and each man in firing took his cue as to windage allowance for leart discipline, and with the perfection of team discipline, and each man public probability with the scale allowance for vertical variation, from the man who had fired before him. Forty thousand penale of Dubling witnessed the match and saw the dethousand people of Dublin witnessed the match and saw the defeat of the Irish team on their own range by a lead of thirty-nine ore standing :-

In 1876 the Irish team, were among those who came over to con-In its the trial team were among toose who came over to con-test for the Palma trophy, and after they had given a very pretty exhibition of marksmanship in that match with eight men on a side, securing for themselves the second place on the roll of teams, side, securing for themselves in second piaco on the roll of teams, the Irish-American series of matches was taken up. The new target, such as is now in use, had then been introduced. In this target the hullseye is three feet in diameter, counting five; the center is another circle fifty-four inches in diameter, scoring four. The inner, counting three, is the square six by six feet, in the center of which the bullsage is painted. The outers are two wings two feet wide and six feet high on either flank of the inner. wings two feet who and six feet nigh on either hank of the linker. They count two points. This makes a slab six feet high and tweive feet long, but it looks small enough at the distance of over half a mile away. The size of the target itself has not been changed from former years, but only the divisions upon it. On Sept. 21st, 1876, the third of the Irish-American matches was shot. This match saw the defection of Col. Farwell, and he has never been seen on the ranges since. The score stood:—

On Tuesday last six men on each side competed over the same ange where in 1875 Col. Gildersieeve and his men won their vicrange where in 1970 Col. othersteeve and his min won his fory. The Irish marksmen have improved greatly. Sinc series began American breech-loading rifles have found way into the hands of English shooters, and last year the Since the core made by any of the twenty-four contestants in the Eicho Shield match at Wimbledon was from an American breech-loader. The veteran John Rigby, after insisting that the muzzle-loader was superior to the breech-loader for the finest work, has since 1876 been busy perfecting a breech-loader, having the finest of the American pieces before him as models. This new Rigby rifle in now in the hands of the majority of the Irish marksmen. On Saturday hast, when the two teams were scoring their last practice, side by side, the Americans seem to have repeated their old policy of putting up a high score on the last day and so striking dismay into the hearts of their opponents; 1,273 and 1,286 were the figures respectively of the American team and the best Irish six. This was the last and best showing before the mutch, but it was left far behind in the actual ligures of the battle. Shield match at Wimbledon was from an American breech-loader.

RANGE AND GALLERY.

BOSTON, Mass., June 19th .- The weather to-day was all that could be destred by the rilemen of Walnut Hill. The wind was steady and from the west during the afternoon, and did not influence the result in either match. There was a large attendance of spectators. In the renewed contest at 200 yards there were sixty-two entries.

| Mr. Bumstead used a military rifle, and consequently is outlied to two points handlesp, which makes his total score 47. The 569-yard match had thirteen entries, and following are best cores made therein, the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the discoverent of the conditions being seven shots at the seven shots of the hottest of the season, and show work was done during the markshow of the hottest of the season, and show work was done during the markshow of the hottest of the season, and show work was done during the markshow of the many the conditions. entices—Emond Brundin, 307; J. J. Toning, 8:15. Second-class double entices—Hopen, 3:10:15; Cutter, 3:18:15.

LAURENDING YAGUT CLUB.—This nowly formed club, of Philadophuh, has had the good sense to limit the size of sails to be carried to "5:21t. of bolt rope," doing away thereby with the fearful overcanvasing, which has been the chief objection to racting as cerred on to-day on the Delawarae. Such a club possense and the control of the control of the possense and the control of the possense and the possense a wins. Psyche of the second class had cut and ran tor home, a good whole-sail breaze being ito much to her liking.

Bit Defense, "The recent mitch race between the cond of the condition of the c

YUNKERS YACHT OLUR.—The second race this year was sailed on the Hudson, June 28th. Three classes, blo and maintails, cuts over 29 and under 20ft. Scul won in first class, betting Mary & Yanke Blird won in second class and Pinofore in the third, Course fifteen miles.

TEXAS REGATTA.—There will be a regata at Texas, July 5th. The Oswego fiect will run over there from Kingston, Ont., after the regatta at the latter place on Dominion Day.

COMMETHIAN MODELS.—Three prizes in the South Boston Decoration Day race have been awarded to Washington Village yachts modelled by amateurs.

modelled by anasteurs.

HANDIGAES—A few discontented individuals have worked off their minds on handleaps recently in the London Field, where their minds on handleaps recently in the London Field, where their minds on the london field, where the london field is the Atlantic lastened to take up the endigers are so in this side of the Atlantic lastened to take up the endigers are so the london field in the registration in England as proof that a like revolution was soon to begin across the water. This was altogether too much, for the "agistation" in England was the merest suface ruffle and never reached the wire. This was altogether too much, for the "agistation" in England was the merest suface ruffle and never reached the wire. In so been reassured by the Field in the reset the best boat wire. In so been reassured by the Field in the reset has the present rules ought not to be changed in principle.

MATCH RACES.—A match has been arranged between Viren, N. Y. Y. C., Mr. F. C. Lawrence, and sloop Wizard, N. Y. Y. C. Mr. Gouv, Kortright. Date not liked. The Schooner Magic, E. Y. C., Mr. F. M. Welt, has also challenged the schooner Cite, N. Y. Y. C. Mr. J. H. Matt, for the Beneatt Cup, won by the latter in the result of the Company o

THE VESTURE.-Mr. Jacob Lorillard has sold the new steam-yacht Venture to Mr. J. M. Fiske, of this city.

DORCHESTER YACHT CLUB.

DORCHESTER YACHT CLUB.

THE fitty-fift regatta of the club, postponed from Decoration
Day, was suled off Harrison Square, June 25th, in a variable
wind. The races were open to all yacht clubs and a fair list of
entries was the result. It belw fresh from southwests at the start,
or and points of the

HAVER REGATTA—The International races of the Societé des Régates du Havre will be sailed July 12th. Open to all nations. Course, thirty miles. Chesses for yachts over 15, 40 and 70 tons. Prizes range from Sol to Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and the Sol and Sol Also, a match for pilot beats. Cutters, full founge; yawls, three-quarters, and schoolers, three-lifths. Flying start,

no restriction as to canyas. Entrance fee, \$10 for foreign yachts and \$5 for club yachts. Entries close July 9th; to be made to Hon. Secretary, It. Winsolw, Hotel-de-Ville, Havre. Probably the Intropola, Mr. Lloyd Phoenix, will enter as the only American representative. Programme can be seen at our office.

LLOYD'S YACHT REGISTER.

THIS useful volume has appeared for 1820. We have in previous assume referred, to the errest vulne and potent influence of such a well considered compilation of building rules, and pointed out the advantage of having some standard to go by. With us in Almerica the question is, What is really a well-build rache and what is not? Some will assert that thoors simply spliced the garbarate edgewise under the garbarate of the garbarate edgewise under the garbarate of the garbarate edgewise under or other works will assert that thoors will tell you tree-mails beat iron all hollow for plank, and the next man, be he builder or owner, will assure you of some old bark of his that lasted ever so many years with the plank old bark of his that lasted ever so many years with the plank caulik against. One builder or owner, will assure you of some caulik against. One builder or owner, will assure you of some caulik against. One builder or owner, of all mechanics, will run a keelson from stem to center-board trunk, and again from the aft side to the run, breaking off all connection at the trunk, never dreaming that he is thereby destroying the very object of keel-they agent the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a useless to refine the weight of a stellar weight of the weight of a refer to the weight of a stellar weight of the weight of a stellar weight of the weight of a stellar weight of the weight of a stellar weight of the weight of a stellar weight of the weight of a stellar weight of the weight of the weight of the weight of a stellar weight of the weight of the weight of the weigh

our wooden craft, as they differ in model and service, and the consequent strains vary materially from the vessels in vogue abroad. With allowances for this wherever pertinent, we may well as the property of the property o

BALLAST ON THE KEEL.

Editor Forest and Stream:—

The experiment of putting seven tons of iron on the keel of my schooner is a complete success, as it lets my bull rise ter and a half inches for the water and disposes with fifteen tons of inside ballast. I only use twelve asid a half fores now instead of twenty-before for all ordinary purposes, and makes her far stiffer in a blow and sea. It has also skirpnend her entarance greatly.

Old cronkers said is would make her "loggy," but on the crond as a tipe of the contract of the

outside makes a vessel sluggish is a fairy tale unsupported by facts.

The Largest Club.—Although the New York Y. C. takes precedence, as to tonnage, over all others, we find from the new

club book of the Beverly Y. C. that to it must be conceded the largest number of sail enrolled in any club in America. The flect is composed of ten schooners, seventeen stoops, two steamers, three yawks, three curiers and forty-eight cutboats, a total of club is the proportion of owners to members, the majority being yacht owners. There are 101 members all toid, or one yacht to one and one-quarter members on an average, a showing not equalled by any other organization. The flowerly Y. C. sailed ten consultation of the proportion of owners on an average, a showing not equalled by any other organization. The flowerly Y. C. sailed ten the Union regath, satisfy of Sampscott, Aug. 23d, there were like entire, interty-nine starters, and cighty-now yachts actually finished the course. That is business; that is yacht racing in current. The club book shows system in its arrangement, especially appendix giving information about last year's reeing is valuable to all anxious to collect reliable data concerning the conditions of yachtime each year. Other clubs might follow the plan to advantage. The officers of the club are: Commodore, Walter bloyd appendix giving information about last year's reeing is valuable to all anxious to collect reliable data concerning the conditions of yachtime each year. Other clubs might follow the plan to advantage. The officers of the club are: Commodore, Walter Loyd K. Burgess, F. C. Lowell, Goo. P. Gardner, J. G. Mion' and R. S. Scars. There is a notable absence of admirals, fact surgeors, rear commodore, divines and such, which proves the club to be organized to report and not for dishing out gold lace to all bands.

organized for sport and not for dishing out gold lace to all bands. Nice RegArza.—As suggested in these columns, the Nice Regatta Committee has changed its mind, and in future will adopt the sailing rules of the British Yacht Racing Association instead of trying to reform the world backward. The Yacht Club de France, the Yacht Club de Portugal and the Societide Stegated France, the Yacht Club de Portugal and the Societide Stegated Spanish coasts have requested the Y. R. A. to assist them in drawing up their programmes. This is a step in the right direction, and will insure fine racing in the Medicirance in the future and make it worth while for Englishmen and Americans to send racing yachts to these waters.

CLEYBELAND YACHE CHEM.—This club is the first outside of the New York Y. C. to adopt a rational and sound rule of measure-ment, based upon the multiplication of all three clic fairnesions, a fact which should go on record to its credit. The conservatism with which Eastern men chirg to old and silly customs does not lamper the younger blood out West, and we are glad to see such away on the right tack at the start. The combing matches of July 5th promise to be the best attended of any racing ever done on the lates.

the lakes.

CABLE LOCKER.—For ebonizing cherrywood, Rezzil wood, nowlee ed nut gait and alum are bo-led in the water until a blackish
solor is obtained: the liquid is filtered and applied to the wood,
which is then next washed in a liquor made by digesting strong
suegar and a little oil of virtoi for some time with excess of iron
turnings; thoroughly west the weod, dry and oil. For staining
one one powdered logwood, one-half cunce green virtid and
one-half ounce verdigris are boiled with water, and the solution,
literad but, is applied, to the wood, which is then coated with a

A Belic of Waterloo.

"Some Guns I Have Owned."-Sr. CLAIR.

OR the amusement of the readers of the Forest and STREAM each ought to contribute occasionally a song, a story, or a toast; something that will lead us back to our boyhood's thoughtless, happy days; to the times when a gun-no matter how ancient or ugly-was a gun, and we rejoiced in the ownership thereof; and I am fully satisfied that nearly every reader of your farreaching paper can look back with a certain amount of pleasure to the time when he shouldered his first gun and went forth to frighten every cow-boy, bird and beast in the country side.

After reading St. Clair's experience with his pot-metal gun, and enjoying a good hearty laugh at the mishaps of the darkey and the ducks, I leaned back in my rocker and fell into a sweet reverse, retracing life's checkered pathway until I reached my boyhood-there I handled anew my first gun, climbed the heath-covered hills of my native land, scented the sweet perfume of the broom, the heatherbell and the hawthorn, heard the warbling notes of the lintey and the thrush as I wandered amidst the whins and the brackens, or watched for the rabbits and the hares amongst the bent hills; in fact found myself in the midst of the scenes of my youth, and the central figure around which all clustered was my first, my bent gun. It is the awakening of such memories as these that endear the FOREST AND STREAM to its thousands of readers in this and the mother country.

Born in the Highlands of Scotland, an only son, and the almost constant companion of a doting grandfather, who was chief forester, or, as the tenantry usually called him, "head gamekeeper," on the estates of Lord -, in the North of Scotland, under whose guiding hand I drew my first inspiration and love for the gun and the field, how often I have watched the welltrained dogs, heads creet, quartering the ground, then to a stanch point, then the flush, and the old gentleman dropping brace after brace until Simms, the under keeper, would grunt under the load. Then, returning to the castle at evening, grandfather would doff his flask and pouch, throw them across my shoulders, hand me his gun, and I would follow Simms to the gun-room as proud as if I had been the huntsman of the day. I had

often begged to be permitted to carry an old double-barrel filmt-lock that stood at one end of the gun-rack unused, but without success, and I became impatient under the restraint. I must have a gun, must learn how to shoot; so I put my wits to work to accomplish that end. In the village lived an old pensioner, Sergt. Douglass, who had served in the Forty-second Highlanders through the Napoleonic wars, and was discharged on account of three wounds received at Waterloo. I was a great favorite with this old soldier, and, when not in the field or at school, I could be found stretched on the grass in front of his cottage, he, with an old nusket across his lap, tell me thrilling stories, of the scenes he had passed through. Waterloo was the pride and glory of the old hero's life; there he would sit for hours, describing the battle, and the prominent part his regiment took in it, how the French horsemen would ride up within a few feet of the square, and by squadrons fire their pistols at the infantry, trying to make a gap through which they could spring to cut down the regiment, but with but little effect, as the men would close up the gaps as fast as made, knowing that their safety and existence depended on keeping a close front. Then the bugle would sound the retreat, and the regiment open up, fire one volley, when back the French would come in full charge to find the squares reformed to receive them. How at the end of one of those fierce charges the Duke of Wellington rode up to the Forty-second, and pulled the star from his breast, threw it in the square, telling them they deserved to wear it better than he. How the old veteran's eyes would sparkle, and his bent figure become erect as he would tell of the last charge of the "Old Quard," led by Marshal Ney, how the from Duke sat camly on his horse behind the Highland Bigade which held the center, watching the approach to the flower of the French army, led by their bravest general, while the French cannon, concentrated on the devoted Highlanders, plowed broad furro part as they lay flat on their faces awaiting the dreaded encounter. And when the head of the column, led by Ney, began to climb the ridge behind which the allied lines lay. Wellington gave the never to be forgotten order "Up Guards, and at them." Then the old war-worn here would spring from his chair, grasp the old musket, go through the motion of loading and firing, until when his strength the motion of the stop the third french bullet had entered and prostrated him to the ground. How little did I think, while listening to the old soldier, that I, too, would pass through a fearful conflict, in a distant land, in defense of the flag of my then unknown, but now dear adopted country.

After one of these evenings, I proposed to purchase the

dear adopted country.

After one of these evenings, I proposed to purchase the old musket, offering all my wealth—five shillings. The old man shook his head; he would not sell. After a long silence he said; "My son, I am growing old and have no children. If you will promise me that you will never disgrace your flag, or bring discredit on your country, my old companion is yours as a gift." The promise was given, and, I trust, thus far faithfully kept, the musket placed in my lands; four feet and a half of it was an inch in length! fitteen pounds of it was an ounce in weight! sixty-two caliber of it was a hair breadth! and as to the lock, once a flint, now a percussion, it was the very embodiment of solidity and strength.

My eyes opened to their fullest extent; I was the owner of a gun, but such a gun! I could scarcely carry it. I stammered out a thanks and started off, the undisputed owner of a gun "to have and to hold" (St. Clair, is that quotation right?), but afraid to carry it home. After thinking it over, I resolved to take Simms into my confidence, and

owner of a gun "to have and to hold" (St. Clair, is that quotation right?), but afraid to carry it home. After thinking it over, I resolved to take Simms into my confidence, and went to his lodge and handed him my prize. He, after inspection, said: "Why, Alec, this is Old Waterloo." After a parley she was placed in the gun-rack. I slept but little that night, thinking how I could lighten my gun. A happy thought struck me; I would cut her oil, and with that purpose I was at the gun-room bright and early, just as Simms was started on his morning rounds. He left me in possession of the gun tools. I took the musket to pieces—a big job—measured twenty-eight inches, and with a file cut the barrel oif; cut two inches from the end of the stock, and shortened it to one foot in front. This had taken me the greatest portion of the day. I had forgotten all about dinner. Grandfather, who had been searching for me, dropped into the gun-room. He picked up the barrel, looked at it, then at me, while a dark frown gathered on his face. He then took up the stock; the frown grew deeper and darker. I moved toward the door. At length he placed the barrel in the stock; raised the piece to his shoulder several times, and slowly a pleasant smile took the place of the frown and I was safe. He said: "W-e-l-l, go on, you will have a gun after a while." Hen left me.

Next day Simms proposed to go to the blacksmith with me to have a thimble and a catch for the barrel put on, which was done, and the mainspring weakened and tube filed down to fit a common cap. I tound an old ramrod, which took the place of the iron one, and after a week's rasping and scraping I brought the stock down to reasonable proportions, and finally ended by having a

short, heavy, compact gun, that fitted my shoulder to perfection. Simms was my instructor. I was an apt scholar, and was soon at liberty to enter the rockery, where I could shoot crows to my heart's content, but I was denied the fields under the plea that I would frighten

where I could shoot crows to my heart's content, but I was denied the fields under the plea that I would frighten off the partridges.

This was my first gun, and many were the hares, rabbits and birds that bit the dust before it. I have owned and do own some fine guns, but not one of them could or can throw the shot further, harder, or closer, and not all of them put together can awaken such pleasant memories as dear "Old Waterloo."

Toward Christmas I had to return home. Major Cummons Gordon owned a fine estate a few miles northwest from Elgin, known as Rosevalley, well stocked with small game. It was a custom of the Major to give his tenartry each year one week's hunt, between Christmas and New Year's day; a custom by the way that every landed proprietor in Great Britan would do well to adopt, as it would draw their tenants closer to them and make them their friends, and would be the means of preserving much game now destroyed; while the amount that they would shoot would be but small, as none of the farmers are ex-

game now destroyed; while the amount that they would shoot would be but small, as none of the furmers are expert shots. I had looked forward to this annual hunt with much anticipated pleasure. I was on the ground early. Mr. Finley, the local keeper, assigned me with George Hutchenson, John Laing, Eric Grag, John Hutchenson and James Forsyth. We started from the bridge between the plantations at the outlet, thence through the whins to the "Clarkley knows," thence east along the hills toward the "Old Granary," thence through the Charleston farm to the starting point; a circuit of about five miles.

ward the "Old Granary," thence through the Charleston farm to the starting point; a circuit of about five niles.

We formed an open skirmish line, preceded by a lot of cur and colley dogs and followed by a "drop shot gang"—St. Clair must excuse me for drawing on him—bent on seeing the sport. Hares and rabbits were plenty, and my companious kept up a constant fusilade, bringing down no game however. I kept my place in line; Old Waterloo looked her best, but saying nothing. We had climbed half way up the face of the knows, when a large hare started down to the left of the line, making straight for the hill, as hares always do, running the gauntlet of four guns, which were duly discharged at it without effect. As it passed in front of my stand, some forty yards distance, my eye caught the springing object; I raised Old Waterloo and fired; the hare doubled up and rolled like a wheel for twenty feet, when it fell dead; the dogs barked, the boys shouted and the men gathered to see the dead with as much interest as if it were a grizzly bear. They looked at me and at my gun in wonderment. Perhaps I was not the proudest being on that hill. It was the first thing killed by me on the run, and I was happy, and I think of it even to-day with pleasure. A new start was made. During the afternoon I got a fair shot at a partridge on the wing and dropped it. That made me the hero of the day. Toward evening we reached the bridge, the game was counted and I was the only person who had killed two. The grand hunt was wound up by a big supper and a dance at the "Old Granary," to which I had the pleasure of escorting Miss Annie R., a spruce little maid of some twelve summers, and the belle of the valley; this as a reward for success on my first grand field day. Can I ever forget it, or the clumsy old gun that I carried? Never whith emenory holds its sway.

Cape Girurdeau. Mo.

olas its sway. Cape Girardeau, Mo.

THREE WEEKS IN THE WOODS.

THREE eventful weeks had Domas and I passed in the wilderness. Like boys we had roamed and revelled in the wild woods, gaining stores of strength and health from the clear balsamic air, the pure spring water and our close contact with nature primeval. Confortably domiciled at "Uncle Tom's Camp"—located near the shore of a beautiful forest-bound lake—we taken it in an easy port of way symbolism called.

Comfortably domiciled at "Uncle Ton's Camp"—located near the shore of a beautiful forest-bound lake—we had taken it in an easy sort of way: exploring, collecting, hunting and fishing, as the mood suited, making daily excursions, whatever the weather, and nights we "slept the sleep of the weary."

Now a day devoted to botanizing, when numberless specimens of the charming boreal flora would be collected, followed by an evening's work in analyzing and in "putting to press" the rare species. The next a long tramp through the tangled forest, piloted by Edward, the best of guides, to a secluded mountain stream, still inhabited by that always interesting animal, the benver, finding astonishing evidences of their strength and sagacity in the extensive "cuttings," curious houses and succession of strongly-built dams, which met our view, a sight vouschafed to but few sportsmen of the present day and soon to be a thing of the past.

Ornithology claimed a share of our time, as a list of over seventy species of birds seen and carefully identified will testify. Domas spent many anxious hours in perfecting this list, and many more in patiently preparing and preserving the skins of sundry strange looking fledglings, which will doubtless receive proper attention

at some future meeting of the "Nuttail Club," and the

at some future meeting of the "Kuttaii Club," and the species be fully determined.

We had clumbed Norton Hill, the bighest in the immediate vicinity, and also the highest tree on top of it, and been vicilly repaid by glorious pictures of the grand forest: thousands of acres—bills, valleys, mountains, lakes and streams, mile upon mile of leafy billows, dot forest: thousands of acres—hills, valleys, mountains, lakes and streams, mile upon mile of leafy billows, dotted here and there with genus of sparkling water, and thank Heaven, unmarred as yet by the axe of the lumberman. An unobstructed view in every direction, a "vast panorama of nature" spread around us—Maine, New Hampshire and Canada at a single glance. Who wouldn't shin up" a ninety foot spruce, with the absolute certainty of ruining his clothes and a fair prospect of breaking his neck, for such a reward?

We had occasional nows from the outside world, for half a dozen hunters had straggled into camp during our strugers, yet in a few days like old friends—such are the amenties of the woods. Pleasant acquaintances one makes in this way, for only true sportsmen and lovers of nature care to penetrate its solitude, and such, wherever met, are always gentlemen.

Our evenings were spent much in the usual manner, rehearsing the events of the day, laying plans for the morrow, telling stories, smoking, discussing the habits of game and the merits and demerits of different makes of frearms.

rehearsing the events of the day, laying plans for the morrow, telling stories, smoking, discussing the habits of game and the merits and demerits of different makes of firearns.

Our presiding genius was "Uncle Tom," an ideal representative of that nearly extinct species, the "Northern Trapper." Well informed and not unfamiliar with the world, having served in the Union army under Gen. Banks in the late war and tasted the horrors of a Texas prison pen, after the disastrous Red River expedition, though the best part of his life had been spent in the woods, engaged in his favorite pursuit. In winter he cads the life of a hermit, without even a dog for company. In summer the monotony is varied by the advent of a few sportsmen, but winter or summer, whatever befulls, unruilled, imperturbable, contented and happy. In fact he has dwelt here so long that he seems to have been assimilated by and to have become a necessary part of the wilderness, like the moose, deer and fur-bearing minals, whose habits he knows so well and with whom he seems to be on such intinate terms. Bluff, honest, kind-hearted "Uncle Tom" "may you live long and prosper."

The speckled trout had not been neglected, for we had

prosper."

The speckled trout had not been neglected, for we had trated their size and flavor from each inlet, stream and brook within reach of camp, not forgetting an old beaver pond back among the fulls—where, in a deep, black pool, we had taken our largest string of all. Our trip to this pond Domas will probably never forget, for he boldly and rashly attempted its navigation in a rude, half-finand rashly attempted its navigation in a rude, half-lin-ished digout, and his breadth of beam exceeding that of the novel craft, he soon became fast wedged anidships, and when the inevitable capsize came the dugout seemed to have the best of it, and for a time was complete mas-ter of the situation. Fortunately no serious results fol-lowed, and Domas, though claiming to have seen strange

ter of the situation. Fortunately no serious results followed, and Domas, though claiming to have seen strange visions while groping among the ancient canals and submerged dwellings of the original dam-builders, thinks on the whole that he does not care to try the inverted style of lishing again. What the trout thought when that being countenance and well-known eyeglasses appeared so suddenly among them will never be known.

Did a hay it senze us? the lake was at hand and the "lunge"—local for the Salmo confinis—were ever ready to be enticed from their quiet haunts in the deepest waters by the alturing trolling spoon; great fat fellows they were, of from two to six pounds weight, their yellow-speckied sides gleaming in the clear water like burnished gold. A little loggy for sport, but delicious when properly served.

Ind "Unele Tim" whisper that the larder was running low? A mysterious night out on the lake with Edward would set things to right, and venison steaks would be in order for breakfast, followed later in the day by famous roasts, savory stews and the not-to-be-despised "runiser Haplacks," as the Professor called them.

We had traversed and ransacked the depths and recesses of the primitive torest to our hearts" content, and felt that our vacation had been profitably spent. Another day and the curious little one-horse jumper would be due at camp, by agreemen', to drag our worldly effects to the nearest house, and we should regretfully set our faces homeward. One long-anticipated and carefully planned hunt had been profitated and carefully planned hunt had been profitated and carefully planned hunt had been forteness the forteness the forteness the forteness them that the results of the related and carefully planned hunt had been profitates of his forteness.

FLOATING A MOOSE,

The cur was fast nearing the forest horizon when Ed-The sun was fast nearing the forest horizon when Edward and I left camp, prepared for our (to me) novel expedition. It had been one of those delicious dreamy days—precursor of the early frosts—when all nature seemed in repose. Scarce a ripple disturbed the surface of the placid iske, nestling here among the dark green hills full 2,000 feet above the sea level. Even the bird music was hushed for the time, and silence reigned suppose.

music was hushed for the time, and slience reigned superence.

The light beat—Adirondack model—was soon in readiness, and the "good lucks" of our friends follow us as we push off from the little log wharf at the landing and shoot out on the tranquil boson of — Lake, at this point about one and a half miles across.

The pale lidne smoke curis in lazy wreaths from the smouldering camp fire behind. In front, on the opposite shore, the soft purplish haze is beginning to shroud the sombre forest and creep up the sides of the nearest hills, finally engulfing all in one great sea of shadowy mystery. A solitary kinglisher sits motionless on the dead top of a prostrate birch close in shore, and with head turned a little one side his keen eyes scan the depths below. A sudden swoop, a loud splash, and he sliently resumes his perch and gulps down the finuy morsel, fruit of his patience and skill.

A lamily of loous are plainly seen disporting far down

hattence and skill.

A lamily of loous are plainly seen disporting far down the lake, near the outlet, the thin veil of mist rising from the water magnifying their bodies to unnatural size.

A pair of goshawks (Astur atricapillus) are wheeling and ercling over yonder wooded point, their long sharp wings and bright gray plumage, as seen by the waning rays of sunlight, giving them much the appearance of eageralls.

rays or storing, giving them inder the appearance of sea guils.

An occasional "lunge" rises indolently to the surface, causing a frantic scattering of the schools of minnows which inhabit the shallows,

Suddenly, from a dark mossy ridge comes the liquid, silvery, Inte-like notes of the hermit thrush: a song rarely heard, save in the very depths of the wilderness, and which, to me, never seemed to belong to earth at all, but rather to be the voice of some sweet spirit from a heavenly sphere, it is so clear, so pure, so mysterious. As we near the middle of the lake we are witnesses of the marvelous cloud effects sometimes seen in a "morthern sunset," when, as the sun sinks in the West, the delicate rosy tints appear in the East, deepening into purple, gold and crimson splendors, till the whole sky is ablaze with a flood of swiftly changing eolor, rebueted from cloud to cloud, from peak to peak, and mirrored in the capasy surface of the lake as well. When we reach the opposite shore all is changed, the sun has disappeared behind the dark line of tree tops and the gorgeous colors have paded and faded, and only a dull guiden afterglow remains. The mountains reappear in their natural gard of blue, and the mist thickens o'er lake and stream.

The boat is drawn carefully ashore, and Edward shoulders his "pack basket," containing all things needful, and paddle in hund strikes into the seemingly "pathless woods;" but sharp eyes can detect the occasional "blazes," which indicate one of "Uncle Tom's saple lines," which we are to follow for a couple of miles to the head of the "unick water" on Fast, Islet

we are to follow for a couple of miles to the head of the quick water" on East Islet.

"quick water" on East Islet.

It is a typical primeval forest through which we pass, a vast boreal swamp, covered with a dense growth of majestic spruces, and carpeted and cushioned with velvet mosses and delicate vines, among which peep a few of the exquisite rose colored bells of the twin flower, the favorite flower of the great Linnous, and bearing his name (Linnous borealts), though long past their usual season of flowering.

"In the richest moss of the lonely dells Are its rosy petals found, With the dark blue skies above it spread, And the lordly trees around."

"In the richest moss of the lonely dells
Arolis rosy petals found."

The long, low mounds, which lie blended like gigantic forest jack-straws in overy direction, show where the aged monarchs have fallen, and are going the way of all things earthly; but nature has carefully and tenderly covered them all with a mantle of unbroken verdure, so that scarce a sign of decay appears. The partiage-berry (Mitchella), the dainty oxalis (O. acetocella), the linnea and snowberry (Chiopenes hispidula) mingle their creeping tendrils and trailing vines, and with soft, feathery mosses we with each other in this kindly office of forest sepulcher, Great lichens, triple-leaved trilliums, bright clusters of the bunch-berry (Cornus canadensis) and masses of the dark, shining leaves and deep blue berries of the clintonia (C. boreatis) vary the scene.

An the trail approaches the stream the forest assumes almost a tropical appearance, from the profusion of ferns which grow here to almost a gigantic size, and for a time we are nearly lost to sight among the tall plume-like fronds of Spirutlosua and Osmundas. The white-threated sparrows (Preabody) and the olive-backed thrushes are singing their vesper songs, and somber-robed snowbirds (Jance hymels) tilt from our shadowy path.

Aubduced tapping attracts our attention to a hollow tree close by, and we catch sight of a pair of banded three-toed woodpeckers (P. americanus) busily engaged insearching the decaying trunk, their movements plainly showing that the "early bird" is not the only one that "catches the worm."

We finsh an occasional ruffled grouse, but the spruce patridges (P. canadensis)—by far more numerous—sil like chickens, with out-stretched necks, stupidly gazing, as if lost in wonder, at the sight of the intrequent visitors: a common habit of theirs, and one which leads to their sure extermination—for they are easily taken with a simple noose tied to the end of a short poic.

A brisk walk of an hour and we have passed the last "rips" and are near the foot of the viced-water,"

portions of the bog.

Little islands and clumps of dwarfed and venerable

Little islands and clumps of dwarfed and venerable looking spruces are scattered through them, their gnarled looking spruces are scattered through them, their gnarled and cone-laden tops heavily draped with flowing locks of the "old men's beards" (Usmeo, giving a strangely weird and desolate appearance to the scene, like funereal oases in a mossy desert. Late in the fall the caribou range through these bogs in scarch of their favorite moss, and the well-defined paths which cross them would indicate that they come not singly, but in droves. The moose are also said to frequent them at certain seasons, and probably a few stay in the vicinity the year round.

A previous visit to this locality on a trouting expedition had demonstrated the fact that they occasionally "watered" in the stream, for the broad-pointed tracks in the soft bed were too fresh to pass umoticed, and the

"watered" in the stream, for the broad-pointed tracks in the soft bed were too fresh to pass unnoticed, and the indefatigable Edward had not only backed a light boat all the way from the lake, but had also, with a small hatchet and hunting knife, opened up a passage almost the entire length of the "still water" by lopping off branches,

cutting out narrow places and breaking through small drift-dams, which obstructed the channel, in anticipation

criting out narrow places and breaking through small drift-dams, which obstructed the channel, in anticipation of the present occasion.

Forcing our way through the alder belt, we emerge from under the leafy canopy and again get a view of the sky above—the full moon has risen in the east, a soft darkness has settled upon the earth, and imperceptibly day has passed into night.

The light skiff is drawn from its place of concealment in the thick underbrush, a blanket is carefully spread inside, that no incartious blow of paddle or boot heel may awaken the echoes in the silent forest; even our conversation is now carried on in whispers, for this still night air is a most wonderful conductor of sounds, and a slight indiscretion on our part might ruin our sport for the night.

ght.
Silently the frail bark glides, snake-like, into the vista Silently the frail bark glides, snake-like, into the vista of dark shadows, propelled by Edward's noiseless publile, and we wind about between the black walls of foliage, turning sharp elbows, piercing through little openings, where the stream widens out into grassy bays, now crouching low to escape a fallen log, and then fast in a sunken tree top; now in the full light of the moon, then passing suddenly into a dark tunnel of overarching shrubbery, where the tortuous channel narrows to a few feet in width.

Scarse of small birds flit from their roosts in the low

feet in width.

Scores of small birds flit from their roosts in the low bushes, and disappear in the deepening gloom. The water rats give one glance of surprise, and make desperate plunges for their subterranean retreats in the river banks. With folded necks and outstretched legs a couple of herous (Ardea herodicus) wing their heavy flight over us, bound for some favorite fishing pool far urthe stream.

river banks. With folded necks and outstretched legs a couple of herons (Ardea heroidas) wing their heavy flight over us, bound for some favorite fishing poel far up the stream.

In a little meadow we catch the shadowy outlines of a deer, as he raises his head from drinking, and then bounds madly away, safe, for to-night our thoughts are on nobler game.

The distinct blows of an axe suddenly startle me. "Uncle Tom is splitting his kindling-wood," whispers Edward, The sound proceeds from camp, full five miles away, "as the crow flies," yet seemingly a dozen rods, so clear and still is this telephonic night air.

Tis time our game was afloat. For nearly two hours we have warily followed the serpentine windings of the noiseless stream and are approaching a point opposite the main bog, where a moose path crosses. Hark! Edwards quick ear detects some disturbance in the water ahead; it may be the river beaver, it's too loud for the muskrats. Slowly the boat moves around the intervening bends; the noise grows more distinct: a constant sousing and splashing of the water; some large aritual is in the stream above. The pulse quickens, every sense is on the alert; a few more strokes of the paddle and I shall be able to see past a clump of tall rushes which hide the game from view. Alas! at the critical moment a treadurenus root catches the bow of the boat and breaks short off with a loud snap, a sound which all the wild designes of the forest fully understand. A great surge and "swirl" in the water, a quick rush up the steep bank, followed by a prolonged crashing through the dense maze of brushwood, and the startled beast strikes the ridge beyond; a few moments of apparent uncertainty and then we hear the retreating footsteps as he steals away up stream, By his deliberate retreat, we know that he has not "winded" us, and there is a possibility of his again coming to water, higher up, though the chances are against ii, for suspicion is a leading trait in the character of a moose. A whispered consultation, and we decide to

her, sturry along in a compact body a few yards from the boat.

Another hour of anxious expectancy—the steady strain on the nerves gets to be nimost painful. The sonbre outlines of the mountains in front are beginning to "loom" above the tree-tops. The stream grows narrower—we are nearing the head of the "level." A slight snapping of the brush, followed by a light footiafl on the clastic moss, causes an instant hait. The sound proceeds from a dark copse ahead, to the right. The steathy trend comes nearer—a few steps at a time and then long pauses—the suspicious animal is heading for the stream and will strike it but a few rods above where we lie in the deep shadows. Eyesight and hearing are now scruined to their utmost tension. With a haish "squawk" a heron suddenly rises, scared from his necturnal repast, and working his ponderous wings file an old-fashioned mindmill in a frantic effort to clear the full bushes—a good omen, for now we hear the quarry boldly bushes—a good omen, for now we hear the quarry boldly old-fashioned mindmill in a trantic chort to clear the tall bushes—a good omen, for now we hear the quarry boldly enter the water. Slowly and noiselessly the boat moves forward, and in a small "slow hole" or creek near at hand, where the slanting monbeams penetrate. I get a glimpse of a broad circling ripple in the water—in the middle two black legs: the body of the animal is lost in the obscurity of the background of alders. Taking an instinctive aim, I press the trigger. The lond report is glimpas of a broad circling ripple in the water—in the middle two black legs; the body of the animal is lost in the obscurity of the background of alders. Taking an instinctive aim, I press the trigger. The loud report is followed by a cloud of snoke, through which I see a great, shadowy body make a convulsive spring to the very middle of the stream. A moment of suspense, then a wild, headlong gallop up the river bed for fifty yards, and a tearing and crashing through the brush-belt. We followed at a respectful distance. Again a heavy crashing through the thicket further away, a few short grunts, a dull pounding of the ground, and all is still.

Thinking it hardly prudent to follow up our game till daylight, and knowing we should need more help in any event, we decided to return to camp, first marking the spot by jeaving our extra paddle stelling in the soft bank. No fear of making a noise now, and we sweep down the winding stream at a lively race, and by 1 o'clock the "swish" of the rapids warns us ashore. Edward now produces a small "bullseye" from his basket to aid us in licking our way through the gloomy swamp.

Not an easy matter at dead of night, this "traveling through the mosay graveyard of trees," as Thoreau describes it, especially when encumbered with a ten pound

breech-loader and following a veritable will-o'-the-wisp

breech-loader and following a voritable will-o'-the-wisp light.

The unearthly stillness of the forest becomes after a time almost unbearable, and the lugubrious hoot of a drowsy old owl (Bubo virginianus) is welcomed as an agreeable change. "Too-hoo-too-hoo," a pause, as if overcome with sleep, then a long drawn out "too-whar," and he relapses into his normal condition.

The proximity of the lake is heralded long before we reach the shore by the hoarse croakings of the great green-headed frogs (Rana fontinalis).

The snug boat is again launched, and we are once more affort. The reptilian concert suddenly stops; the dip of our paddles has alarmed the choristers, but their fright is soon over, for before we are fairly through the frings of aquatic plants that border the lake shore they are at it again, old and young, great and small, a regular "go-as-yon-please" affair.

Tis a beautiful night—not a cloud in the heavens. The great full orbed moon sails gloriously toward the West,

The a beautiful mgit—not a cloud in the heavens. The great full orbed moon sails gloriously toward the West, shedding a flood of light on all below. The rippling surface of the lake shimmers under the bright radiance like molten silver.

Conspicuous in the southern sky are Jupiter, Mars and

Conspicuous in the southern sky are Jupiter, Mars and Saturn, ranged in line near by the three glittering diamonds in Orion's slant-wise both, pointing upward to the Pleiades and downward to the great brilliant Sirius, just risen above the mountain top. The blue vault overhead is bespangled with faintly twinkling stars, and all around us lies the black, silent, coniferons forest. A dim light appears low down across the lake; "Uncle Tom" has lump out a lantern for our guidance. The loons have now discovered our presence and their intensely mournful, wailing cries rudely break the solemn silence of the stilly night.

tut, waning cries rudely break the solemn silence of the stilly night.

For half an hour the paddles are vigorously plied, when we "tie up" at the little wharf, and taking down the signal light make our way to camp. "Uncle Tom" rolls out of his bunk as we enter, his burly form clad in but a single garment. "I thought you were a-comin", boys, for I heard the old loons a-poopin'-er-up out on the lake. What did you lire at?" The situation is soon explained, our early breakfast ordered, and then we stretch ourselves for a short nap; but no sleep for me, the events of the night were too fresh in my mind for that.

By sunrise we were up and away, accompanied by Domas; another boat follows later with the Professor—who was much interested in all that perfained to "moose-dom"—and his guide.

who was much interested in all that pertained to "moose-dom"—and his guide.

The little clearing about the camp is alive with birds—purple and pine flaches, crossbills, flycatchers, sparrows, wagtails, snowbirds, and even that little winged gem, the ruby-throated hummer, has found his way here and is busily darting about among the bright blossoms of the fireweed (Erechthites).

The lake and the long curry are passed, and we are again winding our way up the crooked stream, no longer flowing through a deep narrow gorge, as appeared last might, but between hedges of green shrubbery and graceful vines, bright with starry blossoms of the galiums, and what then were buttresses of jagged rocks are now innocent rushes and branches of brown-tufted sedges. Numberless warblers frequent these river thickets—vel

and what then were buttresses of jagged rocks are now innocent rushes and branches of brown-tufted sedges. Numberless warblers frequent these river thickets—yellow-rumps, black-throated blues, black-polls, blue yellow-backs, redstarts, black-and-yellows, the bay-breasted and the gaudy blackburnians, all flud here summer homes and unmolested breeding-places.

Liere, for the first time, we see the bright magenta plumage and hear the mellow note of the pine gros-beak—the Canada jays (moose birds) scream their discordant welcome as if already senting a bloody feast; but even Domas loses his interest in the feathered tribe—for a time—as we approach the scene of last night's foray. The puddle is found sticking in the river-bank, and close by, the trampled, muddy grass and deep footprints show where the wounded animal left the stream. Silently we step from the boat, and, with bated breath and rilles at the "ready," follow Edward, who, Indian like, is "working up" the trail. Worming our way through the tangled alders we come upon an opening or bit of "swale." Here the circle of crushed spinagnum, with a dark pool of blood in the center, gives abundant evidence that the game is "hard hit," and cannot be far off. A fow rods further, through another brush belt, and Edward cries out, "here he is." We press forward, and there, in a little mossy glade lies the noble quarry "prone and stift."

I confess to a thrill of pleasure as I viewed the glossy black coat, the long, clean limbs, the ugly, clove-brown lead, mule-like ears, and immense "mouille" of my first moose—the Ceruns afces of Linnaus, largest of all the deer family, and the noblest game of the North American forces.

DO SNAKES HISS?

EVIDENCE THAT SOME DO.

Cameridue, Md., June 21st.

CARREDUE, Md., June 21st.

This question came up for discussion two or three years ago before some literary or scientific club in Baltimore, Md., and at once attracted my attention. It seemed to me a curious fact that a belief so universal should not be established upon the evidence of observation so frequent, that in any company of persons familiar with the woods and fields, facts of this mature would recur to some one of them. And yet upon reflection, though quite positive that I had often heard this sibilant sound from such a source, I could not fix upon the exact instance of the "time, place, and circumstance." A day or two subsequently, in walking to clutter on a Sunday morning, I was suddenly conscious of the presence of a viper, commonly known as the "puffing adder," directly across my path. Stopping, I observed him contort his body to some degree, then flatten his head and neck until both lost all semblance of their former shape and proportions, dart out his tongue in quick and angry menace,

and then utter a hiss so loud and distinct that I had never heard it exceeded by parent geese in defending their young. In my astonishment and gratification at the incident I stood observing the creature for perhaps a minute, during which time the same sound became almost continuous, rising and falling in its force and distinctness, until finally I closed the interview in manner and form most customary. I at once wrote for publication in the Baltimore American, for the information of all interested, and for the special edification of the life-rati aforesaid, a brief account of the above occurrence. My recollection of the matter is that it was during the spring months, probably in May. At this season these smakes are most numerous in this locality—at least most often visible. A full grown one is about three feet long and perhaps one and a half inches at its largest diameter. They are marked across the back and sides with yellow and black bands or spots, greatly reminding one of some specimens of the ratificensie. They should be entirely harmless, however, since they are destitute of fangs similar to those possessed by their renomous congenerathat is, of any fangs whatever.

Since writing the above I am enabled to add the following observations:—
Yesterday, my son and a young gentleman from Baltimore started out for a stroil, leaving me sitting on the porch. In a few moments I was startled by cries, and observed our visitor running toward the house. Soon as he came near enough to hear and understand what he said, it was ascertained to be that his companion was then standing guard over a snake in the act of hissing. I hurried to the spot with commendable celerity, and found a viper which proved to be, on measurement, twenty-four inches long, exhibiting the phenomenal characteristics of his species. He was shooting out the tongue—not in ridicule or derision, but with true ophidian instinct, and hissing with a persistence and pertinacity that suggested his high estimation of the faculty, either as a weapon offensive and then utter a hiss so loud and distinct that I had never

tongue—not in ridicule or derision, but with true ophidian instinct, and hissing with a persistence and pertinacity that suggested his high estimation of the faculty, either as a weapon offensive and defensive, or as a valuable part of his business capital. Not in the least intimidated, we proceeded, with great care, to put him through his scientific paces, and hold him under observation some ten or fifteen minutes. So soon as he discovered we were not frightened at anything he did, he seemed to be animated by the single purpose of withdrawing from the convention. This purpose, for the nonce, we resolutely thwarted, and had the satisfaction of noting that while in our company the reptile appeared to be in a chronic state of anger, not unmingled with fear. The flattening of the head and neck, the perpetual display of the tongue, the nearly constant hiss, all showed it. The hiss especially was its most intense act of intimidation. When the creature would, for the moment, be lying quiet, yet with the head and neck of twice their ordinary breadth, and protrading the tongue at intervals, stroking the head or neck with the point of a stick would instantly invite the threatening hiss. This act was accomplished during expiration. The creature would seem to inspire strongly, apparently inflating four-liths the length of his body with air, and visibly increasing its diameter to twice its undilated size, and then forcing the air out, either through its mouth or nostrils, or through both, would produce audibly and distinctly the peculiar sound. It was very curious and entertaining to observe the dilation and contraction of its cylindrical body as the air was drawn in and expelled. The entire cellular tissue under the skin seemed to be the seat of the distension, as we sometimes see in emplysema, after perforating wounds of the chest; and the langs, unless they extent through four fitths of its length, seemed to have but little to do with the act. This, I speak of as the apparent condition, assuming, of course, that the act

Springfield, Mass., June 19th.

Springfield, Mass., June 19th.

Editor Forest and Stream:— "Enquirer" expresses his doubts that snakes ever hiss. I only wish that he had been with me a few days since, when he would have been a quick convert to the contrary belief. I was gathering strawberries, and, as is customary with me when engaged thus, was on my knees. All at once I was starded out of all propriety by a loud hiss, almost in my ear. That it was a powerful hiss you will readily believe, when I tell you that it actually lifted me bodily more than ten feet, and I am no light weight either. I recovered my self-possession as soon as I struck on my feet, and knowing that it was a snake, for I had heard this same hiss bafore, I approached to see what manner of reptile he was, and found him to be a common black snake, and, as near finite I was a since, for I man heard in this same has offere, I approached to see what manner of reptile he was, and found him to be a common black snake, and, as near as I could judge, about six feet long; two feet of his length was creet, which brought his head just above the top of the bushes; his eyes were twinkling, I inagined, with delight, at the exhibition of "ground and lofty tumbling" that he had witnessed, and as I came nearer he opened his mouth and repeated the hiss; this he did three or four times, and seemed disposed to stand his ground, but seeing "blood in my eye," he evidently thought better of it, and, lowering his crest, made off a speed that defleed pursuit. Several times have I heard this same hiss, and have always found it to proceed from the black snake. I have been credibly informed that the water snake has the same habit, but have never been able to verify it by personal observation. verify it by personal observation. SHADOW.

Editor Forest and Stream :-

Editor Forest and Stream:—
In your issue of June 17th, "Enquirer" asks the question: "Do snakes hiss?" In one instance from my experience I can answer it in the affirmative. While gathering wild flowers near Croton Lake a few summers ago, in a rocky field grown up with bushes, while I was stooping to pick some flowers. I heard a distinct hissing noise, and, looking in the direction of the sound, saw a flatheaded adder (Heterodon, palatyrhinos). The noise was quite lond and called my attention to the snake,
Sing Sing, Jane 22d.

Mrs. A. K. F.

SOUTH FRAMINGHAM, Muss., June 19th.—Editor Forest and Streum:—Your Richmond correspondent, who signs himself "Enquirer," says he is by no means sure that serpents hiss, and is certain that rifles are never unerring. I have caught snakes in Virginia called "moccasins," by pinning them to the earth with a forked stick, and they emit a hissing sound not unlike the spitting of

an angry cat, but more prolonged. Your correspondent has doubtless seen the snake referred to. As regards rifles, I am of the opinion that most of the first-class riles at present in use are unerring. It is not the fault of the rifle, but of the man that fires it, as may be proved by bolting a rifle to any immovable frame, and then firing at a mark.

PUTNAM, June 20th.—Some forty years ago the bissing adder was frequently met with in Eastern Massachusetts. At one time Walde Fuher, Foster Wiley and myself were no our way to Crossmaris Pond. When near the four corners we heard our dog bark and heard a hissing sound. We hurried to the place and saw a large kind of a brown snake some three and one-half feet long, colled up with head erect and somewhat flattened, and it was up with head erect and somewhat flattened, and it was loudly hissing at the dog, which was barking at it. Waldo went back to the fence for a rail to kill the snake, while we remained near. The snake hissed loudly and continuously until it was killed. Also saw one at Plympton, which rearred and hissed at ne and I killed it. I have frequently seen them and heard others speak of them, and they were quite common in and around Plymouth woode, say twenty years ago, but are not as often met with in late years. They were considered poisonous. G. F. W.

MAN-EATING SHARKS,

N view of the recent agitation of the question whether sharks really ever eat men, the cutting printed be low, which appeared in the San Francisco (Cal.) Chronicle some time since was deemed worthy of investigation, The slip from the Chronicle is as follows :-

cle some time since was deemed worthy of investigation. The slip from the Chronicle is as follows:—
Dr. Swan, the surgoon of the Pacific Mail Steamship Calinut, which arrived in this ports few days ago from the istimus, reports an incident on the trip worthy of mention. He states that while the Colinut was lying at Acapulco, on the trip up, she anchored one day close to the Chinut. Some of the hands on the latter builted a hook and caught a shark of the man-exter variety about fifteen feet long. The shark was pulled up and out open, and in the belly was found a human arm entire, just as it had been torn by the devouring monster from the shoulder. There was also found in the maw of the shark the heel and toes of a human foot. The remains had evidently been swallowed but a short time. The arm was the left, and upon it were plainly visible the initials, tattoed in India ink, "A. H. C." About ten days previous to the taking of the shark, a sallor from a British brig then lying in the harbor, while under the influence of liquor, fell overboard and was lost. It is supposed the shark had been feeding upon the body a short time before his capture. San Jose Joe, the monster shark of San Jose de Guatemala, was recently seen by the captain of the Chinut. This shark has for many years been the terror of the coast from San Jose de Guatemala to Punta Arena. It has been so frequently seen that he is as familiar to the mariners of the coast as its most perilous headinds. He is said to be over forty feet in length, and is extremely ferocious, human kind being his favorite prey. Capt. Scabny, of the Chinut. Trails thank bean feet in the bean, and the head and tail of the shark extended past either side of the vessel. The captain of the Scath Carolina and Capt. Witherry bear testimony also to the shark's being over forty feet long. In the last few years "Joe," was he is known all along the coast, has devoured half a dozen men, and some years ago the Guatemalian government offered a reward of \$500 to any man who would kill the dev and some years ago the Guatemalian government offered arms one years ago not channel and government oureful a roward of \$500 to any man who would kill the devourer. He has been shot a couple of times and harpooned thrice, but survived these assaults, and still retains his old haunts looking for his favorite morceau.

Through the kindness of Dr. J. O. Swan, of the steamship Colima, we are enabled to print the statements given below :-

SAN FRANCISCO, Cal., June Brt.

SAN FRANCISCO, Cal., June 3d.

Editor Forest and Stream:—
Your request that I should give you the facts in reference to the shark story was received on arriving in this port from Panama on the 29th ult. I inclose a statement signed by Dr. Whittemore, Surgeon P. M. S. S. China, and by Mr. Wm. Wafer, purser of the same, and vouched for by myself. The statement is literally true, word for by myself. The statement is literally true, word for which is now the statement in the China is now in this port, where she may

word. The Chana is now in the remain a mouth.

The man eaten was doubtless the one who was lost off the British ship of war Triumph March 11th, in Acapulco Bay. Respectfully, John O. Swan, M.D., Surgeon P. M. S. S. Colima.

SAN FRANCISCO, Cal., June 3d.
While the Pacific Mail Steamships China and Colima
were lying together of Acapulco, Mexico, on March 21st,
a shark about fourteen feet in length was hooked by perwere rying together on recipitally mean tooked by persons on board the Cithia. The shark was hauled upon the ship's guards by means of loops passed over its neck and tail, and cut open. Its stomach was found to contain a human arm, a foot bitten off at the instep, and a portion of a heel. The ragged and torn condition of the muscles about the shoulder showed evidence of the exertion of tremendous force in separating the arm from the body. The arm was in a good state of preservation; the skin over the half-closed hand a little dark and wrinkled, F. W. WHITEMORE, M. D., Surgeon P. M. S. S. China, JOHN O. SWAN, M. D., Surgeon P. M. S. S. China, WHILLIAM WAPER, Purser P. M. S. S. China, Purser P. M. S. S. China,

In another letter Dr. Swan says :-

In another letter Dr. Swan says:—
In reference to the newspaper statement regarding San Jose "Joe." I will say to you that I believe it to be correct in every particular. A letter to the American Consul, or to the agent of the P. M. S. Company at San Jose de Guatemala, will corroborate it.
I am aware that many people hold the opinion that sharks will not attack a human being in the water or feed upon human flesh. You cannot, however, make the people living along the coast of Mexico or Central America believe that sharks won't devour "the form divine," they have learned by bitter experience that a shark

rather bankers for a healthy human. A case in point:
About two years since, while a negro was carrying a
white man ashore upon his back at Panama, he was attacked by a monster shark in less than five feet of water,
and his leg was so badly torn before the shark could be
forced away that he bied to death before a surgeon could
be cot.

J. O. Swan, M. D.

WINTER PELAGE OF LEFUS CAMPESTRIS,—Ames, June 14th.—Editor Forest and Stream:—If I read Coues and Allen correctly, the jack rabbit is not Lepus campestris, but L. callotis. L. campestris is the great northern or prarie hare, and does turn white in winter. Its habitat is from the Saskatshawan southward as far as Kansas. A specimen was shot near this place last winter, which I identified by Coues' description. It was white. The jack rabbit, or more properly jackass hare (L. callotis) has a more southern range, but the two species overlap each other in the western territories. L. callotis does not turn white. A friend who was on a hunting excursion in Dakota late last fall says that he saw both species in abundance. campestris just beginning to assume its winter coat, while callotis was of the usual color. Dr. Coues says on page 299 of his Monograph: "From the other American long-tailed, long-eared and long-limbed barse (L. callotis and L. californates) it [L. campestris] differs in general color, in the white upper surface of the tail, and in changing to white in winter." And again, on page 334: "L. campestris differs from L. callotis in its shorter ears, in wanting the black on the tail, and in becoming white in winter."

the shorter ears, in wanting the black on the tan, and in becoming white in winter."

The whole dilliculty is explained by the fact that we have on our Western plains two species of hares nearly the same in size, one of which, the prairie hare (*L. campestris*), turns white in winter, while the other, the jackass hare (*L. callotis*), does not.

F. E. L. Beal.

The true jack rabbit is of course L. callolis as our correspondent suggests, but L. campestris is commonly called "jack rabbit" from Kansas to British America. and it was about this latter species that the dispute, happily set right by Prof. Allen, arose.

Ediior Forest and Stream:

Edior Porest and Stream:—

I think you asked two or three weeks ago for opinions as to the change of color, with the season, of the jack rabbit. In nearly thirty years of quite intimate acquaintance with John," I have never discovered that he wears a white winter overcoat. His color varies but little. In this latitude his tail is tipped with white—a vertiable type of the "cotton tail "—but 200 miles further south and beyond, the tail tuft of many is jet black.

The rabbit of the Rocky Mountains that becomes white in winter is the Lepus bairdit, commonly known as the "Snowshoe rabbit." It is short-legged as compared with the jack, but quite as heavy boiled, and often mistaken for the latter. Its color changes very rapidly in the autuum, and by the time snow becomes general it is pure white. Its flesh is about the best of the family. Denver, Col., June 28th.

The hare referred to by Mr. Byers as having the black

The hare referred to by Mr. Byers as having the black tail is L. callotis.

This whole question was set at rest by Prof. Allen's article in our issue of June, 21th; and to that we refer "Sivad" and other correspondents who have written us on the subject.

ANIMALS RECEIVED AT CENTRALIPARK MENAGERIE FOR THE WEEK ENDING JUNE 277... 2 black-handed spider monkeys Atties bekuluth, mother and baby, presented by Mr. Joseph Joffries, Brooklyn. 1 pinehe monkey (Midas edipus), 1 gray-breasted parrakect (Dolborhynchus monachus), mah. BERLIN INTERNATIONAL FISHERY EXHIBITION.

THE PRIZES AWARDED.

N the 17th of June all was done in strict accordance, and at the exact time laid down in the printed programme, the directors, commissioners and exhibitors assembled in the rotunda, or "Grotto of Neptune," at 12, and the Crown Prince appeared at 1 P.M. Minister Lucius stated to the Prince the object of the gathering and requested him to sanction the awards as read, and then the Honorary President, Herr Marcard, read them as follows:

I, ADDRESSES OF THANKS.

The united juries have determined not to award a prize of honor nor incidal to the government of any nation for its collective exhibition, but, instead of this address of thanks, signed by his Imperial Highness, the Crown Prince, will be substituted. These addresses have been awarded to the following countries: Russia, Italy, Saxouy, Denmark, Holland, Norway, Sweden, Switzerland, the United States of North America, China and Japan.

IL GRAND PRIZES OF HONOR.

II. GRAND PRIZES OF HONOR.

1. First grand prize of honor given by His Majesty, the German Emperor and King of Prussia: To Professor Spencer F. Baird. Commissioner of Fisheries of the United States of North America, Washington, D. C.

2. Second grand prize of honor given by His Majesty the German Emperor and King of Prussia: To Herr C. Lindenberg, Berlin.

3. Third prize of honor of the Emperor, etc.: To Herr von dem Borne, Berneuchen.

4. Prize of honor given by Her Majesty the German Empress and Queen of Prussia: To Cavilier Guiseeppe Mazza, Torre del Greco.

5, Prize of honor of their Highnesses the Crown Prince and Princess of Germany and Prussia: To Ober-burgermeister Carl Schuster, Freiburg (Baden). 6. Prize of honor of His Majesty the King of Wurtem-burg: To Professor Arthenius, Stockholm.

6. Prize of honor of this majesty the burg: To Professor Arrhenius, Slockholm.
1. Prize of honor of the Grand Duke of Baden: To Consul A. E. Mass, Scheveningen, Holland, B. Prize of honor of the Grand Duke of Mecklenburg-Schwerin: To Prof. Dr. Dorhn, of the Zoological Station,

Prize of honor of the Grand Duke of Oldenburg: 9. Fixe of month of the Grant Duke of Ordenburg:
To Herr A. Stortenbecker, Director of the Institution for
the Promotion of Religion and Industry of HollandishIndia, Batavia.

10. Prize of honor of the Free City of Hamburg: To

10, Prize of honor of the Free City of Gamous, — Herr Robert Eckardt, Lubbinchen,
11. Prize of honor of the Free City of Bremen: To Herr Harald W. Fiedler, Sterrede,
12. Prize of honor of the Agricultural Club of Berlin: To Selskabet for de Norske Fiskeriers Fremme in Bergen,
10. Prize of honor of the Teltower Agricultural So-13. Prize of honor of the Teltower Agricultural Society: To Herr A. Micha, Berlin.

ciety: To Herr A. Micha, Berlin.
(These constitute the special prizes, and as the entire prize list is too long for publication it may be as well to give only the American prizes, first stating that the medals are not graded, but that all gold, silver, or bronze medals are of the same rank as others of the same material. The names are taken from the official list and are given alphabetically.)

III. GOLD MEDALS WITH SPECIAL DIPLOMA.

United States Department of Finance, Coast Survey-For illustration of the apparatus used in the deep sea fisheries observations; coast charts of the Atlantic and

Pacific oceans: publications and maps.
United States Commission of Fish and Fisheries, Washington—For grand collective exhibit of implements of fish culture, fishways, charts, models of hatching houses and publications.

IV. CLASS I.

IV. CLASS I.

This class includes all water animals whether living, stuffed, in alcohol, or represented by pictures; foods, prepared or dried, salted, smoked, powdered, in tin boxes or in process of preparation; sponges, corals, oysters and their anatomy; mussels, pearls, mother-of-pearl, radiates, worms, insects and their larve (as food for fish or destroyers of their eggs and young), crustaceans, fishes, amphibians, turtles and tortoises, tortoise-shell in different processes of preparation, salamanders, frogs and snakes; water birds, manmals living in water, and all the products of water animals.

GOLD MEDALS IN CLASS I.—Isinglass and Glue Company, Gloucester, Mass.—Frish bladders and fish glue, together with the different preparations therefrom.

United States Commission of Fish and Fisheries, Washington, D. C.—General exhibition of implements of pursuit and capture of fishes.

SILVER MEDALS IN CLASS I.—Alaska Commercial Company, San Francisco—Pictures illustrating the seal rookeries of Alaska; specimens of skins of fur-seal from the raw, dried skin to the same when dyed and finished.

Capt. E. A. Atwood, Provincetown, Mass.—Oil of mammals, as harbor-seal, cowfish, porpoise, blackfish, jaw of porpoise, etc.

J. W. Beardsley's Sons, 179 West street, New York—Dry-salted preparations: "Beardsley's Shredded Codfish:" "smoked mena-

ov. n. neurosisy's Sons, 179 West street, New York—Dry-salted preparations: "Bandeley's Shreidled Codfish," "Beehive Brand Boneless Codfish; "Smoked preparations: "Star Brand Boneless Herring," smoked preparations: "Star Brand Boneless Herring," E. G. Blackford, 72 to 80 Fulton Market, New York—Specimens of fresh fish sent weekly, as brook trout, grayling, red, snappers, pompano, stripted bases: rentiles—as

ling, red snappers, pompano, striped bass; reptiles and batrachians: great American edible bull-frogs, hell-bend-

batrachians: great American edible bull-frogs, hell-benders and salamanders.

A. Booth & Co., Chicago and San Francisco—Canned salmon; entire salmon in this fish-shaped box.

Potter and Wrightington, Boston—Smoked preparation: halibut, boneless herring, salmon; cooked preparations, in cans: fresh mackerel, fresh lobster.

Portland Packing Company, Portland, Me.—Cooked preparations, in cans: "Fresh Seguin Mackerel, Star Brand," "The Farmers' Old Orchard Beach Clams" (Little Necks, star brand).

Russia Cennent Company, Rockport, Mass.—Liquid fish glue (Le Page's).

Rosenstein Brothers, 332 Greenwich street, New York.

glue (Le Page's).
Rosenstein Brothers, 332 Greenwich street, New York
Preparations in spices or vinegar: sardines in mustard,
"Sardines Royales Aromatiques" (in spices).
H. K. and F. B. Thurber & Co., New York—Collection
of prepared foods, in tin: "Genuine Georges Bank Cod-lish," whole fresh mackerel, "Deep Sea Mackerel," "One l, "Deep Sea Mackerel," "One selected bloaters (mackerel), Pound Fancy Mackerel, Beep Sea Mackerel, "One Pound Fancy Mackerel" selected bloaters (mackerel), canned lobster (Egnont Bay). Prof. Henry A. Ward, Rochester, New York—Collec-tion of stuffed fishes and marine mammals. skeletons,

— Hazedorn, Hamburg and New York—Fresh American oysters.

BRONZE MEDALS IN CLASS I.—J. H. Bartlett & Son, New Bedford, Mass.—Mammal oils: whale oil "foots," bleached winter sperm.

J. B. McCarley, Fulton Market, New York, oysters and conserves—pickled oysters, pickled Little Neck clams, pickled soft clams, pickled scallops, pickled mussels, rickled oyster crabs.

Caleb Cook, Provincetown, Mass., mammal oils—oils from head of blackfish (sold as "porpoise jaw"), oil from the beluga (white whale), watch oil, clock oil.

A. W. Dodd, Gloucester, Mass., mammal oils—blackfish, Fish oils—oil from livers of codfish, medicinal ditto.

Heick and Stoll, Hamburg, Germany, American oys-

ters.
W. R. Lewis & Co., Boston, canned salmon, W. R. Lewis & Co., Boston, canned salmon, Joseph Falmer, Taxidermistand Modeller to the Smithsonian Institution, Washington, D. C., zoʻological preparations—series of plaster casts of American food fishes, collection of stuffed aquatic mammals, collection of stuffed aquatic mammals, collection of stuffed aquatic mammals, collection of stuffed aquatic birds.

Jasper Pryor, New York, mammal oils—sea elephant, crude whale, natural whale, bleached whale, whale oil (foots). Oils used for lamps, lubrication or medicinal—crude sperm, natural sperm, spermaceti.

J. Schmidt, New York, food preparations—(not specified).

J. Schmidt, New York, food preparations—(not specified).
F. W. Smillie, Photographer to the Smithsonian Institution, Washington, D. C., series of photographs of American fishes.

William Underwood & Co., Boston, cooked preparations in cans—"fresh codfish." "fresh haddock," canned mackerel, preserved fresh halibut.
W. H. Wonson & Co., Gloucester, Mass., smoked fish—"Grand Bank halibut," "Nowfoundland halibut." HONORABLE MENTION.—Max Anns & Co., 870 Greenwich street, New York, pickled or brine preparations—"American Caviare."
H. M. Anthony, 104 Reade street, New York, "Fresh Columbia River Salmon" (canned), "Star Brand," Eureka Packing Co., San Francisco.
A. Booth & Co., Baltimore, Chicago and San Francisco, canned salmon in large and small boxes—"Oregon Salmon."
Howe and French, Boston, materials used in the arts

Salmon."

Howe and French, Boston, materials used in the arts—fish isinglass made from the hake.

Kemp, Day & Co., 116 Wall street, New York, cooked preparations in cans—canned mackerel, canned lobster, canned cysters, Orchard Beach clams. Little Neck claus. Marvin Brothers and Bartlett, Portsmouth, N. H.—oil of porpoise, oil from liver of sun-fish (Mola rotunda), "Pure Cod-liver Oil," stearine from cod-liver oil. Maryland Packing Co., Baltimore, Md.—canned hard crabs.

Maryland Packing Co., Battimore, Mu.—canned mass crabs.

McMenamin & Co., Hampton, Va.—canned hard crabs, canned "devided" crabs.

Franklin, Snow & Co., Boston, dry salted preparations:—cod. Pickle, or brine salted preparations—haddock.
Cooked, in cans—mackerel.

S. Schmidt, New York—pickled cels in jelly.
Livingston Stone, Charlestown, N. H.—specimens of salmon eggs (S. quinnat) in alcohol.

CLASS II.

Fishery apparatus of all sorts in original or in model. Boats for inland and sea fisherics in model or in picture.

Boats for inland and soa fisheries in model or in picture. Material for apparatus in different stages of construction. Machines or implements for working the raw material. Gold Middle of split bumboo for salmon, trout or base fishing; pieces of bamboo showing splitting process. SILVER MEDIALS IN CLASS II.—James Everson, 489 First street, Brooklyn, E. D., N. Y.—the "Shadow Canoe," with sails for fishing, hunting or cruising. Wilcox, Crittenden & Co., Middletown, Conn.—general collection of accessories to the rigging of fishing vessels, as clews and hanks, chocks, boat-hooks, belaying pins, riggers, hooks, grommets, etc.

vessets, as cleaves and mains, chocks, both-holes, beny-ing pins, riggers, hooks, grommets, etc. HONORABLE MENTION IN CLASS II.—Capt.-J. W. Col-lins, assistant to the United States Fish Commission, Gloucester, Mass. Collin's Adjustable Marine Drag; used by vessels when 'laying-to' in a storm.

CLASS III.

CLASS III.

The artificial culture of aquatic animals. Breeding apparatus in operation, collective exhibits of apparatus and implements used in the culture of fish, crustaceans and oysters, transporting apparatus for fry, models, or pictures of apparatus for fish protection, as fishways, etc. Aquaria. Development of aquatic animals, as oysters, fish, crabs, etc. Exhibition of the progress of fish culture. GOLD MEDALS IN CLASS III.—C. G. Atkins, assistant to the United States Fish Commission, Bucksport, Me. Model of United States and other control of the c

Model of United States salmon-breeding house at Bucksport, Me. Models of implements, trough, etc., used in American fish culture. Models of fishways.

T. B. Ferguson, assistant to the United States Fish Commission and Commissioner of Fisheries of the State of Maryland, Baltimore, Md. For improvement in fish cultural apparatus and invention of plunging baskets, worked by steam power, for shad hatching, as shown in model of United States fish-hatching steamer Fish-Hatch, and also in original.

S. Green, Superintendent of Fisheries of the State of New York, Rochester, N. Y. Cullective exhibition of implements in use by the New York Fish Commission for hatching salmonidæ and shad, floating hatching box and "Holton Box."

M. McDonald, Commissioner of Fisheries of the State of Virginia, Lexington, Va. Improvement in fishway.

M. McDonaid, Commissioner of Fisheries of the State f Virginia, Lexington, Va. Improvement in fishway. F. Mather, assistant to the United State Fish Commis-

F. Mather, assistant to the United State Fish Commis-sion, Newark, N. J. Invention of conical apparatus for fish hatching (original shown). Apparatus for sending fish eggs across the ocean. L. Stone, assistant to the United States Fish Commis-sion, Charleston, N. H. Models of fish cultural appa-

ratus. SILVER MEDALS IN CLASS III.—O. M. Chase, assistant SILVER MEDALS IN CLASS 111.—O. M. Chase, assistant to the Michigan Fish Commission, Detroit, Michigan Fish Commission, Detroit, Michigan Fish Commission, Detroit, Michigan Fish Chass III.—B. F. Shaw, Commissioner of Fisheries of the State of Iowa, Anamosa, Iowa.

sioner of Fisheries of the State of Iowa, Anamosa, Iowa. Model of his patent spiral fishway. HONORABLE MENTION IN CLASS III.—J. Annin, Jr., Caledonia, N. Y. Box for sending trout eggs to Europe. Successful sending of 3,000 eggs, which were presented to the Deutsche Fischerei Verein.

T. N. Clark, Northville, Mich. Improvement in fish cultural apparatus, "Clark's Hatching Box," "Selfpicking" attachment to cone hatchers.

CLASS IV.

Apparatus for transporting adult fish to market or for her purposes, in model or original. (No gold or silver

Apparatus for transporting addition to market a volter purposes, in model or original. (No gold or silver medal for America in this class.)

BRONZE MEDALS IN CLASS TV.—F. Mather, Assistant to the United States Fish Commission, Newark, N. J., improvement in transporting apparatus for use at sea, whereby the motion is utilized for aeration. (Nothing for America in class V.)

CLASS VI.

Models of fishermen's houses and costumes and such implements in use as have not been placed in other

Classes.

SIVER MEDALS IN CLASS VI.—C. S. Merriman, 241
Broadway, New York, The "Morriman Life Saving
Suit," as in use by the United States Life Saving Service,
United States Commission of Fish and Fisheren's
Washington, D. C., collection of fishermen's clothing,
implements, and tools used in the commercial fisheries
and in angiling.

BRONZE MEDICAL SIN CLASS VI.—H. D. Ostermoor, New

York, patent elastic felt mattrass and life preserver (Nothing for America in classes VII, and VIII.)

CLASS IX

CLASS IX.

Literature and statistics of the fisheries and maps, etc., showing the geographical distribution of fishes.

SILVER MEDALS IN CLASS IX.—Prof. G. Brown Goode, Assistant to the United States Fish Commission and Curator of the National Museum, Washington, D. C., great chart slowing the labors of the United States Fish Commission, the places where fishes have been successfully located, the fish cultural stations of the United States, of the State Fish Commission, and of private fish culturists; charts of the distribution of American salmonidæ, both natural and where planted, and of the distribution of the herring family, menhaden, etc.

Forest and Stream Publishing Co., New York, exhibit of thirteen bound volumes (from the first No.) of this journal, which contains articles upon fish culture, angling, woodcraft, natural history, etc.

Charles Scribner's Sons, New York, exhibition of the new work on "Game Fishes," with large colored lithographs after paintings by Kilbourn and text by G. Brown Goode.

HONDRABLE MENTION IN CLASS IX.—United States Hydrographic Office, Washington, D. C., collective exhibit of coust charts.
United States Engineer Bureau, Washington, D. C., charts of the inland waters of the United States.
At the conclusion of the reading of the awards, Professor G. Brown Goode, Deputy Commissoner for the United States to the Berlin Fishery Exhibition, spoke in German as follows:

"GENTLEMEN: Since the first prize of honor, given by
the Emperor, has this day been awarded to the United
States, it is my honored privilege to speak not only for
my own country, but for all others who may have received prizes. We who are foreigners have seen much
in Germany to admire; we have looked upon the grand old
Emperor who, in spite of his burden of years, is always
ready to assist any praiseworthy enterprise by his countee and encour ement.

nance and encouragement.

"From the depths of my heart, feeling certain that I speak the feelings and sentiments of the thousands of people here assembled from all quarters of the globe, I call upon you to assist me in shouting, "The Emperor of Germany! The Emperor William! Long may he live!" Whereupon the German "Hoot!" was three times given by the vast assembly so loud that old Neptune, who stands aloft in the center of the rotunda, and has really done nothing since the opening of the exhibition except to hold his trident in the air to no purpose, began to fear for the solidity of the fountain and base beneath him. The first prize is a magnificent crystal energine energies.

for the solidity of the fountain and base beneath him.

The first prize is a magnificent crystal epergne encrusted with gold and enamel, and containing a globe of purest crystal, upon which is seated a fisher boy holding a dolphin aloft on a spear. It is supported by silver human figures, male and female, the former with spear and conch and the latter with a large pearl, the whole standing about two feet high. It will probably be on exhibition in New York about July 20th.

An evening reception was held in the Kaiserhof, where about one hundred and fifty guests sat down to banquet in the large dining hall, which was handsomely festooned with American flags. Songs were sung by a glee club and toasts were drunk, many of which expressed the kindliest feeling toward America and its fish commission.

TROUT FISHING IN OREGON.

TROUT FISHING IN OREGON.

ASTORIA, Oregon, June 10th.

ASTORIA, Oregon, June 10th.

Astoria has been attended with only indifferent success. The cause is attributed to the coldness of the spring and summer. As I write (at noon) the thermometer indicates a temperature of 57°, and I do not remember to have seen it so high as 60° this season. My littation the second of the Columbia and eighteen miles above. This trip was a total failure, only five small trout being caught. Besides these, about thirty small fish, resembling young trout, from three to five inches in length, wore taken, which proved to be, as I had anticipated, young salmon. These fish are found in immense numbers in all our trout streams from the head of tide water to a mile above, and are generally thought to be young trout. They are a great annoyance to bait fishers, and are fond of leaping and frolicking around a card of flies, and often impale themselves by falling upon the hooks. I am indebted to Prof. Jordan, of the United States Fish Commission, for the means of distinguishing between them and trout, which consists in counting the developed rays of the anal fin. Trout have ten to twelve, salmon fourteen to seventeen, the latter being the number for the Quinnat, the salmon par excellence of the Columbia. The second trip was to the Klaskanine. This stream is the easterly fork of Young's River, which, coning from the south, joins the Columbia a mile below Astoria. The fork is distant ten miles, and the landing a mile and a half beyond. The journey must be made by water, but by keeping the boat on the other side of the peninsulu upon which Astoria is situated, a walk of a mile saves a third of the distance. Starting early with a single companion, each in a small skiff, we reached the landing and began fishing at 9 o'clock. We separated immediately and did not meet again until noon, when it was found that each had

taken six or seven small trout. After resting an hour my companion was for embarking immediately for the homeward run, but I wanted to make another effort; so telling me that he should go slow and I could soon overtake him, he started toward the landings, a mile and a quarter below. I was now just below the last house in the clearing, in good fishing ground, and as the sun had grown quite warm I hoped to got a few more. Just above me was a pool I remembered. The stream turned from its course by a high bank, makes a sharp head from west to north; the pool is in the bend, and below it was a large pile of drift wood that had been there five years to my knowledge. I reached the bend and found the pool still there, but the freshets of the past winter had swept away the drift, leaving only a single large trunk reaching from the high bank into the middle of the pool. The current ran swiftly along the outer bend; on the inside, where the tree trunk entered the water, it was deep and dark, with a slight current setting up stream. This was my position. Casting into the current I saw the line drift down until it reached the log, when it became suddenly stationary; there was no rush or break to indicate a bite, and fearing the hook had caught a sunken snag I drew it toward me with a steady pull, and found it vielded to the strain. As the hook heared the taken six or seven small trout. After resting an hour my the line drift down until it reached the log, when it became suddenly stationary; there was no rush or break to indicate a bite, and fearing the hook had caught a sunken snag 1 drew it toward me with a steady pull, and found it yielded to the strain. As the hook neared the surface a silver flash showed me the nature of my prize, and with no other struggle than a steady pull that was all my rod would bear. I drew him up the pebbly shore, a splendid mountain trout—if mountain it was—not particularly plump, but sixteen inches long. Removing the hook, I gave a few minutes to a critical examination of this strange cupture. It was not a Salmo trideus; its eyes were too small, its form too slender, and its head too long for that. Neither was it a Clarki, for the hyold teeth were wanting. Had it been caught in October I would have pronounced it a salmon trout doing a mile from tidewater in the leafy month of May? And what is a "salmon trout." Is it a distinct species, or only a large "mountain trout"—Irideus, Clarki, Tsuppiloh, as the case may be—returning in autumn from a temporary visit to salt water? Ask me an easy one; I give it up. My trout is reposing now in Prof. Jordan's alcohol tank, and when the Professor returns next month we will see what science can tell about it. Another cast and another fish is hooked, not quite so large as the last, but breeze arough to make the schanger browseyed band the professor returns but heat and another fish is hooked, not quite so large as the last, but large around to make the schanger browseyed band. a temporary visit to salt water? Ask me an easy one; I give it up. My trout is reposing now in Prof. Jordan's alcohol tank, and when the Professor returns next month we will see what science can tell about it. Another cast and another fish is hooked, not quite so large as the last, but large enough to make the slender lancewood bend, and the reel sing merrily as he takes the line and leaps from the water again and again in his frantic efforts to escape; but the "Aberdeen "is fast in his throat, and soon he is drawn upon the bank and laid beside his companion. The result of the third cast was a tish about the size of the scoond, but not so good a fighter. These three seemed to be of the same species, and except in size did not differ greatly from the smaller ones caught before. And now that the large ones are caught, the smaller ones come to the front and in a half hour about hirty, measuring from six to to ten mohes, are taken from this one pool. These, as fast as caught, are lastily examined. The larger half seem to be of the same species as the first ones caught, but a number show plainly the hyoid teeth, characteristic of the Clarki. A half hour was spent in trying other pools, but without success, so reeling in my line 1 started for home, feeling that if the trip was not a great success it was not altogether a failure. A week later a trip was undertaken to Young's River. This stream has a fall just above tidewater, the water being so broken that it would be impossible for any fish to ascend, though they might descend in winter when the water is high. I had a curiosity to know whether as many species of trout would be found there as in the neighboring streams. This trip was the most satisfactory of any made this year. My basket was filled in three hours' fishing and the lish were of good average size, as they always are on this stream. I am not quite sure, but I finish every fish taken was a Clarki. Only two incidents worthy of mention occurred during the trip. I was fishing in the worth of the question in t broke the hook in his struggles, and for a minute it was all I could do with both hands and feet to prevent him all I could do with both hands and feet to prevent him from sliding into the water; at last he became quite, and lifting him with both hands I tried to put him into my basket, but he was too large to go through the hole in the cover, so grasping him as firmly as I could with my left hand I lifted the cover with my right, and had nearly got him good and safe when, making a last effort for liberty, he slipped from my grasp and disappeared in the depths of the pool below. If a listener had been standing by, the words he would have heard would have been, not numerous, but of the choicest. Later in the day, when I had reached the "lower basin," a half mile above the falls, thinking I saw a movement across the stream, and turning my eves in that direction I saw a fine black bear falls, thinking I saw a movement across the stream, and turning my eyes in that direction I saw a fine black bear walking slowly down to the water. He had not seen me, so keeping perfectly still I watched to see how hear he would come before taking the alarm. He walked leisurely along until there was only the width of the stream, some five or six yards, between us, then putting his paws into the water he seemed on the point of wading across, which would have brought him directly to my feet, but, seeing me, he turned, and walking slowly away disappeared in the thicket. Of course, my Smith & Wesson, bought for such occasions, was safely under my pillow at home. A short walk brought me to the boat, and I reached home without further adventure, I expect to start to-morrow for the upper Klaskanine, and if successful may send you a report.

C. J. G.

aspirants for literary honors and emoluments, who were aspirants for literary honors and emoluments, who were constantly boring publishers, without ever getting a show on any respectable journal—or deserving it—and I stepped aside. For nine years I have attended to business, and that is not very remunerative, either. Editors, I will just remark here, have always treated me fairly. The Altuntic, Aldine, Lippincott, and the old "Pea-Green" recognized—and paid—the nameless backwoods with a honormal.

I will just remark here, have anways creases and many. The Allantic, Aldine. Lippincott, and the old "Pea-Green" recognized—and paid—the nameless backwoods writer handsomely.

My best hold is the rod, rifle, canoe, carop, and in short the entire list of forest lore and backwoods knowledge comprised in one word, woodcraft, And I am going back to my first love. My fishing kit is revised and corrected. The nail-driving, muzzle-loading, hair-triggered rifle, is ready to hand.

My canoe is ready for launching. She is clinker built, of white cedar, and the lightest that ever went through the Adirondacks. Weight, seventeen pounds thriteen and throe-quarter ounces. If I live a monto longer, there will be another "fool" the forest. The "melanchoty Jacques" may find him, somewhere between the Fritton Chain and the lower water of the West St. Regis, drowned, with a capsized cockle-shell near by.

For I am going through alone.

The faithful guide and the festive landlord of the woodland hotel will not work me to any extent.

There are 5,000 pleasant, shady nooks in the Northern Wilderness, on which a camp was never raised. Colvin's Report shows that the heart-cores of the Wilderness are as yet unexplored. His final map will show not less than 300 new lakes and ponds, never before mapped.

I have traveled in foreign lands. Have been twice to the Amazon Valley, and I rise to remark that there is but one Adirondack wilderness on the face of the earth; and, if the great State of New York fails to see and preserve its glorious gifts, future generations will lave cause to curso and despise the petty, narrow greed, that converts into saw-logs and mill-dams the best gifts of wood and water, forest and stream, mountains and crystal springs, in deep wooded valleys, that the sun shinford, Pa., first be-

PIKE COUNTY RESORTS.—When Milford, Pa., first became known as a summer resort, only a few years ago, the numerous streams were literally alive with trout, the woods were full of game, and city people who went there for a few weeks could fish and hunt without molestation. But the greedy furners who, thinking the hotels and boarding houses were making more money than they, began posting notices, warning the people against fishing or hunting on their property under penalty of the law. Some of these farmers subsequently removed their notices and allowed the city guests to fish through their property, provided they would pay one dollar per head, for the privilega. The expert anglers were willing to pay so long as there were plenty of fair sized trout in the creeks, but when the farmers themselves would catch all the large trout early in the morning before city fishermen got around, and sell them to the hotels in Milford, or ship them to New York, the anglers became oissuitafied, and have since spent their summers elsewhere than in the Delaware Valley. Gunning has also been prohibited in many places: therefore, outside of good drives and healthy air, Milford has few attractions left. Within one mile of Milford are the famous Sawkill Falls, among the finest for their size in the world. The Raymondskill Falls, three miles below Milford, are declared by many to be superior in grandeur to the Sawkill. The Raymondskill can be sought and seen free of charge, while the owner of the Sawkill has posted notices forbidding people to visit them, consequently parties who do visit, them do so at the risk of being put to much trouble. These prohibitions have greatly reduced the popularity of Milford, and unless some means are devised to bring about free lishing, gunning, and the liberty to visit the celobrated cataracts, its reputation as a resort will in a very few years be gone entirely.

At nearly all the other popular resorts above and below PIKE COUNTY RESORTS .- When Milford, Pa., first be-

years be gone entirely.

At nearly all the other popular resorts above and below Milford, fishing, gunning, etc., is allowed, free of charge, and these places will undoubtedly receive many of the guests who in former years spent their summers in Milford.

The Hennel.

OUR FRIEND THE WATER SPANIEL

S TONEHENGE tells us that, "although a class for this variety is often included in the prize list of shows, the exhibitors are generally of a most miscellaneous character, and I do not pretend to be able to settle the points of the breed with anything like accuracy or minuteness. The following description will probably serve to include all the variations: Head, long and narrow: eyes, small; ears, long and clothed with thick curls; body, moderately stout and barrel-like, but not so much so as the field spaniel; legs, rather long, straight and strong; feet, large and spreading; stern, bushy and curly coated; color, liver and white, varying in the proportion of these colors," While we quote above the description of the standard authority of what the water spaniel should be, it is very far from our intention to commend or decry any particular breed, or recommend any typical dog in this article, but rather call to the mind of our shooting friends that there is such an animal. Now that our wise legislators have decreed that dame woodcock shall be allowed a new span of life for the purpose of bringing up her chicks in the way they should go, and to A Note From Nessuuk.—Willsboro, Tioga County, give her time to don her new dress when her home pa, June 9th.—Editor Forest and Stream:—Many months ago some old admirer of my weak pen sent an inquiry to you asking after "Nessuuk," ers of Forter's Spirit. I did not respond. I dropped the pen in '71. It was pleasure, but, like Mr. Micawber's "coaks," "not remunerative." I found there were several thousands of their outing. Hence let us make a timely suggestion, which if looked down upon by the old hands may afford the young ones, fresh from school and college, a chance to try their hands as trainers.

Dog-breaking like everything else, must have a beginning, and why should not our young friends begin to teach themselves and at the same time rear for their use a loyable field companion. In despite of the general opinion that spaniels are stubborn and hard to break-a tion which our experience has taught us is most fallagious-we cannot think of any breed better adapted to instruct the tyro than a close intimacy with one of these jolly little dogs. A spaniel can be put to a variety of uses that would utterly ruin a setter or a pointer; beside this, it is a sad mistake for any man to make of either a jack of-all-trades. What comparative harm will it be if a spaniels or two are rendered worthless by the misdirected zeal of the beginner. None, we fancy; while it would be no joke to incapacitate for all future use a well bred, keen-nosed pointer or setter. These views are the foundation on which we wish to write.

It is during the long summer holiday, when the bay snipe are flying, that we would open our retriever school nor is there any better place to have it held than by some galt meadow pond, or on some inlet shoal or sand bar. At the best, compared with field work, bay snipe shooting is but slow work, and at times it is oppressively tedious. The sport needs a fillip, and this perhaps can be given by the introduction of a four-legged friend.
Whether the stools are set on the meadows contiguous to New Hampsbire's Rye Beach, or by the best stand on Gull marsh, in Eastern Virginia, there will come days, in spite of both winds and tides, when no flight will be To those, therefore, who have followed this kind of shooting, it is well known how monotonous it is to watch for birds that never come. Far different from beating out a country in which there is a scarcity of game, for then one can walk away his troubles and have some change of scene; at all events there is something to occupy the mind. All holidays become a bore unless we have mental occupation, and partly on this account we suggest what old baymen would call "a four-legged innovation." Whistle, then, to your spaniel the next time you cross the bay; his size will admit of his being stowed away in the boat, and his weight will not pull you back. He will not be in your way, for he can be taught to charge and stay quietly in the blind or end of your sink Teach him to retrieve with a tender mouth, and circle the stools in going out for the birds in order to make him understand that you seriously object to his falling into the vulgar error of mistaking the decoys for the dead. Point out to him that he has sufficient nose to wind the hiding couple, and that it will save himself the trouble of many a long swim by devoting his attention to the winged birds first. Exact obedience, and make him stay at charge until ordered "to fetch." Instruct him to drop to hand, no matter how far away, so that his movements may not sheer off a flock which is setting for the stools. Let him understand that he is to come in at once when he hears the whistle, the note of which, by the way, should be as far different as possible from "the calls" of the large army of the snipe family. If he is thoroughly broken in this respect you will be enabled at times to have him tole in a wide-flying flock, as we have often seen the marble willet allured to the gun in this way. In time his sharp eye will discern the birds long before they appear to the human vision, and he can with care be taught to give a timely warning. To dive for a crippled teal is but his instinct, and he can be worked to make the rail in the sedge take to wing. He will help you to bag many a bird you would otherwise have to go after in the boat, and probably then fail to pick up. He will save you time when birds are flying, and with him you will not be exposed to sight.

There are a score of ways in which our friend, the spaniel, can be made useful, and between the morning and evening flights you can amuse yourself in teaching him until he is perfect in "his tricks and his ways," as Jenny June would say. Of course you must expect to be un-mercifully chaffed at first for being so absurd as to break into the old time custom of declining to be your own retriever, but before the day is out it is a hundred to one that some bayman will call out to you to "bring that ere dog over to help me find a burd.

MR. GODEFFROY'S ANSWER TO MR. DALZIEL'S LETTER Mr., Godefferoy's Answer to Mr. Dalziel's Letter, Ken York, July 1st.—Editor Forest and Stream:—Mr. Dalziel's letter in The Live Stock Journal and Fancier's Gazeffe, republished in part by your paper, I would answer as follows: As to the protest in class 40, 1 think that nearly every one will agree with me that the whole matter was a mistake, and was rectified in the best manner possible, Mr. D. takes no notice of my protests in classes 16 and 33, but takes up the question of dew claws in the St. Bernard. I do not think that five points in 100 is a high value for the dew claws; at any rate, my simile was ii), but takes up the question of dew claws in the St. Bernard. I do not think that five points in 100 is a high value for the dew claws; at any rate, my similo was correct, for the value of "solid white in a bull terrier," though a most necessary point, is the same, viz., five points, Mr. D. refuses to submit to the "opinions" and "crotchetis" of "Stonehenge" and Vero Shaw, as expressed in their books on the subject, and goes on to tell that "old champion Tell, Prince Selm's Courage," and other good dogs, were without dew claws. But in my opinion that proves only that these dogs were not perfect. Dalziel informs me that Darwin says that dew claws are "accidental monstrosities." That may be, but it has

nothing to do with the case, for in the St. Bernard the dew claw is not, as in most other breeds (when present), an elementary toe, but is a regular fifth toe, and has the advantage of giving them a firmer foothold in the snow. Any how, I believe Mr. Darwin a much better judge of Any how, I believe Mr. Darwin a much better judge of monkeys and tails than of dogs and dew claws. As to the demanded apology for the insult of presuming to doubt Mr. D.'s competency, if we doubt the correctness of a judgment we are not going to quietly submit. We express our doubts, and challenge the judge to provide their correctness. "Stonehenge" is our standard here, and we try and breed after it, and it was understood that our dogs were to be judged according to "Stonehenge," not according to Dalziel or Darwin. As he takes up the question of St. Bernards, why does he not notice my other two protests in classes 16 and 33? Is it because the thinks I am right," Please read what the London other two protests in classes 16 and 33? Is it because he thinks I um right? Please read what the London Field says about the judging of class 16. I think it justifies my protest in that class pretty thoroughly. Then, for Mr. D.'s special comfort, let me ask this question: Why did my black setter Satan receive V. H. C. on Tuesday, when Chance was only C., and yet Chance received the special prize for the best black setter? In justice to Mr. D., however, we must remember that he did not judge the setters individually, but as he breaks a lance for his brother judges, and demands an apolocy, I cite the case. The only just ground for complaint is that some one offered to bet the judges that his dog was the best, and that they were wrong, but I am sure that this was the act of no true sportsman.

A. E. GODEFFROY.

ACCIDENT TO POINTER " Sport" Atchison Konsas ACCIDENT TO POINTER "SPORT,"—Alchison, Kansas, June 20th.—The pride pointer in the West, "Sport," by Sensation, formerly from Bridgeport, Conn., owned by Mr. J. H. Gars-die, met with a sadmishap a few days ago, by accidentally breaking his bind leg in some machinery in an oil mill. The dog, 1 am happy to say, is doing well turesent.

at present.

J. A.

Salle of Mr. Price's Pointers.—In accordance with the determination of Mr. Price, the well known pointer breeder, to exhibit as little as possible in the future, but to breed largely, and to offer for sale by auction at Aldridge's, London, England, each year at the commencement of July, the dogs shot over in previous season by himself and friends, a sale of pointers from the Rhiwlas Kennels, Rala, North Wales, will be held at Aldridge's on July 9th, when the following first-class darfs from his kennel will be disposed of: Mossy Face, liver and white pointer bitch, whelped April, 1879, by Mr. Price's champion Wagg, out of Mr. Moore's Moss. Tails, liver and white dog, same litter as Mossy Face, by Wagg out of Moss. Bastow, bred by Mr. Leache, born November, 1878, Pead O'Bells, liver and white bitch, younger sister to Bow Bells, and Yellow Drake, liver and white bitch, younger sister to Bow Bells, and Yellow Drake, liver and white dog, whelped April, 1875, by Drake, out of Nimble Ninepence.

Imported Laverack Albershott, — Brooklyn, July 1st.—1 received June 29th, by the steamer Rozburgh Castle, the pure Laverack setter dog Aldershott, He comes direct to me from the kennel of John Rumford Robinson, Esq., of Sunderland. Aldershott's color is Comes direct to me from the senier of Soni Administrations. Robinson, Esq., of Sunderland. Aldershott's color is orange Belton, and he is about twenty-two months old. His pedigree is as follows: Aldershott, by Emperor Fred., 9,077, out of Blue Cora, 9,120; Emperor Fred. by Laverack's Blue Prince, 4,259, out of his Daisy, 6,131; Blue Cora, by Laverack's Blue Prince, out of Cora, 1,483. The numbers refer to the English Kennel Club Stud

A Beautiful Photograph.—Mr. Charles H. Turner, of the St. Louis Kennel Club, has kindly sent us a photograph of Mr. Tracy's oil painting of the pointer bitches Keswick and Jessamine. It is an excellent copy of the finest picture we have ever seen. Keswick is shown in the foreground pointing, and Jossamine in the act of backing, while in the centre of the picture a sportsman stands awaiting "the rise." This photograph, as well as the one of the sister picture of Faust and Bow, can be had on application to Mr. J. M. Tracy, No. 1102 Olive street, St. Louis, Mo. Price, 75 cents each.

MR. LIVINGSTON'S KENNELS.—Mr. Henry W. Livingston, of this city, has closed his kennels at Flushing, L. I., and transferred his stock to the kennels of the Titus Brothers, at Centerport, L. I.

A New Remedy for Hydrophobia,—M. Lesserteur has just given publicity to a plant which has a great reputation as a cure for rabies in the kingdom of Annau. This plant, of which the name is hoangnan, is a kind of plana, closely akin to the false angostura; it is effects are similar to those of strychmine and brucine. M. Bouley, in speaking of this new remedy in the "Recealtd a Médecine Vilérimaire," regrets that so few facts corroborative of its office in speaking of this new remedy in the "Recealtd a Médecine Vilérimaire," regrets that so few facts corroborative of its office in supersymmetry. — Live Stock Laurand. cine Vélérinaire," regrets that so few facts corrobora-tive of its efficaciousness are given.—Live Slock Journal.

EXERCISE FOR DOGS.—Exercise is most essential to the well-being of a dog. To witness the way he enjoys a good scamper would tell any one this. Without exercise the wheels of the poor animal's life seem to clog, bad humors are not excreted, dyspepsia comes on, he gots morose, dull, and sometimes even irritable and unhappy, liver troubles come on, then jaundice, and then death. A dog ought to have at least two hours' daily romping in the open sir,—Live Stocic Journal.

KENNEL NOTES.

SALES-Bijou .- Mr. Geo. D. Macdougall, of New Brighton Staten Island, has sold back the cocker dog Bijou (Ist Montreal, 1880), to Mr. James Cunningham, of Montreal, the dog's former

NAMES CLAIMED-Flirt II.-Mr. Geo. D. Macdougali claims the name of Firt II. for his cocker bitch now in whelp to Bijou

CORRECTION-New York, July 2d, 1880,- in your last issue ve say that my Flirt was bred June 26th. It was Mr. Godeffroy: Flirt that whelped May 8th. To prevent mistakes occurring from the similarity of names, I shall call my bitch Flirt II, in future, GEO. D. MACDOCOALD. Wheres.—Cleopatra—Mr. H. W. Lee's (Boston, Mass.) mastiff bitch Cleopatra whelped June 2th, twelve pupples—seven does

NAMES CLAIMED.—Lela—Mr. H. W. Livingston, of this city, claims the name of Lela for his Llowellyn setter blich puppy, whelped Jan. 27th, 1889, by Lelaps (No. 159, A. K. S. B.), out of Startight (No. 515, A. K. S. B.). Denutiful May—Mr. H. W. Liv ingston claims the name of Beautiful May for his setter hireh puppy, by Lelaps out of Starlight. Minta—Mr. H. W. Livingston claims the name of Mint for his setter bitch puppy, by Lelap out of Starlight. Lady Collie—Mr. H. W. Livingston claims the out of Staright. Lawy Conte-Mr. H. W. Livingscon comms the name of Lady Collie for his colley bitch puppy, by Watt's Ruy out of Downey's Lassle. Cork.—Mr. W. A. Johnson, of Clinton, N. C., claims the name of Cork for his red Irish setter puppy, helped March 15tin, 1880, by Derg out of Cora (Elcho-Stella

NALE.—Neilie—Detailam, Mass., Jone 50th.—My advertisement in your paper has enabled me to sell my imported Gordon setter bitch Neille (formerly T. T. Sawyer, Jr.'s), to Mr. C. F. Mann, of Worcester, Mass., she in whelp to Jerry. Frem A. Tatr.

Archery.

-Address all communications to "Forest and Stream Publishing Company, New York."

TOURNAMENT OF THE MICHIGAN STATE ARCHERY ASSOCIATION,

THE first grand annual meeting of the archers of the State of Michigan was held under the auspices of the association, upon the beautiful lawn of Recreation Park, in the city of Detroit, on the 33d and 24th day of June. The meeting was a success in every respect, and has done more for the promotion of archery in the State than even its most zealous friends anticipated.

has done more for the promotion of archery in the state than even its most zealous friends anticipated.

The grounds chosen are peculiarly suited for such a meeting, and the preparations were of the most careful and comfortable character. The weather was beautiful, only a little too bright and hot for comfort; but all in all as fine as could have been expected. Thirteen ladies and thirty-one gentlemen competed for the medials of championship, and several visitors took part in the shooting who did not compete for these emblems. Among these visitors were Mr. Will H. Thompson, the present champion archer of the United States. Mr. C. S. Case, Mr. D. V. A. Manley, of Toledo, Ohio, and several other members of the Toledo Archers. The programme and prizellst were so arranged as to give general satisfaction, and the meeting went off without a jar or unpleasant incident.

bers of the Toledo Archers. The programme and prizelist were so arranged as to give general satisfaction, and
the meeting went off without a jar or umpleasant incident.

On the afternoon of the second day, the archers and
spectators were called together in front of the grand
tent, and the President, Mr. W. T. Brown, of Hastings, requested Mr. Will H. Thompson to present the champion
and championess medals to Dr. W. R. Dorrance and
Mrs. E. T. Church, who had made the highest score in
the contest for the championship on the preceding day.
The presentation specches were exceedingly happy and
appropriate, and were greeted with hearty applause. Mrs.
Church received the lady's medal with the same easy
grace which marked her shooting, and Dr. Dorrance replied in a brief and very neat speech, in which he proved
himself as skillful and brilliant in talking as in drawing
the good yew-bow. The lady champion and Dr. Dorrance will each attend the National meeting, and will be
found in the front rank of contestants. The ladies generally shot better than the gentlemen, Mrs. Church, Mrs.
Caldwell, Mrs. Phillips and Miss Sill, being especially
fortunate in their scoring. The championess medal of
the United States was won at Chicago last year by Mrs.
Spalding Brown, with a score of 541, and it is very flattering evidence of improvement that Mrs. E. T. Church
should have taken this medal with a score only six points
less, when at the Chicago meeting she was only able to
score 310 points at the same round. While at Chicago,
she only obtained 101 points with forty-eight arrows at
forty yards, she here obtained 210 points at the forty
yards range.

Mrs. Church shoots in perfect form, drawing her arrows slowly to a point just below the chin, taking careful sim over the point of the arrow at the point of aim,
and loosing smoothly. She is rapidly improving, and a
score of 600 at the Double Round may be expected from
her at Buffalo. The championess was closely followed by
Mrs. Caldwell, of the Battle Creek archers, who

Mrs. Caldwell and Mrs. Phillips shot below their average scores at practice, the latter having often scored hearly 700 points at the Double Round. The English National Round of forty-eight arrows at sixty yards and twenty-four arrows at fifty yards was shot by the ladies on the second day, and again Mrs. Church proved victorious, finishing the round with the superb score of ninety-six points with twenty-four arrows at fifty yards. A very interesting finale to the sixty yards shooting occurred between Mrs. Phillips and the championess, the score being announced as "*a tie" when Mrs. Church still had one arrow only to shoot. She scored a black with the last shot, and the score stood eighty-nine to eighty-six, While the occasion seemed one of great pleasure to all. Ras snot, and the score stood eighty-line to organy-ask While the consists seemed one of great pleasure to all, yet the ladies especially gave evidence of the rare "witch-ery of archery," for they seemed to be "merry as a mar-riageable belle" during the entire meeting. A hard task, indeed, was imposed upon Mr. Will H. Thompson by the indeed, was imposed upon Mr. Will H. Thompson by the President when he required that gentleman to award the prize offered by Messrs, T. B. Rayl & Co. "to the most graceful lady archer." The champion was equal to the emergency, however, and his presentation speech was received with the liveliest applause. He said:
"ULADES AND GENTLEMEN:—
"Well knowing that no one with a home in your midst world the strength due to the other than the desirements."

"Well knowing that no one with a nome inyour limits would thre attempt the decision which I am asked to make, a visitor from a distant city is called upon to bear away with him the anathemas of all your fair archers, with only one exception.
"I might in a spirit of gallantry declare that all the ladies are perfectly graceful, and, therefore, tied for first

place for this prize, but no two ladies would agree with me. Even if I should so decide, the tie would have to be shot off, as all your ties are decided, and the prize would be the reward of skill instead of grace. I might declare that where all were so graceful it was impossible for me to name the most graceful, but every lady would think that she could decide in a moment, only she would not care to tell who she had chosen.

"Knowing of no better way than the most direct one, I have decided that the three ladies who have wielded their weapons most gracefully are Mrs. Church, Mrs. Phillips and Miss Sill. Mrs. Church seems to be tied with Mr. Church, Mrs. Phillips and Miss Sill. Mrs. Church seems to be tied with Mr. Church, Mrs. Phillips with Mr. Phillips, for other prizes; ties which I trust may neither be 'divided' or 'shot off,' but strengthen as the years go on. Therefore, to Miss Sill, who is tied with no one, I award this prize, having no doubt that the gentle gracefulness which has won her this reward will easily charm into the golden tie whoever may be so blessed as to find grace in her sight."

Every one admired the fine tactics of the speaker, and no one could have borne off the prize who more truly deserved it than the recipient.

The shooting closed with a team shoot at the American round by gentlemen, and a team shoot at the Columbia round by three ladies from one society. In the ladies' contest the Battle Creek team won with a score of 692. The best individual score being made by Mrs. Church, of the Crescent Bowmen won the first team prize for the gentlemen with a score of 1,442, Mr. Parm S. DeGraff, of that society, obtaining the first individuales ore, 80-425 closely followed by Mr. E. T. Church with 416. Mr. Will H. Thompson, who shot the round at the same target with the Crescent Bowmen, scored 501.

The only instance of three golds being made at an end during the necting was by Mr. Parm S. DeGraff, of that society, obtaining the first individuales ore, 80-425 closely followed by Mr. E. T. Chur

AN OLD Man's Blessing.-The following letter has been ad-OLD MAN'S BLESSING. - I BE TOTALLY, N. Y., June, 1880.

HOLLY, N. Y., June, 1880.

HOLLY, N. Y., June, 1880.

DEAR SIR—I am an old man, seventy-seven years of age, and for three or four years I have had diabetes, which kept growing worse and worse. I discharged an enormous amount of water, the quantity seeming to increase week after week, and my strength growing less and less, forced me to think that I must waster the property of strength growing less and less, forced me to think that I must soon die, which I certainly should have done had I not taken Warnor's Safe Dilabetes Curo, which I was induced to try upon recommendation of a friend who had used Warnor's Safe Kidney and Liver Curo, and was cured by it. I have used the Safe Dia-betes Cure, it has cured use, and I think it is the best thing in the world. Yours truly. M. N. STODDARD

TRAITS OF FLORIDA BIRDS.—Editor Forest and Stream:—Now and then I come neross little items which I deen within the scope of your journal and interesting to your readers. The latest was a scene on one of our lakes—a fock of our beautiful birds. The roseate spoon bills are just coming in, and knowing a favorite feeding ground on the margin of Selt Lake I took down my gun and went out to secure a specimen. When within a hun dred yards I tiptoed, and could see over the tail gress through an open space a number of our wading species—egrets, herons and spoonbills. I "lowered away." and on all fours made my way within gunshot. What a scene! Beautiful, truly charming! On a turf, side to the wind, which was blowing half a gale, stood sentine! a large, snowy egret, his magnificent plurnage flowing to windward and reflected in the water below, while on all sides the little egrets, with their little plumes curled up on their backs and the topknot flowing in the wind skepped here and there after the minnows and crayfish, while the pink birds stood around busily going throut with their toilet. Two of these, and the prettiest of the lot, were near the "old sentine!" and now and then, is a hey spread a wing, the beauty of the scene was at i is best. I could not shoot; I wanted these three, but as I was either seen or smelled, away they went. Not satisfied with doing well, we often do worse.

Some weeks since I killed a great blue heron which had swallowed two moccasin snakes, one of which was over two feet long and fully an inch in diameter, while the smaller one was as large as a man's for finger. This was a surprise to me, and enough to astonish any one. At another time I killed one, and I noticed that it was unusually heavy. In this bird I found a full grown mullet. The fish was some three inches longer than the body of the bird, and would weigh about half as much. I found one in the act of "getting away" with a catfish, which one might think the bird would not begin to taskle. I can but believe he would have swallowed the TRAITS OF FLORIDA BIRDS.—Editor Forest and tream:—Now and then I come across little items which

week or month. Pinellas, Fla., May, 1880.

ROCK Bass.—North Thetford, Vt., June 21st.—My dear "Shatow"—There has been much research for the food on which the black bass subsists. The highest authority here says he never found a particle of food in the fish's stomach, although he has caught them with a hook for years. Since being here I have caught them daily and have solved the mystery—it is stones. The last one I caught had a stone in his stomach as big as a bullet, and nothing else. This stone was evidently larger onco than it is now, and had I not caught him would have lasted for some time to come. When I get to catching pounders later in the season I shall send you a stone is big as my fist, if I find one.

Springfield, Mass., June 23d.—My dear Professor:—I have just received your postal. I am glad to hear from you, although you give me nothing but a stone. I presume that you wilst for my opinion upon it. Well, I think that it is 4 "whopper"—the stone, I mean—and I should like it for my collection, for I don't believe that you will ever find handther one in a bass. That they are voracious feeders I am well aware. That they ever dine off the granite boulders from the bed of the stream I am loath to believe, and after pondering over the phenomenon for a long time I have come to the conclusion that all bass that persist in this course are not well balanced fish, and are obliged to take in balast.

-The judges at Berlin have awarded to the Forest AND STREAM a silver medal in recognition of the valuable literature pertaining to fish culture, angling and natural history contained in its first thirteen volumes. Accepting the new honor with becoming modesty, we confess to a pardonable pride in attaining the distinction thus conferred upon us. The bound volumes of this journal contain a vast amount of valuable material in the departments which are its specialties, and from week to week it is constantly adding to the storehouse of knowledge and instruction. Deeds are always better than words, and therefore it may be unnecessary for us to add that we propose to make the next fourteen volumes of the Forest and Stream just as rich, as instructive, and as entertaining as the first fourteen have been. The award at Berlin is to be accepted not simply as a token of past excellence, but also as an earnest of what is to come.

We publish elsewhere a full list of the American awards, and commend a careful reading of the suggestive details. The United States sent its exhibits to show to the European world the resources and vast industries of this Continent. It may be that the Berlin display will also open the eyes of Americans themselves to the riches of their own land.

INDIAN CURIOSITIES .- We have received from an Indianapolis correspondent a number of Indian curiosities, which the owner wishes to dispose of. The articles consist of a buckskin coat, ornamented with porcupine quills; a handsome tobacco sack; a fine redstone pipe or calumet; two Sioux arrows; a number of stone arrow heads, and a few human bones from the mounds of In-Any one interested in these matters should apply to this office for price and particulars.

CONNECTICUT SHAD FISHING .- The close season for shad fishing in the Connecticut River begins Aug. 1st. Late reports from Holyoke, Mass., speak of very successful fly-fishing there.

-The latest phase of the "endurance" idiocy is the attempt of a "Dr." Tanner to fast forty days in a hall of this city. If the man dies, or becomes insane, as seems probable, we hope to see his assistants indicted and held for complicity in the affair,

SUMMER WOODCOCK SHOOTING.

THOUGH the progress which is made by game protection in this country is slow, and though its friends have to work against many discouragements, some steps in advance are being made each year.

One of the most encouraging signs of the times is the gradual spread of the sentiment in favor of abolishing the summer shooting of woodcock. The necessity for some protection of this species has naturally made itself felt first in the older and more thickly settled States, where game is least plentiful and gunners most numerous; and hence we have seen Connecticut, Massachusetts, New York and New Jersey amend their laws so that the woodcock should be protected, at least during the nesting season. There is to us something so repulsive in the idea of destroying a poor mother bird, which has under her charge a nest of eggs or a brood of tottering, downy young ones, that we cannot understand how any right feeling person can take the least pleasure in it. It has been pretty clearly demonstrated that woodcock rear at least two broods in the summer, if they are unmolested, and it would seem that the shortsightedness of interrupting the labor of reproduction, when it is but half completed, must be apparent to any one who would take the trouble to consider the matter. The woodcock lays ordinarily four eggs, and her first brood is hatched so early that we have seen, in advanced springs, young ones able to fly well by the 25th of April. As soon as the birds of the first hatching are able to shift for themselves, the old ones prepare their second nest, and the young of this brood are usually out of the shell by July We have more than once seen, in years gone by, the poor little things during the summer shooting, and been moved to pity by their grotesque helplessness.

That summer shooting is thoroughly wrong in principle is acknowledged by all the best class of sportsmen; but more than such an acknowledgment, and more than laws prohibiting the so-called sport, are required to protect the birds. Good laws are enough to protect woodcock from the respectable portion of the community during the close season; but what the birds require is protection from a portion of the community not so respectable. No self-respecting sportsman intentionally violates the game laws, but there are plenty of men calling themselves sportsmen who do not hesitate to kill birds out of season. We have the names of men in New York, Connecticut and New Jersey who call themselves, and perhaps think that they are, gentlemen, who have killed woodcock this summer.

It is a part of the business of the true sportsman to use every effort to educate this law-breaking class up to his own level. It will be slow and difficult work, but we believe that it can be done.

The farmers and land-owners will of course be on the side of the law in this case. They have grass and grain fields which they do not wish to have trodden down and ruined; and many of them know by experience what it is to have three or four men and as many dogs tramping through the high grass, looking for some unlucky bird that has been driven out of the swamp into the meadow.

Besides the salvation of the woodcock and their preservation till fall, the protection of the young ruffed grouse must be considered. The men who will shoot the brooding woodcock, warm from her nest, will not hesitate to knock over the chicken grouse, which will lie sometimes until the dog catches them in his mouth, and which, if they do fly are so easy to hit that a ten year old boy who could not kill three out of five ought to be soundly spanked.

The laws, as they stand in the four States above men tioned, are very well, and if they could be enforced would do a vast amount of good; but until the people generally have respect for a law it is hopeless to attempt to see its provisions carried out as they should be. do not wish to be understood as saying that these laws are all that they should be, but they are vastly better than what we have had before, and if enforced would do no end of good.

People in America, misled by the abundance of its game, have until recently imagined that our game mammals, birds and fishes could never be exterminated. The consequence has been that where one article has been penned on the preservation of game, fifty have been written telling how to kill it. The wholesale destruction of our game within a few years past, the extermination of the buffalo, and the depletion of our trout and salmon streams, are slowly awakening the people of this country to the fact that some active steps must be taken if the next generation are to carry and use rods and guns. is encouraging to see papers like the Herald take hold of a question of this kind, and we take pleasure in quoting a portion of a recent editorial, as follows :-

The ordinary sense of any man of sportsmanlike in-stinct should protest against shooting young birds and pre-venting the natural increase of the finest game bird of the Veature the natural increase of the finest game bird of the Eastern States; but neither sense nor respect for the law, which in New Jersey forbids woodcock shooting in July and August, can prevent a mere stupid slaughterer from dragging his dog and his gun wherever anything to shoot can be found. There are two ways of discouraging the summer shooting of New Jersey's woodcock, most of which are taken by men from New York—one is for

leading sportsmen here to make the practice unpopular by "cutting" those who indulge in i Jerseymen to turn informers and h rested and punished under the law. those who indulge in it, and the other is for turn informers and have the offenders ar

This New Jersey bill, which was passed mainly through the efforts of Messrs. Geo. S. Duryea, of Essex County, and J. Gill, of Orange, N. J., would if enforced make New Jersey again what it once was-the paradise of fall woodcock shooters. We commend the Herald's suggestion to

YALE'S VICTORY,-The crew which Yale turned out this year was a great improvement upon her late representatives in point of weight and condition, and so once again victory perched upon her banners, the first time in four years. The course was well marked out, and the police kept it clear of boats, giving a fair opportunity for the universities to do their best. The race was rowed over the New London course, on the Thames, July 1st, to a fair crowd of spectators and the usual congregation of yachts and craft of all description. The Yale crew broke an outrigger just after starting, and the race threatened to come to naught but for the sensible provision which permits the umpire to recall the boats and start them over again. At the first mile Yale went ahead, and it soon became evident that Harvard was overmatched, the lead being rapidly spun out, Yale winning amid the frantic cheers of the spectators assembled in 24m. 27s., with her opponents some ten lengths astern. The day was unfortunately marred by the regretable accident to Mr. Lincoln, President of the New London and Northern Railroad, and Mrs. Appleton, both of whom were killed by being thrown from one of the cars forming the "movable grand stand," which accompanied the racing boats over the tracks of the road running along the shore. The Yale crew is as follows:—

Bow-John B. Collins, St. Joseph, Mo., '81, 21 years, 170 pounds. No. 2—Philo C. Fuller, Grand Rapids, Mich., '81, 23 years, 167 pounds. No. 3—Frederick W. Rogers, Lexington, Mass., '83, 21 years, 176 pounds. thaniel T. Guernsey, Dubuque, Iowa, '81, 23 years, 177 pounds. No. 5-Louis K. Hull, Lebanon, Conn., '83, 20 vears, 180 pounds. No. 6-George B. Rogers, S. S. Lexington, Mass, '80, 23 years, 186 pounds. No. 7—Charles B. Storrs, New York City, '82, 20 years, 180 pounds. Stroke—Harry T. Folsom, Orange, N. J., '83, 20 years, 172 pounds. Average, 21‡ years, 176 pounds. Coxswain, Mun Yow Chang, Han Shan, China, '83, 20 years, 90 pounds.

THE TEAM ABROAD.—Word comes that the team under Col. Bodine intend sailing for home on the 20th inst. They have done well; better than the most sanguine expected of them; and now everything is clear to the contest for the Palma next year. The Irishmen have shown themselves experts of no mean order, but they have been defeated by a team which was not considered as the most homogeneous and therefore the strongest that could have left our shores. Sir Henry Halford, if he will give up hobnobbing with irresponsible parties, who have not the right to contract for international matches on behalf of America, and devote himself to the organization of a team to visit America in 1881, will find himself fully engaged. He has the whole kingdom to pick from, and with such a high model as the recent winning average of over 215 set at Dollymount no second-rate marksmen can hope to find places on the team of either nation. If there should be any backing out on the part of Sir Henry or his men it can only be set down to fright after seeing the American scores made last week.

TEXAS JACK .- Our brief mention last week of the death of "Texas Jack," at Leadville, Col., June 27th, must have recalled to several of our readers their Rocky Mountain campaigns, spent in company with this noted guide and scout. In the summer of 1878 a party of New York gentlemen made an extended trip, under his leadership, and their very enjoyable experience were at the time detailed in our columns. "Texas Jack," whose real name was J. B. Omohundro, had long been noted for his frontier exploits, where the most of his life was passed. His rickname, by which he was better known than by his real name, was earned years ago by his exploit of conducting

a cattle drive from Texas to Colorado. In 1876 he was employed in Gen, Crook's campaign against the Sioux, and when the Indians were defeated he rode with the dispatches 325 miles in six days, displaying great pluck and endurance, eluding the hostile In-dians on the way and sending the news through to the New York Herald twenty-four hours in advance of the military authorities.

In 1878 he came East, and while in this city frequently called at our office, always showing himself a gentleman in his bearing, and quite the reverse of the blustering plainsman, which he was depicted to be on the bill pos-ters of his traveling theatrical company. "Texas Jack" was buried with military honors at Leadville,

The London World thinks that the reason so many young men nowadays walk like crabs, is a consequence of their perpetual wobbling on the bicycle; and it says that the appearance is known as the "bicycle back." this promises ill for the Boston bicyclers.

STUDIES IN ALASKAN NATURAL HISTORY.

SITKA, Alaska, May 25th.

T last Sitka and its surroundings has done something toward redeeming its reputation with us as a country in which it was possible to obtain some little amusement with a gun. Month after month the good time coming has been postponed, until at length we gave up in despair and stowed away our Parkers; but for the last four weeks we have had as good shooting as any one could ask for, but within the last four days it has gone to "Hans Brideman's barty; where is dot barty now?

First the ducks flocked, preparatory to their flight northward, and their numbers were beyond computation. And when a flock got up, from a shot among the noise of their wings could be heard a mile We did not pay much attention to them; we were tired of ducks, and the flocks were very wary, and, beside, we had better business with the beach-birds, which came in immense quantities. While we were working at them the ducks disappeared. None of the sea fowl breed in this vicinity, but the Indians still bring in a few mallard, which is a pity, as they are now breeding in the lakes among the mountains. A few green-winged teal, too, have come. These birds winter further south : they were the first to come and to go last fall, and are now coming back after the others have left. The Canada goose also breeds here, and some of them, taken young, are in captivity ashore. I think that Barrow's golden eye also winters further south. I got some early last fall, none during the winter, and two during the last week. The mergansers, harlequins, surf ducks. oldwives, scoters butter balls and scaups were plentiful all winter, but have gone probably to the valley of the Yukon. two or three weeks, though, the beaches and marshes and flats have been alive with birds. One of our offi cers brought home one hundred and thirty snipe and ployer from an afternoon's work on the flats, and bags of forty or fifty were common, among which would be of plover, the semi-palmated, the ring neck, the surf bird, and another with four toes, which is neither the "beetle headed" or surf bird, as described by Coues, genus 189 and 193, as the only four-toed plover in the United I obtained from an Indian several of these, both male and female, but could not find out where they were shot. We got none on the beach that I know of. I will copy from my note book my description: Plovers, May 10th male and female. Male—Length, 10½ inches; extent, 2½ inches; wing, 6½ inches; bill, % of an inch; gap, 1½ inches; tarsus, 12 inches; toes, 4; middle, with claw, 12 inches; hind, with claw, 12 inches; full tail, 24 inches 12 feathers; toes not lobate; legs yellowish green; tibia feathered two-thirds of length; colors: upper part, head, back and scapula, dark brown, mixed with lighter brown, the feathers on back having dark brown fields, fringed and tipped with yellowish white; rump, upper tail coverts and one inch of back adjoining, white; tail, dark plain brown; under parts, chiu and throat white and brown mottled; belly and anal regions white, with a few black-tipped feathers; under wing, white. Fe male-Length, 8 inches; extension, 15 inches; bill, 1 inch tarsus. 4 of an inch: 4 toes, hind one little over 4 of an inch; legs, olive green; colors: back, dark brown, fields edged with yellowish white; head the same, but lighter, and back of neck lighter still; upper wing coverts slaty brown, edged with white, the long outer feathers having white quills; under part mottled brown and white rear of belly and anal regions white. At first I took this for the female of the surf bird, but there was one striking difference. In the bill of the surf bird there is on each side a V shaped groove, the apex toward the end of bill and nostril situated in lower posterior. With this plover-which certainly is not genus 189, as its belly was white-there were on the bill two short, longitudi nal grooves, end to end, separated by a little partition the nostril being in the rear of the hinder one. I have saved the skins, and shall send them to Prof. Baird.

From the marshes we have got a few golden plover, Of snipe I have identified as follows, using "Coues' Key : No. 203, Wilson's snipe. No. 204, gray snipe, of which by the way, the cut of head and bill in "Key" is perfect and the membrane between outer and middle toes very "evident," My bird is a large one; dimensions as follows: Leugth, 11 inches; extension, 191 inches; wing, 6 inches; head, 11 inches; bill, 21 inches; tarsus, 11 inches; middle toe and claw, 15 inches, outer pair semipalmated; legs, yellow-brown; tail, 12 feathers; colors about as described by Coues. No. 206, semi-palmated sandpiper. No. 207 to 209, least sandpiper, Baird's sandpiper, jack snipe. -, black-bellied sandpiper and No. jack curlew. The latter I didn't get, but feel quite sure I recognized.

For a few days we had flush times, but about the 20th the birds had about all gone from the immediate vicinity. and we had to search other fields. Hearing that at the a deep bay (Crab Bay, which penetrates eastern side of Kinzoff Island, about twelve miles to the westward) there were extensive flats, which at low water were covered with birds, a party of us started on the 24th and explored the country. We found the flats, as de-

scribed, but instead of being covered with birds they were covered only with seaweed, stranded starfish and clam and scollop shells. Our day's work gave us but one black-bellied sandpiper, one shot at a goose, which, although hit carried off the No. 8's, and one at a bald eagle. The day was, however, a splendid one, and as a picnic the affair was a success.

The starfish were wonderful as regards colors, which were purple, red and green, in different shades. One species resembled in shape the Asterias vulgaris, and an other, with eight or ten short arms surrounding a wide body, resembled more nearly the Ctenediscus crispatus, so far as comparative length of body and legs went. All were of great size, some over a foot in diameter. every direction the flat seemed to be filled out with fountains, for great spurts of water, three to four feet high. were constantly occurring, which of course we translated clams, and dug for them, and such clams! I brought some on board and weighed them, and they weighed one and a quarter pounds each, and were from six to seven inches long by four to five inches in length and breadth

Desiring to preserve the shells, I sent them forward to be opened and cleaned, and my cook found in each a crab of light yellow hue, soft shelled, and with great quantities of eggs, almost ready for laying. The crabs were alive, and I would suppose had crept into the open shells for an asylum during their egg-laying season but the man insists that they were inside the clam itself, and says that he first noticed the little claws projecting from the body of the fish, and that when he pulled them out a cavity remained. If this is so-and another Chinaman confirms him, only he says "Clab he inside that stlomack"-may it not be that the crab was burrowing in the clam's flesh and thus obtaining food as well as lodging while "in the straw?" Certainly they would not have been in the stomach, and living, also; and these lived some time after extraction. Of course the man failed to give me a chance to look into this phenomens.

I believe if I shot a "phillaloo bird," and laid it aside for study, that cook would serve it up for my breakfast without a question, if not warned. He did serve me that way with an ousel. Well, I've got the crab in alcohol, and shall try to get a specimen intact of both,

Mount Edgecomb is on Kinzoff Island, and from a lake on its foot-hills flows through this Crab Bay flats a pretty little river, which I believe is the one from which the trout I sent you a description and drawing of in my last were obtained. I hardly believed the Indian who told me that these fish ran up into the lake in fall, lived there all winter and ran down in spring; but after a talk with Whilford, who, in his capacity of oldest inhabitant and trader, has more information about fish, game, etc., as obtained from the Indians, than any other man in Sitka, he fully confirms the story of the Indian, and says that every spring they are brought in not only from the lake on Kinzoff Island, but from the mountain lakes, in which, during winter, the Indians catch them through the ice. The Indian name for the fish is "quot,"

During our flush times with the beach-birds every boy in town who could rig up a bow and arrows, or borrow s cheap shot gun, was busy with robins, which in count-less numbers tarried with us a few days and spent their time on the beaches feeding on herring spawn and small crustacea. They, too, have winged their way northward, and now the shore line and flats are devoid of life.

I learn that the question as to how many and what variety of crows exist in Alaska is now agitating ornithological circles. I will give my mite toward settling the question. During our year here three species have been more or less plentiful. I have not shot any, not hankering particularly for crow as game, but shall soon do so now that they are "wanted" by science.

All summer, all winter, and until a month ago, raven were very plentiful-living in the town itself, thronging the streets as plentifully and as impudently as does in our Eastern cities the pet (aversion) of Coues, the Passer domeslicus. A month ago the cayote dogs killed a turkey on shore-I might almost say the turkey, for there were but two in town-and its body, well seasoned with strychnine, was hung up just high enough to enable the dogs to continue their repast. But the ravens got in ahead, and for weeks their dead bodies have been libersprinkled around the vicinity, and either nearly all were poisoned, which I do not consider probable, or those which escaped poison have been frightened away. I have not seen over half a dozen within the last month

During the same season, and still continuing to be elentiful, a crow very similar to our ordinary crow, al though, I think, somewhat smaller, and differing in its voice, lives among the islands and infests the flats at low tide, flying in immense flocks every morning to Indian River, where they all perform their ablutions and await the early ebbing tide to get their breakfast.

Last fall there were among the islands quantities of a small crow, not over twice the size of a blackbird, and with a note which, although very different from the ordinary crow's, was enough like it to stamp the bird as one of the family. It was my impression then that they were young crows, but since receiving "Coues' Key" I

am inclined to believe that they are identical with the fish crow, or the "crow, var. carinus, Baird." I shall look the matter up.

Besides the birds I have mentioned, those most common here now are bald eagles, ospreys and various hawks, and a few song birds, of which I have not as yet obtained specimens. The fact is my scientific turn isn't quite trong enough to completely overturn my sportsman's ideas, and I don't fancy crow and sparrow shooting.

I suppose my young friend, Prof. Merriam, who when boy, being hard up for a dog skeleton, killed and boiled his own mastiff in his mother's soup kettle, would not appreciate this sentimentality.

In the way of fish I have little to tell you. The salmon have not as yet come in to great extent. The first school came in, driven by a herd of porpoises, on the 13th inst., and a few were taken by the Indians; since then there have been three or four small schools, but the run cannot be considered as having begun. It is this late opening of the season which operates against the canning interests here. The Columbia River salmon are probably on the market at San Francisco by this time, and it is uphill work to establish a market for the Alaska salmon when it does not come to hand until the market is well supplied with a well-known article. The time for Alaska will come, when the fish, so scarce, get too dear to pay for further south. Here the cost of the fish is a bagatelle.

I have been surprised at one thing. We arrived here June 15th last year, and it was well on toward September before the salmon began to run up the streams and change color. I don't think I saw a "dog" till late in August, but already this year numbers of them have been taken from Sawmill and other rivers; roe fully developed and colors changing.

The salmon trout have not as yet run into the streams, although they are hovering around in the bay, for they have been taken in nets, and arrivals from outside report salmon plentiful a few miles away. Can it be that the unusual quantity of snow water affects the salt water to such an extent that both classes of fish are waiting for a change? No more "quot" have been seen,

On the beach, where last fall the caplins and smelt came ashore in quantities, there has been captured during the last week quantities of sandlances, about five inches long, five eighths of an inch deep, half an inch broad, and long, sharp head. As soon as these creatures are left by the receding waves they burrow into the sand until but their tail is visible. As table fish they are excellent. Halibut are still plentiful and good, and a bass which resembles greatly the ordinary fresh water black bass is very plentiful, and is caught by trolling with any kind of a spoon; the Indians troll with a strip of halibut belly skin on a single hook. No Fontinalis as yet, but expected daily.

have quite a collection of fish in alcohol, and am impatiently awaiting Prof. Bean in the Yukon, who will, I know, be glad to get them, and will be able to classify and describe them. The Yukon is expected daily, and by next steamer Prof. Dall will arrive (his chief assistant, Mr. Baker, having arrived by the last steamer), and the Yukon will go on surveying and other scientific work.

PISECO

GAME PROTECTION. MIGRATORY QUAIL.

Editor Forest and Stream :-

QUEBEC, June 20th.

Editor Forest and Stream:— QUEBEC, June 80th.

I read your number of the 24th of June in the expectation of getting some migratory quail news, especially with regard to the birds that were turned loose previous to this year, but I regret to find your correspondents are very sity about committing themselves to any statement on the subject. I must therefore report what I have noticed in the birds I have sent adrift. Eighty birds were placed in the county of Quebec, and fourteen were planted at the mouth of the Saguenay; one hundred went to Montreal. Of the birds (ten) I turned out on my own farm, one has been found broken up by hawks, who hunt the grass fields most carefully; but we find "dustings" of quail on the roads and paths, and we have seen one couple dusting. They appear to be as regular in this habit as chickens, seeking places not far from barne or buildings, evidently preferring the risk of the domestic cat to the danger of the chicken hawk. We have never heard any cry or call coming from the quail.

In the midst of my walkings I found a young parting (Perdrin gris) just hatched. This was on the 14th the very lark broads and very week lains a first and on the 14th the very lark broads and very week lains a first and the very lark broads and very week lains a first and the very lark broads and very week lains a first and the very lark broads and very week lains a first and the very lark broads and very week lains a first and the very lark broads and very week lains a first and the very lark broads and very week lains a first and a support of the content of the very lark broads and very week lains a first and a support of the content of the very lark broads and very week lains a first and a support of the chicken have a lark broads and a very week lains a first and a support of the chicken have a lark broads and a support of the chicken have a lark broads and a lark broads and a lark broads and a lark broads and a lark broads and a lark broads and a lark broads and a lark broads and a lark broads and a l

ridge (Peraria gris) just hatched. This was on the 14th of June, consequently any quaid hatched in August will be very late broods, and very weak birds for a migratory experiment. Where there are no native quait the dustings are the surest sign of the old birds, as they will visit the same spot every day, and there can be no mistake about this sign, and the ground for quail is gruss or grain land near a wood. near a wood.

I hope some of your other correspondents will occasinoply give you some news, as what is written in local papers is interesting outside the locality, and 1 know of no medium of communication for migratory quail news as good as the columns of a journal such as yours, having a continental circulation. WM. Khodes.

DANVILLE, P. Q., June 28th.

Editor Forest and Stream:—
Your favor of the 18th inst. came during absence. The quail arrived in fine condition, on the 17th inst., and are now rejoicing in their freedom, except a dezen, which I am keeping over in confinement. Shall try to winter

them over and release next spring. They are now quite tame, do not try to fly, and two or three will allow themselves to be caught at any time. Am afraid the season is too far advanced for young quail to mature sufficiently to stand the fatigue of a southern flight, but hope for the best. All who saw the birds admired their sprightly bearing, and were amazed to learn that they had been caged so long. They were so active and in such perfect condition that it did not seem possible they had been caged nore than two or three days. I liberated most of them in lots of ten and twelve birds, and in places about three miles apart. A few have been seen since they were liberative. I will report their future movements if anything of interest is observed. Gro. O. Goodiuce.

English Pheasants.—Editor Forest and Stream:—A few weeks ago 1 imported one hundred pheasant eggs from England, and set them under domestic hens. The venture has so far been successful, as there are some ten or fifteen out already and more expected. These chicks are very healthy, and as my head keeper, Thurtle, has had experience in raising pheasants in England, there is every reason to believe that I will succeed in rearing them. I will report progress from time to time.

Game Bag and Gun.

JULY IS A CLOSE MONTH FOR GAME.

—Address all communications to " Forest and Stream Publishing Company, New York." ----

THE "BLOOD-SNUFFERS' CORNER."-The suggestion that a corner should be set apart in the FOREST AND STREAM for the blood hunters appears to take. Here is a note from Georgia, in which the writer, speaking of Mr. Van Dyke, says :-

STREAM for the blood hunters appears to take. Here is a note from Georgia, in which the writer, speaking of Mr. Van Dyke, says:—

He does not write much of fish, but he is an angler for all that. He is more. He is a humane, cultured gentleman. He completely "suuffs" out a certain class of sportmen when he suggests that they be allotted a certain space to be called the "Blood-Snuffers' Corner," "More power to your elbow," Brother Van Dyke, and most cheerfully would I walk fifty miles to shake hands with you. Too many men, because they own a sporting rille and a shot gun, claim to be sportsmen. Let such men read the "Recreations of Christopher North" and hang their heads for shame when they see how a scholar and a gentleman could spare God's creatures when he had enough for his own use. To kill deer and to catch fish simply to boast of it is a mean and a cowardly thing, Kill deer, my brother; catch fish if you can; but leave it to pot-hunters and low, irresponsible fellows to brag of catching 400 trout in a day or of killing sixty brace of birds in the same time. Yet such men are necessary. Necessary to show the vivid contrast between them and men of honor and culture.

J. W. St. Chair.

MAKE SHOOTING.—Machicas, Me., Jione 15th.—We are having a dry season, but vegetation is not suffering. We hope for rain to stop forest fires, which are beginning to do mischief. Grouse have had a nice chance, this season, to rear their young, and will be planty. Deer are increasing, and, could we have our laws well enforced, would be plenty. We dislike some of your stricks upon the use of hounds for deer, as they are either the emanations of selfish guides or city would-besportsmen. You must allow us, who have been rosidents and have spent, some of us, the larger part of our lives in the forests, to know something of the habits of deer. March, or last of February, when the snow is deep and the sun thaws during the day, with a sharp crust in morning is when the worst class of our outlaws dell enforced, would be spent, some of us,

treat them as induced y at home.

S. B. H. at home.

New Jersen Quall Shouting.—Tom's River, N. J., June 12th.—As there have been numerous articles lately in the papers relative to the wood fires that have occurred this spring in this State, and to the destruction of game generally. I write to let sportsmen know, who anticipate visiting New Jersey next fall or quail shooting, that the prospects for sport are better than they have been for a number of years. The birds have paired off well, and can now be heard whisting on every side. Last year they remained in bevies to a considerable extent. The increase of game in this section is owing in a great measure to the strict watch our game association kept last winter on parties suspected of trapping and snaring.

H. CLAY GLOVER,

Inst.—Last evening I was digging worms under an apple tree in my garden for some chickens, and was called away for a moment. When I came back I noticed a bird running about among the chickens. At first sight I took the bird to be a robin, but on looking at it more closely was much surprised to find it was a woodcock Chickens. At first sight I took the bird to be a robin, but on looking at it more closely was much surprised to find it was a woodcock Chickens. At first sight I took the bird to be a robin, but on looking at it more closely was much surprised to find it was a woodcock Chickens. At first sight I took the bird to be a robin, but on looking at it more closely was much surprised to find it was a woodcock Chickens. At first sight I took the bird to be a robin, but on looking at it more closely was much as busily engaged in probing the earth for worms, and I saw him pull up several. I called my father to come and see the novel sight of a woodcock feeding in a garden in the city and among some chickens. We both stood not more than fifteen feet distant and accurrence a rare thing?

I might say that on account of the long continued drought the ground is very dry, and so I have kept my trees from withering by watering then every night. The earth under the tree was very moist, and I think that the

woodcock, finding a scarcity of food and seeing a likely looking damp spot, dropped in here. That is the only way I can account for his presence, as the nearest swamps or words are more than a mile distant. W. M. D. MINNESOTA—St. Paul, June 28th.—It is the impression of such sportsmen as I have talked with on the subject, that the remarkable high water of this month will have rendered woodcock shooting on the Mississippi bottom poor, the birds having been driven to seek more favored localities. But as the water will be pretty well down by the time the season opens, July 4th, there is a prospect of some sport. Frairie chickens are reported unusually plenty hereabouts, though it is feared that many young suffered death from the heavy and continued rains of early June. In a ride through a portion of Pierce County, Wis, a few days since, large numbers of quali were seen and heaved. The prospect for rare sport there is fine.

California—Benecia, Solano County, June 17th.—We had very fine duck shooting here last winter, although the winter was a very severe one for this State. On the 14th of March, the last day of the season, my brother and I went out for three or four hours' shooting. Thinking the season was too far advanced for duck shooting, most all the shells we took were loaded with No. 8 shot. After three and a half hours' shooting, we succeeded in bagging five qual, six English spipe, one silver gray fox, and forty-five ducks. As the birds were wild, and the shells were loaded with No. 8 shot, I think we did very well. The new Constitution of this State has made some wise provisions in regard to the game law. It is unlawful to shoot any kind of duck between the 15th of March and the 15th of September, thereby putting an end to slaughter of birds that breed here. It is also unlawful to shoot wild doves between the 1st of February and the 1st of July. Hitherto they have never been protected, and the various pot hunters shot the birds while they were hatching. By the present indications, the coming winter will be the best we have ever had, and already we are making preparations for the fine time coming. B.

SHOOTING MATCHES.

WONDERFILL SHOOTING.

THE BEST RECORD EVER MADE.

DOGARDUS and Rimoll met for a second contest in this country at Engerman's Driving Park, Reighton Beach, Coney Island, on Friday, July 2d, at 3:39 P.M. The match was between Captain A. H. Rogardus, champion wing shot of the world, and Mr. George Rimell, one of England's champions, who said after the match was over that it made no difference how many he killed, Bogardus would kill more every time. The match was for \$250 a side. The weather was good and there was a fuir attendance. The birds were wild, in good condition, and very lively flyers, there being but one incomer out of 200. Bogardus used his new hammerless Scott gun, with Dittmar powder in the first barrel and Orange lightning No. 6 in second barrel, H oz. shot. Itimoli used an English gun, with Orange lightning powder, H oz. shot. rel and Orango lightning No. 6 in second barrel, 14 oz. shot. I limeli used an English gun, with Orango lightning powder, 14 oz. shot. The shooting was under English rules, 5 ground traps, 6 yards apart, Rimeli standing at 23 yards and Bogardus at 30 yards. I limeli did good work and was in excellent condition. Bogardus never did better; he killed all his birds in reality, but his 47th was justly secred against him, as it fell dead three yards out of bounds, and when gathered and picked seven shot holes were found going clean through it.

The contest consumed three hours time, and the men kept constants at their work.

stantly at their work. The following is the official score and sum-

NEW JERSEY STATE TOURNAMENT.

THE second day of the tournament of the New Jersey State 1. Sportsmen's Association, opened auspiciously with fine weather and a good attendance Wednesday, June 30th.
Shoot Xo. 3.—Open to members of the Association only, 18 yards

Mesers. Height and Harrison, each killing two pair, divided the fourth prize, one case Dittinar powder, donated by the Dittinar Powder Conpany, 22 Part Elice, New York City, see \$30. the less of 6 there were seven contestants, Mr. Van Brackle by Killing two pair won the fifth pize, 550 "Chilp Wads," donated by Messrs. A. B. Kay & Co., Newark, N. J., value \$5, and one ammunition case, value \$5=\$11. Shoot No. 4.—Open to all amateurs; ten fluwle birds, 26 yards rice, hoth barrels; first barrel must be fired when the bird is in the air; second shot, fired anywhere:—
Dusspan.

Tourno, Ohio, June 20th .- The following scores were made at Corn City range, Saturday, June 28th; possible 75; 15 shots; 300 yards; regulation pull and target:—

Toledo, Ohio, June 21st.—The following scores were made by members of the Corn City Rifle Club, at their range, Saturday, June 19th. Possible 100; 500 yards, regulation pull and target.

F. R.

WHEELING, W. Va., June 28th.—The Wheeling Rife Club shot their first match with the term from the Pennsylvania Rife Club shot their first match with the term from the Pennsylvania Rife Association last Saturday afternoon. Each team consisted of five men, tea shots each, at 100 yards, and ten at 200, Massachusetts target, each team using paper targets and shooting off-band. The challegge came from the secretary of the Pennsylvania Rife Association, and proposed the terms of match, which were accepted by the Wheeling Club, although the 100 yard shooting was new to them at the large target. A series of three matches are to be shot, but the other dates are not yet set. This is the sixth match and victory for the Wheeling Club since April. The following is the score of the teams:—

WHEELING, W. Va., June 2d .- The third competition between WHEELING, W. Va., June 2d.—The third competition between the Canton Rod and Gun Club of Collinsville, Conn., and Wheeling Rifie Club was shot to-day. This is the third of the scries, all of which have been won by the Wheeling Club. These, with the two mid-range matches but in May, make five conclest this chub have shot this spring, in all of which they have been victorious. The following is the score of the last team match, 200 yards, off-hand, Massachusetts target:—

freshments of all kinds are also always to be had on the ground. The Wheeling Club extends an invitation to all rifle clubs to come and visit their new range, and shoot friendly matches at any

The next contest here is to be an individual one between the members of the club for a beautiful table set of engraved glassware, which is to be presented to the club and engraved by Mr. Otto Jaeger, also a member of the club, and an artist in the line of eneraving of unusual excellence

The contest will be at the long range at the park, fifteen shots, t \$00, 900 and 1,000 yards each.

W. Owl.

WHELING, W. Va., June 5th.—We have had a rifle contest to-day between members of the Wheeling Rifle Club for a Sharp's long range rifle, valued at one hundred dollars. The prize was put up by the club, and only the members of the club competed, The shooting was at two hundred yards, off-hand, Massachusetts

target, fifteen shots per man. The following is the score target, atteen snots per man. The following is the score:—

Each club has won a rifle match, and the third and deciding one will be shot on the 28th inst. Both clubs are in their infancy, but are vigorous, and intend to try the longer ranges soon. The Creswell team used muzzle-loaders and the Eugene team breech-

THE TRAJECTORIES OF SPORTING RIFLES.

T is astonishing how few persons, even those thoroughly educated, and with some experience with the rifle, have a correct idea of the curve made by the rifle ball in its flight through correct idea of the curve made by the rife ball in its flight through the air. Those who have met the proverbial "old hunter" will recall how many of them will tell you their rifle shoots "straight" for 150 or 200 yards. Having recently made experiments to ascertain the trajectory, with varying charges of powder and weights of ball, by means of paper screens placed at intervals of 25 yards for a 200 yard range, and thinking it might interest some of your rifle readers I append the table of results below, which, by a cureful examination, will explain itself. I was destrous of trying other standards of sporting rifles, such as Winchester "G model, and others, but could not get hold of them at the time."

"Testectaries for worth blank distance of 200 wards, barymeter.

others, but could not get note of them at the time.

Trajectories for point blank distance of 200 yards; barometer

24.65 inches; temperature 40 degrees to 50 degrees Fahr. April

26th and 27th. Heightof foresight above center of bore, 70 inch.

Nos. 1 to 7—Powder used, Curtis & Harvey's No. 6. No.—U. M. Cartridge used, and No. 9 Factory cartridge.
No. 8—Springfield .45; Sharps .45.

No. 8—Springfield 45; Sharps. 45.
No. 9—Winchester "3.
Calculated to nearest 1-10 inch
Nos. 1 to 7 are trajectories obtained from same rifle, Sharps. 44:
34in. barrel, and 20in. twist, with different charges of powder and
weights of ball, using C. & H. No. 6 powder. No. 8 is a trajectory
of the W. S. 45cal. army rifle, with a 70-405 cartridge, 32.6in.
barrel and 22in, twist; as also of a .45cal. Sharps. 30in. barrel and
20in. twist, with a 27-405; cartridge. These rifles had substantially the same trajectory, as was to be expected from the proportion of the cartridge. No. 9 is trajectory of the "23 model Wine. thany the same trajectory, as was to be expected from the proportion of the cartridge. No. 9 is trajectory of the "3 model Winchester, 2iin. barrel, 44cal, and 48in. twist, with a 40-200gr. cartridge. With No. 8 was used Union Metallic amountion, and with No. 9, the Winchester ammunition. The experiment No. 9 was unsatisfactory, as there was a strong cross wind blowing, and I was unable to get the light ball through all the screens and on the travers. I was manue to get, the ingli out intrody a fit the section. It is given as far is it goes. I had expected its trajectory would be as flat as No. 8, but when I reflected on the short barrel and light ball, the result seemed reasonable.

The trajectories of Nos. 1 to 4 are practically the same up to 200

yards. The lighter balls of Nos. I and 4, though starting out with a higher velocity, are overtaken by the heavier ball of No. 2, and reach the 200 yard point at the same instant. Nos. 5, and 7 jave trajectories gradually rising with the increase of weight of ball. No. 81s substantially the trajectory of all rifles, which the base the same instance to the same trajectories.

70 and 77gr. shell, with similar bullet. On another day I found To and Tigr. shell, with similar bullet. On another day I found the Sharps Alocal, midrange, rose at the highest point, Hien, as that it likewise, with the 70-370gr. cartridge, has substantially the same as No. 8. Nos. 1 to 7 are with hollow-fronted balls. No. 41 have used a great deal very successfully on game, using one sight up to 200 yards, aiming low on the animal. For distances between 75 and 150 yards I have also used, last year, No. 7 on elk and bear. To show the effect of changing the point blank, from 200 to 150 yards, I append a table of these curves, reduced to the 150 yards point blank.

Trajectories for point blank distance of 150 yards, with all conditions the same as in the previous table. Foresight, .70 inch above center of bore.

No. 1-Calculated to nearest 1-10 inch.

No. 8—Springfield. 45 eal. rifle. Sharps. 45 cal. sporting.
The higher initial velocity of No. 1 is shown in the flatter curve
from 50 to 125 yards, over the heavier ball of No. 2. Nos. 3 and 4
appear to have the same curve, though the different powder-ball proportion should make a higher velocity for No. 4. So No. 2 should have as flat a ourre as No. 3 for same reason, it would appear. Nos. 1, 2 and 3 were loaded without lubricant and would not answer for hunting. Nos. 4, 5, 6 and 7 would all answer for hunting, sighted for a point blank of 150 yards. No. 8, should be sighted for a point blank of 100 to 125 yards to compare with the previous numbers.

previous numbers.
These trajectories were taken with great care, each being the average of four or five shots, all agreeing with cach other within three-quarters of an inch. They also are substantiated by previous experiments made, before the screens were proporty leveled up. It is a very correct way of taking trajectories. Much more so than the one heretofore used by me. By previous experiments I had considered the trajectory of No.4 to rise seven laches instead of six and a half, as the table shows, for a 260 yard wolth blank. point blank.

As will be seen, these trajectories were taken with a baromet-

Toget an idea of the induced, a difference of pressure be-tween the latter pressure and the pressure near the sea level, say When the factor pressure and un pressure near the ear rever, say 30 inches, I will compare No. 1 of above tatiles with a trajectory, developed, for a rifle using the same powder-ball proportion, by a corresponder (" \mathbb{C}^{N} ") of the London Field, during the late rifle trials by the Messrs. Holland. That trajectory, being calculated for its height above a line from the center of bore at the muzzle to the center of bullseye, instead of above line of sight, the trajectory of No. 1 is accordingly corrected for the height of the fore sight above the center of bore, and the comparison will be as fol-

| | Number. | Caliber. | Powder grains. | Ball grains. | Propor- tion. | 50 Yds. | 75 Yds. | 100 Yds. | 125 Yds, | 150 Yds. | Initial velocity. |
|---|---------|----------|-------------------|-----------------|------------------|---------|---------|----------|----------|----------|---------------------|
| ĺ | 10 | .450 | 115 | 280 | 2.43 | 3.7 | 4.5 | 4.3 | 2.9 | 0 | 1.830ft, persecond. |
| | 1 | .440 | 114 | 275 | 1 2.41 | 2.8 | 3.3 | 3.0 | 1.9 | 0 | |

The powder used in each trial is the same (Curtis & Harvey, No. 6); the powder-ball proportion is about the same, but the barometrical pressure in one case is 21.85 inches and in the other supmetrical pressure in one case is 21.85 inches and in the other supposed to be about 30 inches. This would appear to be too much difference of trajectory for the difference in pressure, but I cannot see what other influences caused the difference. In these experiments I was surprised to notice how little influence on trajectory was caused by a marked difference recessary in elevations on Vernier scale between Nos. 1 and No. 3 or 5, which means a very decided increase in velocity is necessary to flatten the trajectory a very little. The rifle used in No. 10 is supposed, from its make, to have a 28th. barrel with a 30th, twist. That used in No. 1 had a 31th, barrel and 20th, twist. Could the difference in length of hardy feerings to the experiments under North, Feering and

1 had a 34in. barrel and 20in. twist. Could the difference in length of barrel (referring to the experiments made by Major Farley on proper length of bore, alluded to in a former article) account for any of this difference in velocity?

The finitest trajectory, reported by the Messrs. Holland in their experiments, is that of a 4.60 cal., using 165 grains of powder and 330-grains bullet, which, reduced to a 150-yard point-blank, and allowing for height of foresight above center of bore of half inch, is as 1010ws:—

25 Yards. 50 Yards. 75 Fards. 100 Yards 125 Yards. 150 Yards. 150 Locks. 1.4 2.4 3.0 2.5 Barometer supposed to be 30 Inches.

Proportion of powder to ball 1 to 2.65; a very high proportion t which, with the heavy ball, gives high velocity (near 2,000 feet per second, doubtless), too high to be measured with their instru-

In conclusion, it is hoped our riflemakers will put up on their ranges a system of paper screws with which to obtain the exact trajectory curve of each of their standard rifles. The cost is triting; nothing, however, in comparison to the satisfaction it would give the sportsman, if he knew exactly how his rifle shoots wound give case-point-blank distances. A few shots with each cartridge would determine it accurately, with the screens carefully arranged and their zero (0) points carefully marked.

It appears from these tables the highest point of these curves is between 100 and 125 yards, and not at near two-thirds the dis-

as believed by Major Morrill and other rifle authorities. In think the true distance, with a high velocity, is about 85 per cent. of point-blank distance, and that the rise is no more than one-tenth note after passing the 105-junt point. This secords with previous experiments, as also with the late ville trials near tondon. May 28th.

Pachting and Canocing.

DEATH OF JAMES SOUTHERTON. - Cr. cketers everywhere will bear DEATH OF JAMES SOUTHERTON.—Cr. eksters every where will hear with regret of the death of this well-known and much respected Surrey player. His famous professional cricketing career extended over a period of thirty years, and it was not until he had reached a ripe old ago that he was "bowled by death's uncertage ball." He was select but a short time, but on June 12th he was select with an Strange of the player of the burst and this selection was except the selection. ripe old ago that he was "bowled by destits unerring ball." He was sick but it a short time, but on June 12th he was sicked with an attack of congestion of the lungs, and this sectarre was so severe that he died at his house, "The Cricketers," at Mitchan, Surrey, Eug., on June 10th. Southerton was born at Petworth, in Sussex, Norember 10th, 1821, but was removed when three months old to Mitcham, in Surrey. This "man of many counties" has played for no less than three, namely, Surrey, Sussex and Hampshire. Originally he played for Sussex for his batting, but he soon developed such a wonderful decree of ability as a slow bowler, that of late years he adopted Surrey as his county under the residental qualification. His delivery was slow round-arm twisting, and of good length; and his great success and fame because with the surface of the first time in the match of the What Surrey as the Adopted Surrey as his county understanding, and of good length; and his great success and fame because with the surface of the first time in the match of the Surface of the Hambledon Club, etc. It was not till 1870, when forty-two years of age, that he appeared for the first time in the match of the

reason, namely, for the Players against the Gentlemen. In 1872, Southerton obtained no less, it was stated, than 30 wickelss nearly all in matches of note, and therefore against good players. In 1875, also, he is recorded to have bowled 6.639 belts altogether during the sesson. On April 20th, 1875, he became "mine heat" of the Cricketor's Inn, on Mitcham Green, but he was by occupation a halviresser, and was a popular, temperate, pleasant and well-informed man on cricket matters, and a favorite with

HILLIAM STATES IS, CANADA.—This motch will be played in Phil. adelphia during the latter part of September, and, thanks to the cricketing association of both countries, promises to be the grand-

cricketing association of both countries, promises to be the grand-est international conest ever played between them. American Centuriuss.—On May 29th II, C. Sinonals scored 12 runs in a match, Hamilton 18. Trinity College; and on July 20 Goorge M. Newhall scored 180, not out, for Young America vs. Raltimore.

ONORDIGAS PR. ONUTEO FALLS.—Played at Oswego Falls, N. V.,

YOUNG AMERICA DE PORT HOPE.—Port Hope, Ont., July 8th.—
The Young Americas defeated the club of this place by one innings and four runs. Port Hope, first limings, 37; second innings, 64; total, 101. Young America, first innings, 105.
—There were more matches played during last week than was ever known to be in this country; in consequence, many scores will have to wait over until next week's issue.

NOTES FROM NORTH TEXAS.

FORT WORTH, Texas.

B EFORE leaving this place I must pen one or two little incidents, and perhaps moralize a little on one or both of them. Traveling as much as I do I cannot afford to stop at high-priced hotels, but usually seek some quiet boarding-house, kept by a good, motherly old lady, usually a widow with one or two pretty daughters, or some retired, talkative old gentleman. Such places nearly always afford me excellent accommodations, and at much lower rates than the hotels. To find such, when I stop at a strange place I leave my valise and other plunder with the railroad agent at the depot and go out prospecting. I arrived at Forth Worth at 1 P.M., but felt so eager to examine the rocks and artesian wells that I broks for them at once, and became so engaged that the boarding-house was forgotten until dark. It was then too late to look about much. Procuring my valise at the depot I stopped soon at a tolerably appearing place called the United States Hotel. On entering it I did not fancy the looks of things, but concluded to try it at least till morning. The men in the office, gathered around a stove, seemed the roughest sort of railroad laborers; took supper, which was tolerable enough, and called for a room. Liked the appearance of things in this room hardly better than what I sawin the office; still I went to bed on a shuck matraxs with shuck pillows, which rattled at a great rate whenever I moved. There was nothing else in the room, not even a chair. I cursed the barbarous stopping-place and determined to shake its dust off my feet as soon as I could. After breakfast, which was a tolerable one, I walked out to reconnoiter. Soon found a nice looking ways afford me excellent accommodations, and at much

establishment, though it appeared not quite finished. Entering it and inquiring the price of board and lodging, was told it was \$1 aday. Everything I saw pleased me very well, and I was still more pleased when the rich tones of a piano fell on my ears from a room adjoining the office. But I would not decide to stay until I saw what sort of room they would give me. Was shown one. It was nicely carpeted, had a beautiful little bed, a table to write on, nice washstand, bowl and pitcher, and several clean towels.

My new place has pleased me more and more. It is really a delightful place.

Thave before spoken of the complete blending of the Northern and Southern element in Texas. They live so closely together here, that you cannot at all tell which is which. There are all sorts of close relations existing between them. To-day I found a one-armed Confederate soldier and a one-legged Yankee soldier in the saloon business together, and both got shot in the same battle. They are flourishing. The old soldiers on both sides living hereabout go there to grow merry together. It is rich to hear them fighting over their old battles again. I took part in one of these pleasant engagements, and drauk more beer than was necessary; still, I obtained no inconvenience from it, save a little fullness about the stomach. It is a great deal more pleasant, Mr. Editor, to fight battles with beer than with cannon balls and bullets. Have tried both ways thoroughly, and speak ex eathedra. This complete blending of the Yankee and Southerner in Texas is a very pleasing thing. They see how and another's heads off. The stubborness with which each side stood the blowing off of heads seems to have begotten a mutual respect, which is readily turned into friendship. So complete is this melting together in the form of the contry will never injure it, but the wretched into friendship. So complete is this melting together in the first of the contry will never injure it, but the wretched into friendship. So complete is this melting together in the firs

NGLING is the only one of the three principal field sports of England that is entirely free from the stain of what, for want of a better word, I shall call flunkeyism. The stupid lad, with more money than brains, who yearns to be, or be thought to be, a sportsman, finds in the showy and impressive externals of the chase, with the responsibility appertaining to its pursuit, an easier road, in the eyes of the gaping masses, to the coveted title than in the quiet, unostentatious and selfdependant science of Father Isaac. Hundreds again toil through shooting season after shooting season under the command of a keeper till their hair is gray, without an idea in their heads beyond blazing away at everything that rises within shot. But, unless it may be an occasional noodle who thinks it adds to his importance to be seen swinging a salmon rod, no one fishes "for effect." It would not pay at all. The gentle art has, to be sure, thousands of enthusiastic devotees of all classes, but each one of them goes to the river side, impelled thither solely by his own genuine love of the sport, and the most skill ful performer commands no admiration outside his craft. There is no glitter and show about the business-not enough exclusiveness about it to dazzle the eyes of the vulgar. It is supposed to be slow by fancy youths, who might, with some difficulty, distinguish a pointer from a setter, but imagine they are "shooting men." It is voted unworthy of some wooden-headed, uncultivated plutocrats, who can sit on a horse just well enough to watch, at a very respectful distance, the handling of the pack they are proud to subscribe to, and who call themselves "fox hunters,"

It is possible the comparative ease with which angling can be indulged in by the unpriviledged classes may help to rob it of that peculiar prestige (inexplicable to any one who does not know England thoroughly) that hangs around the sister sports.

You will almost invariably find that the non-fisherman, unless he be a thorough sportsman, speaks of his aversion to, or his want of skill in, the art with a ludicrous kind of conscious pride, as much as to say, "You can't expect a dashing blade like me to care about such a slow business as that? No, indeed; give me a good day's hunting or grouse shooting," The fact that his angling friend has to

give him a lead at the one and wipe his eye at the other give him a lead at the one and wipe his eye at the other is quite forgotten in the conscious superiority of the moment. But this is a phase of English life more conducive to cynicism than description, and would, to most of my readers, be meaningless. Perhaps in the dim future—in the days of the "coming crown"—when time-killing as an art has become necessary on this side of the Atlantic, besides the army of men that sport as now for their own amusement and improvement, there will be another army entering the field bent, at whatever risk of discomfort to themselves, on doing the "correct thing," I hope so. It is infinitely better than the course of life pursued by the intenses of ores of Continental Europe.

amusement and improvement, there will be another army entering the field bent, at whatever risk of discomfort to themselves, on doing the "correct thing," I hope so. It is infinitely better than the course of life pursued by the jeunesse drove of Continental Europe.

But enough. Let us take the map of Britain and glance over it with the eye of a trout fisherman.

Run a straight line from Berwick-upon-Tweed to the Isle of Wight, and the country left upon the east of that line, speaking generally, may be said to be the nontrouting portion of the British isles. By this I do not menn to say that it is entirely devoid of waters holding that most desirable of fish, but as it differs widely in its physical formation from the rest of the kingdom, the very features that form that difference are decidedly of an anti-trout order. Fens and level plains are, of course, with the sluggish winding rivers, ill adapted for such a purpose, though there are occasional exceptions. Norfolk has, I believe, one stream holding trout. Suffolk and Essex have one, I think, between them, while the group of counties that center around Cambridge are, as far as my personal knowledge and supposition go, entirely batern of this fish. There probably are some artificial, and possibly an occasional natural exception to these statements, but none in any way to affect the argument. The Isle of Wight, with its beautiful hills and valleys, has only one miserable little ditch holding trout, while from the "dun wolds" of Lincolnshire all readers of Tennyson know at least one stream pours, where "Here and there a lusty trout, and here and there a grayling," is to be found. From my own knowledge of the stream in question, though I am bound to add it is a very cursory one, I should say the "Laureate's" phrase of "Enrises of Charles Kingsley might be apt to suppose that the chalk downs of England were very paradises for trout fishermen. I was going to say the very opposite is the case, but that would be too strong. A deep-rooted prejudice against that [to m tony the Kennet, and the Itchen (Mr. Francis' invorteriver), while old Father Thames himself ranks all along his course as a trout river, or rather he receives a good many small streams, all famous for the size of their fish, and a certain number of patriarchs of fabulous dimensions known as Thames trout find their way into the baskets of a few fortunate anglers yearly, and are generally considered by the brethren, in that part of England at any rate, as the very étite among their order of fishes. One is reported this week of seventeen pounds. Of these rivers I may have something to say another time, but must now, having dismissed all the non-trouting counties of the Eastern Division, hasten northward, pass up the coast of Yorkshire, which is broken by the egress of no trout stream of note, unless it is the Duffield water, once famous for its club of skilful anglers, till I place my reader on those high table lands where Yorkshire and Dunham meet, and where with Scott's traveler in "Rokeby" he may quote as he looks down over the seenes of that romance:—

"Nor Tees alone in dawning bright

"Nor Tees alone in dawning bright
Shalrush upon the ravished sight;
But many a tributary streen
Each from its own dark glen shall glenn."
The Tees, which rises among the bleak, heathery moors
where Yorkshire, Durkam and Westmoreland comes, and

divides the two former counties from one another, has been, in the days of yore, a famous trouting stream; but alas! we are in the black country of the North, and mining and trout fishing don't agree. Ten years ago Teesdale anglers were getting despondent; how things are now I can't say. For several years in succession—visiting friends in the neighborhood—I made a two days' pilgrimage to the headwaters of that romantic stream—not so much on account of the attractions of the fishing; for, though everything to the eye bade fair for success, and artificial pollution had not reached so far up; though accompanied on each ocasion by the best fly fisherman I ever knew, persistent failure attended my efforts. Yet there was a charm about the stern widness of the surroundings; a solemn weirdness about the bleak, waste uplands, that carried the same party of us there summer after summer, to the cozy little thatched inn with its swinging signboard, that welcomed our steps at night as we returned with light baskets, and worn-out with foundering over the roundest and most slippery boulders that have over been anathematized by anglers.

To realize that this bed of polished boulders, with nexty-colored water trickling down between them, was the same river that reflected on its surface the lights and glare, the flames and furnaces of Middlesborough and Stockton was, of itself, somewhat difficult. One had also the pleasure of casting a line upon the same day at the foot of two of the highest waterfalls in England, and our principal hopes used to be centered on the dark-colored, seething pools, which churned and bolded beneath each cataract, the one about forty, and the other about eighty feet high.

I must lasten in a northeasterly direction, however, over the wild stretch of moortand famous for its immens stock of grouse, that in the breeding season resounds with their clucking and crowings and all through the summer with the plaintive cries of the curlews and pewits, till the valley of the Wear, or Weardale, lies beneath, note

scattered at pretty regular intervals all the way from its headwaters to Bislop Anckland, where the massive walls and turrets of the palace of the bishops of Durham, with its mediewed memories, look down over that dirty, thriving town.

I don't think there is a river in the world that has so many and such skillful anglers in a given space as the upper waters of the Wear, with its seant supply of wary little trout. In the days of old, before the fatal lead "hush" discolored its then bright waters, when the bishops of Durham compounded their fluctuating mineral tithes for one hundred and fifty thousand dollars a year and thought themselves hardly used, or long even before that, when they ranked as princes, and the country was preserved for their hunting grounds, splendid trout darted in myriads through its long, shelving pools and gently rippling rapids, what fishing these reverend lordships might have had then! Now the miner, the schoolmaster, or the parson, with their home made rods, which they swear by (and they certainly surpass anything I have ever seen turned out by a tackle maker), with their single strands of horsehair and dies tied by themselves on horsehair, with long handled and antique landing nets peculiar to the Wear, wade deep into the water and throw yards and yards of line, dropping their flies, like gossamer, in far off holes and under distant banks, carrying more art, more care and more perseverance into the craft than any class of anglers I have ever met, and with certainly less possibility of a corresponding reward; for a few small trout, running six or seven to the pound, are all that the most successful could hope for. But the glopy of the capture is enough, and these much-fished-for troutlings are certainly possessed of a very different order of intellect to their cousins in a West Virginia brook. In the days when as a schooloby and an undergraduate I used to than the banks of the Wear, I used to "fancy" myself on the strength of Southern and Western performances not a little, but my conce

bits. However, after a series of cutting and splicing and waxing he pronounced it as good a job as could be made out of such poor material, and apologized for shortening it a foot by saying it was better to have a ten foot rod, though it be an indifferent one, than eleven feet of nothing at all. They used to make all their own rods in those days upon the Wear, and for feathery lightness, for balance, and for that inexpressible connection between butt and tip that manufactured rods are so often wanting in, I have never since seen them equalled.

Then as for fishing with even the finest gut after May, no one but a blunderer or a tyro would dream of such a thing. The hair from a sorrel stallion's tail (and a North

wanting in, I have never since seen them equalled. Then as for fishing with even the finest gut after May, no one but a blunderer or a tyro would dream of such a thing. The bair from a sorrel stallion's tail (and a North Countrie stallion at that) was tied in single strands for five or six lengths, doubling it higher up, and twisting three together as the cast joined the line. You must tie your own files of course, too, on single him—a coch-y-bonder, a yellow bloa and a woodcock and orange. Wear trout were supposed to great from their watery depths Southern flies with shouts of derision. A landing net, too, you must have, as wanling is the order of the day, but, "an you love me," said the Weardale mentor, "not one of those unhealthy cabbage nets that they use in the South, that fold up in your basket, with flimsy short handles that hook onto your creel strap." Shall I tell you, genife reader, what a Weardale landing net was like in those days? In the distance it looked like a standard, on to which the angler, in mid stream, was proudly clinging, but on a close inspection it was found to be an instrument with a pole, to begin with, eight feel long, with a thing like a boat hook at the end. The net itself fastened on a wooden right would have landed Mishee Nahma, the king of fishes, himself, who scared Hiawatha so badly, if I remember rightly, or would, at a pinch, have made an excellent hammook for a moderately sized man; but no matter, to insure the respect of the blunt North countrymen, who net you at every bend of the river, it was necessary to attach yourself to one of these monsters. So much for prejudice. It was supposed to be a great help in wading. I can imagine it to have been an excellent thing for a drowning man to get satride of and come out of a deep pool on, to be sure. But chough, it was the only article in their equipment that gave me a chance to pay them back in their own coin, and I never lost the chance. It was fortunate for my Weardale friends that they were not migratory anglers, and that th

apparatus, would have been startling additions to a crowded railway carriage, and decidedly imposing on horseback.

I must not finish this sketch without allusion to the champion fisherman, not only of the Wear but of the whole of that country, as he was not only an "angler great," but a scholar, an author, and a poet.

Mr. W. was master of what was by courtesy called the "grammar school" of the little town of B—, upon the Wear; one of those old foundations of Edward VI., that collapsed, like many others of its kind, between the pressure of higher education on the one side and lower education on the other. When I saw it last it had dwindled to one boy. Solemnly the great bell on the roof used to toll out over the town and notify the inhabitants of the incomings and outgoings of this solitary being. Methodically and punctually the great piscator used to seat himself at his spacious desk, and for twelve months is said to have superintended the slumbers of this isolated individual. The plash of the river sounded ever in his professorial ears, and the juvenilé obstacle atone prevented his exchanging the rod of birch for that of hickory. The endowed school commissioners had not then swept those old defunct institutions from the face of the earth, and his exchanging the rod of birch for that of hickory. The endowed school commissioners had not then swept those old defunct institutions from the face of the earth, and his salary was secure anyhow. Human nature could stand it no more—this obstinate urchin still kept the bell telling—so at last, according to tradition, he was offered a good round sum to absent himself for the future, which left our learned friend at leisure to prosecute his favorite secure. He deltad a value of vector which is described. left our learned friend at leisure to prosecute his favorite sport. He edited a volume of poems, which sign of the natural beauties of the neighborhood for fifteen miles round, and some years before, while his school was still in existence, he had published a book on angling, which, apart from its local prejudices, was considered by the angling world as an excellent addition to its litera-

ininging workt as an exceeded addition to the mean-ture.

The friend I alluded to some time back sat in his youth at the feet or this Galilleo, and has told me many an anusing yarn about the old gentleman. One especially, I recollect; it was when he was deep in his book on any-ling, and the pupils were having a great time of it. He was especially occupied then with the plates, which he exceeded himself. The hour struck for the arrithmetic lesson, and he moved to the blackboard, chalk in hard. The boys rubbed the slates with their coat sleeves, shuffled their feet, cleared their throats and went through the usual programme that, among the schoolboys, is the prelude to any hushed mental effort. They watched the chalk eagerly in the pedagogic hand as it began its movements over the blackboard, hoping the fraction sum would not be too complicated, when belold! as the bulky person of Mr. W. removed from that position, and, with the usual last flourish of the chalk in the air, moved back to the desk—not a vulgar fraction sum, but the outline of an immense troat stretched its great length over the sacred ground. The stilled titterings that predude the coming storm roused the attention of this great preceptor. Some latent consciousness caused him to step down before the board and discover his mistake, when the sensitive risible organs, so uncontrollable in youth, gave way, and the whole school shouted with laughter till the roof rang again. Like all petty schoolmasters of the olden days, rascibility at being caught tripms was a second nature, and physical reproof came before verification that the product of the delenday, rascibility at being caught tripms was a second nature, and physical reproof came before verification and the class and so that occasion, I believe many more, flew like hail among the dodging and bobbing heads of the ire. The friend I alluded to some time back sat in his youth dries that were used in such educational establishments as missiles and, on that occasion, I believe many more, flew like hald among the dodging and bobbing heads of the youths. It was never forgotten, and to this day our old friend, whose form has long created to be a familiar one upon the banks of the Wear, is still called the "Big Fish" by that generation.

RINGWOOD.

An English angler caught a trout which had in its mouth an old rusty hook, this hook caught in his wrist, poisoning his blood, and the man died in three weeks.

WOODCOCK CARRYING THEIR YOUNG.

Washington, June 12th.

Editor Forest and Stream :-

WASHINGTON, June 12th.

Ethitor Forcat and Stream:—

Inotice with interest the statements in your issue of the 11th instant regarding the habits of woodcock, under various extigencies, carrying their young in their claws or between the thighs. The fact that woodcock have such a habit is, as you say, indisputable; too many reliable observers, both in this country and abroad, having contributed information on the subject for it to be doubted. As regards the exact method in which this is done there appears to be a difference of opinion, or cless, as is, probable, the moatus operandi differs with circumstances; and I agree with you that additional light in the matter is desirable. Especially interesting would it be to know if the male bird ever assists his partner in securing the young from danger. So far as I can recall he has never been accredited with this act of devotion.

Having had the pleasure this summer for the first time of verifying, with my own eyes, what before I had accepted on the testimony of others, I give the circumstances for the benefit of your readers. While watching some warblers in a small clump of pines near a little patch of ground, sufficiently moist to admit of "boring," I flushed four woodcock. Three of them, two males and a female, may be dismissed with the remark that their llight showed nothing peculiar: they went off unenumbered so far as I could see. But as the fourth bird rose, a female, I could plainly detect, tightly clasped between the thighs and close to the belly, a dark bunch of something, the effect of its weight being visible in the slow moving wings and the overbalanced body of the old bird, which appeared almost perpendicular. Had I been in any doubt as to what that something was, the old birds actions would have told the story. For, when a few feet away, she settled to the ground, but apparently without lighting on her feet, and with beating wings scuttled along the ground, using the old trick of the disabled bird which we all knows owell. I was a willing dupe and follow

Doubtless J. D. B. in the London Field is correct in suggesting that the female may, when in a hurry, grasp the young as she happens to get hold of them, and so they may appear between the tibie, the tarsi, or possibly even between the claws.

I should have added to my statement above, that I obtained not a glimpse of the legs and feet of my bird, and presume that the tarsi and claws were flexed upward so as to carry them quite out of sight, It will thus be seen how entirely different was the method adopted in this instance from that illustrated by the woodcut mentioned above, where, if my memory serves me right, the legs were represented as fully extended and at right angles with the body. with the body.

A woodcut such as our correspondent describes ap-

peared in the Scientific American,

Moodus, Conn., June 18th.

Modden, Conn., June 18th. Editor Forest and Stream:—

Last April I had a young setter dog, and being anxious to train him in the way he should go, I one day took him to a young growth on the edge of a swamp, where I had in times past often shot woodcock. I was walking leisurely through the saplings and underbrush when my dog, who was a little in advance of me, suddenly stopped, and with one forefoot uplifted made as pretty a point as I ever saw. I stood a minute, admiring the beautiful attitude he was in, and then stepped carefully toward him. He neither moved a muscle nor looked around. It was a stanch, good point. I hit the underbrush a few feet shead of him with a stick, and, just as I expected, up flew a woodcock; but her curious shape and peculiar flight caused me to look after her in wonder and astonishment. Her legs hung straight down from her body, and her flight was laborious and slow, but she had nothing in her feet. This I noticed particularly, as I have heard that woodcock, when surprised, will carry their young a short distance in their feet. She flew a few feet above the ground, and lit about two rods from me. I went to where I had marked her down, when my dog pointed and I flushed her, but this time she slot off with the whistling, gizag flight that is a characteristic of the woodcock, and was soon out of sight over the tops of the saplings. I carefully examined the ground where she rose, and found hidden in the leaves a poor little half-fledged woodcock, hardly able to crawl. This set to rest in my mind that woodcock carefully their young, though not in their feet, as some writers have said, but pressed between their legs and close to their body. I went back to the place where I first got up the woodcock running briskly along through the

underbrush. A few days after I went with a friend to this place, and the same performance was reënacted, the old bird, as before, taking the weakest of her brood to protect. On this occasion we both distinctly saw the young bird between the old bird's legs as she flew. Now was it by chance that the mother woodcock selected the weakest of her offspring to protect when she saw enemies approaching, or did she reason, and thus leave the strongest to take care of themselves? F. C. FOWLEE.

weakest of her offspring to protect when she saw enemies approaching, or did she reason, and thus leave the strongest to take care of themselves? F. C. FOWLEE.

ORNITIOLOGICAL NOTES FROM MONROE COUNTY, N. Y., 1880.—Appril 23d.—Examined nest of great horned owl (B. virginianus), built in a hole in an immense basswood tree; it contained one young owl about two weeks old. The old birds must have been excellent purveyors, for on the nest lay flesh, lish and fowl for the day's provision, viz., three very large barn rats, one young crow, one redwing blackbird and two large suckers. By way of postscript I may add that the juvenile owl is now (July 2d) in my possession—a vary handsome and well-behaved pet, with an enormous appetite.

April 24th.—Hawks evidently destroy a great many snakes and lizards in the spring, before the weather is hot enough to give full vigor and activity to these reptiles. The crops of three broadwing luzzards shot to-day were crammed with the flesh of snakes; one female redailed hawk shot vesterday had just devoured a very large snake. All had carefully skinned their pray before eating it, but had also swallowed the pieces of skins.

May 18th.—As I was scarching for marsh wrens near Lake Ontario to-day a large bittern rose from the reeds. I shot and secured it, when another flow up a few rods from me, which I also shot. On going to pick up my birds I found their nest, containing one egg of a light grayish-drab color. The nest was on a low tussock of reeds, and roughly formed of dead reeds and coarse grass. On dissecting the female I found several eggs of various sizes, one just ready for exclusion.

During the past two weeks the white crowned sparrow has occurred here in extraordinary abundance; the orchards, gardens, hedges and outskirts of wools have literally swarmed with them. During a ride of fifteen miles to-day I must have seen many thousands. This is unusual, for this species is generally much scarcer here than the white-chowned sparrow; this scason the reverse is the case. The majorit

year, and then secured a hundred, as they stayed all day.

June 14th—On visiting a sick friend to-day I was slown a nest of the house wren (T. adon) in a singular situation. A tin watering pot had been hung inverted on the branch of a pear tree. The birds had nearly filled the ean with their nest and safely reared their young. As it was close to the window of the invalid's room, much interest had been taken in the little orcautres, and many weary half hours had been beguiled in watching their movements. The number of times the young were fed were specially noted with care. On the day of my visit the parent birds carried them food thirty times in one hour and forty-two times in another.

June 19th.—While watching a pair of mourning warblers feeding their young I noticed something peculiar in one of them. I therefore secured the pair and found the female bird to be of the variety called "Macquillieraght."

one of them. It herefore secured the pair and found the female bird to be of the variety called "Macquillivragi." It had distinct white cyclids and clear gray throat, and was a longer bird than the male, which was a very high colored specimen. The mourning warbler is common in most of the low, bushy woods in Monroe and Orleans counties, but it is extremely difficult to find its nest until the young are hatched.

Peregarne.

INTELLIGENCE OF A SPANIEL.—Lincoln, Me., June 12th. Editor Forest and Stream:—Mr. C. W. Porter, of this town, while trout fishing a few weeks since, found a wood duck's nest containing ten eggs. He carefully packed eight of them in dry moss, brought them home, and placed them under a hen who in due time hatched six active ducklings, they taking to water immediatly after breaking shell. The gentleman is the owner of a fine blooded, very intelligent spaniel bitch, and upon sening the brood for the first time, obeyed her first impulse and attempted to destroy the lot. Being reprimanded, and observing her master take especial care of them, she became very zealous in protecting them during the day, and every night goes to their pen and hovers them with as much solicitude for their conflort as ever exhibited by a hen for her chickens. They take to her very contentmuch solicitude for their comitor as ever exhibited by a hen for her chickens. They take to her very content-edly, apparently enjoying the warmth afforded them by their strange foster mother. It is a peculiar sight, and we all look upon it as something quite marvellous, as the bitch is an excellent hunter, by birth and breeding an inveterate enemy of the feathered tribe.

F. C. B.

MORE PEACEABLE SPARROWS.—The following clipping is taken from the Port Huron (Mich.) Times. The occasion was no doubt an interesting one to the "ground

DITG":—
An interesting spectacle took place on Water street this morning in the shape of a battle between a ground bird and two sparrows, in which the ground bird was killed within five minutes, the sparrows driving their beaks through its head.

More Albinoes.-Painesville, Ohio, June 1st,-Editor MORE ALBINOES.—Painesville, Ohio, June 1st.—Editor Forest and Streum:—I have seen a good deal in your Natural History column about albinoes, so I send you a description of one I saw to day. It was a chipmunk, or ground-squirrel, perfectly white with the exception of the stripes on the back, which were a yellowish, dirty white. The man who had him took him from a nest containing thirteen, of which this was the only white one. While going across the fields the other night I saw a "partial albino" robin.

JAMES C. BEARDSLEE,

When do Bears Briso Fortit?—I have just seen the man who caught the young bear cubs. They were taken the 20th of February last by two men, Smith and Philander Failing, of Montague, who were gathering spruce gum in the big woods ten miles west of Lowville, on Ting Hill. They heard the cubs crying in the den, under the roots of a large tree, sent a boy with them home for shovels, axe and a gum; then, cutting open the mouth of the den, the bear attempted to defend it, but they shot and killed her. They found two cubs in the den, and took them home and kept them for three days before they got their eyes open. From that they supposed them to be six days old when taken. They were very small then, have grown fast since, and on the 20th of May one weighed thirteen and one quarter pounds. WHEN DO BEARS BRING FORTH?-I have just seen the

The Sublimity of Favil.—Lebanon, Mo., June, 1880. Editor Forest and Stream:—I noticed in your paper of Aug. 28th, 1879, a little article concerning horsehair snakes. Of course Dr. Evarts must be correct as regards horsehairs; but to my certain knowledge the human hair, under favorable circumstances, will veritably transform into snakes. A circumstance I shall state took place more than twenty years ago with an aunt and uncle of mine. They had combed in the evening, wetting their hair from the same bowl of water, and letting it remain until morning when to their surprise two hair snakes were meandering in the water—one black and the other light, corresponding to the heads from whence they came. You can easily test the matter.

Mrs. F. McC.

Per Squirable.—In March, 1879, I caught a red squirrel, and April 19th I found four young ones in her nest which were born that day; two lived and grew finely until some two months old, when Diek was caught and killed by a cat. Dilley, when some three months old, was left alone, as I let the mother go, when she disappeared and was seen no more until last winter, when I was chopping wood near the same trees where I caught her before. I reset the old trap and she was again a prisoner, and I took her from the box trap, with my hand ungloved, and placed her in with Dilley. She seemed to know her, as she did not hurt her, but would let her play around and with her. I gave her to a neighbor's girl, and she kept her about two weeks and let her go. That was about as long as I kept her with Dilley. Dilley was gone some four days last March toward the close of the honoth, and canne home, when I placed her in her cage. May 6th she had five young squirrels. As she had her liberty, she would go up stairs, when I took them and placed them in the cage. She did not like that, so I took them back several times and killed two through rough usage. I have now three nice ones, smart and lively, yet this year their eyes came open four days sooner than last year. Last year they were thirty-five days old, this year only thirty-one days, when they could see. I would be pleased to hear more from any one who has had experience with all other varieties of squirrels, black, fox and gray, etc. L. E. W.

New York, June 7th.—Editor Forest and Stream:—Some few years ago, when quite a boy, I made the acquaintance of two young men just from New Hampshire. Until they came to this city they had lived in the backwoods, and it was my delight to listen to their descriptions of life in logging and maple sugar camps. Among other things I was told that in felling trees it was a common thing to find a squirrel's winter quarters stored with beech-nuts, and shelled at that. This I camnot vouch for, but I believe it to be true, as the young men were and are still of good moral character.

FLY-FISHING FOR BLACK BASS.

FOURTH PAPER-FLY-BOOK.

A MONG the necessary adjuncts to the fly-fisher's outfit are the fly-book, landing-net and creel. The former is now made in many patterns and sizes, and of various grades of quality and material. Those with the "Hyde," or metal clip, for holding the files at full length, are the best and most satisfactory.

There is nothing better, neater, or more substantial in this line than Abbey & Imbrie's "Southside" fly-book. It is made of Russia leather, with parchment leaves, provided with the metal clip, and two leaves of heavy, portous cloth for drying wet flies. It is also furnished with large pockets, and compartments for leaders. It has a capacity for a hundred flies, and is made of a uniform quality which is of the highest grade.

The "Holbertom" fly-book of Conroy, Bissett & Malleson is one similar in style and construction, and is a first-

The "Holberton" fly-book of Conroy, Bissett & Malleson is one similar in style and construction, and is a first-rate article. The price of this book depends upon the material used in its construction, and its capacity for a greater or less number of files. One holding four dozen is large enough for all practical purposes.

A few snelled hooks should be carried in the fly-book, the new pittle upon purpose the control of the

A few snelled hooks should be carried in the 11y-100s, to use with such natural bat as grasshoppers, beetles or dragon-files, in case the artificial fly does not prove successful. Sproat hooks are the best, either Harrison & Son's or T. Hemming & Son's, the latter firm, I omitted to state in my article on hooks, somehow, make hooks every way equal to those of Harrison,

For fly-lishing, a short handled net is the best, and should be as light as possible. Those with wooden rims are as good as any, though the folding ring nets are more convenient and portable. The net should be of good depth, and of rather course mesh. When the fishing is done from a boat, the long handled net is proferable, but when fishing a stream by wading, or from the bank, the short handled net is more easily carried, and answers every purpose better than the long one.

The beginner being now provided with all the tools, it is in order to put his rod together, attach reel, reel-line and cast and proceed to business. In rigging the cast, if the leader is provided with loops at each end, and for s at each end, and to the small end of the leader is provided with loops at each end, and to drop-like, proceed as follows: to the small end of the leader attach the stretcher or tail-fly by passing the loop of the leader through the loop of the suell and over the fly, then draw together. Three or four feet from the tail-fly attach the dropper or bob-fly in the same manner, there is my the loop of the small court the loop of the y, then draw to ill-fly attach the iat is, put that is, put the loop of the snell over the loop of the leader, and push the fly through the latter loop and draw leader, and push the fly through the latter loop and draw tight; or, if the leader is not furnished with loops for this purpose, slip a knot of the leader (about three or four feet from the tail-fly) apart, and after making a round knot in the end of the snell of the fly, put it through the opened knot of the leader and draw together; this will hold firm, and the dropper fly will stand at right angles from the leader.

If, however, the gut lengths of the leader are tied by hard, close knots, instead of the slip knot or double water knot, then the snell of the dropper must be attached close to, and above a knot of the leader, by a single knot or half-hitch, a round knot having previously been made in the end of the snell, to prevent the half-

been made in the end of the snell, to prevent the half-hitch from working loose; this is probably as good and

been made in the coal been made in the coal been made in the form working loose; this is probably as good and safe a way as any.

The cast is now ready, for I do not advise the use of more than two flies. If, however, the angler wishes to employ three, the third fly, or second dropper, must be attached three feet above the first dropper, and in this case the leader should be nine feet long. But the beginner will have all he can attend to with a six feet leader and two flies. The leader having been previously straightened by sooking in water, or rubbing with Indiarubber (the former method is to be preferred), and attached to the reel-line, the angler is now armed and equipped as the law directs, and ready for CASTING THE FLY.

Casting the artificial fly is performed by two principal motions, a backward and a forward one. The former is to throw the flies behind the angler, and the latter is to project them forward and beyond. That is all there is in it. These are the main principles involved, and the first or backward motion is merely preparatory to the second or forward one, the latter being the most important.

portant.

But the style and manner of making these to "But the style and manuer of making these two mo-tions are all-important, for upon the correct, skillful and, I might say, scientific performance of them, depends the success of the angler. The main objects of the two mo-tions are, first, to get the line and cast behind the angler in a straight line, without lapping or kinking, and, sec-ond, to project the line forward without snapping off the tail-fly, casting it perfectly straight, without confusion, and causing the flies to alight first, without a splash, and as lightly as the natural insect dropping into the water. and causing the lines to alight first, without a spiash, and as lightly as the natural insect dropping into the water. This can only be done by the novice, with a short line, about the length of his rod, and he should not attempt a longer cast until he is perfect in this. When he can lay out his short line perfectly straight before him, without a splash every time, he can then venture further. But we are getting along too fast; we must go back to first principles—the two perions are

first principles—the two motions.

The backward and forward movements are each made

The backward and forward movements are each made in about the same length of time, but while the former is a single movement, the latter is a double one; that is, it is divided into two motions, or parts; though these two forward motions are made in the same length of time as

is divided into two motions, or parts; though these two forward motions are made in the same length of time as the backward movement.

I will now try to explain these movements more explicitly, but it is extremely difficult to convey the exact idea without diagrams.

The prospective fly-fisher having his rod, reel and cast in readiness, stands near the bank of the stream, with a clear space of lifteen or twenty feet behind him. Having the line about the length of his rod, to begin with, he takes the book of the tail-fly between his left thumb and forefinger and structhes the line taut; then by waving the rod slightly backward over the left shoulder, and at the same time releasing his hold of the tail-fly, the line straightens out behind him, the right elbow meantine being held close to the body, as the backward movement is made with the wrist and forearm entirely. The position of the right hand during this portion of the cast is with said hand grasping the rod lyust above the red (the reel being at the extreme butt, and on the under side of the rod), and with the reel and palm of the hand toward the angler, the thumb looking toward his right shoulder. When the line and leader are on a straight line behind him, which the beginner must learn to judge and time exactly, without looking behind him, be brings the rod forward with a gradually increasing rate of speed, until the rod is slightly in advance of him, say at an angle of 15° off the perpendicular; then, for the first time, the right elbow leaves the body—and, at the same time, the rod is turned in the hand in the oppisite direction, that is, with the back of the hand to ward without stopping the motion of the rod, the right arm is projected forward to its full extent and on a line with the shoulder; this is the second part, or motion of the forward movement; and consists in merely following the direction of the flies with the tip of the rod, so as to ease their rapid flight and allow then to descend without confusion, and to settle upon the water noiselosely and two motions, as the military have it, or according to

and two motions, as the unitary have is, or according to the formula of time as above given.

Sometimes these movements are made straight backward and forward over either shoulder, or over the head, but the best way is to make the backward movement over the left shoulder, and the forward over the right shoulder, the line thus describing an oval or parabola; by

this method the flies are not so apt to be whipped off, and

this method the flies are not so upt to be whipped off, and it is withal more graceful, more en reple.

But these various ways of costing all come into play at certain times and under peculiar circumstances; and the rod will be held more or less to one side or the other, or more verifically, as particular circumstances or emergencies demant. For the notice must remember that there are trees and buskes and rocks and winds to contend with in fir-fishing, and, moreover, as he becomes proficient he will choose his own style of easting, for no two anglers cast the fly exactly alike. Then there is the sidewise cast, where the line is not thrown helind the angler at all, but to one side or the other; but I have not space nor facilities here to enter fully into the merits and details of the various ways of casting; they must be learned by practical experience.

We will now presume that the tyro has perfected himself in casting a short line, and can throw his tail-fly into his hat nearly every time at a distance of fifteen feet—and right here let me say, beware of the angling brig who declares that he can cast his tail-fly into a glass of water at fifty feet, every time; It can't be done. Also fight shy of the long-range fisher who insists that he can cast a hundred feet with ease. It can't be done. The longest cast, with a single handed rod, I ever saw, without "loaded" flies, was eighty-one feet, and I believe the longest on record is Seth Green's eighty-six feet, while at the last tournament held by the New York State Sportsman's Association seventy feet won the first prize, When the hegimer can cast his till yin to his hat, eight.

longest on record is Seth Green's eighty-six feet, while at the last tournament held by the New York Starta Sportsman's Association seventy feet won the first prize, When the beginner can east his fly into his hat, eight times out of ten, at fortly feet, he is a fly-fisher, and so far as easting is concerned, a good one. But let us go back to our tyre, who has now become proficient with the short line, and it is time to lengthen his cast, which is done in this way: After casting, and roving his flies on the surface by zagzag, jerky motions, to the left or right, and without provoking a rise, he pulls off from the reel with the left hand three or four feet of line, and lifting his rod, slowly at first, by a gradually increasing notion lifts the leader and flies, and throws them backward over the leader and flies, and throws them backward over the left shoulder as before described. The resistance of the flies, before they leave the water, takes the extra length of line from the rod, and it is unfolded behind the angler into a straight line when he casts it forward over the right shoulder.

In this way the line is lengthened at every cast, if necessary, until the maximum or desired distance is reached. But the angler should never let his flies touch the ground behind him, but must so time the movement as to propet the line forward at exactly the right moment to prevent this.

Another caution: The angler should never attempt to

this.

Another caution: The angler should never attempt to cast his lies by main strength, for this will accomplish nothing but confusion, and it takes but little force to retrieve or cast the flies, with a well-made, springy and pliant rod. The rod, moreover, must never be carried back over the shoulder to a distance exceeding ant angle of 15° off the perpendicular, for the backward throw is really accomplished by the time the rod is in a vertical position, and this might be said, also, to a certain extent in regard to the forward movement or cast proper; for by the time the rod is 15° off the perpendicular in the other direction (in front) the main part of the cast is made, and the second part of the forward movement is only to follow the flies with the point of the rod, to ease their flight as above mentioned; this latter part of the floward cast can no more aid or extend the flight of the flies than "pushing" on the reins can increase the speed of your horse.

Thave now in the fewest words possible, and in the simplest manner, endeavored to explain the "mystery" of casting the fly, and I trust the beginner will be able to understand it. It is shoot impossible to describe the art clearly and satisfactorily by mere words. One hour with a good fly-fisher will teach the novice more than a hundred written pages. I have purposely omitted many little details of nicety and precision, which would only tend to confuse instead of enlightening the beginner in the noble art of fly-fishing.

Cynthiama, Kg., July 2a.

BLACK BASS VS. TROUT, Another caution: The angler should never attempt to

BLACK BASS VS. TROUT,

LAWTONVILLE, Ga., June 22d.

"Strings such a difference there should be "Twitt tweelle dum and tweetle due." The tweelle dum and tweetle due. The tweetle dum and tweetle due old controversy revived anent black bass and trout, and finding also some rather peremptory and umpleasant doubts from Dr. Henshall and other gentlemen concerning former articles written by myself for your paper ("Black Bass" and "Black Bass Fishing"), I must ask you to hear me.

In one of those articles I stated that a black bass proper in the South. I now

ing former atteies written by mysell for your paper ("Black Bass" and "Black Bass Fishing"), I must ask you to hear me.

In one of those articles I stated that a black bass proper could not be found in any stream in the South. I now reiterate that statement, and say that I will stand or fall on the scientific evidence of the best informed ichthyologists in the United States, the two fish (Al. Salmoides and C. atrarius) to be dissected together.

I want this vexed question set at rest, I shall be set at rest, forever. It is true that we have a fish at the South called trout, which, to superficial observers and to those who are not to the "manner born," look like black bass, and blie at all things that his congener will, including, of course, the fly, but which are no more black bass than they are salmon. It is true that they exist side by side in some streams, but in no Southern stream. They can be found in Kentucky and Missouri together, and even in Tennessee, in waters that empty into the Ohio, but in no others. The moment you cross some roaring brook in your pursuit of speckled troat, which brook swells some river that empties into the Adantic, good bye to all black bass fishing. Thore never was a black bass in any stream that empties into the Adantic south of Maryland. And there never will be.

Dr. Henshall speaks of the striped base (R. edipsopo) as never weighing over two pounds. Now this is unkind. I believe I first had the hour, through the solicitation of Chas. Hallock, Esq., former editor of Forest and Stream, of introducing the freed water striped hass to the notice of the public. No notice were striped hass to the notice of the public. No notice were striped has to the notice of the public, No notice were striped has to the notice of the public, No notice were striped has to the notice of the interests of scientific ichthyological nonenclature. Something, indeed, for the truth, if it can be found in this captions, deceiving world. Nothing for trumph, for if I am wrong I earnestly dosire to be see

right. But to our muttons, or, rather, revenouz les

I stated in one of my articles that the striped bass (R.

right. But to our muttons, or, rather, revenouz les paissens.

I stated in one of my articles that the striped bass (R. clysops) was often found of the weight of six pounds. I caught one in the Missouri River, twenty-live miles below St. Louis, that weighed nine pounds. I stated these facts in my article, and Dr. Henshall must have read it. They are caught in the Green River, in Kentucky, the Dector's own State, weighing five pounds. I must infer from these data that the Doctor, like Herbert, "who never saw a black bass," must have never seen a fresh water striped bass. Fish are amuzingly deceifful creatures. I've seen a wary old trout come up to my roach, smell it, and back away gracefully; and, indeed, with a fine look of scorn on his upturned nose. No man shall ever say of me that I endeavored to mislead the readers FORESTA ND STREAM, or, that I made a mendacious statement wilfully and knowingly. I have tried to do my duty with all the light that is in me; iff have failed, the fault lies not in good intentions; though Byron says that a certain place, unmentionable to ears polite, is paved with bricks made out of good intentions. Howthat may he, no gentleman has ever yet disputed my bare word. In calculating the purity of a river, the scum and foam cannot affect the general result.

Dr. Henshall writes with discriminating severity about mingling the names "rock bass," grass bass," calico bass," etc., etc., in one chaotic mass. He is right. A rock bass is the "red-cye" of Kentucky, the goggle-eye of the Western States and the rock bass of the North. He is a true bass, notwithstanding his thick, short anatomy. And he is something of a fish, too. Under favorable conditions. I have caught them with a minnow, with three strands of C silk, a light bamboo rod and No. 9 salmon trout hook, when they would prove to be game and plucky to the last; those weighing two pounds giving fully as much trouble to capture as black bass of the Same weight. The "raw mouth" perch in Southern waters is his congener. They are caught i noment whether we can our southern ast at standards, as a consider M. pallithes, or trout juit, as the time has surely come in our natural history that we must be accurate in our nomenclature, we beg to state our belief that our fish ought to be called "green bass." Different in anatomical structure, different in fins, different in times and mode of feeding, our green bass are not black bass, but an entirely different fish.

feeding, our green bass are not black bass, but an entirely different fish.

From close observation, I should say that we have at least four varieties of the Southern fish, while I never say but two kinds of bass, the black and yellow. These, indeed, differ in different streams; being long, slender and elegant in form in some streams, as short, thick and inelegant in others. In some they will not touch crawifsh, while in others It is the only bait with which you can catch them. I know streams in which the common angle worm is most killing; again, in others, the fly is the most certain lure.

Hear the conclusion. Misled by a similarity of mouth, and, to some extent, form, many well meaning but mistaken persons call our green bass black bass. Many Southerners call them trout, and trout they will be with them until the end of time. Mark my words. We have no black bass in the South, and no rock bass. We have the green bass, the speckled perch, the true perch (red-iin), jack, raw mouth perch, and, I beg to retract, in

have the green bass, the speckled perch, the true perch (red-lin), jack, raw mouth perch, and, I beg to retract, in one stream that empties into Flint River, the rock bass. This is the list of our game fish, and we positively have no more in fresh water. More anon. Yours fraternally, St. Clair.

Our correspondent refuses to be convinced against what he conceives to be the evidence of his senses, but we fear that the advocates of the "green bass" are championing a hopeless cause, for the ichthyological experts of the city are against them.

CANADIAN SALMON ANGLING.

NEW YORK, July 12th.

Editor Forest and Stream :-

Editor Forest and Stream:—

Yer the information of any of your readers who may be contemplating a trip to the salmon rivers of Canada, I would say that a friend in St. John writes me that salmon anglers are having a tedious time waiting for the arrival of fish; that some of the lessees of the Nepissiguit have left that river tired out and unsuccessful, and that the New York club are having no better success on their new purchase of fishing grounds on the Metapedia and Restigouche.

The inclosed slip from the Albany Evening Journal, from Mr. Dawson, one of the disappointed, shows an equally disappointing experience for the anglers on the Upper St. Lawrence sulmon streams, and goes to confirm what I have previously said, viz. that while one man may one year leave home about the 5th of June, reach a salmon stream, remain there a week, make a good score, and be back at his occupation in two weeks, at a cost of \$150 for traveling expenses, the chances are that in nine years out of ten he will either have to leave the river without killing salmon, or wait from two to five weeks at a cost of three or four times \$150, to say nothing of cost of rods, flies and other appurtuances. Many years' experience has shown me that nothing is more irregular than the arrival of salmon in Canadian rivers. One year

cost of rods, flies and other appurtenances. Many years' experience has shown me that nothing is more irregular than the arrival of sulmon in Canadian rivers. One year parties waited on the Nepissignit from the middle of June to the 1st of August. All fishing seasons for anadromous fish are "unsartin."

I write on this subject because two or three friends of mine (with \$150 each, hardly gotten and scrimped out of small salaries) were crazy to have me lend them my salmon rods and gear in the beginning of this season, so that they might waste their money and scennly two weeks of vacation in a trip to Canada for salmon. They are now glad that I dissuaded them from going, unless they could get away for at least a month.

could get away for at least a month.

I have noticed that an early year for salmon is often followed by several late years. No woman is more fickle than salmon in some of their habits.

I was glad to see in the Herald the other day an edi-I was giad to see in the Herma the other day an edi-torial remonstrating against and ridiculing the habit of some calling themselves anglers of taking trout only three to five inches long. I believe that a law limiting the size of trout, "had in possession dead," to let us say six inches, would be no more "impracticable" (as you call it) than are the game laws generally. Something must be done to stop this wholesale infanticide, or there must be done to stop this wholesate infantence, or there will soon be no trout even for the present generation. Artificial culture will not make up for the slaughter; it will only stimulate the greed of these pot fishermen (if pot fishermen will please excuse my slaud-ring their comparatively homorable designation) to greater boasts of

not fishermen will please excuse my slandering their comparatively honorable designation) to greater boasts of catching 200 to 300 infant troutlings a day; and some of them printing their detestable exploits. Why in Vermont a man proudly showed me seventy-five of these poor little fingerlings, which didn't weigh three pounds in all. I told him he ought to be tried for child nurder. Put the hand of the law, as well as the scorn of all decent anglers, on such fellows.

Manilattan, Mr. Dawson's letter is as follows:

MANILATTAN, Mr. Dawson's letter is as follows:

MANILATTAN, and the six of the same of the most important factors in the trade of the Provinces is seriously affected. The salmon season (commercially) opens about the middle of May—the eatch gradually increasing from that time on to the close of June, and then rapidly falling off to the last of August, when the netting season is practically over. Although there is a run of small fish (from half to two-thirds the average weight) during the last fortnight of August and the first week in September, but few are netted. This year the season opened inauspiciously. During the first fortnight, and down to the 15th of June, the catch did not reach one-twentieth of that of last year at any one of the most prolific stations. The count at Tadousac, up to that time, was only twenty fish, against 500 last year, and very nearly this proportion was returned from Campbelltown, Dalhousie, Miramichi, etc., and from several of the most famous points on the north shore. But this early deficiency was extended from the north shore. But this early deficiency was extended from the north shore. But this early deficiency was extended from the north shore. But this early deficiency was extended from the north shore. But this early deficiency was extended from the north shore. But this early deficiency was extended from the north shore. fish, against 500 last year, and very nearly this proportion was returned from Campbelltown, Dalhousie, Miramichi, etc., and from several of the most famous points on the north shore. But this early deficiency was expected to be made up later, and the fishermen continued to draw their seines hopefully, but to no improvement up to the 7th inst., when the nets at several points were taken up in despair,

"In conversing with dealers at Quebec to-day, I gathered a few facts which may be of interest, as showing the extent of the famine. One small dealer received and shipped more fish the first four 'days in June last year than during the entire month this year, and A. Fraser & Co., the largest dealers in the Province, report a like deficiency—their receipts and shipments falling off from millions of pounds to thousands. This firm have been in business for sixteen years, and really instituted a new era in the trade. Up to that time fresh salmon found their way to only a very few places in the States. Now they are sent to almost every considerable town as far West as St. Louis and Chicago. During the season the amount of fish shipped to the States reaches into the millions of pounds, and is really one of the most important and profitable articles of Provincial traffic. Last year Messrs, Fruser & Co. sold their lish, packed in ice, for from five teacher. prontable articles of Provincial traffic. Last year Messrs. Praser & Co, sold their fish, packed in ice, for from five to eight cents a pound, at Quebec and Montreal. This year the price has at no time been below twenty cents, and the quotation will be twenty-five cents hereafter. No single fact could show more conclusively the great deficiency of the season.

"In a lone conversation will be

deficiency of the season.
"In a long conversation with Mr. Fraser, I found him,
like the rest of us, quite at sea in regard to the probable
cause or causes of this unparalleled deficiency. With
others, he thinks that the unusual quantity of ice in the
Gulf may have had something to do with it. He believes, comers, ne tunnss that the unusual quantity of ice in the Gulf may have had something to do with it. He believes, however, that the unusual number of sharks that have shown themselves in the vicinity of the best fishing grounds have had their influence. He thinks so from the fact that many of the fish taken in the seines appear to have been bitten. If the sharks do not destroy the salmon they may frighten them back into deep water, and thus prevent them from passing into the rivers. Porpoises have also shown themselves in unusually large numbers, and may also have had their influence in keeping the fish back from their natural haunts. But these are mere conjectures, and the mystery is rendered all the more mysterious from the fact that while the salmon are thus scarce codish are more abundant dered all the more mysterious from the fact that while he salmon are thus scarce codfish are more abundant than for many years. Why should not the same causes operate upon both fish allke is a question which will open a wide door for discussion. It is a serious problem how far this non-appearance of salmon on their usual spawning grounds will affect the future supply. It is barely possible that the late run will be larger than usual. "Of course salmon anglers are quite as much disappointed as the net fishers. So far as I know they have had but very poor success thus far, with no cheerful prospect during the fortnight which yet remains of the

pointed as the net fishers. So far as I know they have had but very poor success thus far, with no cheerful prospect during the fortnight which yet remains of the season. All who are interested in the general subject of fish and fishing will be cutious to watch the outcome of this unparalleled barrenness of the usually prolific waters of the famous Gulf."

Canada—Montreal, July 9th.—At the present time there is good fly-fishing for bass in the Richelieu River near St. Johns, Quebec. The best grounds are in the rapid waters below the eel weirs. Some four pounders have lately been taken there. The owner of the weirs, Peter Thuutte, or Duvalle, is a good guide for those waters. Are all bull frogs young duck destroyers? Last evening my boatman, Thuette, observed a young black duck struggling in the water among the reeds, and went to its assistance and found that a large bell frog had siezed it by the head, and held on until Thuotte took them both out of the water and killed the frog. Among my catch last evening was a 14 pound sucker, who rose to the surface of the water and took the fly.

STANSTEAD.

GODBOUT SALMON ANGLING -Godbout River. Province Guebec, June 27th.—It may be interesting to some of your readers to know what sportsmen are doing in this locality in the way of salmon fishing. So far the result has been anything but satisfactory for a stream of such renown as the "Godbout."

renown as the "Godbout."

There seems to be a scarcity of salmon along the whole of the North shore of the St. Lawrence, as even the net-fishermen have not been doing much up to date. The season has also been much later than usual, and instead of getting salmon here about the 7th of June, as we generally do, the first fish killed was on the 16th, and for

more than a week after the fishing continued poor. With the last spring tides, however, they began to run in and prospects are brighter, and possibly I may have some good scores to send in July.

I give you below a statement of two weeks' fishing, by two rods, as also weight of heaviest fish caught by each. To snake up for the want in number, the fish so far are larger than in former years and have averaged several pounds more bounds more.

Rod No. 1.—Mr. John Manual, of Ottawa. Number of

Rod No. 1.—Mr. John Manual, of Ottawa. Number of fish, 45; total weight, 714 pounds; largest fish, 29 pounds; smallest fish, 8 pounds.
Rod No. 2.—Mr. David Law, Montreal. Number of fish, 23; total weight, 371 pounds; largest fish, 30 pounds; smallest fish, 8 pounds.
Total catch, 67 fish; weight, 1,085 pounds: average weight, 16 pounds.

NAP, A. COMEAU.

THUNDER BAY TROUT.—Prince Arthur's Landing, Ont., June 21st.—I inclose you a pencil outline of a genuine brook trout caught, unfortunately for sportsmen, in a net in Thunder Bay this A.M. Weight and size marked G. T. M.

The fish measured 234in, in length, 124in, in girth, and weighed 4 lbs., 151 oz.

Vermont—Belvidere Corners, June 30th.—I have been here several days, trout-fishing in the streams running into the "Bog," and can report good success. This town it beautifully situated among the mountains, and a veritable paradise for bear hunters. Mr. Curtis Brown, one it beautifully situated among me mountains, and table paradise for bear hunters. Mr. Curtis Brown, one of the most prominent men here, is a successful hunter, and has scored his full four dozen black bears, and expects to add several more to that number soon.

STANSTEAD.

TIM POND.—Following is a note from Eustis. Maine. June 21st, addressed to Mr. J. Warren Tuck of this city, who first make known to our readers the attractions of Tim Pond. We fear that the fishing there will not last many seasons if 300 fish in five hours is to be the approved catch :-

catch:—

I am having some company now; have twelve men from Sabattis, near Lewiston. Dr. Hill has not yet arrived, but is coming as soon as he can leave his patients. A party of four—Dr. Hill's friends from Biddeford—left here a week ago. They caught on the 11th, in five hours, 300 good-sized trout. They went away feeling good. Evidently the Forest and Stream is read by the right class of people, as shown by the result of my notice in that in many ways valuable paper. But my four cabins class of people, as shown by the result of my notice in that in many ways valuable paper. But my four cabins have not yet been crowded, and Tim Pond seems as full have not yet been crowded, and this found seeins as the of trout as an English pudding is of plums, and they appear to bite better than they did last year. I have never known game in the woods so plenty. Every party has seen wild deer on their way from my house to Tim Pond. I now have a buckboard path from the house to the pond; I now have a buckboard path from the house to the pond; I also have a nice saddle horse for those in ill health. M. W. Mead has recently repaired and refurnished the hotel at Kingfield, where you called last summer. He and his wife know how to keep a neat, clean, home-like hotel. The table is well-furnished with the fresh, sweet products of the country and the viands of the Boston market. It is a first-class place for you or any one to leave your family while at Tim Pond hunting and itsing. Clark's stage runs daily from Farmington to Kingfield on arrival of trains, and Clark will send parties of any size by private teams to my farm house.

KENNEDY SMITH. KENNEDY SMITH.

field on arrival of trains, and Clark will send parties of any size by private teams to my farm house.

KENNEDY SMITH.

WAS HE MIXED?—Camp Kenebago, Indian Rock, June 27th.—Editlor Forest and Stream.—I was very much surprised on reading my Forest and Stream. Has sery much surprised on reading my Forest and Stream this morning to find the article dated Little Boys Falls, Magalloway River, and signed K. C. Now if K. C. has an idea of giving the Farmachenee Lake another "puff" I should advise him to take the trip he pretends to have taken, and see if he cannot get a better idea of the "lay of the land," for it is plain to be seen by any one acquainted with the country that K. C. never was there. I have been on the Magalloway River, between lakes Umbagog and Parmachenee, quite a nutaber of times—by boat, on snow shoes and on skates—and it is news to me that the Metallock ponds lay several miles to the east of the river. The first Metallock, as it is called, surely is on the west side, in full view of the river, and the upper is on the cast side, nine miles above the lower, but instead of being several miles from the river it is not over ten rods, hidden from sight by a high bank. When K. C. gets to Joe Danforth's carry, as he calls it, he gets entirely lost, as John Danforth's camp ("Camp Cariboo") is a strong five miles from this place; and if you have an idea of raising Johnny by shooting I should advise you not to trust to small arms, but to take a cannon along with you. This small arms formerly owned and run in connection with the Lindsey Pond Camp by Spoff Flint. This year Mr. George Lewis is the proprietor. The camp is balf a mile from the river landing and two miles and a half from the lake. The carry team is still kept there, and I suppose the shooting arrangement brings it there, and I suppose the shooting arrangement brings it there, and I suppose the shooting arrangement brings it there, and I suppose the shooting arrangement brings it there just the knew serys mum who had been to the lake this season, a

Fr. LAWRENCE BASS FISHING,—New York, July 12th.— I have frequently been puzzled to know where to spend the summer, and, at the same time, have the pleasure of

| Since the control of the control o 5,024 Greatest day, July 17th, 1879. Fish with fly, 353.

ROCHESTER, N. Y., July 6th.—Black bass fishing at Nine Mile Point, in Lake Ontario, (a fourteen mile drive from the city), is unsurpassed just now. Two gentlemen were fly-fishing there a few days ago, and caught over a hundred good fish. The fishing is good only when the wind is blowing toward shore.

E. R.

BLACK BASS.—Tent "Hancock," Banks of the Delaware River, July 4th.—Will you confer a favor on the disciples of "lke Walton," and more particularly to the lovers of black bass angling, and let them know that there is such a place as Narrowsburg, on the Eric Railroad, about one hundred and twenty miles from New York, on the Delaware River, where there is no finer fishing in the Northern States. Black bass are not only in abundance, but are perfection, both in regard to weight and flavor; none of the soft flabby kind that are in ponds. The river is only three hundred feet from the depot, with grassy slopes on both sides shaded by some of the most majestic sycumores in the country. Talk about sport! Just find jovial John Ruff, and get him to go with you for a day's fishing excursion, and I will guarantee that no more pleasant company, better fishing, nor finer bass, can be found anywhere. The village is one of the old fashioned kind. Pleasant and comfortable, with just enough of modern improvements of the outside world to leave one nothing to wish for but for it to continue. There is but one hostelrie of ye olden time, kept by Marray Brothers, who I can promise will give all one can desire, both of comfort and of sport. Take a day off and go up there, and if you are not satisfied, send your bill to me and I will settle.

WILLDUGHBY.

NEW JERSEY—Riverside House, Forked River, July 91h.—We are now having fine weakfishing, and during the past week quite a number of New York gentlemen have been enjoying the sport at this popular resort, among whom were Messrs. E. C. Fox, Thos. H. Spaulding, A. G. Walker, G. Lewis Ring, F. W. Mead, S. T. Knapp, and a number of families. The average catch per boat has been from 23 to 40 fish, weighing from 14 to 4 pounds each. The Riverside House being situated directly on the water, and in the immediate vicinity of the best fishing grounds of Barnegat Bay, offers superior inducements to families or gentlemen fond of the sports to be found in our bays. House open all the year.

A. B.

July 12th.—One of our yachts, the Mattie, with Mr. and Mrs. E. C. Fox, Mr. and Mrs. T. H. Spaulding and Mr. J. L. Kirkland, has just come in with eighty-nine fine weakinsh, the largest catch of the season so far. They were caught in the bay near the Riverside House, the ladies in the party catching nearly half of them. We look for fine fishing from this time forward. A. B.

FLY-CASTING.—Canton, N. Y., Juty 5th.—Reading your article on ity-casting in last week's Forest and Stream reminded me of the interest taken in that part of the State shoot at Rochester, last season. I offered a boat and fixtures, valued at sixty dollars, as a prize for dycasting, open only to those who had never won a first prize at any State contest. The prize committee wrote me, requesting me to allow them to place it where they pleased, saying they had already secured prizes for flycasting. I consented, and the result was such that I do not care ever to give away another.

J. H. RUSHTON.

J. H. RUSHTON.

J. H. RUSHTON.

A RECOVERED HOOK.—Clinton, Conn., July 5th.—I
went out fishing June 3d, using worms for bait, two
hooks on a gut leader, hooks three feet apart. I was fishing in a deep pool when I snagged my hook, evidently
catching on a submerged log. After trying to clear it,
I concluded to break it. I did so, breaking the leader
where the second hook was joined on, leaving both hooks.
Was out again the 22d, and happened at the same pool.
At the first cast I took a nice plump trout, fully one
pound in weight. Inagine my surprise on unhooking
him to find a hook well down in his stomach and my three
feet of broken leader hanging from his mouth. When I
loot the hook: it was a large stout wire, but when I took it
from the fish the wire was not larger than a small fly

hook, and would easily powder up between thumb and finnook, and would easily powder up between thumb and finger like black lead. I forgot to say that there was but one hook on the recovered leader. The upper one is probably sticking in the log. I was put on with a loop, and a pull by the fish easily drew the leader through. The fish was plump and gamy, and appeared to be none the worse for having had a hook in his stomach nincteen days. From its appearance the hook would have been entirely consumed in ten more days.

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

NO. VIII -- THE SEX OF SEVERAL EELS.

O-DAY, June 13th, there was a gathering of a few men, who came to the President's room, by invitation, to witness the dissection of several alleged male eels which had been on exhibition as such for some time, and to determine the fact if it were possible to distinguish the sexes with certainty while the fish were still alive and unopened, as asserted by Prof's. Jacoby and Cattie. Dr. Hermes, Director of the Berlin Aquarium, furnished the eels from the stock which has before been alluded to in these columns, and which were sent him, as male eels, from Trieste by Jacoby himself, and the dissection was to be conducted by no less a person than Dr. Virchow, the celebrated naturalist and one of the first anatomists of the world. The spectators were Herr von Behr, President Deutchen Fischerei Verein ; Dr. Hermes ; Herr Haack, Director of the Imperial Fishcultural Establishment at Hueningen; Mr. Fred Mather, of the United States Fish Commission : Prof. Torgioni Tozzetti, of Italy; Herr von dem Borne of Berneuchen, and one or two others, Prof. Goode being absent in Dresden.

Dr. Hermes stated that he had received the eels, male and female, with full directions how to distinguish the sexes, but that it was very difficult, and he would try to select them to the best of his ability, and taking one from the glass tank, he said : "Here is a male." The eel was thirty-eight and one-half centimeters long, and was laid on its back, where it was held in position by an awl through its jaws, while Dr. Virchow opened its abdomen with the scissors, and all watched the verdict which proved that the diagnosis was correct, a verdict verified by all present who were familiar with the subject. No. 2 was pronounced to be a female, but, on opening, there was a doubt on account of the season and the smallness of the specimen, the eel spawning in the fall and winter months, and therefore the eggs, if there were any, were not well advanced by the middle of June, or, it might be possible that if this was a female, the eggs would not be ready to fill in a year or two; anyhow it was evident that whatever it might be it was not a male. No. 3 was also called a female, and it proved to be one, while No. 4, and last, was a male of 45 centimeters.

Dr. Hermes stated that the head of the male had a greater vertical thickness, the eye was smaller and the snout narrower, but that although he had been successful in the four cases above cited he did not feel authorized in saying that the rule was infallible. The sperm cells were then placed under the microscope and showed, with a power of about 250, very like ordinary testicle when in mass, but when spread out it was plain that the cells were sperm cells, and not fatty ones, although no spermatoza were visible. A portion of the tissue of the doubtful one, No. 2, showed nothing but fat cells, the irregular group ing of their angular forms differing widely from the regular arrangement of the eggs which were seen depend ing like long clusters from a central cord with an artery or rather a capillary, beside it, and thus ended the examination. Dr. Hermes, of course, was more confident after his successes, while the skeptics intimated that to make it certain that the sexes could be distinguished without dissection would require 400 cels to be examined instead of four. The American representative in replying to a question as to the possibility of thus determining the sexes, said : "It may be so, or it may not; the alleged differences in outward appearance are not strong enough for me to separate them with any certainty, and it is often hard to distinguish the sexes of brook trout in the summer." Herr von Behr then asked Mr. Mather if he would accept a few male eels for Professor Baird, and an arrangement was made whereby some will be brought to America when Professor Goode and staff return.

In this connection the following translation from the Zoologischer Anzeiger* of June 7th may prove interesting:

THE GENITAL ORGANS OF THE MALE EEL AND SEXUAL DISTINCTIONS. By S. Th. Cattie. Phil. Nat. Cand., Docent an der Realischule zu Arnheim, (Holland.)

As is well known, Darwin¹ has confirmed the experience of Gunther that female fishes are larger than males.

*The Zoologischer Anzelger herausgegeben von Prof. J. Victor Carus, in Leipzig. 1 Charles Darwin. Die Abstammung des Menschen, ubersetzt von Cerus. II, Thell., p. 5 u. if.

Perhaps it may be that Syrski, in the year 1874,2 has followed this rule in seeking the small cels in order to find the males, at which time he had the good fortune to find an organ which is now generally called the "Syrski organ," or the male organ of generation.3 Darsets afterward found this organ in a variety of cel known in France as Angvilla pimperneau, and Professor A. S. Packard has seen the living spermatozoa in the male Angvilla bostoniensis.4 The male cel being only about 430 m. m. long (17 inches), we need not wonder that it is found so soldom, as the young cels go in the deep water where the organs of reproduction are soon developed (six to eight weeks), and then they are ready for the spawning season, when the old cels, male and female, go to the bottom. Failing then to find the spermatozoa we must rely upon the cells of the testicle and the general listological structure of the Syrski organs to bring us the evidence of the sex.

By an examination of small cels it may be found that some have a rather broad ribbon fastened by the edge by a small fold of the skin to the swimming bladder, while the other edge is free. This ribbon goes from the liver to beyond the anal opening, and is covered with thousands of fat cells. A lobe-shaped organ, which consists of fat cells, covers the posterior portion of the intestinal canal and the ovariums.5 The eggs which I found in specimens of twenty to fifty centimeters in length were of 0.75 nillimeters. Treated with vinegar and ammoniated carnine there was a grand nucleus and also a nucleolus to be seen.

and the ovariums. The eggs which I found in specimens of twenty to fifty centimeters in length were of 0.75 mill-limeters. Treated with vinegar and amnoniated carmine there was a grand nucleus and also a nucleolus to be seen.

In other specimens fat-lobes were found, but not the broad ribbon; but in the same situation are to be found along the back part and also through folds of the inside webs, and joined to the swimming bladder a very thin transparent strip of the liver which extends behind the anal opening. This strip is furnished with bow-formed appendages, or cuts, which are 0.75 m. m. in length and 0.05 m. m. in depth, with the convex portion langing downward into the abdominal cavity. By the side of these Syrski's, or lobe-formed organs, a fine canal is found, whose duty it is to pass the seed out (sperm duct), and this shows well when injeeted with carnine. The histological structure has been examined by Frend,8 who found a network of inside webs (Balken) similar to the structure of the unripe testicles of fishes; a similar view may be observed in my own preparations in cases where the smaller specimens have been examined.

Among the larger cels which I have observed with the lobe-organs (445 m. m.) I found tube-formed cords which were filled with cells from their bases to the tops of the bow-formed cuts, and, after treating with the many different reagents, I never succeeded in distinguishing with perfect clearness the nucleus. My observations were conducted with Obj. K. Imm. Zeiss, Oc. 3 and 3.

ferent reagents, I never succeeded in distinguishing with perfect clearness the nucleus. My observations were conducted with Obj. K. Imm. Zeiss, Oc. 3 and 3.

After Jacoby, 7, von Siebold has seen such cell formations (Zellenstränge) in a specimen of an eel where the lobes were strongly defined. These cells showed a decided similarity to the sperm-cells in the testicle, and I am of the opinion that mine are the same. In no specimens which have come under my notice have there been any commatozoa. Before I began my examinations on mens which have come under my notice have there been any spermatzona. Before I began my examinations on the histiology of the testicle lobes, I considered the question whether beside the mentioned differences in this size and length there might not also be other outside signs whereby the sex might be distinguished. On this point Jacoby says:—

point Jacoby says:—

1. "One decisive point is the broader jaw of the females, in contradistinction to the narrow and tapering one of the males, or ones with the 'lobe organs,'

2. "The lighter color of the females, which is of a greenish tint on the back, shading to a yellow on the belly, while the others are of a dark green, often an intense black, always with more of a metallic luster on the sides, and which commonly show a white belly.

3. "An important outside sign is the difference in the height of the dorsal fin, the females having it decidedly higher and broader than the fish with the lobe-organs.

4. "A sign not always certain is the larger eyes of the males, while those with particularly small eyes are most generally females. Eels, with 'Syrski's organs,' have very large eyes; but also there are large-eyed females to be found."

Jacoby gives a few measurements as illustrations of

Jacoby gives a few measurements as illustrations of is statements, from the great number of eels measured y him, from which the correctness of his conclusions in be seen; but, I am inclined to consider some of his can be seen; signs overestimated, while others, not less important, have been overlooked by him. From a great number of eels, measured by myself, I am enabled to give the fol-

nett. 7 Dr. L. Jacoby. Der Fischfang in der Lagune von Commachio

From this it may be seen that all females have a higher dows lin than the males of the same length of body, and probably with age this will not increase. The observation that cells with the lobe organs are large-eyed seems to me to be wanting in evidence, and not borne out by observation, but my examinations have led me to lay greater stress upon the broader mouth of the females as opposed to the small and tapering mouth of the male; not only is the mouth of the female broader, but it is even a creat deal more flattened and has more projecting (nafpetriebene) eyes, a fact to which I had my attention particularly drawn, and which I did not find in the males. The mouth or upper jaw of the males is more convex. (See cut.)

(See cut.)
If the width or narrowness of the dorsal fin, and particularly the broad flattened mouth of the females, with

their projecting eyes, together with the small convex mouth of the males be closely observed, then, with some practice, it enables one to distinguish the sexes with

some practice, it enables one to distinguish the sexes with very little trouble.

On an average I have found among every twenty cels, of from 300 to 450 millimeters in length, which I received from the fishermen, five cels with lobe organs, at least twenty-five per cent,, but when I began to notice the two before mentioned prominent marks as the dorsal fin and the mouth, and searched for male cels especially, then I found from eightly to ninety per cent, of the cels so chosen to be flurnished with the "Syrski organ," but it has been impossible for me to find any rule whereby to distinguish the sexes by the color. All of those, both male and fennile, which I examined had a white belly shading into green, with metallic reflections upon the sides.

Arnheim, April 3d.

And thus stands the vexed question at present, your correspondent merely giving the facts and leaving your readers to draw their own inferences, and prove or disprove them by experiment and observation.

-Never look a gift horse in the mouth, nor into the muzzle of a gun.

The Hennel.

-Address all communications to "Forest and Stream Publishing Company, New York."

A GREAT, ugly, awkward, yellow dog—a yellow had somehow acquired the notion that a yellow dog was the embodiment of meanness.

"He is well-shaped, and has a handsome coat," said my

the embodiment of meanness.

"He is well-shaped, and has a handsome coat," said my brother.

I could but acknowledge this as I noticed his broad, full chest, lithe back and supple limbs; but he was a yellow dog, though his skin was smooth and bright.

"Look here," added my brother, litting a fore-paw; "part Newfoundand;" and he spread the webbed tees for my inspection, while the dog modestly winked and blinked his big eyes and slowly withdrew the paw as it unwilling to assert claims to merit on that score.

"Good dog! good old Jack!" said my brother, stroking his ears. "See there—what do you say to those oyes?" he continued to me, as, with a hand under the dog's closed jaws, he brought his eyes full in view.

Jarge, soft and bright they were, as a gazelle's; and with such an appealing, intense, human look I might as well call it, that I was conquered. "Good—fine," I said, laughing, "He'll do. The eyes are all right. But he isn't Prince."

"And he's a yellow dog," was the rejoinder, coupled with a quizzical grimace as the dog laid himself at my feet.

"Yes. He's not Prince. Handsome is that handsome

isn't Prince."

"And he's a yellow dog," was the rejoinder, coupled with a quizzical grimace as the dog kaid himself at my feet.

"Yes. He's not Prince. Handsome is that handsome does, though," I returned, rather pleased at this attention of the animal. Now Prince was a beauty, a splendid St. Bernard, with shining, curly, black hair—and such lovely, drooping ears—such a graceful curve to his fringed tail. But, following his predilections, he had wrought so much mischief—executating cornfields, uprooting young trees, and finally nearly undermiting the barn, that he had been bunished to the mountains. So Jack reigned in his stead.

And Jack's office as a watch dog was to bark—to bark, nuerly. He understood this, and performed the duty faithfully; his somerous voice could be heard of a clear night over a mile dwar. Keen was his seent and quick list ear—woo to the misureant who came within his range; that bark sent terror through every fiber of his being. Yet a more gentle, affectionate creature neverwas. And his sugacity in discriminating between welcome and unwelcome visitors on the piemiess was remarkable. He scenned to know intuitively who were freends of the family, and was quiet and deferential toward them—conducted himself most benignly indeed, and as it proud of the protection he could gram them.

Docile, respectful and obschent he was, except in one particular. Being especially fond of accompanying any of the family to town, where we frequently went, he was often showed to trot alongside of Major, the old roan, as he drew the buggy or open wagon, and sometimes was industed with a seat in the back of the vehicle, And there were times when his fondness for this recreation got the better of his principles, and his duty as the home guard was neglected. He would watch wistfully

all preparations for the jaunt to town, and, if not invited to follow, with drooping cars would slink off to his kennel and crouch in its doorway with his head between his paws till the buggy was out of sight. Then, with the flectness of a hound, he was on the track keeping a respectful distance in the rear till the vehicle had hearly reached its destination, when he would come forward, with lolling tongue and panting sides, and look up with such a pitful look in his great eyes we hadn't the heart to send him back. An "Oh, Jack! how could you?" would make him hang his head sheepishly for an instant, only to raise it again with a gentle, suppressed bark, as much as to say—"Forgive me!"—the hark increasing louder and louder as he circled round and round old Major and the buggy. Finding he was not ordered home he would file into place beside the horse and trot complacently all the rest of the way. One very warm day! was going to take tea with a friend in town. The buggy needed repairing; I must go in the open wagon. I took an umbrella to shield my head from the sun, Jack watched me so narrowly that when ready to start I said "Can't have you, Jack. Go to your house and be a good dog," If els thus away much disappointed, evidently. I had my fears, and looked round repeatedly, meaning to send him back on his first appearance; and it was no easy thing to turn my head, with the umbrella in one hand and the reins in the other. I began to think how docile and good he was to take his disappointment so quietly, when, all at once, he appeared beside Major. I instantly ordered him home—repeated the order before he obeyed; then drove on more rapidly—for a moment, perhaps. And Jack dashed by mo like a flash and wheeled Jimself in front of the horse, an entirely new maneuver, but one which he afterward repeated, only in extremity hower. Again I commande left for a moment, perhaps. And Jack dashed by mo like a flash and wheeled Jimself in front of the horse, an entirely new maneuver, but one which he afterward repeated, only in turned and saw the old fellow, only a few feet in the rear, scated demurely on the roadside, watching me. My command was sternly reiterated. He sped homeward, to all appearance, like lightning. But in less than a minute came a bounce in the back of the wagon, and before I could turn my head he was at my side, the sweep of his ears brushing my check—numbrella knocked at one side. A little squeal of joy, the lapping of his tongue on my rein-hand, and the victory was won—he had his ride to town, and in front of the wagon—an honor never before attained. A few short, sharp barks, as if he were chuckling over his finesse, and a roguish pat of his paw upon my knee, showed that he thought it a good joke. It was vain to say, "Nanghty dog! bad Jack!" He didn't believe it, he just winked in my face with the utmost gravity, gave a few complacent raps with his tail on the floor of the wagon, then drew himself up with the dignity of a judge, and so held himself the rest of the journey. A most amusing spectacle, a comical group, we were—his ling yellow dog and red-faced damsel (the worry about Jack had sent every drop of blood into my face) under a blue cotton umbrella—judging from the nods and grins of everybody we met.

The next week I had an engagement about half a mile distant—must ride, but did not want Jack—felt determined he should not go, so chained him and made him

The next week! I had an engagement about hat a mue distant—must ride, but did not want Jack—felt determined he should not go, so chained him and made him comfortable, with food and drink, in his kennel. He uttered such cries of distress before I started that I unfastened the chain and contented myself with talking seriously with him about staying in the house. He seemed to understand and very demurely settled himself for a par.

for a nap.

A few choice plants, of which I was not a little roud, stood on the piazza near by. Jack, blinking his great eyes solemnly, often watched me as I watered and tended

soon of the plazza hear. J. Jack, binking its great eyes solemnily, often watched me as I watered and tended these plants morning and evening. An elegant cactus (Caclus grandiflora) was in bloom. It was my pet, and Jack knew it, I firmly believe. Little did I think that I was seeing its beauty for the last time as I passed along to give Jack a farewell pat on his neck, and then with a "Good old doggie!" hurried into the buggy. Jack followed the team with his eyes till it was lost in the distance, and then deliberately walked to my cactus, thrust his nose among its spiny leaves—without wincing—and, taking its stalk in his great jaws, drew the plant from its pot, and, with a low growl, completed its destruction by stamping on both leaves and blossoms, the large crimson flowers receiving the most of his anger. This over, he returned quietly to his kennel and composed himself to sleep. My mother, at a window near, saw the whole, but could not prevent it, it was done so quickly.

Quickly,
When I returned, he hurried out of sight, and it was When I returned, he hurried out of sight, and it was several days before he would answer my kindest call. I believe he was heartily ashamed, and regretted that he had ever given way to his anger, for he soon began to show me many little kind attentions—as if in reparation. This was the first and the only occasion on which he was ever known to display a bad temper to any of the family. And he was not a destructive dog—did not tear and break things like his predecessor; neither did he steal and hide—he was no thief.

After this sad affair he was very gallant toward me. If I went out of an evening, he was sure to follow, as my guard. If, as it sometimes happened, I was belated in town, and had a lonely walk home, I was sure to meet Jack coming to escort me. And it frequently happened that when I was in town of an evening, he would slip away from home, and go from one place to another till he found me.

way from home, and go from one place to another till the found me.

At last, my father moved into town, and Jack accompanied us. The unusual stir and noise kept him continuated the state of the state he found me.

But he took kindly to his new home—soon became very fond of his new master, with whom he led a useful and a happy life for over a yeur, making good friends by day among the eustomers of the grocery store, guarding by night the barn occupied by his master's horses and eattle.

among the customers of the grocery store, guarantees and cattle.

One night the barn occupied by his master's horses and cattle.

One night Jack's master was roused from sleep by a furious bark. At first he supposed it to be his usual salute to a passing traveler. But the bark was repeated—continued—with increasing vehemence. The man aross and hastily dressed. Passing out of doors he saw nothing unusual. Still the barking went on. He unlocked the barn door—flames and smoke burst forth; the barn was on fire. He ran around to the rear door and set horses and cattle free. The faithful dog, confined to an inner room, kept up his hoarse bark amid stilling smoke. The neighborhood was quitekly alarmed, a crowd gathered, but no one dared attempt the rescue of the dog through that scorching, blinding fire. The barking went on, but fainter and fainter, till at last it ceased—nothing could be heard save the crackling and hissing of the blaze. When the flames were subdued his remains were found just where his master had left him the previous evening. The faithful creature had yielded his life a saccifice to duty.

Dear, good old Jack! He was only a yellom dog, but in life he had many admiring friends, in death many sincere mourners. It is my faith that he has gone "where the good dogs go." Shall we presume to say that the feelings, the instinct, the reason—call it what we will or may—that prompted such honest, faithful service may not be as enduring as our own feelings, our own consciousness?

IMPORTED ENGLISH FOX-HOUNDS.

IMPORTED ENGLISH FOX-HOUNDS,

We this city on Friday last for the purpose of having a look at three English fox-hound emigrants that were on bourd, on their way to a new home in Kentucky. These hounds, a dog and two bitches, were consigned to the well-known forwarding agent, Mr. A. E. Goldsmith, of 58 Wall street, and were reshipped by him to their new owner, Mr. Henry Bishop, Louisville, Ky. This trio is the most typical one of its class; that has ever been imported for American use. The dogs were selected for Mr. Bishop by Mr. George Lowe, as the best to be had in England. No dog has for so long a time been carefully bred, reared and trained in large numbers as the English fox-hound, and in many fox-hound kennels careful records have been kept of the breeding of every litter for at least one hundred and fitty years. At present there are one hundred and fitty years. At present there are one hundred and fitty years. At present there are one hundred and sixty-eight fox-hound packs in the United Kingdom, one hundred and forty belonging to England, nineteen to Ireland and nine to Scotland. Two of the new arrivals, a dog and a bitch, are from the "Grove" pack, of which, Viscount Galway, M. P., is master, and the other bitch from the famous "Dartmoor" pack, Admiral G. Parker, master. The following are the sires and dams with some brief particulars of these splendid animals:—

Gratifude, bitch from "The Dartmoor" By Lord Yarborough's Glider out of Sunbeam, sho by Royal, Jr., a great winner and said to be the best looking fox-hound ever bred, Gratitude has been bred to Choristor, by the "Meynell" Cerberus. She is a superh young bitch.

Rauble, bitch from "The Grove", by "The Meynell" Linkboy out of Bounty, is Grand-daughter of Braeelet, the dam of the celebrated Barrister and Furrier. She is beautiful in every point, with great muscular development.

Fairplay, dog from "The Grove," by "The Meynell" Linkboy out of Sounty. Bounty by "The Meynell" Linkboy out of Founty. Bounty by "The Meynell" Linkboy out of Founty. Boun

is a wonderfully fine dog and can well stand as a model for all breeders. yellow markings.

These are by far the most perfect hounds we have ever seen in this country. In despite of a long and somewhat rough voyage, the dogs arrived in fine condition, although showing signs of having been in the care of a too generous cook. They were much admired during their brief stay in this city by a number of philo-kuoas, and we congratulate Mr. Bishop upon the success of his timely nurchase. timely purchase.

SETTERS AS "SITTERS."—Mr. Jno. M. Tracy, of St. Louis, Mo., is engaged at present in painting a picture of Dr. J. B. C. Lucas' red Irish setters, Erin and Biddy.

IMPORTED LAVERACK ALDERSHOTT. -In last week's issue IMPORTED LAVERACK ALDERSHOTT.—In last week's issue we published a letter from Mr. Erdman A. Heyzberg, of Brooklyn, N. Y. Through an error his name was omitely we are now glad to rectify the mistake, and call attention to the fact that Mr. Herzberg is the happy possessor of which has the state of the contract of the c Aldershött.

IMPORTED BLACK AND TAN SETTER.—Mr. William Stanley, of Englewood, N. J., has recently received from Lord Minto's Kennels, in Scotland, a magnificent two year old black and tan setter dog. The dog, "Victor", was selected by Dougall, the well known Glasgow gun-maker, and now is in the hands of Mr. Ferry, of Palmer, Mass., being trained.

TORONTO DOG SHOW.—The rules and prize lists of this show can be had free on applying to Mr. A. D. Stowart, Osgoode Hall, Toronto.

KENNEL NOTES.

BRED.—Rulh-Count Dan.—Mr. A. H. Moore's imported English setter bitch Ruth to his Count Dan. Bosket-Aldershott.—Mr. E. A. Herzberg's Boska (Kate II.-Pride of the Border) to his pure Lay-rank Aldershott.

NAMES CLUMED.—Earl.—Mr. T. W. Reaver, of Danville, Pa., claims the name of Earl for his liver and white setter dog, whelped Dec. 18th, 1879, out of M. Goldsmith's Polly, she by Brooks' [Bismarck, out of Chas, Launings Sherwood's Gyp, stred by Brooks hisbarts, but of Class Laminings his revoid a Cyp, sired by J. Buckloy's imported dog, Dudley, from Earl Dudley's konnels. Staughton and Endora—Mr. M. P. McKoon, of Frunklin, Belaware County, N. Y., claims the names of Stoughton and Endora for cocker spaniel dog and bitch puppies reserved out of his Beauty by his capitain.

-Rose Bradwardine .- Mr. Fred. N. Hall's, of this city. WHELPS.—Hose Bradwardine.—Mr. Fred. N. Hall's, or this city, red setter blich Rose Bradwardine (Edeho-Bess) wholped, July 2A, eight pupples, four dops and four bitches, by Mr. A. E. Godeffey's Rover II. Bdle.—ir. Vm Standey's (163 Brondway) clampion black and tan setter bitch Belle whelped, June 2wh, three pupples, all dogs, by Toledo Kennel Club's Grouse. Gussic.—Mr. W. H. Pierce's (Courtlandt Kennels, Peckskill, N. Y.) red Irish settler bitch Gussic (own sister to Lincoln and Hollyar's Arlington), wholped July 9th, 1880, fourteen pupples, cloven, dogs and three bitches, by champion Rory O'More.

SALE.—Berkley-Rhue, whelp.—Mr. Thos. A. Addison, of Chelsea, Mass., has sold to Mr. Aifred H. Bartlett, of Boston, a bitch puppy out of Rhue by Berkley.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

New York Archery Club.—New York, July 12th.—This club has commenced to shoot again in the Central Park, and it is hoped the weather may be such as to allow them to continue regularly.

A match will be shot with the Multnomah Archers, Portland,
Oregon, Friday, July 16th, at the American and Columbia rounds,
the team consisting of four gentlemen and two ladies. The
Multnomah Archers have already shot, and we will publish the

Multinomali Archers have already shot, and we will publish score of both teams next week.

The club has accepted a challenge from the North Side Archery Club, of Chicago, to shoot the York Round with four gentlemen. The time is not decided upon, but due notice will be given.

At the last meeting, the New York Club issued a challenge to the Nottingham Club, of Elizabeth, and the Brooklyn Club, to shoot with teams of four gentlemen and two ladies at the American and Columbia rounds. Notice of the matches will be given hereafter.

Jas. W. Auten, Jr., Secretary.

NEW YORK ARCHERY CLUB.—At the last meeting of this club it received challenges from the North Side Club, of Chicago, and the Multnomah Archers, of Portland, Organ. It also issued challenges to the Brooklyn Archery Club, and Nottingham Archers, of Elizabeth. These matches all depend upon the state of the weather and the will of the Park Commissioners, but the members are in hopes of being able to resume practice some time

CONSECUTIVE YORK ROUNDS .- M. Granger Smith, of the North Side Archery Club, Chicago, made the following record of fi

PUBLISHERS' DEPARTMENT.

HUNDREDS OF LADIES, who have been unable to attend to their duties owing to periodical sicknesses, have found Warner's Safe Kidney and Liver Cure a real "throad in need." Being a purely vegetable compound, and containing all the elements of safety as well as those of power, it has become universally popular. During the summer, especially, it is a certain proventive for the numerous Kidney, Liver and Urinary troubles incident to the season. All druggists sell it, and none, except those in perfect health, can afford to be without it.

NEW YORK, THURSDAY, JULY 15, 1880.

TO Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to Forest and Stream Publishing Company. Names will not be published if objection be made. Anonymous communications will not be regarded. We cannot promise to return rejected manuscripts. Secretaries of Clubsand Associations are uiged to favor us with brief notes of their movements and transactions. Secretaries end with propriety in department of the paper that may not be read with propriety in department of the paper that may not be read with propriety. We cannot be responsible for dereliction of mail service if money remitted to us is lost.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

THE DITTMAR POWDER.—We publish this week a second letter from Dr. Nash, of Mississippi, an account of whose lamentable accident with what purported to be Dittmar powder appeared in our columns some weeks since. For the publication of this first account we were severely taken to task by the present manufacturers of this explosive, who avowed their disbelief in the statements of our correspondent, and intimated pretty plainly that they had strong doubts that any such accident occurred at all. These doubts will be set aside, we presume, by the evidence on the subject which we publish

We have none but the kindest feelings toward the Dittmar Powder Manufacturing Company, and, if their powder is all that they claim for it, we shall be only too glad to give the widest publicity to the fact. Such a powder, provided it is safe, is just what we, in common with all other sportsmen, desire to use. It must be remembered, however, that the Dittmar powder is still on its trial, and has not yet come into common use or even into general favor, far less supplanted black powder. It is true that Bogardus and other professional pigeon shooters use it very generally and speak of it in very high terms, but among the great mass of shooting men it has not yet made its way into public favor.

We do not propose to advertise in the columns of For-EST AND STREAM any article that is in any way objectionable, and especially do we wish to shun the responsibility of bringing to the notice of our readers anything that is dangerous. As we have before stated, we refused the advertisement of the Chichester Rifle Company because we believed that no safe arm could be manufactured for the price at which those rifles were to be sold, and the event has proved the correctness of our decision.

We have taken great pains to learn all the details about Dr. Nash's accident, and we have the sincerest sympathy for him.

We think that the present company are bound to warn the public by every means in their power against the powder manufactured by the old company or companies, since it is evident that this old powder is, or may be, dangerous.

-Eight of the citizens of Lansing, Mich., have signed their names to a conspicuous poster offering a reward of \$25 for information which will convict any person of violating the game laws of the State,

A WORD ABOUT GUN MAKERS.

OUR remarks some weeks ago relative to speculators in human credulity who advertise to send guns worth \$50 for \$10, has had good effect in choking off a fraction at least of the revenue which would otherwise have found its way into the pockets of these fire-arm swindlers. We revert to the subject again because we are in receipt of frequent inquiries from distant correspondents, who send us the glowing advertisements of these fraudulent concerns and ask us what we think of them. Just now there is before us a letter from Fort Reno, Indian Territory, asking if the writer shall forward \$10 to a Boston firm for a \$50 gun.

There is one reply, and only one, to a question like this: Use common sense; exercise the same discretion in buying a gun or a rifle or a pistol that is employed in buying a watch, a horse or a suit of clothes. sane man forwards \$10 to a city sharper with the expectation of receiving in return a \$100 watch. None but a veritable simpleton would think to purchase a good horse for a song; sensible persons avoid the mock auction rooms of the Chatham street clo,' dealers: nor is there any different principle governing the manufacture and sale of fire-arms. It is a recognized law in every branch of manufacture and trade that the manufacturer must receive a fair equivalent of value given, and those who advertise to give this value without receiving the equivalent in return are set down as dishonest swindlers. This rule is just as imperative in the gun trade as it is in any other.

A good gun commands a good price, and if he would be sure of a safe and serviceable weapon the purchaser must pay the price. The manufacture of sporting arms is not in the hands of a monopoly. There are enough firms engaged in it to make the competition so close that the prices are cut down as low as they can be legitimately. No reputable firm would dare to risk its good name by attempting to palm off cheap goods for costly ones, and hence all such advertisements come from irresponsible parties.

The various dealers whose names appear from week to week in the columns of the Forest and Stream represent the legitimate and regular trade of the country. - It has ever been our aim to keep the advertising pages of this journal free from misleading notices, and to make the paper the safe medium for dealer and patron. Time and again have we refused to insert the advertisements of firms which we believe to be irresponsible, and we shall continue our efforts to keep our columns equally clean in the future. In this we are actuated by simple business principles. The faith imposed by its constituency in the fair dealing of the FOREST AND STREAM is something that we cannot afford to lose, even for the large immediate returns the cheap fire-arm men would be only too glad to make for an opportunity to reach the mass of our readers. We cannot afford to risk our reputation by dealing with these firms; whether or not our correspondents can afford to risk their lives by tampering with the cheap guns, is a question for each individual to decide for himself, and he ought not to hesitate very long deciding about it, either.

THE NEW YORK DOG POUND.

W E paid a visit to the New York dog pound, on Saturday last, which is situated at the foot of Sixteenth street, East River, and through the kindness of the officials in charge had, an opportunity of inspecting the building where the dogs are kennelled, and the machine of death in which they meet their doom. It is now three weeks since Mayor Cooper's order to seize all unmuzzled dogs went into effect, and from the 21st of June a determined raid upon the canines of the metropolis has been most persistently kept up. This is shown by the record of the receiving book, for no less than 2,280 dogs of all sizes and breeds, and no breed at all, have been received up to Saturday at the pound. Of this number twenty-three have been redeemed by their owners and three returned to their masters by the direction of the Mayor, on account of illegal capture.

The building in which the animals are housed is a long and narrow one, with plenty of windows, guarded by wire netting through which the air freely circulates. Tt. is fitted up with stalls on the ground floor similar to those used recently at Madison Garden, in fact, it suggests to one the idea of a grand dog show of mongrels. free from the usual complement of disappointed exhibitors. Besides the apartment containing the long rows of pens, there are two large box stalls in which the most mangy and forlorn looking curs huddle together while awaiting their impending fate, occupying their time sitting on their haunches uttering the most piercing cries and enlivening their last moments and relieving their minds by munching each other's ears.

The sanitary arrangements are almost perfect, and the whole place is scrupulously clean and free from odor. Each animal is provided with an abundance of food. which consists of bread softened in water, and a pan of clean water is within each pen. Although there were 143 dogs in the pound, there were only two of any value—a fine red setter and a moderately fair specimen of the black Newfoundland type. The Pomeranian or spitz dog seemed to predominate, and we were informed that there were two to one of this breed brought in to that of all the other varieties of dogs combined. The drowning days are Monday, Wednesday and Friday of each week, and the means employed to rid the city of homeless and dangerous pests is both simple and merciful. The dogs are confined in an iron cage which is rolled down to the edge of the river on a car running upon a track parallel to the building. When at the end of the wharf, the cage, by means of a swinging crane, is lifted off the car and lowered into the river. Death speedily ensues, and the bodies of the animals are beaped on the wharf, until removed by a hoat which carries the carcasses to Barren Island. There they are skinned and the fat boiled out of them; in fact, almost every part is utilized.

Dr. Carver, -Dr. Wm. F. Carver, the famous rifle expert, ought to be satisfied with the reception given him in Europe. While in England he gave exhibitions of his skill before the Prince of Wales, and received as a token of the royal approval an elegant scarf pin and a valuable belt. From England the marksman extended the prowess of his arms to Paris, and from thence went on to Germany, where he appears to have been received with even greater eclat than elsewhere. Not only did he win all the prizes in several rifle contests, but, at the spe cial request of the Emperor William, he gave an exhibition before the court and the royal family. The programmes were printed on white satin of lavish proportions, and the shooting of the American was so pleasing that an adjutant was dispatched the next day to convey to the Doctor an elegant diamond ring "From His Majesty, the Emperor of Germany," as the inscription read. Shortly afterward a special invitation came from the Crown Prince to the effect that Dr. Carver's exhibition seemed to interest the Crown Princess, who had been melancholy of late, and it was hoped that a second performance might be given. The Doctor was conveyed from the depot in the royal carriage, and the exhibition, which was given on a grassy lawn, consisted of shooting at moving and stationary objects with rifle and shot gun, on foot and on horseback; shooting with the bow and arrow, and throwing the lasso. Another scarf pin. bearing the monogram of Frederick and Victoria, was the royal token of approval.

-Farmers should bear in mind that the law prohibiting summer woodcock shooting will save much of their standing grain and grass, and that after their harvesting is over they will have leisure to start on even terms with the city sportsmen.

GAME PROTECTION.

RETURN OF MIGRATORY QUAIL-Here is the first news this year of the return of migratory quail to their nesting grounds. We hope to add other notes of a similar nature, and urge our friends to give us the earliest information on the subject. Our correspondent writes from Boonsboro, Md., July 2d :-

boro, Md., July 2d:—
I have the pleasure to inform you that the migratory quait turned out in the locality of Oakland, Md., in the spring of 1870 have returned to the same place, and are now hatching out their young. Some of them on the same farm upon which they were released.

WM. B. WHEELEN.

BANGOR, Me., July 10th.—About the 1st of June I received my quota of the migratory quail, imported for Maine. They were loosed on a farm of a friend some five miles from the city. A week since I drove out to see Maine. They were loosed on a farm of a friend five miles from the city. A week since I drove out how my protegy's might appear. Found them in a p not twenty rods from the place where turned loo bright and cheerful as though never transported, they have nests I feel sure, from the fact they he cover and beautine, and was considered to the cover and beautine, and was considered to the cover and beautine, and was considered. they have nests I feel sure, from the fact they hovered over and about me, and were continually sounding notes of alarm. The pasture is rather low ground, with long swale grass, suitable for concealing nests, with plenty of spring water. My friend reported one lame about the buildings and quite tame.

Franklin, N. Y., July 5th.—The 100 Messina quall which I procured through the kindness of Mr. Horace P. which a proceduct enough the animess of air, notace r. Tobey, arrived in most excellent condition, only four out of the 100 being dead. They were put out in three pair lots about our adjacent farms, mostly among bushess and briars, and are heard every day by our farmers. One which I reserved for a cage bird and a curiosity has become very tame and quite musical in his style, besides being quite a comical little pet. M. P. MCoox.

ROCHESTER, N. Y., July 6th.—The first report I have heard from the European quail imported by the Monroe

County Sportsmen's Club is painful to relate. Five pair were liberated a few miles east of the city, and a friend on whose farm they were put out writes me that one pair nested in a meadow on a neighbor's farm, who in mowing came on the nest unexpectedly and cut the legs off one bird and the toes off its mate. There were fourteen eggs in the nest, and the farmer thought to save them by having a hen hatch thom, but he can scarcely succeed. They appear to prefer meadows for nesting, and it is to be feared that the mowing machine will kill our stock and spoil our experiment. If there was any way of getting a supply a month earlier the young would probably be able to take care of themselves by the time haying begins, and if they should avoid this modern war chariot they might in time spread all over the land and justify the hopes of those who have tried the experiment. County Sportsmen's Club is painful to relate.

Game Bag and Gun.

JULY IS A CLOSE MONTH FOR GAME

-Address all communications to "Forest and Stream Publishing Company, New York."

A NEW GUNPOWDER.

NEW powder has been manufactured by the Du pont Powder Company which is specially adapted for choke bore guns. An interesting trial of this powder was made at the Brooklyn Driving Park, June 25th, the test being to shoot at one hundred wooden balls without intermission and without cleaning the gun : also making a target, 21 inches diameter, at the end of each twenty shots. The gun was a Parker, 10-bore choke, of ordinary pattern; cartridges loaded with 4drs. powder, 11oz. shot.

Two targets were made at 35 yards, twenty shots fired two more targets at same distance, and so on, until one hundred shots had been fired at 35 yards, and twelve shots at 45 and 50 yards. The balls were, with one exception, all well hit, showing the marks of from four to eighteen shots each.

The patterns of the 21-inch targets, made as above were: First target, right barrel, No. 9 shot, 390; left barrel, No. 10 shot, 635; second target, right, No. 10, 620; left, No. 10, 578; third target, right, No. 9, 479 left, No. 10, 628; fourth target, right, No. 9, 504; left, No. 10, 606; fifth target, right, No. 9, 493; left, No. 9 444; sixth target, right, No. 9, 483; left, No. 9, 485. seventh target was made, after an interval of ten minutes to allow the gun to cool, showing for the right barrel No. 9 shot, 846 pellets; left barrel, No. 10 shot, 537 pellets.

As to the particular point for which the powder was tested, namely, comparative cleanliness and the moist-ure of the dirt in the barrel, it was found that the dirt had not caked in the barrels even after sufficient time had been allowed for it to cool. Simply wiping out the barrels with a rag restored them to their proper condition, and, so far as this point is concerned, the trial amply showed that the powder is what its manafacturers claim.

THAT DITTMAR POWDER ACCIDENT.

BELOW we publish several letters relative to the Ditt mar powder accident, of which an account was given in the June 10th number of this journal. The most noteworthy of these letters is that of Dr. Nash himself, and of Sheriff Johnson, which, with the can of powder received by us, establish the main facts as detailed in Dr. Nash's original communication. We consider it now sufficiently proven that the accident did occur as at first stated; that the powder employed was the Dittmar brand FFF, manufactured and sold by the "Dittmar Powder Company," which preceded the present firm, and that the gun was loaded with the charge stated, namely,

We may properly say here that having had former correspondence from Dr. S. P. Nash, and that correspondence having been of a nature to show that he was no novice with the gun, we were ourselves perfectly willing to accept his statements as first sent, and published them believing them to be authentic and reliable. The event has proved that we were correct. If some of Dr. Nash's statements were incoherent, or, as claimed, the things he described impossible, so much the more evidence offered of his sincerity; for of such an accident, it is a well recognized fact, no two men would give the same account; and on the other hand, if a person were deliberately to manufacture an account of the bursting of a gun he would take good care to make it a clear and thorough story. That Dr. Nash's recital was somewhat confused was the very best proof of its inherent truthful-

What this may show as to the character of Dittmar powder, probably each of our readers will have an opinion of his own. Our duty toward our correspondent, the Dittmar Powder Manufacturing Company and our readers in this affair is done when we have given all an opportunity to know the truth.

PHILADELPHIA, Miss., June 29th.

Editor Forest and Streum:—
I have just received Forest and Stream of June 17th, and in it I notice an article from the Dittmar Powder

Company in which they seem to be in a terrible fever about an article of mine, published in FOREST AND STREAM of June 10th, and call upon you for the name of the Louisville merchant who gave me the powder, and the name of the merchant from whom the Louisville merchant obtained the powder, also requesting you to have the original canister containing the rest of the powder from which the charge was taken which caused the accident sent to you, togother with the small circular which accompanied the same, etc. I returned from Louisville this evening, where I have just been spending nearly a week, trying to get up just such things as the Dittmar Powder Company request you to have sent to you; and the result of this work I sent to Macon, Miss., to be expressed to the Forest and Stream Publishing Company.

The Louisville merchant who gave me the powder is Dr. E. Foster, physician, druggist, dealer in guns, ammunition, etc. I called on Dr. Foster for the bill of Dittmar powder, that I might get names and date of purchase. On examination of the bill, I find that I was mistaken about the powder being purchased in New York, but it was bought by Mr. Foster, of Louisville, Miss., from Crookes & Hilder, 604 North Fourth street, and 608 North Third street, St. Louis, Mo.

I obtained from Dr. Foster the canister, and a part of the powder, which he says is the original canister and powder that caused the explosion. Before sending the canister to the Forest and Stream Publishing Company, I waited three days for Dr. Foster to look up the circular that caused the explosion. Before sending the

canster to the Forest and Stream Publishing Company, I waited three days for Dr. Foster to look up the circular that came with the powder. He at first told me that he thought that he had given the circular to some of his friends, and did not remember who, but on the third day he handed me the circular that I send with the powder, marked No. 3, and said that he thought that it was the one that came with the newder hu could not be certain. marked No. 3, and said that he thought that it was the one that came with the powder, but could not be certain of the fact, as I had given him some circulars that came with Dithmar powder that I received from Bogardus & Co., after the accident with the Dithmar powder ordered by Dr. Foster. So I am not certain that I sent you the original circular that came with the powder, but am of the opinion that it is not. It will be seen by referring to my article in FOREST AND STREAM, from the 33d to 38th lines, inclusive, that I relied on what Dr. Foster told me about the circular gone one else having the circular for examination at the time), and cunnot be certain on this point. From the information that I could get about the circular, before I fired the charge that caused the explosion, it seemed that the circular and y gave a description circular, before I fired the charge that caused the explosion, it seemed that the circular only gave a description of the powder, and stated that it could be used in both shot gun and ritles by using the same amount by measure. The circular I sent you (No. 3) gives other instructions, and instructions that I did not see until I received the powder I ordered from Bogardus & Co. Hence my reason for giving it as my opinion that it is not the circular that came with the powder or ordered by Dr. Foster. I will state here that Dr. Foster stands very high in Louisville and vicinity as a physician, druggist and gentleman, and if he has made a mistake in sending the circular I do not think that it was intentional, for he lost considerable time, and worked very hard for one of his age (he seems to be nearly eighty years of age), in trying to get the circular.

t the circular.

age (he seems to be nearly eighty years of age), in trying to get the circular.

I wish here to make a correction in regard to what I said about the label on the canister. I had been moved home from Louisville (twenty-four miles) before I wrote my last letter to the FOREST AND STREAM, and nearly a month had elapsed since I had examined this label. I had to write from memory of what I had seen, and as I had been examining circulars that came with other canisters. I had gotten things a little mixed, and my memory, although correct on the main point, was not altogether correct on the whole. In my letter to the FOREST AND STREAM I said that the label on the face of the cunister stated that it was one of the brands of rifle powder, and was marked FFF. This FFF mark was not on the label on the face of the cunister, but pasted on one edge of the canister, and although it is not on the label as I believed it to be when I wrote, the circulars which I have force me to believe that if it is a genuine article of Dittmar powder it must be rifle powder. For instance, the printed instructions pasted on the back of a canister that is now in my possession, of Dittmar's Diamond Grain C powder state that: "The shot gun powder is lettered B and C, the latter the finer. The shot gun powder is not to be used in rifles. The rifle powder, F, works very well, and is preferable to B and C in 14 and 16 bore. The FFF can be used in muzzle-loading shot guns."

The canister just referred to, with two others, was bought by me from Bogardus & Co., Chicago, Ili. These canisters were delivered to the express company at Chicago on the 24th of March, and before Dr. Foster bought cago on the 34th of March, and before Dr. Foster bought his Dittmar powder, but owing to some carelessness of the express company my powder was not received until the 1st of May—after Dr. Foster had received his and after the explosion of my gun, These canisters were wrapped in white paper with the letter C printed upon the wrapper, and a diamond, drawn with pencil, around the C. These canisters were all called, and had printed instructions for using the powder pasted on the hacks of the canisters, and the letter C stamped on these instructions. The face of these canisters have the addresses of the Dittmar Powder Manufacturing Company, and the words Dittmar's Diamond Grain upon them. So I infer that these canisters contain genuino Dinomod Grain C powder. A quantity of losse circulars accompanied the canisters, two of which I sent you by express, with the powder I sent you, and marked No. I and No. 2. Other kinds may have been in the package, but several persons called to examine them while I was in my bed, and carried off such as the suited them, and I have now left only two kinds, samples of which I sent you. I give description of the powder and circulars that were sent to me by Bogardus & Co., because I have been requested to do so. In calling on you for certain evidence of the accident, the Dittmar Powder Manufacturing Company say that "without this evidence we think you will also admit that there is no case made out against us" (them). In my other communication to the Forest AND STREAM it was not my intention to make out a case against the Dittmar Powder Manufacturing Company, but against myself. At that Dittmar powder, but owing to some carelessn tention to make out a case against the Dittmar Powder tention to make out a case against the Dittinar Powder Manufacturing Company, but against myself. At that time I believed the accident to have been caused from a wrong use of the powder, and I wished others to be more careful than I had been. It will be seen by referring to my article of May 13th that I there state that I had not written it through any prejudice that I had

against the Dittmar powder, for I was satisfied that if rightly used it was a valuable invention. The small amount of dirt and smoke that it seemed to create, when burned, caused me to believe it to be valuable. I brought only one charge against the company, and that was they did not give the public a sufficient chance to become acquainted with the various grades of their powder in their advertisements, etc.

did not give the public a sufficient chance to become acquainted with the various grades of their powder in their advertisements, etc.

Since making the charge 1 have been making a more careful examination of the circular I sent you marked No. 1, and find that the Dittmar Powder Company say that "FFF, a very the grain specially made for all muzzle-loading arms, might also be used in breech-loading shot guns," recommending it to be used in the very way that I used it when the accident occurred, and making it unnecessary to change their advertisement. The statement just referred to in their circular makes it necessary for the Dittmar Powder Manufacturing Company to prove that this powder, labeled Dittmar powder, that since been tampered with. Should they fail to do this there will be a case, and a strong one, made out against them. In their letter of June 11th they most emplatically declare their disbelief in it ever having been manufactured by them, and further down say that they can furnish you a dozen affidavits that not a single grain of powder was ever put up or sold by their company which was not sealed and did not show their printed directions on each can or keg.

In institce to the Dittmar Powder Manufacturing Company in the properties of the properties of the properties of the printed directions.

on each can or keg.

In justice to the Dittmar Powder Manufacturing Comon each can or keg.

In justice to the Dittmar Powder Manufacturing Company, I will say that the canisters which contained the powder that caused the explosion of my gun, and bought by Dr. Foste, for Dittmar powder, had neither seals or printed instructions upon them, and I am in hopes they will be able to clear themselves of putting such a dangerous article in the market. Their threat to spare neither time nor expense to ferret this matter out to the bottom pleases me very much, and they will find no one more willing than myself to lend all possible aid in this matter, and should they clear themselves of having been the cause of the suffering and expense which I bave had to bear, I am not willing that the matter should stop until the guilty parties are found and made to suffer. I do not see why the Dittmar Powder Manufacturing Company should complain that my accident was published in your paper, if, as they affirm, they disbelieve in this powder ever having been manufactured by them. It seems that they should be glad to know that there is a dangerous powder being manufactured and sold as their powder.

In their communication to FOREST AND STREAM the

In their communication to Forest and Stream the In their communication to FOREST AND STREAM the Dittmar Powder Manufacturing Company declare their dishelief in the possibility of such results coming from so small a charge of any powder in the world, unless made to specially produce similar results. If this powder is not genuine Dittmar powder, but an article put in the market to injure their reputation, it is possible it was made to specially produce such results; and if it is genuine Dittmar powder it is not sealed, and it is possible that some wicked wretch removed the seal and introduced enough fulning silver. Imministing cold, dynamic, nitroducing silver, fulninating cold, dynamic, nitroducing silver.

mar powder it is not seased, and it is possible that some wicked wretch removed the seal and introduced enough fulminating silver, fulminating gold, dynamite, nitroglycerine, anything that would produce an explosion, and the charge that I shot being the first used from the can, it might have contained a part or the whole of the explosive substance.

It is a fact beyond successful contradiction that the accident which I reported in FORIST AND STREAM did actually occur, and that, too, when I was shooting only 3drs, of the powder from an §4 lb, gun that I had been accustomed to shoot 4drs, black powder out of. As evidence of this fact I ask, and shall expect you to publish the letter I sent you from Sheriff Johnson, and the article in the copy of the Winston County Index that I sent at the same time, also the note from the editor at the bottom of the article.

ticle in the copy of the Winston County Index that I sent at the same time, also the note from the editor at the bottom of the article.

If this is not sufficient evidence, I will give as reference, Drs. G. Y. and G. P. Woodward, Dr. Conwell, Dr. E. Foster, Dr. J. Fox, and Dr. A. S. Rick, of Louisville; also, Mr. Duncan Eatman, of the firm of Woodward, Metis & Co., J. B. Gage, Hugh Hathorn (clerk), C. J. Woodward, John Graham, and Col. M. A. Metts. 1 could send other names, and could send any number of affidavits, but if this is not sufficient to convince auyone let the doubter come and see my crippled hand, and the thumb which was torn from it with sufficient force to be thrown forty yards from where I was standing when I fired the gun. I have my thumb in alcohol, and expect to preserve it to show the manner in which it was torn from the two my the sufficient of the collection of the second of the sufficient of the

Office of W. B. Johnson, Sheriff of Winston County, Louisville, Miss., June 24th.

Louisville, Miss., June 24th.)

Editor Forest and Stream:—
My attention has been directed to an article in the Forest and Stream in the forest and Stream in the forest and Stream in regard to an accident that occurred in our village on the 21st of April hast, in which Dr. S. P. Nash was seriously wounded from the explosion of a double-barrel shot gun, charged with powder taken from a can labeled. Dittinar Fowder, FFF. I was present and saw Dr. Nash load the shell, and there were 3drs. of this Dittinar powder put in the shell. After the accident I examined the shattered pieces of the gun, and am of the opinion that a double or treble charge of

common black powder would not have caused such a complete wreck of the gun. Afterward I also extracted the load from one of the shells which he had been using previous to the accident in the same gun, and found that it contained 4drs. of black powder. This was the first trial of the Dittmar powder in our county, and from the shattered condition of the gun I was impressed with the idea that Dittmar powder was dangerous, from the fact that 3drs. of this powder had done what 4drs. of common black powder had failed to. Dr. Nash is a citizen of Neshoba County, but well known here from boyhood, and is a gentleman in every particular, a good dentist, and a sportsman of the first water. I write this to convince you that this accident did occur, and that Dr. Nash is no novice in the handling of a gun.

W. B. Johnson.

Prom the Winston County Index, Friday, April 30th, 1880, On Wednesday, the 21st inst., Dr. S. P. Nash, of Nestoba, in company with Jno. A. Graham, started out lunting, with the intention while out of trying some of Dithmar powder, which is said to be the best now in use either for ritle or shot gun. When near the milt on Main street, Dr. Nash concluded he would try the powder and lired at a target, when the gun exploded, blowing off the thumb of his left hand, and lacerating his hand in a terrible manner. We are glad to state that the wound is not considered dangerous by his physician, and at this writing Dr. Nash is doing well, and it is hoped will soon recover and be able to attend to his professional duties. This new powder is almost white, and when exploded makes but little noise, but lack of space prevents a full description of it. We would advise all who use it to follow the directions implicitly, which this accident shows to be necessary.

Editor Forest and Stream:

This paragraph would seem to convey the idea that Dr. Nash did not follow the directions for using the powder. In writing the notice we did not know whether or not be did, but made the suggestions as a precaution to others using it.

L. Lebenffeld, Editor Index.

Philadelphia, Neshoba County, Miss., July 1st.

others using it.

L. Liebespfeld, Editor Index.

Philadelphia, Neshoba County, Miss., July 1st.

Editor Forest and Stream:—

Yours of June 25th was received in due time, contents noted, and will answer the same cheerfully. Dr. S. P. Nash was raised and lives about five miles from this office, and when at home recives his mail from this office. His father and myself settled near each other in Neshoba County in the spring of 1837. I have known Dr. S. P. Nash rom childhood. His father was one of our most respected citizens of this county. He was one of our most respected citizens of this county. He was one of our most respected citizens of this county. He was one of our most respected citizens and raised a number one family of children. The Doctor is about thirty years old, and is one of our first-class men of his age; also, he deserves much credit for the man he has made of himself. He is a small, weakly man, and that was one cause of his giving his attention to the profession of dentistry, though he is a natural mechanical genius, and, as he says, his gun and fine dogs have been half of his pleasure, and there are but very few men who know more about fire-arms or can use them any better than Dr. S. P. Nash. It is generally understood by his gunning friends that he cambeat any old gobbler yelping or gobbling. The Doctor had just returned to Louisville from his home in this county when the sad accident happened at Louisville. He had come home for the purpose of spending a few days hunting turkeys and fishing. While at home he called up two old gobblers and killed both of them at one fire, they being domble when he fired.

It is a great misforture to him, and everything he published in regard to the bursting of his gun and his terrible wound is all true. I saw the Doctor about six weeks after it happened; he was then barely able to come in a buggy to town, and looked quite feeble. He was into wond about headed over. Has as yet very little use of his fingers, and we fear he never will be able to continue the count o

nand that was shattered by the bursting of the gum.

G. P. WOODWARD, Assistant Postmaster.

New York, July 12th.—Editor Forest and Stream:—
We tender you our thanks for the aid you have given us in obtaining information relative to the accident reported by Mr. Nash. The can of powder you exhibit is not of our manufacture, but was made in olden times, and, therefore, we shall not be surprised if upon trial it should prove in some manner imperfect. We shall subject it to a test on our pressure gauges, and then we shall know whether the powder is too strong, or whether the accident was occasioned by a faulty gun or some other causes independent of the powder. We have never sold a can of powder except a seal was placed over the screw cap of the can. We have never sold a can of powder without full directions for its use pasted upon the can, and we shall hereafter still more publicly give such notice. We think that we should not be held responsible for the faulty manufactures (which is yet to be proved) of our pressecessors, who, working without the proper instruments, had no means of determining the greater or lesser strength of each individual tot of powder, thus obtaining a uniform standard. However, we are here assuming that there is a fault in that particular can of powder, a fact that is yet to be ascertained by means of the pressure guage, and the results of our trials we will give you as soon as possible. Our Mr. J. V. Lengerke leaves to night for Binghamton to conduct the experiments.

FAXETTEVILLE, N. C., June 21st.

FAYETTEVILLE, N. C., June 21st.

Editor Forest and Streem:—
I have seen in the Forest and Streem:—
I have seen in the Forest and Stream for a year or two past articles on Dittmar powder, some of them so grossly unjust that I am tempted to give my own experience. My weak point is over-fondness for line dogs and guns. I have been an ardent sportsman for nearly forty

years, and during that time I have used black powder of the finest grades of all powder makers that it was in my power to procure, and the same objection applies to them power to procure, and the same objection applies to them all—they will make too much smoke and foul the gui too quickly. These objections do not apply to Dittman powder. I was induced three winters ago to try a fow charges of Dittman powder. I did so with great fear and trembling, but I found it was the powder that I had looked for all my life. First, no smoke, and I could always get in the second shot; second, my gun did not foul; third, there was no recoil, and last, but not less, ways get in the second shot; second, my gun and not foul; third, there was no recoil, and last, but not least, there was more strength in Dittmar than, in any black powder that I have ever used, provided you load your gun properly. I use a Scott gun No, 12, seven and a half pounds. I load my shells myself with three and a half drachms of powder, two Eley's pink-edge wads on powder, one ounce chilled shot, with soft wad on shot, and with shells loaded as above. I have yet to find the man that can beat me. Who uses black powder?

I will state a circumstance that occurred in the capital of our State last winter to illustrate the feeling of prejudice against Dittmar powder. My business often calls me to the capital, and I have some sporting friends there, and among them is a clergyman of high standing in the Church; he is the pastor of about the largest congregation in the city. After the usual salutations of the day were passed he informed me that he had just the day before received a fine gun that he had ordered, and had

Church; he is the pastor of about the largest congregation in the city. After the usual salutations of the day were passed he informed me that he had just the day before received a fine gun that he had ordered, and had gone out the afternoon before to try it and was very much pleased with it. It shot well, and killed the game clean and dead; but in following up the game he had to jump a ditch. He made a misstep and fell with the muzzle of his gun in the mud, and as he arose a quail got up just before him, and without thought he fired on the bird, and of course the consequence was the muzzle, stopped up with mud, burst the gun. The Doctor was using Dittmar powder. I asked him the question, "Did the powder or the mud burst your gun?" Why the mud, of course, did it! I thought no more of it, but some two months after, when I was called to the capital again on business, and at a depot on the railroad some gentlemen boarded the train who resided in the city and had been out for a few days' shooting, I engaged them in conversation about sporting matters. They showing me their shooting traps I asked them what kind of powder they used, and after they telling me I asked them if they had ever used Dittmar powder, and with a look of horror depicted, if possible, they answered, "What! use Dittmar powder twhy, it burst Dr. P.'s gun."

It was the mud in the muzzle that burst Dr. P.'s gun." I thought of the old saying, give a dog a bad name, etc. I went on to the city and called at a store that I was informed kept Dittmar powder and asked if they sold Dittmar powder. The young man, with a look of surprise, also answered, "We keep Dittmar powder and sked if they sold Dittmar powder, and only they it burst Dr. P.'s gun."

I hought of the old saying, give a dog a bad name, etc. I went on to the city and called at a store that I was informed keep Dittmar powder to the powder, and only write this in justice to a company who are furnishing a very superior article of gunpowder to the sportsmen of this country.

Editor Forest and Stre

Editor Forest and Stream :-

Etitor Forest and Stream:—
I wonder if any one ever bursts a gun now with black powder? If they do, is the bursting attributed to the particular brand of powder, or are the brains of the fellow who loaded the shells in anyway mixed in the matter? I don't mean the loose texture of the explosion, but the "gray matter" during the loading. These thoughts are suggested by reports that Dittmar powder is dangerous, and statements in the papers from time to time to show cases where even moderate charges have bursted guns. If there is less recoil in the Dittmar than in black powder, it would seem to indicate that the former was a slower powder. If such is a fact, how can it be that it is more liable to burst a gun? That there is much less recoil I can testify, from an experience of over five years with somewhere about ten thousand shells, and this includes twenty-live cans of the Bogardus brand, which the maker himself thought was too quick. For several the maker himself thought was too quick. For several years it was not uniform in quality, but it has imthe maker himself thought was too quick. For several years it was not uniform in quality, but it has improved, and is now the very best powder we have ever shot for execution; and as for pleasantness, in lesser report, recoil, smoke and dirt, it is incomparable. I would say, I have no interest in the powder, further than a sportsman's desire to defend a good thing which has given me pleasure in many a field and woodland tramp. We have used a 7-1b. gun, and $3\frac{1}{2}$ to 4 drs. of powder, with 1 oz. to $1\frac{1}{2}$ oz. shot.

E. L. H.

Winchester, Mass., June 19th.

Editor Forest and Stream:—
I read, with a good deal of interest, the statement pub-

I read, with a good deal of interest, the statement published in your paper of June 10th in regard to the accident said to have happened [to S. P. Nash from the use of Dittmar powder. For the benefit of my brother sportsmen, I will state a still more serious accident that occurred here last summer. One of my townsmen borrowed a single-barrelled shot gun for the purpose of shooting cats which greatly annoyed him. Not finding the game at the time, he set the gun away in the house, to which his wife objected on account of the children, fearing they might meddle with it, and requested him to remove or discharge it. He took it out by the side of the house and fired it. The gun burst, blowing not only his thumb off, but his hand and forearm all to pieces. Bits of flesh and pieces of his hand and arm were found. his thumb off, but his hand and forearm all to pieces. Bits of flesh and pieces of his hand and arn were found bespattering the whole side of the house. He was obliged to go to the hospital and have his arm amputated, and came near losing his life. As far as could be ascertained, the gun was loaded with three drachms of Hazard powder and one ounce of shot. No publicity was given this terrible accident beyond a mere paragraph in one of the local papers. Had the gun been loaded with Dittnar powder, there would have been no end to the statements about it. Now, taking the two accidents in the spirit in which Mr. Nash puts his, what is the conclusion to be drawn? First, Mr. Nash burst his gun with Dittnar powder, losing his thumb; therefore, Dittnar powder is dangerous, and all sportsmen are warned against it. My neighbor burst his gun with Hazard powder is still ner dangerous, and all sportsmen are warned powder is still ner dangerous, and all sportsmen should against it. My neighbor burst his gun with Hazard powder, a more terribis accident, and therefore Hazard powder is still more dangerous, and all sportsmen should be on their guard against using it. The truth is that neither of these accidents furnish any

evidence against the use of either of these powders. youther a gainst the use of which of the process and cocidents are calcing place every week; but, as they occur from the use of black powder, no especial notice is taken of them. I gave the Dittmar powder a thorough and exhaustive

I gave the Dittmar powder a thorough and exhaustive investigation several years ago, trying experiments with it in various ways, and, in your paper, over my own name, gave the result of some of these experiments. I do not hesitate to say that by no fair means can a good gun be burst with three drachms of this powder. The statement as it now stands in your paper seems simply absurd. Either the gun had been wrenched by previous large charges of black powder, or, more must have been used than he states. The assertion of Mr. Nash that the gun was burst into more than fifty pieces would indicate that it was not safe to be used with any gunsmith knows, go to pieces in that way. I used the Dittmar or Schultz powder, as directed in a former article, for two years, and were I confined to either that or common black powder, I should greatly prefer the Dittmar, as being not only quite as safe, but far more pleasant and effective.

ant and effective.

I have no personal acquaintance with Mr. Dittmar, or I have no personal acquaintance with Mr. Dittmar, or the Dittmar Company, and those who know me will not, certainly, accuse me of being in their interest, E. A. Brackett.

From our knowledge of the Dittmar powder and of the \$65 Parker gun, we considered, in the case of the ac-cident narrated by Dr. Nash, that the fault was not with

ARKANSAS GAME PROSPECTS.—Near the mouth of Devil's Fork, Ark., June 30th.—This being the "off," season, by common consent—there is no game law in this Stute—the sportsman can do little more than clear up the game occasionally, and note the prospects for the comming fall. Deer are not overabundant—hardly an average showing of tracks, etc., in the woods. This is made up, and more too, by a superabundance of bear signs. And this may account in some measure for the scarcity of the former. Turkeys have bred successfully. The season has been very favorable. They are in the woods eveywhere in satisfactory abundance, and are unusually forward. I have met several very large "droves," and note young once as large as common hens. These will afford "royal sport" in October, or even late in September. The "mast" is good in the hills, especially all the varieties known as "sweet mast," so there is a promise of good sport for the coming season, Bob White is everywhere breeding in profusion. He will hardly be noticed, however. By the way, in my excursions through the fields I observe that the mumber of cock partridges is greatly in excess of the hens, a thing I never noticed before, I also observe that the wood duck, Anas sponsa, has bred in unusual numbers in the waters of this State. Now let the migratory birds do their part, and we shall have something like "the old times in Arkansaw."

PENNSYLVANIA. — Notwithstanding the forest fires that swept over great portions of Pike County during the early part of the summer, the eggs of the woodcook seem not to have been destroyed, for these birds are reported to be very abundant in the neighborhoods of Sho-hola, Lackawaxen and Blooming Grove Township. The season for woodcock is from July 4th to Dec. 15th; quall, Oct. 15th to Poet. 1st; ruffed groups, Sept. 15th to Dec. 15th. The route is viu. Milford, thence team or stage.

SHOOTING MATCHES.

BOGARDUS US. RIMELL.-The third match of the series of three BOGARDS ES, RMELL.—Institut ancient on the Series of after between Capt, A. H. Bogardus and George Rimell, of England came off at Pittsburg, Pa., July 10th. The weather was unisually warm; a slight breeze from the right quarter caused many left quarter birds. The birds were in excellent condition, young and wild. Bogardus shot with his new Scott hammerless, weighing to nod not not make the second managers of the man one-quarter pounds; Dittimar powder in first barrel, Op-ange Lightning No. 6 in second, Ross. shot, klimell foading the same. Bogardus stood at thirty yards, klimell at twonty-eight yards; the boundary being, the inclosed grounds, was in some places fifty yards and in others ninety yards. Following is the

Total 100.

* Denotes killed with second barrel.

+ Fell dend out of bounds.

RECAPITULATION. Bogardus:-Killed. Missoul. Rimell:-

Bogardus used second barrel thirty-one times, lost four birds out of hounds; Rimell used second barrel forty-one times, lost three out of bounds. Referee—S. S. D. Thompson, of the Sports-mens's Association. Oilleisi Scorer—E. F. Bown.

OTTO C. WILKINS.-A new claimant to fame in shooting circles OTTO C. Wilkess.—A new cannant to tame in showing arrars. is Mr. Otto C. Wilkins, of Cooperstown, Pa., whose most remarks able feat was that of breaking with a ride 93 balls out of 100, and 173 out of 1700, including one run of 107 straight; an average of 15 4-5. This was done at Franklin, Pa., May 4th, R. G. Lamberton referee: H. B. Kanture and J. B. Gordon socres. The shooting was in the presence of the Franklin Sportsmen's Club, hundreds or other spectators witnessing it. Mr. Wikkins is twenty years old, and has shot with the rite only nine months, having previously earlied the reputation of being one of the best wing slots in the State. His progress with the rite has been very rapid. In about a month after he began he made a score of 81 out of 100.

glass balls, at a Mercer County fair; and two weeks later, in a glass balls, at a Mercor County fair: and two weeks later, in a practice shoot at Cooperstown, he broke 149 straight. His next feat was breaking 885 balls out of 1,600, making one run of 232, at Greencastle, Pa., Oct. 224, 1879. Otto C. Wilkins stands 5tt. 10in., is straight as an arrow, and has broad shoulders, light complexion, with light blue eyes. His shooting is graceful, his rilio being handled with case. He extends his left arm straight out, grasping the barrel near the muzzle, covers his target quickly and always shoots with both eyes open. His gun is the Kennedy magnaine rifle, which shoots the Winchester .44 cal. center-fire eartridges, 40grs. powder, 200grs. lead, 1873 model, the same as that used by Dr. Carver. It carries 15 balls, and with it Mr. Wilkins drives his bullets through pennies and nickeds thrown find kins drives his bullets through pennies and nickels thrown into the air.

TOPHAM, ME., July 5th.—Second of the series of matches at

glass balls under the management of the Sagadahoc Association. The conditions were: Card rotary trap; 18 yards; C. Gond and A.

This is an error, as the Pennsylvania Club. report a match between use "Pennsylvania Liule Association and the Wheeling Rille Club. This is an error, as the Pennsylvania Rille Association bas shot no such match. The Pennsylvania Rille Club and the Wheeling Rille Club are the organizations which had the match. The Fennsylvania tatle Rille Association is composed of seven clubs, each club being represented ciation is composed of seven clubs, each club being represented in the Association by delegates, and the club which shot against the Wheeling riflemen is one of this seven. Your report tends to convey the idea that a team representing this Association has been defeated by the Wheeling Club. Please correct this error. The match was shot mader different atmospheric influence, and the shooting was done in the respective cities to which the clubs belonged and results telegraphed. The Philadelphia shooting took place while a gale was blowing which necessitated from two to two and one-half points whedage at the distances shot.

G. W. REBER,

G. W. ZIEBER, Secretary Pennsylvania State Rifle Association.

Normistown, Pa., July 9th.—A rifle match was shot on July 9th at the Stockton, N. J., range, between Geo. Fox, of Philadelphia, and A. B. Farker, of Norristown, Pa., which was won by the latter on the following scores:—

| A. B. Parker. | 500 600 | yards | 5 5 | 5 | 5 | 4 5 | 5 | 5 | 5 5 | 5 5 | 54 | 5 | 4 | 54 | $\frac{4}{5}$ | 5 | 5 - 72 5 - 73 145 | l |
|---------------|------------|-------|--------|---|---|--------|---|--------|--------|--------|----|-----|---|----|---------------|---|---------------------|---|
| George Fox | 500 600 | yards | 5 5 | 5 | 5 | 54 | 5 | ō ō | 5 | 5 | 5 | 5 5 | 5 | 5 | 5 | 5 | 5-74 145 | 1 |

Wind and light were bad.

BALTIMORE, Md., July 5th.—The Maryland Rifle Club had a genoral meeting to-day, at Patapseo Kange, with half a dozon matches on. During the greater portion of the day the sky was overeast, and twice or thrice a slight rain foll for a few moments. A good light with very little wind, except during the Alford Match—even in that not interforing greatly with good shoofing. Among the competitors were members of the Columbia Rifle Club and Montgomery Rifle Club. In each match from fifteen to thirty competitors were entered, and the following were the six birhest scores in each contest:— BALTIMORE, Md., July 5th .- The Maryland Rifle Club had a highest scores in each contest :-

First Mutch.-100 and 200 yards. Five shots at each range, any

HUNTING RIFLE SIGHTS.—Springfield, Mass., June 19th.—Editor

Forest and Stream:—It is with heartfelt satisfaction that words
fail to express that I have devoured the articles upon "the sighting of hunting rifles," from the facile nen of your correspondent. ing of luuting rilles," from the facile pen of your correspondent. J. S. Van Dyke. Although the only knowledge that I possess of this gentle writer is gleaned from the articles over his signature. I can unbesttaringly youch for him as a practical sportman, for be plainly articulates the "shibboleth" that proclaims him a worthy member of the honorable guild. "No carpet knight is in whose theories are conceived in easy chair and whose experience is drawn from the writings of others; but a genuine disciple of woodland sports, whose wits have been sharpened by innumerable encounters with the denizens of forest and field, and whose ideas bave been formed by curred in others and neigh, and whose sees have been formed by curred in observation while tramping over the bills. That many of his ideas are correct my own experience corroborates, and I am so well pleused that he has seen the sight that has so long been dear to my eyes, and so plainly and entertainingly recorded his opinions upon the subject, that I cannot canning recorded as opinions upon the singlest, that I cannot forbear expressing my thanks and adding my feeble testimony to the correctness of his views. Although the scatter gun is my favorite weapon, I have ever been an ardent lover of the rifle, and have always turned to it as a source of pleasure during the close averanya turned of 1 as a source of piessure during the close season, and the scalps of many a festive woodchuck and sanguin-ary hawk attest that occasionally at least my sights, the front one specially, which was of the "wilco-of-watermelon" shape so especially desyr both by Mr. Of the Dyke, until one day I shap to shape to unty westness y air, van Dyke, until one any I aad to had luck, or rather good fortune, to lose it. I was in a peck of trouble for woodchucks were plenty and I was too far from home to return for another one; but as necessiry is the mother of invention, I scratched my head and found an idea. I was crouched under a wall that separated a potto field from a measiow where a whole wan take separation a poster order from a meaning where a whole flock of nearly grown woodchucks were disporting free from ear-and with no thought of the sad fate that awaited them. I have said that I found an idea, I also found a potato at the same-lime, and with my knife I soon fashioned a sight out of it that gave me and with my knile I soon fastioned a sight out of it that gave me a sight more satisfactory than any dozen of the boiled, fried or reasted esculent tubers have afforded me since. There was an excrescence upon the potato about the size of a B shot; this I cut out, leaving enough of the main body to fit the V-like scat of the sight. Although I greatly admired the artistic heauty of the adjunct, still when I attempted to "draw in bead" upon one of the froliceome rodents I was far from satisfied, and at once instituted the restriction of the start o froliceome rodents I was far from satisfied, and at once instituted a bunt for another idea, which came at my bidding, and at its bebest I carved a minute "silice-of-waterinclon" shaped piece out of the top of my invention, and as I sgain glanced along the deadly tabe I mentally exclaimed "Eureka!" and at once demonstrated the soundness of the aforesaid idea by plumping a bail just under the ear of the nearest one of the group, and in five consecutive shots I had the pleasure of witnessing five sets of least kicking in the nir and section. But summy talk searches to consecutive shows I had the piceasure of witnessing hive sets of legs kicking in the air and seeing live stumpt tails wagging in a satisfied sort of way at the success of my experiment. As soon as I got home I took a piceo of bone and carved out a fae-simile of my potato sight, and coloring it with ink I made a crease with a three-cornected file; and under the influence of an inspiration that I have ever blessed, I substituted one of the same pattern for my rear sight, and have over since been firmly established in the my rear signt, and nave ever since been firmly communication faith that for all conditions of weather and light there is no heter sight in the world.

It was a beam wind to the first mark and jam to the roing tide kicked ung out poins for the final stretch. The weather grains the first was a standard to the strength of the strength

YONKERS VACHT CLIIN.—Two classes of cutboats sailed the first race of a series for the challenge cup of the chith, July 8th. Course ten miles up the river and return. The Garrison won, bearing Mamie. Yankee Bird and Pinajare.

NEW ROGHELLE YAGET CLUB—The annual race was salled July 8th over a sixteen-mile course, from the barbor to busy off Fort schuyer and return. Nettle easized and the rest and all they could do to keep right side up as the wind was fresh. Mary B. won in 3a. 3cm., beating Estilla, Presto, Nameles, Innah Lack and Nettle. They were all cathoats under 16tt. Prizes \$30, \$10 and \$5.

The wording a few and the Letter B current away some gear, but we so that we would be a considered as the considered as

The Reflect.—The attentions made to this Boston schooner, from designs by Mr. A. Carey Smith, have proven very successings. The heliow in the frames forward was padded out, giving an easy entrance; the stern was spun out, the keel rockered, the post raked, and a fan-tail added.

post raked, and a fan-tail added.

Chickgo Vacur Curge—Mr. Pattibone has bought the sloop

Harry Binke from Cleveland parties and viced her in the Chi
eago regettis. Sile is 23ft, keel, 13ft, beam, and registors it tons.

Owing to her new sails not being in shape, her sailing was not

what it ought to be, but the sloop prive ovidence of very fair

speed. The mainsail has 30t the sione prive ovidence of very fair

supplied for long cruises of it outlit of nautical instruments is

supplied for long cruises of the lakes. The Chicago Yacht Club

now owns fourteen yachts and saventy members, and will offer

prizes for an August regard. In the race of June 28th, Namdes,

Goodenough and Fleaturing took liest money in second, third and

no entries for the first class. A match between Nameless and line

and Frolic is talked off.

Berdom virtue — Stall they come. Machines are sta discount.

REFORM IN TYPE.—Still they come. Machines are at a discount in Moston. Lawley & Sons have given the old Undue a keel and side of the still the still the still the still the still the still the still the still the still the still the still the still the still the still basion. Practice is developing what theory pointed out ten years ago, and depth and keel are all the go in Boston.

NEW CANOES.—The Rev. Mr. Cressy, who astonished the "reg-ulars" by winning the canoe race on Lake George list year in a bome-made cance, has high finished a couple of now ones for thir comecuted cance, has high finished a couple of now ones for thir Ammonoesue into the Connecticut at Wells River, down the Connecticut to Springfield, then carry across to Pittsheld, down the Housatome to the Sound, and eventually work their way to Lake George in time for the August Canoe Congress.

Keels Again.—A club in England has decided not to allow keels any time when rawing center-boards, as their experience has coverer of the keel sloop. Yeking, of Baston, and announces himself ready to sail his keel against any center-board which has a mind to try him on.

mind to try him on.

Cutters in Boston.—The fleet of cutter-rigged yachts and
even yawis is growing apace in Boston waters. Active, Hesper,
Enterprise, Viutel, Eddik, Seophien and others are a standing refutation to the truly loyal, who, like all Bourbons, refuse to learn
but live to see. There are evidently others beside ourselves sailors enough to take no stock in the sloop as a handy rig, because
amend the seach and smale a must how no better.

MORE VICTURE—Seven persons were drowned out of a light draft yacht on itser Lake, Minn. July 5th. The lesson will be thrown away like many another, and the yearly number of vic-tims of the pancake model will continue to count up by the hun-dreds.

I ACTEA.—Mr. David Sears, in his schooner Acted, Eastern Y. C., arrived at Helifax, July 9th, from Boston, and will remain two weeks.

weeks.

GOHLLA.—Now owned by George C. Oravely, of Toronto, has
been overhanded, and left of an extended cruise July 11th, for
the Bay of Quinto, Thousand Islands, and Alexandria Bay, returning along the American coast, calling at Oswego, Sodus,
Rechester, and Niagara.

SALEM BAY YAGIT CLUB.—A correspondent writes: The club is progressing nicely; we have a good landing; a store directly across the street from the club bouse; arrangements for furnishing water for yachts. Any mail directed care of the club is delivered about yachts calling here.

Noronis—Mr. F. P. Osbura and party arrived at St. Johns, N, B., in the schooner Nokomis, July 7th, late from Mount Desertand left July 8th for New York.

ATALANYA.—Schooner Atalanta, Bear Jom, Vermilye, A. Y. Gariyed at Jaihususie, N. Is, July 7th, and was to leave for Gaspe, arrived at Jaihususie, N. Is, July 7th, and was to leave for Gaspe, the owner and friends being after salmon fishing in the Restructure of the Proceedings of the Restructure of the Proceedings of the Restructure of the Proceedings of the Restructure

THE ANTHRACIES.—This little steamer arrived July 2d in New York Harbor from England via Halifax. She is of from only \$4 16. long, 16ft. beam and 16ft. deep. The trip across was made in 18 days, and was intended to show the great economy of high

pressure steam, as used in the Perkins boiler, the steamer having consumed only 20 tons of coal on the voyage, no use having been unde of sails. The working pressure ranges aloud 3500 st., engines of special design being used. There are three cylinders, the high pressure being 8x15, and the two low pressures 18x15. The system is of course very applicable to the larger classes of the larger than the steaming distance as much as possible. The Perkins boiler and engineare not new, having been in the market for several years, and are well known to the profession. As steam can be seen that the steaming the several years, and are well known to the profession. As steamed and high pressures when the racing season slacks up. The Anthrette is a thorough little seagoing steamship, and swell worthy of a visit, as the will show at a glance in which directions we are builwarks, and hatches, flush deck, strength of construction, and hing excellent life boats, can be studied with advantage to our solves, for we are lamentably delicient in seagoing characteristics.

Nor Allowber.—A funny kind of protosy was cuttered against

Not ALLOWED.—A funny kind of protost was cutered against Phantom in the recent regarts of the E. Y. C. She was said to have shown "reckless and unscruptulous management," and made it "dangerous to life and limb." Very properly, the committee "did not consider these matters as coming within their province,"

THE STEAM CATAMARAN—An attempt was made to launch this visionary structure July 6th, but the leading village blacksmith acred by the structure of the structure

was pulled out again for repairs.

A CAT ASRIAT—The Newport Mercury reports skipper Albro, recently returned from the Clyde, as saying that the Scotch yachtenen would not sail against the cutbar Georgie and Annie any of their own yachts of "similar dimensions." By that we presume they showed sense enough not to sail on tenrth against an experiment of the same of the same and small blaine to them. Albro has no cause for complaint in that; but his ebagrie shows the extent to which such an illogical and one-sided rule as sailing on length can warp the judgment of an individual trained up to the fuller, and vitiates whith the control of the complaint of the sail of the sail should be sailed to the sail of the sail sail to the sail of the sail sail to the sail sail to the sail sail to the sail sail to the sail sail to the sail

ROWING IN THE WEST.—The rapid strides in popularity which rowing is making throughout the West may be judged by the liberal prizes offered by the clizens of Bay City, to be rowed for July 2th, the day following the N.W. R. A. Regata. We call attention to the advortisement of the races, which will be found

atter tion the my torowing to re. w. r. Degates, which will be found closewhere.

SALEM BAY REGATEA.—The open regaths salled in Salem Bay July 5th was a decided success, but his point of entries and the weather served out by 0id Prob. The races were under the management of a committee of the St. B.Y. C., consisting of Messrs, G. W. Mansheld, H. A. Hale, C. W. D. B. M. M. G. W. G. C. R. G. W. Mansheld, H. A. Hale, C. W. D. B. M. G. BOSTON CITY REGATTA.

BOSTON CITY REGATTA.

TO such an extent has the popularity of yachting spread among yeal or holiday would be considered adequately observed unless a public yacht race forms one of the features of the celebration. The good seaso to confer the management of the sport upon persons well known to be posted in all the details of match sailing. And let it be remembered that racing in Boston inclusion sometimes, too; it means a visat amount of foll and troub to considered the property of the persons well known to be posted in all the details of match sailing. And let it be remembered that racing in Boston inclusion in the hoppy in the property of the property of the property of yeachts are of what may be termed "Corinthian tonnage," have comply intridues of the Cradie of Liberty the great majority of yachts are of what may be termed "Corinthian tonnage," have comply for all purposes of cruising and making them genuine Boating homes, behading and skippering of their own ships to any degree of professional competency they may choose, and most lloston yachtsons go "the whole hog," permitting no base bireflings to steal from them their sport of anoly shaven timoneering or of gather from them their sport of anoly shaven timoneering or of gather from them their sport of any ways exhibited more love for a good, wholesome bont, with keel and moderate rig, small schooners universally taking the place of the large unwieldy sloops known to the milder chimes of or of the professional complex described on the charge that evident and discussed not merchy as a mug with lighting colors displayed, and a deep interest in the racing is certain to be evinced, records made that are swrth preserving, and the day's battle viewed and discussed not merchy as a mug with depth good of the professional complex of more stugglish intellect, and omposed generally of hobby ridden graduates of the marco minded school of "working bours," Last year three times a many neces were salled in greater than any professional composed of the complex of the forme

life insurance policy. Over forty keels were entered—not a bad showing for the "reform movement," when but a few years ago an individual with a keel boat was looked upon with pity, and the man who built such a craft was deemed on the high road to the warthin.

man who built such a craft was deemed on the high, road to the say him.

The arrangements for the regatta were perfect. Com. M. J. Kley laving dovised for a proper start the use of that on poles. Richy having dovised for a proper start the use of that on poles to the was promptly on hand—not two hours late as elsewhere the eastom—in the steamer Wooley, The committee comprised Messrs. Hugh O'Brien, William Woolley, Clarence P. Lovell, Heary E. Hosley, Albert P. Lauten, judges; William Morris, Heary E. Hosley, Albert P. Lauten, judges; William Morris, can be supported to the start was from an anchor, and just lefter to the gun a fine brief came out from west southwest, whereupon the different classes were sent away in rapid succession. The first class comprised solonomers and sloops from 35ft, upward; second class, 50 and \$15 for schoolers, \$48 and \$20 for the keel sloops, and \$40 and \$21 for center-board sloops; in third class, for keel sloops, and \$40 and \$21 for center-board sloops; in third class, for keel sloops, and \$40 and \$21 for center-board sloops; in the conter-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in the content-board sloops; in

ciaes, \$50 to Urst schooner, and \$50 and \$50 for the sloope; in second class, \$50 and \$10 for schooners, \$41 and \$20 for the keed sloops, and \$40 and \$20 for center-board sloops; in third class, for keed sloops, and \$40 and \$20 for center-boards; when the class, for keed \$20, \$15, \$10 and \$7.50, and same to center-boards. Among the big schooners Alfeck and as all over, Caroline to start against the olds of \$307, length, \$Mr. W. \$3. Lockhard, and the big schooners Alfeck and as all over, Caroline not carried to start against the olds of \$307, length, \$Mr. W. \$3. Lockhard, and then spit to trivisted his board trying an overland roung, ounsing in with a lead of 7 minutes over the smaller ones, and harding \$50. The course for all hands in the first class was out. Broad Sound, leaving flam Head Buoy on the starboard, Fiwn Bar on thence to Bell Boat on Haddings, up Lighthouse Channel, through the Narrows, leaving Fort Warren, Gallop's Shand, Nix's Mate Buoys and Speciacle Isiand on the port to the Indexs boat; dispatch to the starboard of the port to the Indexs boat; dispatch to the Index of the starboard of the port to the Indexs of the starboard of the port to the Indexs of the starboard of the port to the Indexs of the starboard o

LAKE YACHTING.

LAKE YACHTING.

Editor Forest and Stream:—
Yachting in these waters has been very dull so far this season, and to proposed dues not at present seem very bright. Still, the analysis proposed dues not at present seem very bright. Still, the action of the season took place yesterday at a pionic given by the Odd Fellows. But three yeaths put in an appearance, namely, the Katie Gray, Gracie and Syptia, the latter the only standing keel on the dispatched on their journey, the Katie leading by Iseconds and Gracie second. All were crowded with entires, the first part of the race being dead hefore it. Katie running outs a big balloon jib and Gracie second. All were crowded with entires, the first part of the race being dead hefore it. Katie running outs a big balloon jib and Gracie second. All were crowded with entires, the first part of the race being each leftone it. Katie running outs a big balloon jib and Gracie second. All were crowded with entires, which outfooted the lists was between the two center-boarders, which outfooted the lists was between the two center-boarders, which outfooted the lists was between the two center-boarders, which outfooted the lists of the second of the course had been completed. A good race resulted in Gracie being beaten by 2m. 363; and Gracie which had a second and the second of the course had been completed. A good race resulted in Gracie being beaten by 2m. 363; and Gracie, while how measures Il tons or more, having had an addition made to her keel, sailed botter than ever before, but will not beat Katie for some time to come.

A case for the Governor General's Cipp took place at Toronto was won by Emma, Und second and Laura third. The oil Ried, as big ungainty tub, was dismissed early in the race.

the first four wickets falling rapidly for the pattry number of fif-

return game, won by visitors by 100 runs. Detroit took the but, the first four wickets falling rapidly for the pairty number of fifteen runs. Windsor stock was up, but Bodds turned the tide by making a splendid stand and knocking off thirty in good form, the top score of the day. Calvert went in last man, and as Beck (a young colt) was in for a partner, the general splinton was that there would not be many runs added, but the two made a grand stand, and put on over fifty runs, the youngster, Beck, plaving like a veteran. At last Calvert's time came, and he was run out, baving played for a good twenty-nine.

Shot Gun and Rifle Powders Revolutionized.

Champion Shot Gun and Rifle POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. CaptainBogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is vet open to the world. Address

All our cans have seals over the screw-cap, with C. Dittmar's signature, and none others are genuine.

DITTMAR POWDER M'F'G Co., 24 Park Place, New York

Always Uniform and Reliable.

7 First Prize Medals, Vienna, 1873; Phila., 1876; Paris, 1878; Sydney, 1880.

Special concession by the French Government, and on sale in all civilized countries. Peerless Tobacco Works,

COLT, WEBLEY and JAMES

It is with especial satisfaction that we invite the attention of the sportsmen and the trade in general to the three names at the head of this notice, the greater part of whose guns will pass through on the process that the production here. The many thousands of them already in the hands of their delighted nosessors are enough to insure their fame. Of the productions of E nos James & Co. we would say that although comparatively unknown in this country, they are destined, from their excellence and cheapness, speedily to take and hold an honorable place.

Of the Wobley's guns we have this year two classes. First, the celebrated Guns.

Every gun of this class has fine laminated steel barrels, bar rebounding locks, extended rib pistol grip, and patent fore end, and is chenoer this year than ever before. Second, a JOB LOT of Webley guns, with top and side lever actions, ranging from the very finest Exposition and Fist. Premium guns, offered at about balf the original price, down to the very lowest. Most of these guns are heavy, weighing from 9 to 16) pounds, and are specially adapted to killing large game, aloud as ducks and geese, at long range. They afford a rare opportunity to obtain a first-class gun at a low price, and it is proper to say that in thoroughness of workmanship and excellence in shooting they are in no way inferior to the treble wedge guns.

Of Colt's guns, white we keep all grades, we recommend specially

THE CLUB GUN.

These guns are manufactured exclusively for us in the New York and Bastern market, and all club guns advertised by others are a different article. The genuine Colt Club Gun has a rubber heel plate, in the middle of which, within a circle, the rumpant colt, and around which circle the words. The Club Gun are beautifully embossed. The Colt Club Gun is intended for glass ball or pigeon trap shouling where closeness and penetration mer requires its vear guns of every grade, from the very linest, including a HAMMEHLESS, down to the cheapest. We have determined to import no guns not bearing the maker's name. The country has been flooded with worthless trash bearing the name of Wm. Moore & Co., etc., which means nobedy. The Mossrs. James have consented to make for its guns to sell as lows any guns are sold, and good enough to bear their name, These was any continued to the control of t

Reminiscences of English Rivers.

SECOND PAPER

THE conclusion of our last paper left us wandering somewhat aimlessly by the banks of streams whose names as great trouting waters live only in the fading memories of a generation fast passing away, and whose discolored waters form a melancholy contrast to the wild and romantic scenery reflected on their surface.

If personal associations have caused me to linger too long among scenes where tales of big trout told by gray headed men round winter firesides are more plentiful than any more solid realities, I must hold out as my ex cuse that these hasty sketches are in no wise intended as a recapitulation of the best British trouting waters, but are rather prompted by the feelings that many of our anglers would be glad to take a peep, even on paper and in the hands of an indifferent guide, at those streams whose names are indelibly bound up with the whole history of our craft, and from whose banks has sprung that hereditary enthusiasm that nerves the arm of every Anglo-Saxon fly-fisher in every clime; from the mahseer slayer of the Himalayas to the colonists who have turned the sparkling rivers of New Zealand and Tasmania into what promise to be the finest trout streams in the world : from the mighty salmon slayers of the Metapedia and the Restigouche to those happy beings whom fate permits to revel in the fresh piscatorial pastures of "foar fleck'd Oregon.

The towers and spires of Durham's lofty cathedral and university are left behind as the Edinburgh mail train dashes northward. Streams that have once been bright and clear foam down beneath lofty viaducts that span their now turbid floods. Mining villages teeming with industry in its grimiest form, alternate with stretches of silent moorland that for a few moments might deceive the stranger with the idea that he was approaching some sportsman's paradise, till he finds himself gliding slowly over the high level bridge, beneath which the Tyne, black with filth, but dear to the hearts of professional oarsmen, is dimly seen through the fog and smoke of Newcastle. Upward through the murky air floats the roar and din of that busy city, giving way in turn to the bustle and the clatter of the finest railway station in the North.

Here are always to be seen, during the fishing season, a good sprinkling of anglers in tweed suits, and hats encircled by casting lines and flies; some with rod and basket only, bound for the higher waters of the Tyne, which afford good trout fishing; to the Coquet or other streams that they can snatch a few hours upon between trains. Others again carrying valiese or having portains. streams that they can snatch a few hours upon between trains. Others again carrying valiese or having portmanteaus labelled for more distant haunts—the rivers of Western Yorkshire, perhaps, or the Scottish border—joy depicted on their faces and elasticity in their steps at the anticipation of a week or a fortnight's oblivion from office stools and counting houses. The two hours' run through the well cultivated plains of East Northumber-land presents more of agricultural than piscatorial interest to the traveler. The Wandbeck, it is true, crosses our course, and we catch a sight of the Coquet, famous for its bull trout, winding off toward the sea, at the mention of which river the mind of every well-informed British angler reverts to the name of Rothbury, a famous resort of anglers.

is suin from, which go to ovarious as a set of memorial of which river the mind of every well-informed British angler reverts to the name of Rothbury, a famous resort of anglers.

Talking of anglers' resorts, it is strange, strange that is necording to the generally received British traditions, that the best trout fisherman in England, more often than not, hail from great cities. A town-bred man is in matter of sport generally rated, till he has proved himself otherwise, as a muff by the squire, the sporting parson, the gentleman farmer and by the booted and breech'd doctor, lawyer, or land agent of rural England; but in my opinion your wandering city angler who has fished from the Orkney island to the Lands End and is at home upon overy kind of water and with every breed of trout, is by far the most formidable antagonist you could well choose to fill baskets against. Neither is this so strange when one comes to look into the matter. In the first place he rarely fishes preserved rivers and consequently has to deal with all the wariest and most educated trout in the country, from his youth up. In the second place there is more gregariousness among this class of British fishermen, and consequently a constant element of competition enters into his sport. He probably belongs to a fishing club or association in his native town, which meets quarterly or annually and perpetuates the glories and inmortal memory of Father Ezak around groaming tables and with flowing bumpers. Then there are the actual competitions for prizes which the different clubs hold periodically, the bugbear of country fishers whose more contracted lines may be thrown on waters selected for such competition. These are perhaps more common in Scotland than south of the border, and many is the time I have retired disgusted from the river bank before the ominous announcement of some rustic: "The fush in club's not preserved by the former, and consequently continuations, from their eried disgusted from the river bank before the ominous announcement of s to make much show under aftered circumstances. The Devonshire local angler, for instance, who is an adept at wading up bushy streams and picking out quarter-pounders with a short line from the most (to outsiders) unlikely looking holes, would be almost a novice, when started on the banks of the Itchen or the Kennet or any other of the clear chalk streams, to drop a fly at the end of fifteen yards of line over the nose of wary three-pounders. The latter individual, again, would probably lose all the flies in his book and his temper besides, upon a well wooded west country brook, and on an American mountain stream would most likely break his neck into the bargain; but for casting a long line deftly and handling big fish he has no superior. Now your cockney, if I may apply such an opprobrious term to a disciple of Izaak, is as a rule equally at home among the wary monsters that lie beneath the willows and the osiers that fringe the slow gliding tributaries of the Thames, and among the tangled thickets, the over-arching boughs and the slip-ney rocks that exasperate the tyro upon mountain brooks. His ideas on flies are more liberal if not nearly so orthodox as the local sportsman who firmly believes that there are certain flies without which it is perfectly useless to rig up a rod beside his stream.

are certain flies without which it is perfectly useless to rig up a rod beside his stream.

Enough of this, however, for the train is standing on Berwick bridge, and far beneath us the bright waters of historic Tweed are mingling themselves with those of the German ocean, and washing the walls of the ancient and independent commonwealth of the North. The many-arched and moss grown bridge that has borne many a host to bloody fields from either side, still spans the stream which carries to the sea the waters of a hundred more whose names have been dear to the hearts of generations of anglers. As we enter Scotland and traverse the fifty miles that lie between Edinburgh and the border, every bend in the line reveals some object of interest. To the right the Northern Ocean thunders against the wild and gloomy headland of St. Abbs—the

southern entrance to the Frith of Forth—and the spray dashes in clouds over the lonely ruin of Fast castle—rendered historical by the tears that three generations of Anglo-Saxons have shed for the woes and the untimely ends of Edgar Ravenswood and Lucy Ashten. We must not linger, much though we should wish it, in the ancient town of Dundas, with its solitary street and its storm beaten custle; we must pass it and the bills above it from which the Scots rushed down to their doom on Crom which the Scots rushed down to their doom on Crom well's pikes. We must leave behind us the Bass rock which the Scots rushed down to their doom on Cromwell's pikes. We must leave behind us the Bass rock, raising its gignutic form out of the ocean, and the wide plains, too, of East Lothian, waving with the heaviest crops that in all the world can be found. We nust be concent with a distant sight of Edinburgh, with its cloud of smoke hanging heavy against the crimson evening sky, and turn gouthward to where the long low line of the Lammermairs cuts the herizon from the Prith of Porth to the Tweed. One river only of angling notoriety and German Ocean between Edinburgh and Berwick, for it is many famous tributaries that course down the valley of the Lammermairs and the Peebleshire Mountains, that the footsteps of the tourist angler instinctively turn—and away again beyond them the Cyde and its feeders, and southward to the many streams that he to the Cyde and its feeders, and southward to the many streams than the feeders, and southward to the many stream than the feeders, and southward to the many stream than the trout producing capacities of this picturesque and rugged country re pretty strong may be surmised by the swarms of rod and basket carriers, that upon any of the "fast days" or holidays see a tapart by the Scottish people fill the

and away again beyond them to the Cipte and its leeders, and southward to the many streams that have made Dumfries famous as a fishing country. That the trout producing capacities of this picturesque and rugged country are pretty strong may be surmised by the swarms of rod and basket carriers, that upon any of the "fast days" or holidays set apart by the Scottish people fill the trains running south and west of Edinburgh. Let the angler upon Northern waters, unless he wish to be hunted from pool to pool and to sleep upon the floor in the village inn, be careful to ascertain that none of these auspicious days are embraced within one of his trips. Let him fall back for a space upon any private water that he has the run of, and let the great host of piscators gather back again to their work in the cities, and two or three days besides elapse for the recovery of the female autocrats, who preside over the "Anglers' Rest" and the "silver trouts," from the clean sweep of their larders and cellars, before he venture out among the moors and mountains where the capabilities of these little old-fashioned hostelries will be his sole dependance. Song and comfortable retreats are these little old-fashioned hostelries will be his sole dependance. Song and comfortable retreats are these little inns, however, in ordinary times. The spirit of "Meg Dods" still presides over many of them. The lamb is fresh from the mountains, the trout from the stream that ripples past the door. The bottled beer from the famous breweries of Edinburgh makes amends for a lack of variety; and the flavor of the toddy makes one forgive the want of externals and conveniences, without which the ordinary modern hostelry would collapse. These, however, are peculiar institutions; they are not intended for, and are not patronized by, tourists in the strict sense of the word. Neither the English or the Americans who swarm over the Highlands in July, Angust and September—except for a peep at Abbotsford and Melrose, perhaps—ever penetrate the south of Scotland,

fortunate beings may be well illustrated by the fact that fortunate energy may be well into trace by the rack thave frequently been given unlimited fishing privile by inclosing my card to total strangers, and on the colland have upon one occasion had my sport fixed as number of days by the host of a country house at what was then staying as an invited guest. I was conside house at which number of days by the nest of a country house at which I was then staying as an invited guest. I was considered fortunate even to get that, as the old gentleman, though he had never seen a trout caught, was a monomaniac upon the subject of game preservation for its own sake only. No well-worn track wound along among the ferns and briars and rushes that fringed the banks of that most sacred stream. The trout of generations had congregated and grown lazy and died in the pools and rifles of those neglected waters. Then were thousands of them, and I think they would have risen at your books or your hat had you run through your fig-book. Generations of keepers had walked thousands of miles in the vain quest of daring intruders who might have the hardiboot to cast a fly upon that precious stream, whose contents never benefitted, even to the extent of one breakfast per amum, their jealous and distant owner. Well do I remember those four days that an important looking document intimated to the keeper I was to have for an attack upon those unsophisticated troutlings. I I was considered Well do I remember those four days that an important hooking document intinated to the keeper I was to have for an attack upon those unsophisticated troutlings. I was a sat young dog in those days where a fish was concerned, and I am afraid the four days, under the somewhat lax observation of that worthy functionary, were considerably stretched, till I began to get fairly ashamed of myself; not for my stolen bleens, I am afraid, but for devoting so much time to the slaughter of innocents who did not know a March brown from a bumble bee.

Heaven preserve us from the average English game-keeper. It is the fashion, because he can shoot straight while his brother can only drive a wagoon of tung a five.

Heaven preserve us note that the leaven preserve us note that the leaven it is the fashion, because he can shoot straight while his brother can only drive a wagon or turn a furrow, to regard him as a mighty fine fellow. So he may be, doubtless, among his equals at the village tap—and it is natural he should be a demi-god among that large proportion of the "jennesse drope" whose sole aim in life is to acquire the arts in which he and their grooms have long ago attained perfection—but he is certainly not seen to advantage when ordering his master's guests to their posts in a pheasant cover, with a shrewd eye to their visions of possilong ago attannes. Per to advantage when ordering his master's guests to then posts in a pheasant cover, with a shrewd eye to their "tipping" capacities, or haunting, with visions of possible sovereigns floating before his eyes, the quitet-loving and independent angler who wishes him at Jericho, and to whom, when merely trout fishing, he can render no possible service. Catching trout in an open water must have a zest for the true sportsman that is utlerly wanting in a profile river that is very closely preserved. It is the difference between knocking over a cantering hare before the sticks of the beaters in an English covert and before the sticks of the beaters in an English cove before the stress of the beaters in an English covert and cutting down a January quali at I full speed in a Virginia wood. While speaking of fish preservation in Great Britain, I should mention that there is an immense quan-tity of trouting water that would not bear, from its im-mediate proximity to great centers, being thrown indismediate proximity to great centers, being thrown indis-criminately open to the public, and is rightly preserved in a liberal manner by private individuals or clubs, and generally utilized to its utmost capacity.

in a liberal manner by private marvaticas or caus, and generally utilized to its utmost capacity.

One distinct feature of the border stream we were lately discussing is the presence of the "gray" or "bull" trout, a species of salmon trout that is found, with scarcely any exception, in the northeastern rivers and tributaries, and nowhere else, I believe, in the kingdom. These lish, which a novice could not distinguish from a sea trout, ascend the Wear, the Coquet and the Tweed in October to spawn, and begin rising to the fly the following February, when they afford most excellent sport, running from one to ten pounds in weight. As an article of food, however, they are useless for polite tables, being, of course, poor and out of condition. In April they go down again to the sea, so are never to be had in a season when they ard fit for food, and are consequently not thought worthy of legislation. I have had line sport with them on small trout tackle early in March when the weather has been too cold for the brook trout to rise, and the field has been left clear for the "bulliss." sport with them on small trout tackle early in March when the weather has been too cold for the brook trout to rise, and the field has been left clear for the "bullies." An eight-pounder on a twelve-foot rod, and a fine cast, is about as excellent an imitation of salmon fishing as could be procured. Right sociable are the venile, too, at the rustic inus that are scattered along the banks too, at the rustic inus that are scattered along the banks of the Tweed that nestle among the hills which look flown upon the White Adder and the Black Adder, the Teviol, and the Type, and the hundred little foaming burns that feed them. Through April and May the chances are some eight or ten lovers of the crift will smoke their pipes and sip their toddy round the black and geat fire that, in those latitudes, is at that sesson so doubly welcome. Every hole that contains a trout, from Edinburgh to Carlisle, from Glasgov to Berwick, is discussed with the accurate knowledge of oil habitues. What fish are caught, as he second tumbler begins to circulate! What mounsters are extracted from the waters of "Still St. Mary's Loch." What magnificent fellows are still lying beneath Kelso Bridge, with whole casts in their jaws. What prodigies have been performed in the days of old upon the very stream whose music can be heard, even through the closed windows, above the meaning of the pine woods, before the depletion of its waters, which these vertains declare has long taken place. The hard-worked lawyer from Edinburgh is there. The mercantile interests of Glasgow are well represented. Camp Northumberland contributes a couple of grave-looking beings glad to escape from the black-neaf fields, and the rattle of trucks that surrounds New-Castle-on-Tyne. Two or three young gentlemen from England, who are supposed to be studying agriculture in the Lothians hard by, have driven over in a tandem, while an angling parson, from a neighboring parish, and a medical student from Edinburgh, complete the variety. The stuffy upon me troin one wall, and the when the weather has been too cold for the bri to rise, and the field has been left clear for the " and gave each consecutive occupant of the room the inpression that he had caught the numps, while the windows rattled unceasingly in the constant breeze. Early
hours, such as American anglers from the nature of the
climate partly, and partly from the national proneness
to being up betines, were the exception. Nobody in
England begins tishing till about 9 o'clock, though 1
have known anglers in the Scottish rivers fish all night
long with a worm in summer, wading up stream, and

with wonderfut results. The hills of Peebleshire and Berwickshire, and the still wilder moors of Lanark and Dumfries, abound with these rustic ims, that still exist in much the same state as they are depicted by Scott in his "St. Roman's Well," while the austere but kindin much the same state as they are depicted by this "St. Ronan's Well," while the austere but kind-hearted dames that usually preside over them, if they are not such virugoes as "Meg Dods," are generally very well capable of keeping order m their establishments.

Ringwood.

CAMP NOTES.

BY BODINES.

WHEN one grows weary with office work, but labors on through the dreary winter, anticipating with joyful emotion the good restful time in store when June shall at last arrive and bring to him a season of recreashall at last arrive and bring to him a season of recrea-tion in the woods; when one longs for the time to come, planning for it months beforehand, setting the day for the start and inviting a coterie of congenial spirits to join in a camping-out excursion, no greater disappoint-ment could likely occur than to have a delay or post-ponement become necessary.

The usual arrangements had been fully completed for

The usual arrangements had been fully completed for an annual camping out expedition. Tents, cooking utensitis, provisions, and all other camping conveniences had been carefully packed in two large, iron-bound camp chests, and the dray on the barn floor ready to carry them to the depot. George, the cook, was on hand early, his black face shining with pleasant recollections of the previous year's experience. All the campers had collected in and about my yard, with rods, guiss and other paraphernalia and bundles strewn around. But an hour intervened to train time. I had awakened that very morning with an excruciating pain in the joint of my great toe. So persistent was this pain that I was compelled to resort to crutches to admit of my superintending the loading of our fixtures. The campiers looked on sorrowfully; and, cager to go as myself, yet, all advised against a fellow going to camp on crutches. Many were the salloading of our fixtures. The campers looked on sorrow-fully; and, eager to go as myself, yet, all advised against a fellow going to camp on crutches. Many were the sal-lies of wit discharged at my condition and at my ex-pense. The swelling continued in the toe-joint, however, and by the time the dray was ready to leave the yard, I was completely prostrated with the rapidly increasing pain. It very soon became evident that I must yield to the solicitation of friends, if not to the pleadings of my great toe, and postpone the day for our departure. This thought was exasperating, and pained me almost as much as the confounded toe, inasmuch as friends were expected, from a distance, before the week would end; indeed, two friends had already left New York for the camping grounds, expecting to join us there on this very evening. There seemed to be no way of apprising them of my misfortune and arresting their journey, hence my great perplexity. In my dilemma a good friend came to my relief and volunteered to journey to the rendezvous and bring them to my house. Letters and telegrams and rener and volunteered to journey to the rendezvise and bring them to my house. Letters and relegrams were dispatched to the others, and then, to nurse my afficted member, I went to bed, where I remained for nearly two weeks, with the most painful of all diseases—inflammatory rheumatism.

nearly two weeks, with the most paniful of all diseases—inflammat ry rheumatism.

At last, I was able to hobble about by the aid of a cane, when I at once gave orders for our departure; and here I am, on the Lycoming, the same delightful spot upon which we have camped regularly for the past nine years. The natives had been praying for our coming for a month, as no rain had fallen in the valley for more than six weeks, and with us always heretofore had also appeared the rainy season.

We landed, therefore, as usual, in the midst of a thunder storm and pitched our tents between showers. I took a position under a great beech, and, while the rain trickled down my spine, gave directions about the arrangement of the camp, for I was too lame to attempt a non-active park.

All the storm of the camp, for I was too lame to attempt a non-active park.

But, having passed two weeks here, with an abundance of rain daily. I have come to the conclusion that rain and rheumatish are not incompatible. I have slept soundly and well between damp sheets, and have all ding rain upon the tent has sprayed my face; yet have awakened every morning feeling better, until at this of those for the breakfast table. However, with a more active that in a new propersion of the camp, for I was too the conclusion that rain and rheumatish are not incompatible. I have slept soundly and well between damp sheets, and have all my head upon a wet pillow while the nist from the falling rain-upon the tent has sprayed my face; yet have awakened every morning feeling better, until at this from the tent has sprayed my face; the awakened of the form to the breakfast table. However, with an of the most fort to be the breakfast table. However, we then the form for the too for the breakfast table. However, we have a water and the matchest table. However, we have a water and the matchest table. However, we have a water and the tent that sprayed my face; yet have a water and the tent that sprayed my face; yet have a water and the matchest table. However, we have t falling rain upon the tent has sprayed my face; yet have awakened every morning feeling better, until, at this writing, I am able to take my rod and supply my quota of trout for the breakfast table. I have sat, with my inflamed foot upon a camp stool, under a sheltering canopy, where the wet and dripping trees sent great drops of water through the canvas to spatter my paper, and have watched the birds hump their backs and squirzeds whisk their tails m an endeavor to prevent the rain from penetrating to their skins. I do not believe that birds enjoy rain any more than do we. I am led to this conclusion by observing them under the ordeal. Now, there is the cathird, for instance, perched on a limb just over my head. He's not happy. He even looks melancholy, and at times I think I can detect an expression of conclusion by observing them under the ordeal. Now, there is the catbird, for instance, perched on a limb just over my head. He's not happy. He even looks melancholy, and at times I think I can detect an expression of supreme disgnst with the dampness of his surroundings. An hour ago, he was as lively as a cricket, and seemingly very happy, warbling and whistling right merrily, as he hopped from himb to limb, watching with much interest the mysterious movements of the invaders of his domain. But, the moment he heard the thunder pealing among the mountain crags, he cocked one eye heavenward, whisted meditatively with the other one, dropped his hitherto busy tail, and became motionless and silent as an oyster. Not another note has he uttered; and now there he sits with his back arched, his feathers drawn close to his body, his bill elevated and his tail bent at a right angle, from which the rain is pouring in little rivulets, while he shakes his head occasionally to free his eyes from the blinding moisture. Just once has he deigned to look down at me to see how I am getting along, with an expression of face plainly indicating that he is prepared to say, if he only could, "confound the rain!" Poor fellow! Wonder whether he ever has had rheumatism in his great toes, and what his opinion is of the advisability of such a sufferer sitting out in a rain storn, just for fun?

Yes, here I sit, watching nature in her different moods.

rock-bound and musical as tinkling silver bells. Above the rocks, rhododendrons, profuse in their blossoms, that peep out from the ovorlanging foliage of the great trees beyond, as though nature had constructed a well-arranged and delightful bouquet upon a grand scale. As I fluger here admiring the scene, constantly changing my position to keep the rheumatic portion of my person out of the wet, the thunder rolls overhead, and the great black clouds shut out the light, changing all the lues in my great bouquet. Now dashes of lightning illuminate it with a new and weigh brilliancy, revealing the very moss-covered rocks, ferns and more delicate flowers that before were unobserved in the deep, dark red flowers that before were unobserved in the deep, dark red. rock-bound and musical as tinkling silver bells. Above illuminate it with a new and weird brilliancy, revealing the very moss-covered rocks, ferns and more delicate flowers that before were unobserved in the deep, dark recesses of the tangled undergrowth. Soon the storm has spent its force, and passes over the hills to wash and drizzle other valleys beyond our own; the sun peeps coyly out from behind some lagging cloud, as though ashamed for having abandoned us so long, and again lights up and warms our camp, at once restoring every one to good humor. The birds are the first to give utterage to their authority and the days of the processing the most of the processing the most of the most

coyly out from behind some lagging cloudy as though a shamed for having abandoned us so long, and again lights up and warms our camp, at once restoring every one to good humor. The birds are the first to give utterance to their appreciation of the change, and make the mountain and valley musical with their wild and ecstatic warblings. The catbird is in the advance in expressing his joy, and is now whistling as though in an endeavor to outdo all his feathered companions.

An hour has passed, and with it all traces of the storm. The wind has shaken the raindrops from the trees, and the warm sun has already dried the ground. The birds continue their merry warblings, the bees hum and buzz among the flowers and about your cars, and the butter-flies flop in zigzag courses through the camp, avoiding limbs and busbes in a surprising manner when the awkwardness of their flight is observed. Our surroundings have become cheerful and delightful, dispelling all thoughts of storms.

Placing an arm chair, constructed of a barrel and piece of jute, in one of the boats, I paddle down to the otter slide in the pond and anchor there making up his mind to partake of any tempting morsel thrown in his way that I have provided myself with a novel, in the perusal of which I may kill time as well as suckers. I find this exceedingly engaging amusement for a contemplative, rheumatic mind; for your attention becomes about evenly divide? between the bobbing cork and the startling situations of the characters in the novel. While thus employed, the heroine of the novel was preparing to escape from a prison through a window by the aid of a rope, and an ardent lover outside the prison walls; and as my mind quickly outran the story, enabling me to foresee what a spleadid time those two loving young people would have hugging each other as they slid down the rope, together, and as I was dreamily speculating upon what they would do when they reached the friendly cover of the garden, down went my cork, followed by the novel, also by the heroine, to cover of the garden, down went my cork, followed by the novel, also by the heroine, to give me a better opportunity to see what was pulling at the end of my line. A vigorous jerk upon the rod brought to the surface a monstrous and solemn-looking sucker, which persisted in extending his proboscis and squeaking in a peculiar manner, in derision or perhaps dismay at the situation. While disengaging the hook from his tough snout, the lovers slid down the rope unobserved, and got nicely away to a magnolia grove. It was moonlight to them, but broad daylight to me and the sucker. All this while the young man had his arm about the waist of the young woman, and was constructing the usual sweet semthe young man had his arm about the waist of the young woman, and was constructing the usual sweet sentences for her attentive ear. He was again declaring his undying love, and making preliminary preparations to seal it with the usual kiss, always provided for such contingencies, and my thoughts became fully wrought up to the situation. I imagined even that it was dark (although the sun was just then scorching my nose; my olfactories eaught frequent waits of the magnolia blossoms; I saw the pretty, coy young maiden and her pouting, willing lips; indeed, the verifable and inevitable smack had almost saluted my ears, so in sympathy was I with the story and the two young people; when, down went that confounded oork again! This outside interruption of my reading and reverse brought me at once from the contemplation of fiction to in sympathy was I with the story and the two young people; when, down went that confounded oork again! This cutside interruption of my reading and reverie brought me at once from the contemplation of ficton to fact. My cork was under-way under, and becoming more so every moment. I couldn't help it—I doubt whether I could have done otherwise had I been the young man—I dropped the girl once more, and pulled on the rod, and delivered into the boat a squirmy, slippery cel. Was there ever before such an instance of the attempted mingling of romance and reality? Sentiment and cels! I contemplated that slimy, restless creature as he attempted to the himself into "true lover's knots" in the bottom of the boat, and tried to reconcile his untimely appearance with my story. But he wouldn't mix, I philosophized over the affair for some minutes, but could not revive in my memory a solitary instance where a snake, history would have offered a parallel, but never having encountered a young woman who would fraternize with an cel, and fearing that the young man might lose his kiss, I threw the luscious rascal overboard and regretted my hasty action, most sincerely, ten minutes later. For, would you believe it? notwithstanding the flavorable condition of affairs—nagonia trees—in the dark—pretty girl—poung [ips—and all that, the blamed fool didn't kiss her after all! Something alarned them favorable condition of affairs—magnolia trees—in the dark—pretty girl—pouting lips—and all that, the blamed fool didn't kiss her after all! Something alarmed them, and they fled while I was fussing with the eel. So, having lost the felicity of witnessing the lover's salute, and being cheated out of my prospective breakfast, too, I permitted the lovers to continue their flight, while I wound up my line and paddled back to camp, queer phantoms of suckers, eels, lovers, pouting lips, painful toes, and fair maidens leading the way.

Arriving there, I found two of the campers had just returned from up the stream with trout and woodcock for

of suckers, cels, lovers, pouting ups, pouring fair madens leading the way.

Arriving there, I found two of the campers had just returned from up the stream with trout and woodcook for the mid-day meat. While George prepared dimner, we all lay off in the large tent and smoked our pipes. HAUNTS AND HABITS OF BEARS.

MAP of New Brunswick will show on its westerly boundary, near the line of Maine, a railroad connecting St. Andrews and St. Stephens on the south with Hamilton, Maine and Woodstock north. For nearly one-half the distance, some forty miles, the road traverses an unbroken wilderness whose barrenness and desolation is beyond the power of pen to describe. Originally, it was heavily timbered, mostly pine, spruce, hendock and cedar, which now lies prostrate like crinkled grain in a field after a heavy storm. In September, 1873, a fearful gale swept inland from the Atlantic some eighty miles in breadth, extending fifty miles or more ere its fury bated. It had been predicted three months in advance by Lieut. Saxby, of the Royal Navy. Nearly all the shipping at that time on the coast was lost, together with the crews. The event is now referred to in that section as "Saxby's Gale." The year following fires swept over the country, burning and destroying what few trees the wind had sparred, except here and there some low swamp where timber was small, and an occasional hard wood ridge which seemed not to offer so much obstruction to the fury of the gale as did the green timber. The lay of the land is generally level. The "horsebacks," so called, are plentiful, but of slight elevation. In addition to the down timber, granite boulders are strewn in greatest profusion, so much so that, now they again the castled, are picential, but of sight elevation. In addition to the down timber, granite boulders are strewn in greatest profusion, so much so that, now they are in full view one wonders that the heavy forest ever found a foothold. On either side of the railroad is the same monotonous, dreary waste, to penetrate which requires an amount of pluck and vigor more than men ordinarily

Here the black bear roams in comparative safety, envi-

nothonic. On either side of the railroad is the same monotonous, dreary waste, to penetrate which requires an amount of pluck and vigor more than men ordinarily possess.

Here the black bear roams in comparative safety, environed as are his haunts with such protective agencies that few hunters, and none but the most involverate, will instead them, and but few people would care to make a still the hand of this descrit for any purpose. Between Mochat the hand to this descrit for any purpose. Between Mochat the hand to this descrit for any purpose. Between Mochat the hand to this descrit for any purpose. Between Mochat the hand to the game of man habitations except the shanties of three games of man habitations except the shanties of three games of man habitations except the shanties of three games of the matter.

In a season of plenty, bears remain almost wholly on the hard wood ridges, feeding upon beech must in the fall and in spring after coming out of winter quarters. At such times, to trap them, one needs to set in their vienity, as, being so fond of that food, they care little for the bait offered. When there are no nuts they forage around deserted logging camps, devouring every morsel of offal and carrion. It is at such seasons and places that the hunter is most successful. On the advent of very warm weather (this year the 20th of May) all, as one, strike for the swamps and water-courses. Here, in their travels, they invariably form well defined roads, often as deep and hard as those made by domestic stock in a pasture. Every one, too, will stap exactly in the track of its predecessor, so that large indentations in the path are the result, and but little skill is required to sink a trap where the pan will rest in the conter of a stepping place and thus secure the game. When they first visit the swamps, each bear will invariably uprear against trees, and with tusks and claws tear out the wood and bark. Often a dozen or more trees in close proximity are thus found, many of which are killed by annual mutilati

past four consecutive years at Sugar Brook, York County, midway of the most barren section described. While in that region this season I was occasionally made happy by association with such genial gentlemen and ardent sportsmen as C. E. Robertson and Dr. Junis, of Haulton, Maine; Dr. Reddield, of Providence, R. L.; N. S. Dickey, of Boston, and John Stawart, of St. Stephens, N. B., Supt. of N. B. and C. R. R. The two last named gentlemen were often companions on the bear trails and trout streams by day, and camp mates by night, and never an occasion when the "wee sma hours ayant the twal" did not discover us recounting achievements of the past and anticipating those to come, the most delightful past and anticipating those to come, the most delightful enjoyment vouchsafed to those who love the sports of forest and stream. CORPORAL LOT WARFIELD.

Hillsboro Bridge, N. H.

Breeding of the Shorelark in Winter.—The shorelark (Ereniophila cornula) breeds during winter near Buffalo. A pair of these birds had fixed their nest or nesting place within half of the railroad station of Tanawanda. In the middle of February four half fledged birds were discovered without any nests and only protected by the care of the parent bird, who reared them successfully, although snow covered the ground to a depth of several inches. In the beginning of June I saw near by that spot a full grown bird of that species in immature plumage, which may have possibly been one of the brood. The bird is thus a resident of our vicinity in summer as well as in winter.

Chas, Linden,

DISAPPEARANCE OF LARKS IN SCOTLAND .- A letter to the Edinburgh Scotsman notices the destruction of the nest of the skylarks in the following terms:-

the Edinburgh Scotsman notices the destruction of the nest of the skylarks in the following terms:—

I am not aware whether the fact has been specially or publicly noticed that the lark, one of the most charming of our singing birds, has, within the last two or three years, been rapidly disappearing from several districts of Scotland where it used to be found in great numbers in spring and early summer. From my own observation, during the last week or two, while residing in the Valley of North Esk, in Forfarshire, where the song of this bird was heard from morn to eve in former years, I failed to hear its delightful song or see a single specimen of the bird. Changing my temporary quarters to this locality in Perthshire, I find the same observation entirely applicable, and matter of observation by those residing in these localities, the current explanation of the disappearance of the lark being the prodigious increase in the numbers of the starling, which swarm in droves of from half a dozen to scores, which, prowling over the fields, have plundered the nests and devoured the eggs of the lark in the Spring and early Summer of the last fow years, and thus effectually demonstrated Darwin's theory of the disappearence of the weater before the stronger species and the survival of the strongers, if not otherwise the fittest. It would be interesting to know from other parts of the country, whether the same process has been producing similar results in respect of the lark.

LACTATION IN VIRGIN ANIMALS.—Apropos of a recent letter of Mr. Tegetmeier to the London Field, a corres-pondent of that journal sends to it the following interesting account of an incident which came under his own observation. He says :-

esting account of an incident which came under his own observation. He says:—

A Pomeranian bitch of six years old, which has never had pups, belonging to the coachman here, has for the last two years been regularly stacked by the stable cats. She began by suckling them when they were kittens, and they have ever since continued to suck her, and now that one of them has kittens herself, the curious sight may be witnessed of the kitten sucking her mother, and the old cat sucking the bitch. The other day a black poolle found its way into the loft where the kitten was, and both the old cat and the Pomeranian together rushed at the intruder. Nor are the maternal attentions of the Pomeranian confined alone to the felline tribe; she endeavors to suckle the young both of pigs and sheep. When there are young pigs, she gets into the stye and forces her maternal attentions upon them—a course the old sow promptly resents; and about three weeks ago she carried on the same tactics with a lamb, but so wroth was the old yew that she pursued the would-be foster mother across the field, and followed her even into the open stable among the horses, where she testified her wrath at this somewhat unnatural proceeding by several well-delivered butts, much to the discomfiture of the poor Pomeranian.—C. FULLERTON SMITH.

ARRIVALS AT THE ZOGLOGICAL GARDEN, CINCINNATI, UP TO JULY 1st.—One opossum and eight young (Didelphys virginiana) five striped prairie squirrels (S. tridecem-lineatus); one Passerine nve striped prainte squirres (S. braccem-tibratus); one l'asseruie parrakect (Felthoula passerina); one wild gross (Berrilota cana-densis); thirty-two European quali (Cortunie communis); one rat-tlesantic (Crotalius durissus); all presented. One buffato (B. abaci-canus); two Virginia deer (C. striphianus); one fallow deer (Dama wulgaris) one ditto, white (D. wulgaris, var. Alba.); all born in the valgars) one ditto, white (D. valgars, var. Alba.); all born in the garden. One passenger pigeon (Ectophets migratorius); hatched in garden. One vervet monkey (Cercophitecus ladandii); one bonnet monkey (Macacus radatus); five uneaque monkeys (M. comordius); two plg-tailed monkeys (M. nemestriaus); one Arabian abtoon (Cymocephalus handarjus); one gray woif (C. occidentalis); two mule deer (C. macrotis); seven orchard orioles (leteras spurius); two cow birds (Molothrus pecors); two cas birds (Minus carolinensis); four indigo birds (Cymocepia eganca); eight Savannah sparrows (P. savannah; all purchased.

FRANK J. THOMPSON, Superintendent.

-A Rochester, N. Y., bird fancier has, after much difficulty, succeeded in securing three birds which will live in one cage, and whose colors represent the national red, white and blue. The red bird is a species known as the Napoleon, from South America; the blue, an indice bird from the same country, and the white, a sparrow from the isle of Java. The three birds are alike in size eat the same food, and live together in becoming harmony. Now, if they can be taught to sing "America" and "Yankee Doodle," the happy and patriotic owner may, with pardonable pride, rest from his labors.

HATCHING THE SPANISH MACKEREL.

HILE Col. McDonald and Mr, Earle, of the United States Fish Commission, were gathering statistics of the fisheries for the census in Mobjack Boy, Md., they discovered some ripe fish among the "Spanish" or Bay mackerel, Cybium maculatum, and took their eggs and impregnated them. These facts were reported to Prof. Baird, and Major Ferguson immediately put himself in communication with Mr. Bosman, Superintendent of the guano works of O. E. Malthy, at New Point Comfort. Mr. Bosman has had charge of the pound nets where the mackerel were found, and was satisfied that the spawning time of this fish extended from July 1st to the 1st of August. Major Ferguson went to the Bay about the 1st of July, taking his shad-hatching apparatus with him, as the eggs were reported to be of the same specific gravity as those of the shad; a report which proved untrue, as he found them much lighter than shad eggs, owing to an oil globule which caused them to float. He was accompanied by Prof. Ryder, a microscopist of ability, in order to make a report upon their development, and it was found that when the embryo is freed from the eggs the changes are very rapid. At seven hours it begins to assume a fishy shape, at seventeen hours the head and eyes are visible, and at twenty hours the fish is hatched. The drawings made at this stage show an oil globule attached to the lower of the umbilicus. This globule is a point of decided difference between the mackerel and other fish, the embryology of which have been described in the Maryland fishery reports. The globule causes the fish to turn over and swim on its back, with its head down, and deprives it of the power of righting itself until it breaks up and disperses, which it does in a short time, and its anparent use is to buoy the young fish and prevent it from seeking lower water, where it might be devoured. The drawings show the fish until four days, or when the sac is absorbed and food is found it its stomach.

Major Ferguson feels satisfied that the propagation of this delicacy can be carried out on a large scale, as has been done in shad culture, and hopes in a few years to be able to do so, as we have no doubt he will, for the fish are reported as plenty and spawning freely in that locality.

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

AMERICAN FISH CULTURE.

PERHAPS the best way to give a list of what is shown by the United States in the way of fish culture will be to take it directly from the well arranged catalogue, where the articles are as well arranged and classified as it would seem possible to have them. The fishways having been treated of in a former letter are cultited too. omitted now.

DEVICES USED IN OBTAINING AND IMPREGNATING OVA

DEVICES USED IN OBTAINING AND IMBREONATING OVA. Model of natural spawning race, invented by Stophen II. Ainsworth, West Bloomfield, N. Y. Not patented. This device consists of two sets of frames covered with wire-cloth, placed in two layers; the upper one has meshes coarse enough to allow the eggs to pass through, and is covered with coarse gravel in which the fish make nests and spawn. The upper screens are then lifted and the ova taken from the lower ones. S. H. Ainsworth. Pans used in catching the eggs of fish when taken by hand. They remain in these until impregnation has taken place.

Dipper used for supplying water to the impregnating pans and in the transfer of fry.

HATCHING HOUSES.

Dipper used for supplying water to the impregnating pans and in the transfer of fry.

HATCHING HOUSES.

Model of hatching-house at United States salmon-breeding station at Bucksport, Me. Scale, ‡ inch to the foot (1-48). C. G. Atkins.

The hatching troughs are arranged in sets of four across the building, and fitted with Brackett trays. The water enters them from a feed-trough along the side of the room and escapes by pipes through the floor.

Model of Druid Hill hatching-house, Druid Hill Park, Baltimore, Built in 1875, by the City of Baltimore, under the direction of Major T. B. Ferguson, State Commissioner of Fisheries, at a cost of \$7,000. The building is of bine stone, with white granite trimmings; the center, 12½ by 33 feet, is two stories high, and on either side are octagonal wings 14½ by 20 feet, whose sides are almost conditional through these and two large windows in the gable end of the main buildings; the inner door of the ventibule is also of glass. The windows are all furnished with dark green water-proof curtains, to exclude the sun and light when desirable. The windows are all furnished with dark green water-proof curtains, to exclude the sun and light when desirable. The water is supplied from a strong spring on the side of the hill near by, and is piped into the fillering tank which is just below the ceiling of the hatching-room, which occupies the first floor of the building. The supply pipe is so arranged with valves that the water can be conducted into the ponds below the house without entering the filtering tank should is be desirable. The water is piped under the floor, which is a Schildenge pawement, to the several section of the floor, which is a Schildenge pawement, to the several section of the floor, which is a Schildenge pawement, to the several sections of the section of the several sections of the several sections of the several sections of the several sections of the several sections of the several sections of the sections of the several sections of the sections of the sections

States Fish Commission.

This apparatus is screwed into the top of a carrying-can, and a small stream of water coming in from a tank or reservoir above draws air in through the side aperture and discharges it at the bottom of the tank, when it rises to the surface in a foam. Apparatus of this kind was used in the Boston aquarium of W. E. Baker in 1874, and by the United States Fish Commission in 1875 in the aquaria of its Sea-coast Laboratory at Wood's Holl, Mass. It was applied to fish-carriers by T. B. Ferguson in 1877.

Can for hatching shad eggs while in transit, by motion of the water caused by rolling of ship or railroad car. Designed by Fred Mather. United States Fish Commission.

ISINGLASS FROM FISH SKINS.—Gloucester, Mass., July 19th.—Editor Forest and Stream.—I notice you have our company as manufacturers of isinglass and glue from fish bladders. That is a mistake. The stock we use is the skin of salt fish. The fish is put up for market, in boxes, with the skins taken off, also bones taken out. The skins were of very little value before my invention.

JOHN S. ROGERS.

Our report was taken from the official catalogue of awards, which designates the award as follows :-

"13. Isinglass & Glue Co., Gloucester, Hausenblaso und Fisch Leim nebst Fabrikaten darens."

As will be seen elsewhere, the medals will not be ready before October, and it would be well, therefore, for our correspondent to write to the Fischerei-Verein at Berlin, to have the report of the award corrected.

THE RANGELEYS.— Hartford, Conn., July 17th.—I found the Rangeley Lakes (July 1st) very quiet; most of the anglers gone and very little fishing, although I was told that the mouth of June was as good as any they had seen for many years, the fish leing more numerous, but smaller. The water was very low, but I was surprised at the number of camps which had sprung up since I wrote the "Rangeley Lake Tront Tales" for the FOREST AND STREAM in 1874. I left Mt. Kineo House June 28th, and the Hy-fishing was excellent. My wife took a tront of 2½ pounds, and a lady cousin who was with me took one of 2½ pounds, and a lady cousin who was with me took one of 12½ pounds. I saw smow in the White Mountains, and missed those sweltering days in June. If I can afford the time this autumn, I want to go to Maine and pass from Mooschead Lake over to Churchill Lake, and then by way of Spider and Mausungunkes and river to the Aroostook River, coming out at Caribou, Maine, and thence into New Brunswick. My prottler-in-law, Col. Golf, was the first person to "boro" through that region last year, and beaver, carboe and moose abound, the law on the latter being off Oct. 1st, the first time I threy years,

THE LATE APPEARANCE OF CANADA SALMON

NEWPORT, R. L. July 16th.

Editor Forest and Streum:

An explanation has been asked of me by a number of persons of the tardy appearance of salmon in the rivers of Canada and Nova Scotia; and, not feeling able to an wer satisfactorily. I referred the problem to Prof. H. Y Hind, Windsor, Nova Scotia, a gentleman who is perhaps the best fitted of any in America to write on the physical agencies affecting the movements of migratory fish in the North Atlantic Ocean.

I have much pleasure in inclosing herewith his reply. the publication of which in Forest and Stream will, think, be of much interest to its readers.

SPENCER F. BAIRD,

WINDSOR, Nova Scotia, July 11th.

DEAR PROF. BARRD:—
In reply to your letter of inquiry of the 29th of June,
Is end some brief notes I have made on the subject.
The question you have proposed respecting the cause
into the tale appearance of salmon in certain rivers emptying into the Gulf of St. Lawrence, this year, is one of
great practical interest, not merely to anglers, but
in the study of the artificial propagation of the salmon,
and the probable causes which have led to but inconsid-

and the probate causes with fave to but inconsu-erable returns from very great outlay.

I shall give you a brief resume of the ideas which have occurred to me on this subject, which is subordinate to the far more interesting inquiry respecting salmon propagation.

gation.

I do not think that the unusual abundance of Green-land ice, or of local ice, has had much to do with the late appearance of schools of salmon in our rivers. In 1875 the Gulf of St. Lawrence was so choked with ice in May that several mail steamers bound to Quebec were caught and entangled in it for many days and even weeks. Yet that year was not a late year for salmon, although it was a poor year in some localities.

Every river appears to have its own schools of fish, which visit it in succession, some for breeding, others for smitary nurroses.

although it was a poor year in some localities.

Every river appears to have its own schools of fish, which visit it in succession, some for breeding, others for sanitary purposes.

But they come at times which are determined by hereditary habit formed through ages of acclimatization and adaptation to the conditions of the river and the sea into which it empties. All the schools of mature fish which ascend the river or play about its mouth are not spawning schools, for there are good grounds for the belief that at a certain age and under certain conditions the salmon becomes a biennial spawner.

The spawning school which ascends in July or August to spawn in October or November, is probably destined in many cases to become the first spring school which enters the river the next succeeding spring for sanitary purposes, remains for a short time, and descends to the sea again without spawning, it being an off year to them. Should anything happen to these spawning schools which come in July or August, so that they become greatly diminished, then the next years' spring schools, which they would have become, will be much diminished also, and a year must elapse before the early spring schools, which they would have become, will be much diminished also, and a year must elapse before the early spring schools and the same month in torce.

Such an event appears to have occurred during November and December 1879, apart from the destruction occasioned by the rod and the net. This was the unusual cold of those months in the fall of 1879, the mean temperature in some parts of the Maritime Provinces falling five degrees below the mean of the same months in the preceding year.

At Manitoba the difference amounted to 20° Fahr. At Frederiction, N. B., the mean of December, 1879, was 6°, 35 lower in December, 1878. At St. John's, N. B., it was 5°, 45 lower than December, 1878. At St. John's, N. B., it was 5°, 45 lower than December, 1878. At St. John's, N. B., it was 5°, 45 lower than December, 1879, was 6°, 90 below the mean of 1

broke up.

Now, with regard to those fish which have not arrived
to the conditions which broke up.

Now, with regard to those fish which have not arrived at the age, or been subjected to the conditions which compet them to produce fat instead of developing ova, and become biennial spawners, the cold of November and December, 1879, put back the desire or instinct in the fish to spawn, although their ova might be fully developed, and they retained their spawn perhaps a month or six weeks longer than usual in the manner hereafter described.

Those that escaped to the sea after this late spawning.

scribed. Those that escaped to the sea after this late spawning, and continued to develop ova instead of putting on fat, would not have their ova sufficiently matured early in June of the present year to induce them to leave the sea, and they migrated long after their usual time.

A very curious illustration of the effect of extreme and prolonged cold occurred in the early spring of 1870, in the well-known salmon river Tyne, in the north of England. The fish there, which usually sparwn in December, and were never before known to spawn in February, were concealed from view from the 1st of December, 1878, to the 20th of February, 1879, by a snow storm and prolonged cold of unusual duration. When the river broke up, large numbers of salmon were observed spawning in the third week of February. Such an occurrence was never before known, and, indeed, it is quite uncommon for salmon to spawn even in January in the Tyne.

ing in the third week of February. Such an occurrence was never before known, and, indeed, it is quite uncommon for salmon to spawn even in January in the Tyne. The hook on the lower jaw of the male salmon has much to do with the spawning of the fenale, and plays an important part in that operation; a description of which I have not seen published.

I think you will find that the ovaries in the salmon are separated from the oviduct by a delicate membrane; in fact, a hymen. The purpose of the hook on the lower jaw of the male is to break this hymen. When the fertuale is ready to spawn, and not before, she suddenly turns on her side, and the male, always in attendance, instantly seizes her just below the pectoral lins, and with a sharp grip and pressure of the blunt hook on his lower jaw ne fractures the membrane which separates the ovaries from the oviduct. The fenuale resumes her normal position, and the operation of spawning soon after commences. The effect of the pressure of the hook on the side of the female is like what would be produced on a non-elastic see distended with water—the sac would yield at the weakest place. In the female salmon this weakest place is the membrane separating the ovaries from the oviduct. Pressure with the hand, or even through hand-

position, and the operation of spawning soon after commences. The effect of the pressure of the book on the side of the female is like what would be produced on a non-elastic sac distended with water—the sac would yield at the weakest place. In the female salmon this weakest place is the membrane separating the ovaries from the oviduct. Pressure with the hand, or even through landling of the fish, necessarily produces the same result the ovaries are distended. The presence of this membrane gives to the female the power to retain the ova as long as she chooses, or until her instincts show her that the conditions for exuding the ova are suitable; then the lies upon her side, and the hook of the lower jaw of the male serves the purpose it was designed to fuffil.

It follows from this that there is always a certain relation between the development of the hook on the lower jaw of the male and the period of the year during which the females spawn. Hence it would be incompatible to propagate salmon in a river by bringing a female from a stream where salmon spawn in September and pairing her with a male born in a river where the flat spawn in December. The hook of the future male would not be sufficiently developed to serve its purpose, and the frome would be ready to spawn before the sor emarkable that the force of this adjustment of hereditary labit by a proper selection of fish is easily seen. The Severn, for instance, in the southwest of England, is one of the ear liest spawning rivers known. September is by no means an uncommon date for spawning there; whereas, the river Wyc, flowing into the same estuary, is a late spawning river with a first provent, whose waters lie some fifty miles to the northeast of the Severn, the largest fish, according to Mr. Buckland, run up in September and October, whereas the spawning fish come up from December to February. In the Seckville River, emptying into Bedford Basin near Halifax, Nova Scotia, the salmon come directly from the sea into the river to spawn in the fall of the yea

Prof. Baird, United States Commissioner of Fisheries.

California Trout.—Wellsville, N. Y., July 14th.—In June, 1879, we put into the Genesee River, in this vicinity, a few thousand California trout fry, given us by Seth Green, of the State Hatchery.

Last evening several of these Californias were caught in the river, while fishing for our native trout; three of them that were badly hooked were saved, and are now "lying in state" on ice. The three saved measure, respectively, 7, 7½ and 7½ inches, the longest weighs three ounces. A larger one was caught and put back that measured 9 inches in length. The party catching these told me that they take a hook as "business like" as our native Salmo fontinalis.

C. A. F.

BLUEFISHING AT LONG BRANCH.

Editor Forest and Stream :-

Editor Forest and Stream:—
You like to hear of your subscribers having a day of real genine sport, so it occurred to me your readers would like as well to know where they can find just such a place and have just such a time as I have mentioned, within fifty miles of New York.
On last Friday I received a note from my old friend, Arthur L. S., stating: "Buy a bass rod, reel and lime, and come with me to Long Branch. I can give you the best sport you ever had." Knowing so well that Arthur knew what sport was, I proceeded to Abbey & Imbrie's, on Maiden Lane, procured what he had written me, and at 3:30 p.M. I was on the train bound for Long Branch with Arthur. Thence we drove to Scabright, engaged Jack, "the best fisherman on the water," bought a bushel of moss bunkers of doubtful odor, and, with the thermometer at 50 degs, we went over to the beach; at 3:30 p.m. I was on the train bound for Long Branch with Arthur. Thence we drove to Seabripht, engaged Jack, "the best fisherman on the water," longist a hussled of moss bunkers of doubtful odor, in the beach. Our book was safely launched through the breach of the beach. Our book was safely launched through the breach of the beach of the boat and light breeze carried us out five miles from shore. Our content of the least of the boat and light breeze carried us out five miles from shore. Our content of the power of the boat and light or the other, a process which is called the boat and then or the other, a process which is called the boat and then or the other, a process which is called the boat and then or the other, a process which is called the boat and then of the other, a process which is called the boat and then or the other, a process which is called the boat will be the boat and the or five the boding sum for five the boat will be the boat of the was a trached a foot or so of wire, a large book bailed with a piece of moss bunker. It is aw Arthur's rod bend almost the water Turning to sum trached a foot or so of wire, a large book bailed with a biece of moss bunker. It is aw Arthur's rod bend almost the water Turning to sum the six, and jumped and shook his lied, but his efforts failed; and as he was being dragged to the side of the boat with the reel he struggled in almost every conceivable way. I had forgotten all about my hook, but just then my rod commenced to leave me as though I had thrown the line looped over the smokestack of an engine. Having braced the end of my rod mider my seat, I tugged away, when Arthur said, "Give him line or he will break your rod." He took the line and away they went, until at last he was checked, and, as he was being pulled up slowly to the side of the boat, I could see him swimming around an around in the water. After he was landed, I realized low very tired I was. The fellow weighed ten pounds.

When we had caught about twenty-five, all over six pounds, and ceasional

BLUEFISHING AT MARTHA'S VINEYARD.—Reports from the famous fishing grounds of Martha's Vineyard give glowing accounts of the sport to be had there with the bluefish and other varieties. See the advertisement elsewhere of the Norton House,

TROUTING.—Hornellsville, July 11th.—As Mr. Van Dyks suggests a "Blood Sunffers" corner, the following will be an appropriate item for it.—
A party of four gentlemen of this place lately returned from Pine Creek, Pa., with 1.000 brook trout; the lot weighted less than forty pounds. A little calculation will show that the fish weighed less than three-quarters of an ounce apiece. Do you not think an eight inch law or a lunstic asylum would be good for such "Blood Snuffers?"

JOHN.

New Jersey—Riverside House. Forked River, July 17th.—Large quantities of bluefish now in the bay, running from one to two pounds. Weakfishing also continues good, thirty-five to seventy-five being the average catch per boat. Were it not for the net-fishing, which is openly carried on regardless of all law, we would have fine sheepshead fishing, as it is not unusual for the net men to take fifty or more at a haul, and what they do not catch are frightened off.

catch are frightened off.

Late arrivals at the Riverside House include Mr. and Mrs. D. W. Lee, Mr. and Mrs. A. M. Mayer, South Orange, N. J. Mr. and Mrs. D. D. Acker, Jr., Mr. and Mrs. Henry Thompson and family, Messrs, R. H. Spear, Jas. M. Edgar, Jr., N. L. Tunis, Chas, S. Farley, Chas. C. Jaclard, all of New York, who spend most of their time on the bay fishing, etc., the ladies enjoying the sport and catching as many lish as the gentlemen.

A. B.

Wisconsin Black Bass.—Janesville, Wis., July 12th.—I have been reading the articles from J. A. Henshall on black bass, and I must say he knows what he is writing about. I think the black bass has got more game in him than any other fish that swins in Western waters. I don't know anything about the East.

Rock River has her share for black bass, also wall-eyed pike and pickerel. On July 10th, a small boy fourteen years old caught with a fly a black bass weighing four pounds; he hud a hard fight as the water was very rapid and the bank very steep, but the little fellow was game like the fish, and finally landed him.

Last week, Wednesday, a party of nino gentlemen went up the river about ten miles in the little steamer Bower City Bell and caught a large washtub full of black bass, pike and pickerel. They had a splendid time. C. C.

St. Clair Flays Bass Fisher.—Detroit, Mich., July 12th.—My first visit this year to St. Clair Flats was made last week, Thursday and Friday. Found fishing just fairly started. A friend from Ohio, Mr. E. J. Fairfield, and myself took seventeen bass running from one pound to five and a quarter pounds in weight, some six or eight pike, from two and a half to nine pounds, a half a dozen pickerel, or "wall-eyed pike" as they call them here, and five or six perch, the latter as large as I ever saw, certainly not less than a pound each. In all we got about seventy pounds. Friday's sport was cut short by a fearful storm, which drove us in before 4 o'clock. Some very fine maskadonge have been taken in Baltimore Bay, in the flats, this year, but we were not lucky enough to strike any. The best time for bass will now soon be here, say from the middle or latter part of August to the close of the season, and there is room for a thousand rods. Mr. T. F. Wallace, ome of your old subscribers by the way, of Marion, Ohio, paid the flats a first visit and expressed himself satisfied with his success. Next time I am able to go out, I hope to send you an account of such fishing as shall make you wish you were "thar."

UNO,

RICE LAKE.—Port Hope, Ont., July 9th.—Maskalonge and bass fishing, which ordinarily commences on May 16th, did not begin at Rice Lake until May 24th. Trolling for maskalonge was good up to a couple of weeks ago, since when very few have been caught. Although a great many yellow or mud bass were caught in the early part of the season, the black bass did not begin to bite well until about June 20th. There has been good fishing since. Although very few ever try fly-fishing for black bass upon this lake, still when attempted it is generally successful. One gentleman caught twenty-eight one afternoon, using a bright red fly; another caught fourteen, going the short distance of three miles, four weighing over four pounds each. There is a good hotel at Gor's Landing, three miles from Harwood, kept by T. Harris, board \$1, boats 50 cents per day. It is the best place on the lake for families, being well kept, clean and quiet. There is a good hotel at Harwood kept by W. Garnet; terms reasonable, I believe. Route, Norsemun from Charlotte to Cobourg, train to Harwood. F. C. G.

The Rennel.

—Address all communications to "Forest and Stream Publishing Company, New York."

-Dr. H. B. Wygant informs us that the pointer bitch advertised by him last week was taken suddenly with distemper and died last Saturday night, He wishes in this way to reply to the numerous letters received by him in response to his advertisement,

Pointers in the Field.—Photographs of Mr. Tracy's paintings of the St. Louis Kennel Club's pointers, Faust and Bow, and Keswick and Jessanine, can be had at the sportsmen's warehouse of Messrs. Schuyler & Duane, 189 Broadway.

DEATH OF DIDO.—We are extremely sorry to announce the death of Dido, the setter bitch owned by Mr. J. O. Donner, of this city, and recently purchased by him from Mr. W. B. Wells, Jr., of Chatham, Ont. Dido was sick only one week, and died July 19th.

CANADIAN KENNEL CLUB.—A meeting will be held in the Rossin House, at 8 o'clock on the evening of Wed-nesday, Sept. 5th, with a view of establishing a "Cana-dian Kennel Club" to act in harmony with the National American Kennel Club, and with the same objects in

BAURLE.—Lonisville, Ky., July 18th.—Editor Forest and Stream:—I thank you for notice of the hounds, which was incorrect in one particular, through a neglect of mine to inform you that Bauble will not be shipped until she is bred. Abigail was the bitch you saw, and not mentioned. She is by The Grove Reveller ex. The Grove Arrogant, running back on sire's side to Mr. Meynell's Guzman, 1780. The present importation is for "The Crystal Spring Pack," Waverly, Tenn., Mr. A. M. Waddell, master.

Ticks on Dogs.—Annapolis, Md., July 12th.—Edilor Forest and Stream:—In your issue of June 24th I noticed an article on "Conditioning dogs for summer woodcock shooting," in which you state that the spot from which a tick has been taken should be dressed "with some mercurial preparation." I have had my dogs out for exercise daily, and for the last two months have every day taken ticks from them. I have used no dressing of any kind on the spots from which they have been taken, and no dressing has been needed. Ticks should be removed gently by twisting them around. What is the object of the mercurial ointnern? If the tick is removed the same day on which it fastens to the dog I do not believe it can deposit any eggs. I have seen neglected hounds with sores containing ticks or grubs of some kind, but they were not well cared for animals.

The object of the mercurial ointment is to effectually destroy any ova that may have been deposited. Your negative experience does not destroy the positive experience of others; of course, the more immediate the removal the less danger and the less need of any application as an antidote. We have simply given you a good antidote when required.

IRISH SETTERS .- New York, July 20th .- Editor Forest IRISK SETTERS.—New York, July 20th.—Editor Forest and Stream:—I suppose there never was a dog show—in this country, at least—where some of the exhibitors were not disappointed. The fact is, there are a great many who, having read "Stonehenge," think they are not only able to judge, but that they own the best dog. If the judge's opinion don't coincide with theirs, the judge must be at fault. We have had the best of English judges here, gentlemen who know as much, if not more, about dogs (especially setters and pointers) than "Stonehenge." With this class of judges he is not an "au-thority". henge." thority."

henge," With this class of judges he is not an "autitority,"
According to Mr. Dalziel's letter to the Live Stock Jouraal, the protest in class 40 was made simply because Mr. Davidson's dog bad white on. I venture to say that no Irish judge would have considered that a bar to his winning. I have a letter from an Irish gentleman, who was a judge at several Irish shows last year, and who is a large breeder of Irish dogs himself, in which he says: "White is not considered a fault in Ireland, whatever it may be in America. The handsomest, best and purest Irish dogs I ever saw had white on toes." Champion Palmerston is a rich cherry red, with white or face, which his owner says is "the true type of the Irish setter," Why, sir, at the show I had one nam tell me that my dog had English blood in him because he had white on his clest; there was no doubt about it. When I assured him that the dog was as pure Irish as any in the world, he looked as if he pitted my ignorance. This is the idea that some people get from the "protest"—that a dog to be pure Irish nust be all red. Any candid nam will admit that Irish breeders ought to know something of Irish dogs. The Irish classes here are always large. At the next show let us have an Irish judge, unhampered by rules laid down by one who perhaps never bred an Irish setter in his life. setter in his life.

rules laid down by one who perhaps never bred an Irish setter in his life.

Tononyon Dog Show.—This bench show will be held Wednesday, Thursday and Friday, Sept. 8th, 9th and 10th, during the annual exhibition of the Industrial Exhibition Association of Toronto, at the new Exhibition Park, Toronto, Canada, and judging from the prominent nad well-known names connected with the management, promises to be a well conducted affair. The following is the list of officers: President, F. W. Jarvis Esq., Sheriff, County of York; Vice-Presidents, His Worship, the Mayor of Toronto, and Christopher Robinson, Esq.; Q. C. Committee: Messrs, A. R. Boswell, C.A. Brough, W. H. Doel, F. C. Draper Chief of Police), Geo. Gooderbam, J. F. Hellmuth, Stephen Heward, J. Maughan, Jr., John Massey, R. Timing, Jr., James Watson and Lieut. Col. Otter: Honorary Secretary, A. D. Stewart, Esq. cers Industrial Exhibition Association: President, J. J. Withrow, Esq.; First Vice-President, W. F. McMaster, Esq.; Secretary, J. J. Hill, Esq. Premium List of Thirty-two Classes.—Classes 1 to 4, mastiffs, St. Bernards, Newfoundlands and greyhounds, for best dog or bitch, \$10; For best dog and best bitch, \$10; for second best, \$5. The Great Western, Grand Trunk, Northern, Credit Valley, Midland, Canada Southern, Erie, New York Central and other railways will carry dogs free, if accompanied by a care-taker.
Entries close on Aug. 21st, 1880. Forms sent on application to H. J. Kill, Esq., Toronto, Canada.

A WHOLESALE LITTER, - Joseph Meyer's livery stable at 62 George street, Cincinnati, Ohio, was the scene a few days ago of a canine phenomenon, unequaled in the annals of doggy matters. Here is what the Cincinnati Enquirer man has to say about it :-

Equiprer man has to say about it:—
Arriving at Mr. Meyer's, a crowd of curious, gaping men
and boys was found surrounding a handsome brown-andwhite English pointer which lay upon a pile of sawdust
and shavings in the rear of the building. Clambering all
over the gentle animal were a squirming lot of little pups,
all extremely anxious to get the first chance at supper,
for there were entirely too many of them for all to get in
at the first table. There were pups us black as the ace of
spades; pups with white-tipped ears; spotted pups and

white pups; pups with black tails and pups with white ones. Twenty of them, a full score, on actual count. It was a sight worth seeing, although the mother seemed to think that she had more little ones to look after than she had bargained for. The first one made his debut into the light of the "Paris of America" at 9 o'clock in the morning, and the way the reinforcements began to come was a caution to the natives thereabout. The majority of them were of the female persuacion, but there were just enough boys in the lot to keep the other girdly things under control. The mother who gave birth to such a wonderful family is an English pointer of pure stock, and her present owner, Mr. Meyer, bought her only a few weeks ago from Joe Todd, a peddler, who resides in Avondale. She is as gentle a brute as can be imagined, and she allowed the bystanders to freely examine the diminutive beasts without interference. The present case is without parallel, we believe, in the annals of natural history, although it is a common thing for a sow to have a litter of young numbering quite as many. An English pointer is generally proud if his spouse presents him with a family of six or seven, but when the old gentleman who is responsible for this, learns the fact, it is probable that he will hardly associate with his fellows on terms of equality hereafter. The dam who thus has made herself famous answers to the name of "Rose," and every member of her big family remains alive and exceedingly active the subject of the control of his parallely and when one small specimen was unkered into existence in a seemingly dead state she at once made endeavors at resuscitation, in which she was linally successful, and that little brute was just about as lively as the rest of the gang last evening. At last accounts all the twenty were still on hand, none of them having got away, while there were no more additions to chronicle.

counts all the twenty were still on hand, none of them having got away, while there were no more additions to chronicle.

A PENSIONED DOG.—In the Territory of New Mexico the legislature, by joint action, recently pensioned a dog for noble services. In that country there are many sheep farms, and shepherd dogs are so well trained in caring for the flocks of their masters that it is their daily practice to take out the flocks in the morning to pasture, guard them all day and at night return them to the fold or corral. This work of the Mexican dogs is so common and so faithfully performed that it is looked upon as a matter of course and nothing more than should be expected from a well-trained dog. This being the case, it would appear that the dog worthy of a pension in that Territory must have performed some very marvelous feat indeed, and something out of the common line of canine achievement, and he did. He did not save his mistress' life from the murderous fury of the savage, nor her child from being brained against a door-post or being choked by a huge blacksnake, for his master was not married, and had no wife or babe, but led a solitary life in his solitary ranch in a very solitary part of New Mexico. It chanced that the dog in question, on returning of an evening with his sheep to the fold, discovered that his master was not stirring about, but renained inside the shanty and kept very quiet. The next evening it was the same. The dog, when he penned up the sheep, repaired to the stanty, smelled through the crack in the door his master's presence, but the man was still quiet and did not breathe. The dog scratched, barked, and even howled, but no response came from within. The door remained closed; no snoke rose from the chimney to greet the early morn. But the dog, true to his appointed duty, went out with the sheep on the third day and cared for them while they cropped the herbage on the hillsides. But he was getting hungry, and that night when he drove the sheep into their pen the last one to attempt to get contrary, it increased in numbers, and when, at the end of two years from the time of the death of the proprietor, the ranch was visited, and the remains of the poor fellow found, the dog was still at his post of duty, jeal-ously guarding his flock, and driving them to the best pastures every day, and to the fold at night, before which he slept, to keep the wild sheep-exters of the plains at a civil distance. Such fidelity excited admiration wherever the story was told, and the Arcadian legislators of the Territory, in a fit of generosity and enthusiasm, at their session two years ago (they have biomail sessions in that happy country), granted a pension for life to that dog, to be paid from the State treasury, as a reward for his fidelity, and no doubt as an encouragement to all other shelpherd dogs in that Territory to be good dogs and faithful.—Boston Globe.

KENNEL NOTES.

WHELPS .- Daisu .- Mr. John White's (Bridgeport, Conn.) white and orange setter bitch, Daisy, by Calhoon's Sam out of Mallard's Belle, whelped eleven puppies, all white, excepting three, which had orange spots, by Ranger II.

DEATH .- Dido .- Mr. J. O. Donner's English setter bitch Dido.

BRED.-Mina-Dash III.-Mr, Walter H. Beebe's (Now City) Champion Mina (Leicester-Dart) to Champion Dash III.

NAMES CLAMED.—Grouse and Dash.—Mr. Titus J. Hodges, of Greenpoint, L. I., claims the names of Grouse and Dash for his two setter pupples, the former leann and white and the latter red, out of Dutchess H. (Riodman's Dash I.-McLaughlan's Dutchess) by Roy (Shipman's Toun-Governor's Liza). Both the pupples are being broken by Mr. C. H. Souvens, Rockland County, N. Y. Eudora, not Endora.—Mr. M. P. McKoon, of Franklin, Dehaware County, N. Y., desires us to state that the name of his spaniel bitch puppy is Eudora, not Endora, as published in last week's issue.

Step the mainmast 3ft, from store and the other 3ft. from storen. The sails will be 6in. shorter on the luft than the mast, and 4in. shorter on the foot than the booms. Masts of spruce, Zin. and 1fin. thick at deek; booms \(\) and \(\) fin. in center.

A. A. R. South Norwalk, Conn.-We know of no special laws A. A. R., South Norwalk, Conn.—We strow of no special laws for Dutchess and Putanam counties. The general Now York State law provides the following open seasons: deer, Aug. Ist to Dec. 1st; no open season for moose; wild fowl, Sept. 1st to May 1st; quali, Nov. 1st to Jan. 1st; woodcock, Sopt. 1st to Jan. 1st; sugarierds, Aug. 1st to Feb. 1st; ruffed grouse (or partridge), Sept. 1st to Jan. 1st.

partridge), Sopt. 1st. to Jun. 1st.

Thay, Peake's Island, Me.—I believe the "cruelty" folks are going to make a strong effort to stop our shoot next fail. Do you suppose they can accomplish it without a special statute? They have been obliged to wait for such statute in other States before they could stop pigeon shooting from a trap, and one would think it would be so in Manne. Ans. Unless a law is passed making pigeon shooting illegal your fournament cannot because the status of the st

I. M. G., Washington, D. C.-Please prescribe for my pointer, I. M. G., Washington, D. C.—Preuse preserve for my pointer, which is just thirteen months old. His eyes are very much instance, little or no appetite, nose juite warm and a kind of twitching when he stands still. He has moderate excretise and is fed with rathle scraps. Ans. The probability is that the dog has had distemper, and in the present stage will be benefitted by quitnine, say two grains three times a day; also give a small dose of sulphur occasionally.

TRUMP, Newburyport.-Where can I obtain the game laws of ort States? Thave a pointer dog about three years old who has been lame for over a month; only a slight limp most of the time, but sometimes he limps a good deal. There is a swelling of some kind on the ankle joint to his right fore paw; the lump is hard and pains the dog on slight pressure. Ans. I. Send to Orange Judd Co., Broadway, N. Y. 2. Avoid giving the dog ex-ercise, and paint the part alliliced with tincture of iodine daily. Write more definitely after fair trial of treatment.

Write more definitely after fair trial of treatment.

E. K., New Haven.—When is the woodcock law off on Long Island this year? How much of Fowlor's solution of arsenic would you give a Scotch terrior, about nineteen pounds weight, four and a half years old? He'sgotthe mange. Ans. J. Aug. ist. 2. Three drops twice a day. It should always be given on a full stomach, and it must be withheld for a week or so if it produces redness of the eyes, running of watery fluid from the nose and a loathing of foce. To prevent last result, give a tonic of one teaspoonful of Peruvian bark immediately after a meal.

A. & Co., Boston, Mass.—For internal canker of the car the following is suggested: Take Goulard's extract of lead, one ounce; glycerine and carbolic acid, one-quarter of an ounce; finest clips oil, four and a half ounces. Mix the two first named, and add the oil, gently rubbing together in a mortar. The bottle must be well shaken before the liniment is used. Avoid giving meat, and feed vegetables with the mush. Give twice a week a teaspoonful of sulphate of magnesia in water one bour before feeding in the morning. Dress the dog's less with the following: Powdered blearbonato of potash, half ounce; sub-sulphur, one onnee; lard, four ounces; rub well into the skin.

A D E .- Ans. 1. In case of diarrhoa, when the bitch is suck A. D. E.—ABS. I. Il cuse of diarrinea, when the bitch is suck-ling, the diet must be changed and carefully regulated all through the disease. Light and easily digested food, as well-boiled oatmeal, rice, Indian corn meal, or arrowroot, should be given with a little milk or beef tea. When the dog is very weak, a little with a little milk or beef tea. Whou the dog is very weak, a little should be poured down her throat every few hours, and a little port wine be added to the food. An injection should be given: A quarter of a pint of grued with two drachms of interure of catechu and one drachm of laudanum. A dose of catsor oil should be given at once. Write result of treatment, and if the injection does not check the diarrhea, we will mail your a prescription that will not fail. 2. The open season for woodcock in this State begins Aux. 1st; deer, Aug. 1st.

this State begins Aux, 1st; deer, Aug, 1st.

A. D. N. Monson, Mass.—It is supposed that the old Southern hound was used by the uncient Britons in the chase of the larger kinds of game. Its distinguishing characters are its size and general heavy appearance; its great length of body, deep cheet, and ears remarkably large and pendulous. It was the slowness of the breed which occasioned its disuse. Several of the broad was count. The programmen shows the programment of the programment of the programment of the programment of the programment of the programment. Its with, except on some show benches in England, nigring with his larger brethren, the deerhounds, and assuming their name. He still exists in out-of-the-way places. The shape of the mg with his larger of electrod, the decendaries, and assuming their name. He still exists in out-of-the-way places. The shape of the rough grey hound corresponds closely with that of the decriound, but he is not so large or nowerful, averaging about 26in, at shoulder against 20in, or 20in, in the deerhound.

der against 2011. Or 5001. In the deernound.

F. H., New York.—Mange is the most troublesome, and, in some forms, the most locathsome disease which we meet with in a dog. There are several varieties, the most common being virulent reange, mange with thickening of the skin, red mange, and cruption between the toes, and blotch, or surfeit. The disease, under certain conditions, is contagious. A too stimulating diet, insufficient exercise, etc., are among the principal causes. In chronic cases, Excellent subties of signals in chronic cases, Excellent subties of signals in chronic cases. cases, Fowler's solution of arsonic is often of great benefit cases, Fowler's solution of arsonic is often of great benefit. The does is from two to eight drops, given twice a day in food. The dressings used are very numerous, and depend upon the condition of the dog. The most simple is oftnemen of the fower of sulphur and lard, one part of the former to four of the latter. The dog's bedding should be changed at least every other day; and the proper use of disinfectants in and about the kennel are of the former to the four day in the proper use of the four day in the proper use of the four days and the proper use of the four days and the proper use of the four days and the proper use of the four days and the proper use of the four days are the four days and the proper use of the four days are the four days and the proper use of the four days are the four days and the proper use of the four days are the four days and the proper use of the four days are the four days are the four days and the four days are the four days and the four days are the four days and the four days are the four days are the four days and the four days are the four days and the four days are the four Write more fully symptoms of dog, and we will mail

H. W., Newark, N. J.—To brown gun barrels: Tinet, of muriat of fron, one ounce; altric ether one ounce; sulphate of copper, four scruple; rain water, one pint. First, securely plug up both ends of barrels, leaving one plug in each end of sulficient length ends of barrels, leaving one plug in each end of sufficient length to be used as handles, then thoroughly clean with some and mater, after which cover with a thick coat of time, slacked in water, and when that has become dry remove it with an iron wire scratch brush; this is to remove all dirt and grease from the barrels. Then apply a coat of the fluid with a rag, and let it stand for twenty-four hours, when a slight rust will have appeared; then take barrels and immerse them in a trough containing boiling hot water, after which scratch them well with the scratch hrush. Repeat this until the color suits, which will be after three or four applications. When completed, let the barrels remain in line water a short time to neutrulize any acid which may have penctrated. Take for great care not to handle the barrels trying the opentrated. Take great care not to handle the barrels during the operation, for the least particle of grease will make bad spots.

NERVE POWER.-Few people suffer so much from nervous ex-MARK FOWER.—For people studier so much from nervous ex-haustion as now-paper editions. The wear and tear of getting out a good paper teil fearfully, and readers seldom know how much vital force a single item may have eest the one who wrole it. Editors have often been driven to drink in order to stimulate their exhausted faculties, but of late are using Warner's Safe Nervine instead. This valuable preparation acts as a southing power, quieting the nerves and producing sleep with all the re-freshment that it brings.—[4dv.

To the White Mountains.—The summer travel over the Consolidated is heavier than ever this year, and the palacecars which run through to the White Mountains are particularly well patronized, the two cars this morning having seventy-seven passengers. The conductors on the through palace car are ex-Conductor McKenney Holcomb, of the Suffield branch, and Conductor Raymond, formerly of the New York and New England road,

The skull and horns of an uncommonly large mountain run were found embedded in a pine tree in Idaho, It is supposed that the beast was caught and starved in the tree when it was a sapling, leaving his head to be overgrown by the wood.

A WEEKLY JOURNAL

DEFOYED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURA HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERV. TION OF FORESTS, AND THE INCILCATION IN MEN AND WOMEN A HEALTHY INTEREST IN OUT-DOOR RECREATION AND SAUDY I

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

NOS. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

POST OFFICE BOX 2221

STREET FOUR DOLLARS A YEAR STREET, IN AUTOMOR.

Advertising Rates.

- Inside pages, nonpariel type, 25 cents per line; outside page, 40 ents. Special rates for three, six and twelve months. Notices in ditorial column, 50 cents per line—eight words to the line, and cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by Saturday of each week, if
- ansient advertisements must be accompanied with the r they will not be inserted.
- inserted. siness notice of an immoral character No advertisement or business notice of an immoral character will be received on any terms.

 *Any publisher inserting our prospectus as above one time, with prief editorial notice calling attention thereto, and sending marked ony to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 22, 1880.

TO Correspondents.

- All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good fatis, and he addressed to Forest and Stream Publishing good fatis, and he addressed to Forest and Stream Publishing We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle. We cannot be responsible for dereliction of mall service if noney remitted to us is lost.

Advertisements.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all con-

Mr. Fred Mather with the Forest and Stream .-It affords us the most sincere satisfaction to announce what our readers and friends will with equal pleasure learn that the FOREST AND STREAM has added Mr. Fred Mather to its staff. That gentleman will in the future conduct those departments of the journal which are devoted to Fish Culture and Sea and River Fishing.

Mr. Mather is so well known, both in this country and in Europe, as a practical fish culturist, an accomplished angler and a well-informed student of ichthyology and the related branches of natural history, that it would be out of place here to rehearse his qualifications for the discharge of his new duties. We are content to congratulate our subscribers on this accession to the staff of the paper. It is the right man in the right place,

We may add that Mr. Mather's very wide personal acquaintance among anglers, fish culturists and ichthyologists gives him unlimited facilities and resources for making the Forest and Stream now more than ever the ablest, freshest and best journal of its kind in the world.

Mr. Mather will assume his active duties here with the new volume, the first number of which will be published Aug. 5th.

THE BERLIN MEDALS.—The prize medals awarded at the Berlin International Fishery Exhibition will not be ready for distribution before next October, and possibly November. Those coming to the American exhibitor will be received by Prof. Baird, the United States Fish Commissioner, who will deliver them to the Secretary of State for distribution to those to whom they have been awarded.

The American representatives have returned from Berlin, Prof. G. Brown Goode, Mr. Fred Mather and Capt. J. W. Collins arrived on the Neckar last week. Mr. Rockwell was left in London seriously sick with typhoid fever. Messrs. True and Palmer remained behind to pack up the exhibits.

-Mr. Chas. Hallock has severed his brief connection with the "Sea World."

-Brooklyn will be specially favored next year. The New York State Association will meet there in June, and in July will follow the convention of the National Arch-

A SOCIETY ORGANIZED FOR WORK.

N association has been organized at Utica, N. Y. which promises to confine itself very strictly, and, from the high character of its membership, very effectually, too, we should judge, to the work of game protection. The call for the initiatory meeting was signed by the following prominent sportsmen and citizens: C. W. Hutchinson, W. T. Dunmore, Fred B. Divine, I. C. McIntosh, Geo. D. Pomeroy, B. A. Wilson, R. B. Jones Edwin Richardson, J. A. Erlhauer, Thos. McCorkle, Wm. Warring, Geo. Booth, W. G. Hubard, David H. Gaffin, C. W. Keeler, C. T. Mould, J. A. Maben, Oscar A. Whee ler, W. I. Martin, J. Bailey, T. F. Budlong, Gain L. Fay W. K. Gilmore, E. Z. Wright, A. H. Ballou, James G. W. E. Lewis. Wm. Townsend, T. V. Leroy, W Dimbleby, John Peattie, James Roberts, M. H. Griffith, W. Jerome Green, J. N. Hays, Fred A. Westcott, J. G. Cessford, H. C. Macy, John Gissible, Geo, H. Scranton. John D. Kernan, W. M. Storrs, John G. Brown, Chas. H. Childs, F. E. Hutchinson, E. T. Manning, Wm. B. Sutton, O. F. Golden, J. Gomph, J. J. Flanagan, W. F. Boynton, Geo. Westcott, M. J. Brayton, W. C. Harris C. W. Shapley, D. Sabine, W. J. Dickinson, James G. French, H. W. Dunlap, E. H. Divine, John Gomph, R. O. Jones, I. J. Gray, Chas. H. Carr, F. H. Lowery, Geo. A. Reynolds, Hon. J. Thos. Spriggs and H. D. Pixley.

These gentlemen, with many others, were present at the gathering at Bragg's Hotel, Utica, and at the very outset of the new organization stamped its character.

Mr. W. T. Dunmore said that the need had long been felt of a society which should look to the strict enforcement of the law, and which should take enough interest in the cause to employ its own officers in the detection The Secretary of the and prosecution offenders. meeting, Mr. Fred. B. Divine, said that the old State organization was in disgrace, as conducted the past few years. Mr. J. J. Flanagan followed with the statement that local clubs could find no encouragement from the State Association to persevere in their efforts, and that if a society meant business it must withdraw entirely from any connection with that body. Chairman Hutchinson suggested that the Long Island sportsmen, under whose auspices the State Association tournament was to be held, had it in their power to effect a reform in these matters; and Mr. Flanagan added that, from his knowledge of the tastes and character of the Eastern gentlemen, he believed that they would effectually modify the character of the annual meeting.

Several practical and definite plans of action were discussed and acted upon, and after an informal discussion the meeting adjourned.

This action of our Utica friends is a direct and natural outgrowth of the dissatisfaction-long felt and recently culminated-at the lack of any concerted action in protecting the game and fish of the State of New York, Besides their good intentions in this work, the members of the new association possess abundant good sense and determination to insure success in their undertaking.

Just what attitude the new society proposes to sustain toward the New York State Association for the Protection of Fish and Game, we are not at the present mo ment clearly informed. Two courses are open to it, One of these is to conduct its own affairs entirely independent of the State Association, thereby withdrawing from the latter all the local support of sportsmen who are earnest in their endeavors to fulfill the work implied in its name. The other course is to cooperate with the State Association -- to infuse into that body its own spirit. and by uniting with the other right-feeling sportsmen of the State, who are numerous and powerful, to determine the future character of the State Association, Whichever of these two courses the Utica society may adopt, the support of the Forest and Stream will be given to its right protective measures cordially, fully and unflinchingly. But for the good of the sportsmen throughout the State, we should much prefer to see the gentlemen, whose names have been mentioned in this article, present at Brooklyn next year, adding their forces to the ranks of those who will be gathered there then. We need local societies; they can do, and do do, what a State society cannot accomplish; but we should not give up the general State Association, nor withdraw from it the support of the local clubs.

We are not of those who would seek to organize a general protective society in New York independent of or in opposition to the already existing Association. This latter, reformed and restored to its original character, would be stronger than any new society could hope to be. If it be found practicable then, let the friends of game protection hold to the present society; if this be not practicable, by all means let the other action be taken.

Abel Crook, Esq., the President of the State Associa tion, is at present engaged in a codification of the game laws, and, with other members of the Society, is putting into action a comprehensive and well-defined plan of systematic effort to perfect the law and the agencies for its enforcement. We shall shortly lay before the sportsmen of the State the details of the work now in progress.

THE AMERICANS AT WIMBLEDON.

HE team men under Col. Bodine are doing good general work at the great English range, and showing the British riflemen that in individual shooting, as well as in team work, our men are able to hold their own. At long and short ranges in all the matches into which, by the conditions, they could gain admission, the names of the American riflemen are to be met, and generally about the head of the column. There is now quite a camp of the American riflemen on the common. and rifle factories here cannot complain that their goods are not liberally advertised.

The event of the meeting, however, so far as the Americans are concerned, is the Halford-Hyde match, to be shot on the 24th inst. It is to be a match with eight men on a side, and the Americans engaged on various teams to go into the match are Farrow, Brown, Scott, Hyde, Rockwell, Dudley, Laird, Gerrish, Clark, and Jackson. This list includes two who will drop into the reserve. It will be a very strong team if it is properly handled, and with any approach to team discipline ought to make a strong fight.

The only fault to be found with the Halford-Hvde match is that it has all along been sailing under false pretenses. It is nothing more than a match shot for the personal gratification and personal aggrandizement of Messrs. Halford and Hyde. Wittingly, or otherwise, it has been forced into prominence as an international match when it has none of the characteristics of such a contest. The men represent nobody but those by whom they are engaged and employed, and all pretensions to a representative capacity on their part are entirely false. No body or organization on this side the water sent them out. They are under no form of authority, and should defeat visit them it will not form a break in the line of American successes, bIf, as Sir Henry Halford says, the shooting of the present match will help him in his task of securing a team of British shots for a Palma contest in America in 1881, then by all means let the match go on. Let it go on in any event. There cannot be too many friendly meetings of riflemen to shoot out their little differences of opinion before the butts, but we do protest against the sly but shallow covering of gun peddlers twisting what should be the most gentlemanly of sports into a means of forcing themselves into public notice. Let the riflemen shoot freely, fairly and frequently, but let drummers take their place behind their counters and stay there.

TEAM DISCIPLINE.—There has been no end of ill feeling toward Col. Bodine, shown in Boston circles, over his rejection of Capt, Jackson as a member of the actual shooting six on Dollymount Range. It certainly does appear curious that one who stood in the front rank of American riflemen, and who could claim, by his sustained record, the title of the best all-round shot in America, should have wasted his strength as a reserve. There is no disguising the fact that the team was the best disorganized team that ever engaged for our side in an international match. So far as correspondence throws any light upon the matter, there was not much more harmony when Ireland was reached, and Col. Bodine is credited with being very much of a Sir Joseph Porter, K. C. B., in the opinion of many of his men. It certainly was a great disappointment to Boston to have Capt. Jackson so unceremoniously left out to cold oblivion and but a mere spectator of the fray in which he could have played so strong and important a part. Col. Bodine may expect to hear no end of caviling upon his return here, but he has but to point to the record of his team to silence all the grumblers. This is a case, above all others. where the end justifies the means, and that the judgment of the captain of the team was not very far wrong, no better verification than the figures of June 29th need be adduced.

Mr. OBER'S EXPLORATIONS.-We have received and shall shortly publish the initial letter of a series from Mr. Frederick A. Ober, who it will be remembered is prosecuting scientific explorations in the Lesser Antilles. In a note written at the Island of Nevis, June 17th, our correspondent gives us some hints of the busy life he is leading, and of the very satisfactory results of his trip. He says :-

"Since reaching St. Thomas I have been on a continual jump, or rather a series of jumps, and have hardly settled in one place long enough to collect my .thoughts. The fact is. I have undertaken to do in four months what six would hardly suffice for. Thus far, have been tolerably successful; have found one new bird, at least, and have carried out my programme to the letter. I am accumulating a lot of material that will keep me busy grubbing for the next six or eight months. I have climbed six mountains, and investigated four craters, and have done more walking since March 5th than I did all last summer and winter.

"Thermometer slides up and down between eighty and

ninety-five, and does this regularly every day.
"To-morrow I go to St. Kitts, thence to Montsenat, thence to Dominica—the scene of very old exploits—

thence to Trinidad, then turn about for America. see I have not yet done half my distance, though I have finished more than half my work.

THE VELOCITY OF SHOT .- Prof. Alfred M. Mayer, of the Stevens Institute, Hoboken, N. J., has been for some time past engaged in an elaborate series of experiments to determine the velocity of shot. The scene of his experiments has been the deck of the famous "Stevens Battery," a man-of-war hulk which was never launched, and which has been lying for twenty years where she was first constructed. Prof. Mayer's experiments consist, briefly, in determining the time, as marked by the vibrations of the tuning fork, elapsing between the start of the shot and its striking the target the interval being noted by the opening and closing of an electric circuit. To make the tests thorough and complete, a number of shots have been fired with different sized shot, different charges of powder, and at different distances, aggregating several hundred discharges. would take a man of Bogardus' build to stand all this without flinching. Prof. Mayer deserves great credit for his pluck in carrying through the difficult task. We have not attempted to describe the experiments, because they are to form the subject-matter of a paper to be read before the American Association of Science at Boston, next month, an abstract of which the experimenter has kindly promised to furnish for the readers of the Forest and Stream. It will be a valuable and important contribution to our knowledge of the subject. We may add that Prof. Mayer is a practical sportsman, a first-rate shot and a pleasant companion.

How Does a Dog Scratch?-We are constantly re cciving the best of evidence that the advertising columns of Forest and Stream are very carefully read. Of course our advertisers all know this; they find it out in the reg ular way of plenty of returns for the notices they insert but we are sometimes informed of the fact in a curious manner. For instance, among the cuts now in our advertising columns is that which accompanies the notice of "Cathery's Dog Soap," and represents a dog scratching himself. Now, we had not looked at this picture from an art point of view, nor even had we scanned it for its fidelity to or divergence from strictly correct canine portraiture. To us the picture represented so many inches of advertising space, for which we had received so much cash in return; and if we had any further thought about the matter it was that the picture of the flea stricken dog would probably accomplish the aim of its author by attracting attention to the advertisement setting forth the merits of this approved brand of soap.

But it appears that this cut is not perfect, and its imperfection has already been noted. A friend of ours out in Wisconsin, who is the editor of a bright paper, and, as this incident shows, a lover of dogs also, prompted either by love of the true in art, or by jealousy, perhaps, because he has not the cut in his advertising columns, clips out the picture and sends it to us with this note :-

BELIOT, Wis., July 10th.

Editor Forest and Stream :-Pray ask Cathery if he ever saw a dog scratch himself standing up?

We have hardly time to consult the authority requested, but we are very sure that we have seen a dog scratch himself while standing up. Like one of our correspondents, who said the other day that he had heard a snake but he could not give time and place, we find it diffigult to fix the exact dog and the exact occasion, and we must leave the query for some of our friends to answer. Who ever saw a dog scratch himself while standing up?

WATER SKATES.—The bare enumeration of the devices and accouterments designed to assist the modern sportsman in his pursuit of game and fish would furnish a striking catalogue of the fruits of human ingenuity. The latest addition to this stock is the invention of Mr. W. C. Soule, who has succeeded in constructing a pair of shoes with which it is possible to walk on the surface of the water. It seems that Mr. Soule had been seriously annoyed, as thousands of men had been before him, by the loss of numerous snipe and ducks which fell into the water in places which were too deep for wading and too muddy for boat navigation. He set himself to work to provide some mechanical aid out of his dilemma, and the result is a pair of sheet zine shoes, soldered air and watertight, each about five feet long, ten inches wide and five inches deep, and pointed at each end. In the top is sunk a well for the foot, and on the bottom are two propellers, or gauge paddles, one at each end. These open and shut by the motion through the water as the walker pushes his feet forward.

The inventor recently gave an exhibition of the "water skates" on the Harlem River, demonstrating their practicability in smooth water.

CAPT, E. W. PAUL.-Capt. Edmund W. Paul, who recently died in St. Louis, Mo., was in his day a noted pistol shot, whose feats will be recalled by many of our older readers. Unlike the fictitious titles assumed by modern knights of the gun, Capt. Paul's was well carned in the Mexican War, where he commanded a

Missouri company. His fame as an expert with fire-arms was at its height in 1854, in which year he was accus tomed to send out challenges containing proposals "to fit a dollar to the end of a twig two inches long, and while a second person will hold the other end in his mouth, so as to bring the coin within an inch and a half of his face I engage to strike the dollar three times out of five at the distance of ten paces, or thirty feet. I will hit a dollar tossed in the air, or any object of the same size, three times out of five, or a knife blade, placed at the distance of thirty feet. I will wager that no person in the United States can be produced who will hit a quarter of a dollar at a distance of thirty feet oftener than I can on a wheel and fire."

Since the notice of Capt. Paul's death appeared, we have written to several persons, seeking to learn some thing of his exploits; and having been so far unsuccess ful, we shall hope that this brief notice may be the means of eliciting from others some further account of a man who so outlived his fame.

A WATER CURE.—The most confirmed believer in the efficacy of the water-cure treatment would hardly send a patient afflicted with inflammatory rheumatism into the woods to live in a tent beside a stream and undergo diurnal showers. Damp sheets and rheumatism would be an unheard of combination outside of a fishing camp. Those who know "Bodines," a skillful physician of the regular school, may well be apprehensive that he has gone over to the water-cure people with a fatal sim pleness; but we take this Lycoming experience to be a merely temporary freak, incidental to the life of every devoted angler, governed in its periodicity by the condition of the waters and the biting of the fish.

We are promised a further account of "Bodines" camp life.

THE VIRGINIA CAMPING TRIP.—We again call attention to a projected tour through the mountains of Virginia. As stated in our issue of June 24th, a party of gentlemen, or possibly of gentlemen and ladies, prop to start from Lynchburg Sept. 10th and to spend a month in angling, shooting and sight-seeing among the mountains, returning to Lynchburg Sept. 29th. The opportunity here offered is one in a lifetime, and we urge upon those who would enjoy a trip of this kind to avail them selves of the offer of our friends, as already detailed in these columns. Communications should be addressed to Maj. R. C. Saunders, Careyswood, Evington, Campbell County, Va.

ADIRONDACK MAP .- Mr. S. R. Stoddard, of Glen's Falls, N. Y., has just issued a map of the Adirondack wilderness, which has been compiled from all the latest and most reliable sources of information. Access has been had by the author to important State and private surveys not hitherto given to the public. The map shows wild trails, carries, ponds, streams, etc., the location of hotels and camps, distances, and many other deails which the Adirondack visitor could not have. For sale at this office, price \$1; mounted on muslin and roller, \$1.50.

ENGLISH ANGLING STREAMS.—The second paper of "'Ringwood's' Reminiscences of English Rivers" concludes this author's chat on this entertaining topic : but we hope at no very distant day to supplement them with sketches of angling abroad by the same pen. The writer shows himself not only a thorough angler, but a close observer and a good story teller.

OLD Guns .- We intended, at the time we published "Cape Rock's" description of his Waterloo gun, to invite others of our readers, who might have stories of similar interest about various old fire-arms, to narrate them in our columns. There were cortainly enough Revolutionary muskets converted into the arms of peace to furnish material for reminiscences of this character.

THE RANGELEY LAKES .- The article published in our issue of Feb. 26th, 1880, entitled " Parmachenee and the Rangeley Circuit," is a complete guide to the Rangeley

WILD RICE.—The water in Rice Lake was very high the last spring, and consequently the rice did not come to the surface as early as usual. The prospects are, however, that a goodly harvest will be gathered.

-Brooklyn has 10,232 dogs, or 2,617 more than last year. The license fee there is \$2, with a penalty of \$10 for non-compliance. Brooklyn pays, therefore, \$20,464 per annum for her canines.

-The numerous friends of Mr. Jacob M. Witmer, of Niagara Falls, will join us in congratulations upon his marriage on the 15th inst.

NEW YORK WOODCOCK SEASON.-The open season for woodcock shooting begins in New York State Aug. 1st, except in Oneida and Herkimer counties, where it does not begin until Sept. 1st.

GAME PROTECTION.

SUMMER WOODCOCK SHOOTING.—Pennsylvania should ow follow the example of her sister States, New York, ew Jersey and Connecticut, and protect the woodcock during the nesting season.

CONNECTICUT WOODCOCK SHOOTING.—The law in Con-CONNECTICUT WOODCOCK SHOOTING.—The law in Connecticut prescribes a close season for woodcock until Oct. 1st. Last year the season was observed v ry generally by the better class of shortsmen through the State, but it was found that the pot-hunters took all the birds, and when October came there were no birds to shoot. This when October came there were no pirts to shoot. This year every body shoots, sportsmen and pot-lunters alike, and the effect has been that even earlier shooting has been practical than when the law was up July 1st. Then the season was generally observed; now all hands began to shoot in the latter part of June.

DELAWARE WOODCOCK SHOOTING.—Dover, Del., July 1st.—Editor Forest and Stream:—Since summer woodcock shooting is in order, perhaps you will allow a Delawarean to say a word on the subject, particularly as Maryland and Delaware have had to shoulder the charge of allowing their half-fledged long bils to be slaughwarean to say a word on the subject, particularly as Maryland and Delaware have had to shoulder the charge of allowing their half-fledged long bills to be slaughtered. We have been shooting woodcock since the 1st of this month (as provided by the State association), and have yet to see the first half-fledged cock or the one to be caught by putting salt on its tail. Is it not rational to suppose that sportsmen would prefer hunting in the bracing and invigorating fall, to the hot, sweltering tramp through sawgrass and briar and along branches where millions of mosquitoes and sheep flies hold high carnival, raising innumerable welts on the recking neck and torn hands of the intruder, and where the ever ready and faithful animal is often forced to seek a shady spot for a moment's rest, and will open his mouth to receive a few drops from your precious flack of water or teat to quench his thirst? But this cannot be; we must shoot in the season provided by our State laws or be content to find a few stragglers in the fall. Many have written on this subject, but none of them criscise a Southern law from a Northern standpoint. Our sessons written on this subject, but none of them criticise a Southern law from a Northern standpoint. Our sessons are earlier than those of Northern New York, Massachusetts, Connecticut, etc. Our children mature earlier, and so do our birds.

Has the Delaware Game Protection Association nothing to say, pro or con, on the subject?

EVERETT VON CULIN.

A New Canadian Preserve.—Hay Bay, Ontario, once a famous ducking ground, but of late years as overrun and ruined by game-baggers, is to be preserved like Long Point, Lake Erie. A company, composed of the owners of lands bordering on the buy, some residents of Napanee and one or two denizens of Belleville, has been formed, and the shooting ground will be carefully protected, wild rice planted, and other means taken to induce the ducks to frequent the bay again.

MIGRATORY QUAIL IN MISSOURI.—The Jefferson City Sportsmen's Club have received an importation from Messina, and haveturned them loose in the vicinity of that city, some at the farm of Dr. McWorkman, eight miles west of Jefferson City; some near Castle, Resome near Osage City, on the Ewing farm, and som Callaway County Sportsmen in Missouri and Karare urged to look out for the birds, and to secure a protection so far as may be possible.

Game Bag and Gun.

JULY IS A CLOSE MONTH FOR GAME.

-Address all communications to " Forest and Stream Publishing Company, New York."

GAME PROSPECTS .- We shall thank our friends to send us notes on the game prospects of their respective localities. The very open winter would seem to warrant the of a large supply of birds next fall. A Washington friend tells us that birds have not been plentier in that region for many years, and the brief notes we have received from other parts of the country point to the same conditions elsewhere.

New Jersey-Hammonton, July 3d.—The last heavy rains have damaged the quail crop mightily, and the prospect for good shooting in this neighborhood is poor. L. W. S.

SNIPE AT GOOD GROUND .- Good Ground, L. I., July SNIP AT GOOD GROUND.—Good Graduat, L. I., July 18th.—Bay snipe are flying fairly now, and some big bags have been made. Mr. C. E. Perkins, of Hartford, Conn., killed forty-seven large snipe on the 17th, and it looks very much like a good season here, as more snipe went North this spring than usual. WILLIAM N. LANE.

FERNANCINA GUN CLUB.—Fernandina, Fta., July 15th. TERMARIA ON CLOS.—Fertamutal, Fig., Jug. 1911.—The Fernandina Gun Club was organized on the 7th inst., with the following officers: President, F. B. Papy; Vice-President, Dr. A. C. Ford; Secretary, Dr. J. D. Palmer; Treasurer, H. E. Dotterer; Attorney, H. J. Baker.

Baker.

Connecticut—Tolland County, July 12th.—The country about New England and the Middle States has been, according to reports, very dry this season. The highlands of Connecticut, in this section, have been favored with abundant showers for the past two months, and the growing crops were never in better condition. Woodcock are very plenty, coming here from all the dry sections north of us, and the law is well kept. The shooting here in October will be better than for many years past. This is always a favorite locality; no better. I doubt, can be found in the country.

Mars. past. This is always a favorite locality; no better, 1 doubt, can be found in the country.

Mars.

This statement couflicts with the reports we have re-

ceived as to the supply of birds in other parts of Connecticut this year.

MICHIGAN DEER HUNTING.—Escuraba, Mich., June 11th.—Deer unusually plenty on northern peninsular;

they are in season here from Aug. 15th to Nov. 15th. Sporting men will find good deer shooting here in September. No other game to mention.

Always pleased to help hunters who come in my way. Went into the woods in 1873 with a bad lure. Health improved, and I threw up my business and live in the most of the time. ber most of the time.

MANN.—The game and fish laws of the State of Maine are published in pamphlet form for gratuitous distribution. The Commissioners of Fisheries and Game are E. M. Stillvell, Bangor, and Everett Smith, Portland. They request that any violation of the laws be reported to them. The close seasons in Maine are:—Salmon, July 15th to April 1st, following; trout, togue and land-locked salmon, Oct. 1st to May 1st, excepting on the St. Croix River and fits tributaries, and all the waters in Kennebee County, in which the close season is Sept. 15th to May 1st; black bass, Oswego bass and white perch, April 1st to July 1st; moose, Jan. 1st to Oct. 1st; cariboo and deer, Jan. 1st to Oct. 1st; traffed grouse, commonly called partridge, and woodcock, Dec. 1st OSept. 1st, following; quail and pinnated grouse, Jan. 1st to Sept. 1st, and quail are protected until Sept. 1st, 1883; wood duck, dusky duck, commonly called black duck, May 1st to Sept. 1st, insectivorous birds are always protected.

NEBRASKA GAME NOTES.—Omaha. July 10th.—The

coast shooting; plover, May 1st to Aug. 1st; insectivorous birds are always protected.

Nebraska Game Notes.—Omaha, July 10th.—The prospects for a fine shooting; season are good—quail and chickens are plentiful all through the surrounding country—indeed, quail are to be found in large numbers, within the city limits. With Omaha as a center, the sportsman will be able to find good sport in almost any direction he may wish to travel. Conveyances can be hired at reasonable rates, and as the roads are good, a twenty or thirty mile drive is nothing. Good water can be found almost everywhere, as the bottoms are but a few miles apart. A trip up the Elkhorn valley will give plenty of sport, and the valley itself is the finest section of country to be found in the West. There is good bass fishing (said to be) in the Elkhorn, but other streams will not give much satisfaction. Omaha boasts of two sportsmen's clubs, the workingmen's having the most vitality and largest membership. Pigeon and glass ball matches are frequent, the last occurring on the 5th, when nearly 1,000 birds were put up. The bird trap used is a new one, the invention of Mr. Hathaway, a gunsmith, and is without doubt the simplest and best made. Sportsmen here uniformly overload their guns, and consequently do not make the best possible scores their guns are capable of doing. This fault, however, is a common one all over the country. I have seen good guns condemned simply because they were overloaded.

Nautricus.

Carson, Nev., May 26th.—I notice that some of your correspondents are relating wonderful (b) stories about killing two snipe, when but two birds took flight, with one barrel. I will relate my experience. In the fall of ISTS I was hunting jack snipe on a favorite ground when one bird rose, flying directly from me, keeping within a few feet of the ground. I pulled on him at about twenty-live yards, and he fell dead. As my dog—a retriever only—went to pick up the bird, my eyes lit upon another a few yards further on, and in a direct line with the one I had just brought down. Upon my dog bringing his second snipe, I found it to be badly hit. My theory for this singular double is that the second bird, being in direct line with the one on the wing, the former came in for his share of the charge as the shot struck the ground. In the same field last fall I bagged two snipe with one barrel as they "crossed"—only two birds in the air at that moment. Only last week, while out dove shooting, I killed two birds with one barrel as they took flight; and the same day a friend who accompanied me flushed three doves, killing one with the first and two with the second shot. Doves are the only birds the law permits us to shoot at present; they are quite abundant. Messrs. Crawford, De Neuff, Rose and myself bagged 137 one day leat week. Carson, Nev., May 20th.—I notice that some of your

Messrs. Crawford, De Neuri, Rose and myseit pagged 137 one day last week.

An Echo of the Big Shots.—Editor Forest and Stream:—In your last issue I notice the amnouncement "California Ahead"—a reply from the Pacific coast, in which it is claimed that my score of eighteen snipe in thirteen consecutive shots is badly beaten. To beat my score he quotes an enormous bag (made in six hours) of seven dozen snipe, also states that four were killed at one shot. I cannot see how or upon what grounds the gentleman from California can claim an offset to my score, for the reason that I only claimed to have killed more snipe in a given number of consecutive shots than any one that I had yet heard of. I made three double shoots and one triple, there being three birds together only once, and I killed them. The gentleman from California mentions, also, that his friend also made a double shotnon bird on the ground unseen, the other on the wing. I have frequently done this and seen it done by others.

I claim that my double and triple shots were not "scratches." At the time this shooting was done, although a youth, I was about as near perfection in the handling of a gun as I ever expect to be, and as an illustration of it, I will mention that I have called my shot and knocked the tail-feathers out of a dove flying to roost (and they fly faster than any bird in the world, especially at this time), without hurting him. To do this I used No. 19 shot, and I have done it often.

Seven dozen snipe in six hours is wonderfully good shooting, but I will give the bag made by two gentlemen in this county some years ago. This was told to me when I quoted the exploit of the friend of the gentleman from California, which I also explained as an illustration of its remained as a six of the men in this county some years ago. This was told to me when I quoted the exploit of the friend of the gentleman from California, which I also explained as an

shooting, but I will give the bag made by two gentlemen in this county some years ago. This was told to me when I quoted the exploit of the friend of the gentleman from California, which I also explained as an offset to my score previously given you, and which even they acknowledged to be the best on record. These two gentlemen killed over two hundred and eighty snipe in one day, and have frequently killed from one hundred to one hundred and fitty after I o'clock P.M. They killed sometimes five, six and seven birds at one shot. Every sportsman here knows that it is the habit of snipe to flock in immense numbers just prior to their migration northward, and, although they are wild, it is not an unfrequent occurrence to hear of several being killed at one shot on the "Teche," I am almost positive that I can obtain a score from the so-considered best snipe

shot in Louisiana, of over one hundred birds scored in a day, and in a manner that will eclipse the bag mentioned by the gentleman from California. I have heard it from his own lips, but have forgotten it.

I am ready to yield the palm to any sportsman who will exceed my score—"honest Injun"—all things considered. I forgot to mention that I used, at that time, a nuzzle-louder, made by J. P. Murray, of Columbus, Ga.; 13-bore, with 2jdrs, powder and 4ozs. No. 7 shot. Until you, Messrs. Editors, can supplant my record more substantially, I must claim my score still in AD. VANCE.

SNIPE SHOOTING—Hammonton. N. J. July 3d.—In

Ga.: 13-bore, with 24drs, powder and 402s. No. 7 shot. Until you, Messrs. Editors, can supplant my record more substantially, I must claim my score still in AD. VANCE. SNIPE SHOOTING—Hammonton, N. J., July 3d.—In your last issue you published a communication written by "If. C.," of San Franciseo, and headed "California Ahead." in which he claims that the score of P. S. Mullin, killing in six hours seven dozen English srips. As the best shooting yet heard of. I will and do agree with "H. C.," that it was big shooting; but nothing very extra, considering the time and birds plenty. I will now give you, not in a spirit of braggadocio, the best snipe shoot on record. In the spring of 1881 I was in Illinois, shooting in Menard County. On the 3d of April I went from Bee Grove to Middletown, Logan County, a distance of about five miles, of course taking my gun, and accompanied by my pointer dog Jack. On the Middletown prairie is a snipe ground of about sixty acres, On reaching it, I found it alive with English snipe. I never saw so many birds on the same ground. I had only four pounds of shot with me (had I had a bag of shot, I could have used it all). In a little less than two hours I killed sixty-six English snipe and five green-winged teal. I killed once, three snipe with one barrel; and several times killed two birds crossing. I had to shoot very small loads, as I wished to see how many birds could kill with four pounds of shot. I measured each load of shot in my hand, and can truthfully say that, toward the last of the shooting, the shot would not more than cover a twenty-five-cent piece. The birds were very tame, and jumped close to me—the smallest load killing them clean. On my rarival at Middletown, I counted out my birds on the counter in Mr. Reed's store, in the presence of Hon. Colby Knapp, Drs. T. B. Perry and Hill, and Mr. M. Reed, all of whom will confirm my statement. On another occasion I left the house (situated on Be Grove, Menard County, Ill.) to shoot a few snipe on Salt Creek bottom, not going off

of it a few weeks afterward.

I have seen snipe in thousands in Illinois, and many and many a time have I seen more than a hundred jump at once. I would like much for Capt. Bogardus to state through your paper the greatest number of birds ever killed by him in one day's shooting. For those who have never shot snipe in Indiana and Illinois I would say they have no idea what good snipe grounds are, or how easy it is to kill (provided you know how to do it) your dozens of snipe a day.

L. W. Sharp.

Powper Measures.—Manchester, N. H., July 9th.—
During the last year I have become somewhat interested in glass hall shooting, and after shooting a few rounds a few days since a number of the club asked me what the matter was with my shells. I told them Idid not know, and that I loaded them myself and used the same grade of powder as other members of the club, and my score was as good as the average. I began to think of the nuatter and thought I would test we have a contracted the same grade of the property of the property of the property of the property of the necessive I was in our series. the club, and my score was as good as the average. I began to think of the natter and thought I would test my shot and powder measure. The measure I use is one of James Dixon & Sons' combination, and the smallest charge marked on it is 3drs. for powder, which by actual avordupois weight is 1dr. and 20grs, and the weight of the largest charge marked on the measure, as the full capacity, is 5jdrs. and the actual weight is 3drs. On trying it for shot I find it practically correct, according to the same scales and weights. Now the question with me is, why should there be this discrepancy between the quantity as marked on the powder side of the measure and the actual weight? while on the shot side it is practically correct? I have spoken with a number of our club in regard to this, and no one seems able to give any reason for it, and only say that "the Dixon measure is the standard measure and they all go by it." If you could give some explanation of this subject through your very interesting and valuable paper it would be a great gratification, not only to me but to other members of the club, who have become interested in it.

MENBER MANCHESTER SHOOTING CLUR.

The powder measure is arbitrary, and does not agree with the avoirdupois weight. Dizon's measure is the standard.

SHOOTING MATCHES.

NORWICH, N. Y., July 8th.—Friendly match between the Binghamton Gun Club and the Norwich Gun Club, on the grounds of the latter. Card's rotary trap; 18 grads rise; 20 balls cach. The Norwich Club won the match by the following score:—BINGHARTOS CLUB.

RANGE AND GALLERY.

Rosyon, Mass., July 11th.—Everybody's Match was well filled to-day, as all the participants were aware that it was the final shoot in this match, which has received the partronger from all parts of the country. The day proved one of the best given to the marksmen this season. The wind came gentle in its force and easily controlled. The mingo which danced before the targets was thoroughly perplexing, and made the iris of the bull look ragged, and it was hard to reach. During the later stages of the shooting the wind changed several points, and when the dark clouds east their shadows upon the targets, the gentlemen looked to their windage and watched close to elevations. The shooting was first class, as the summary indicates, and closes a match which will stand in the foremost rank of the many regular shoots which have become so popular at Walnut Hill, Mr. Charles shoots which have become so popular at Walnut Hill, Mr. Charles snoots which have becomes opportunat without this in contract the succeeded in scoring 49, the largest score ever made in any match in the world with a military rifle. Richardson also made a good 49, "sporting rifle," and was followed by Mr. Jowell with the same score. Subjoined are the winners' scores and prizes:—

Not relishing the defeat of their team the officers of the fort pro Not relishing the defeat of their team the officers of the fort proposed another match during the week, to take place in Cheboygan, and sent word over Thursday that if acceptable to the team from the gun club, they would be over Friday on the Mary to shoot the return match. The time was satisfactory to the club, and word was sent to Mackinate to that effect, and this afternoon, on the range at the trotting park, the contest took place, resulting in a very excitume and close contest, but victory rested with the Cheboygan club by one point. The following is the score:—

| | FORT | T MACKINAC | TEAM, | | |
|-----------------|------|------------|---------|-----------|--------|
| Wm. Christian | | 4 | 3 3 3 4 | 4 4 4 4 4 | 4 4-37 |
| II Mullon | | 4 | 3 4 4 3 | 8 5 2 5 5 | 5 5-41 |
| P. McNamara | | | 3 3 4 4 | 4 4 4 8 | 3-37 |
| Sergeant Downey | | 4 | 3 4 5 4 | 4 4 4 4 | 3-39 |
| Total | | | | | 151 |

CHEBOYGAN TEAM Mullov B. Mullen...... Chas. Kitchin..... T. A. Perrin. W. S. Humphrey..

Total. 155

The teams shot in the order of their names. Barney Mullen, of the Cheboyyan club, and Christalin, of the fort team, leading off. It will be noticed that when three men on each side had shot it stood a tie, leaving Sergeant Downey and W. S. Humphrey to decide the match. With only two shots remaining to each side it was a tie, on next to the last shot Mackinae led one, but Mr. Humphrey's bullsey to the three for Sergeant Downey settled it, The representatives of the gun club shot under a disadvantage in both contests, owing to the fact that in all their practioning they had used peep sights at the breech, with globe, wind gauge sights at the muzzle, and in the matches they were discarded, they using only the plain, open sight. Then the fort team used the hip rest in shooting, while the Cheboyyan team shot with arm extended. Under these circumstances we think the result highly creditable to the representatives of the gun club.

DETAILS WANTED—In yours of May 6th I see John W. Oakden challenges as a second.

DETAILS WANTED.—In yours of May 6th I see John W. Oakden challenges any man in the world to shoot 40 shots 300 yards with him. How does be want to shoot—off hand, at rest, or under the rules of the N. R. A., at 4 foot target, 8 inch bullseye?

Howard Fry, Williamsport, Pa.; W. S. Brown and with, Hastings, Mich.; E. T. Church and wife, Charlotte, Mich.; E. W. Devol, J. B. Devol, L. B. Devol, Marietta, Ohio, John K. Hogt, Major A. G. Constable, Brooklyn N. Y.; D. Y. R. Manley, Toledo; Will H. Thompson, Mrs. J. Lee, Crawfordsville, Granger Smith, John Wilkinson, Chiego; A. S. Brownell, Boston; Ford P. Haut, C. Grauville, Hammond, Ohio; W. Kyle, Highland Park, III. The convention assembled in the parlors of the Piece Palaso Hole, Mr. Frank Sidway, of the Buffalo Toxopholites, the first Vice-President, being in the chair, Mr. D. V. R. Manley, of Toledo, Secretary.

An interesting letter from the President of the Association,

President of the Association,
An interesting letter from the President of the Association,
Mr. Henry C. Carver, of Chicago, was read by the Secretary.
CHICAGO, July 10th.

Franklin Sidway, Esq., Chairman and Delegate of the National Ar-

Franklin Sittuny, Ess., Chairman and Delegate of the National Archery Association, Buffalo, N. C.;—
Dear Sir: Regretting my inability to participate with you in the good cheer and friendly emulation which shall characterize the second assembly of the archers of the United States, in the beautiful city of Buffalo, to do honor to the long-low and wayward shaft. I beg to extend herewith to your body, to the officers of the Association, and all resident and visiting at chers, my heartiest greeting and best whese for that I till measure of interest and pleasure which must always attend these national gatherings of lady and centlemon archers. The future grand nections of and pleasure which must always attend toese national galacterings of lady and gentlemen a redoces. The future grand meetings of our Association shall indicate a steady and permanent growth in Interest and harmony, until they shall become the acknowledged social events of each midsummer senson; and I venture the prediction that no future gathering of the archers of our National Society will surpass in genuine enjoyment and hearty good cheer,

Society will surpass in gentilities of the meeting which is appointed for the 13th, 14th and 15th insts.

I congratulate your executive committee upon the very attractive programme which it has issued, and which must commend

itself to all archers.

Itself to all archers.

The novel feature introduced of giving a choice of prizes to the successive and successful winners seems to me both admirable and just.

Personally I rejoice that your committee decided to abolish eash prizes. In my judgment the wisdom of this policy, if perpetuated, will be felt in the yours to come, in that you will always securation attendance and action configurations for the letters. petuated, will be felt in the years to come, in that you will always secure the attendance and active coöperation of the ladies of our American society, whose presence is indispensable to the success of a pastime so wholesome, exhitarating and health-giving as is archery. My own observation convinces methat the introduction of money prizes would be fatal to the healthy growth, elevation and perpetuity of this delightful recreation, that the ladies, generally, raise their voices in protest against such a policy, and I carnestly recommend that in your deliberations, provisions and instructions for the grand annual meetings of 181 you give due consideration to the views of our lady nemprovisions and instructions for the grand annual meconigs of 1881 you give due consideration to the views of our lady num-bers; in other words, should the question of money prizes come before your body on the evening of the 12th inst., that you sub-mit such question to a vote of the individual membership of the Association in order that such a provision may not be incorporated into the constitution without a majority concurrence of in-

ted into the constitution without a imagerity concurrence of in-dividual members.

With reference to admitting individual archers to the privileges of our Association, I should deprecate such a system as being prejudicial to the basis upon which archery is building and growing. The tendency of the custom, if adopted, would be to discourage the formation of new clubs throughout the country

of scourage the formation of necessary cases. I commend this sub-ject, in its many bearings, to your careful consideration.
I would further suggest the adisability of so mending Article 10 of the constitut on as that it shall read, "the champion medal shall be awarded to the individual member making the greatest number of points a the Double York Round," to be computed as

Onlows:—
Greatest gross score, 2 points; greatest gross hits, 2 points; greatest score, 160 yards, 1 point; greatest shifts, 100 yards, 1 point; greatest score, 80 yards, 1 point; greatest score, 80 yards, 1 point; greatest score, 80 yards, 1 point; greatest score, 80 yards, 1 point; greatest score, 80 yards, 1 point; greatest hits, 80 yards, 1 point; greatest score, 80 yards, 1 point; greatest hits, 80 yards,

In case of a tie in most hits or greatest score at any range, such point or points shall be equally divided.

In case of a tie in points and score, the medal to be awarded to the archer who shall have made the greatest number of hits. In case of a tie in points, the medal to be awarded the archer who shall have made the greatest number of hits.

The championess medal shall be awarded to the individual lady member making the greatest number of points at the "Double National Round," consisting of 98 arrows at 69 yards, and 48 arrows at 50 yards, said points to be computed as follows:-

Greatest gross score, 2 points; greatest gross hits, 2 points; greatest score, 60 yards, 1 point; greatest score, 60 yards, 1 point; greatest score, 60 yards, 1 point; greatest hits, 60 yards, 1 point; greatest score, 60 yards, 1 point; greatest hits, 50 yards, 1 point; total, 8.

total, 8.

Ties to be decided same as in the contest for the champion medal. I should consider that by this method overy archer would receive full measure of credit for meritorious skill in hits or score at some one or more, or all, of th: ranges of the round, even having lost the honor of winning the medal. With reference to a location for the Third Grand Annual Meeting to take place in 1881, I would respectfully submit that the National Asso-

place in 1881, I would respectfully submit that the National Association is yet young, and will require patient nursing at the hands of strong, ardent archers and patrons; hence I would recommend you to select a point that shall be central, and that thrives and abounds in archery.

In retiring from the Presidency of the National Archery Association I feel it to have been a great honor to have held the office. I return sincere thanks to the officers and members of the Association for many courtesies received. In conclusion, I shall always consider it a special privilege to render such substantial aid seles in my nower toward strengthening and persutating a ways column tay power toward strengthening and perpetuating a pastime whose "fascinations shall keep hold on the hearts of men so long as the new moon returns in heaven a bont, beautiful bow." Very respectfully,

HENRY C. CARVER.

The proposed change in the plan of giving championship med-

The proposed change in the plan of giving championship medsla was adopted by the convention.

After various measures relating to the business details of the
meeting, it was moved and seconded, after some discussion, to
bar out Mr. Burnham's new invention, a peep-sight, from this
meeting and from all future meetings of the Association.
The shooting began Tuceday morning, ou the parade ground,
where twenty-six targets and five white tents had been prepared
in the best possible mannor. The weather was at first threatening, but sunshine succeeded the clouds, and the day proved to be
addictiful one a delightful one.

From 10:30 o'clock until 4 the arrows sped to their marks, the gentlemen contesting in the double York Rounds and the ladies in the double Columbia Round. Wednesday the weather was intensely hot, with a variable wind. The shooting, as on the previous day, being at the double York and Columbia Rounds. Thursday, came the team shoot, one of the most interesting events of the meeting. Following are the complete scores of the tourna-

NEW YORK ARCHERY CLUB.-New York, July 17th .- The match between teams of this club and the Multnomah Archers, of Port-land, Oregon, was shot on the part of the home club, Friday, July land, Oregon, was shot on the part of the home club, Friday, July 16th. The Multinomah Archers shot June 36th, and telegraphed their scores, which the New York Cluh also did. The weather was very warm and shooting did not commence until 5 o'clock During the shooting at the fifty yards range the team shot in a thunder storm, which affected some of the scores. Taken altogether the showing is good considering the little practice obtained during the past month or more. The return match will come off as soon as the arrangements can be made with the Portland Club. The Nottingham Club, of Elizabeth have accepted the challenge sent them, but the day is not yet named. The Sputen Duyril Club have challenged the New Yorkers, and the teams will probably shoot the American Round. Saturday, July 24th, at Smutren

Granger Smith...... J. R. Adams....... J. Wilkinson.....

Ladies, 30 arrows at 30 yards. Gentlemen, 30 arrows at 40 yards. Archery INVENTION.—Mr. S. E. French, of this city, a member of the Manhattans, bas invented an archery utensit which be calls the "draw-and-loose." Its purpose is to assist in drawing back the bow-string and in loosing the arrow; enabling the archer to make a better score by giving greater case in manipulation. Many persons find difficulty in the "loose," because the string hurts their fingers. By tho use of the "draw-and-loose," all this is avoided. Mr. French finds that his own scoring has steadily improved since be has pur his invention into practice, and be claims that his little addition to the archers' outfit will prove of universal nonularity. universal popularity.

FIXTURES.

July 22, at Paterson, N. J. - Paterson vs. Newark. July 23, at Prospect Park. - Manhattan vs. New York July 23-24, at Hamilton. - Staten Island vs. Hamilton.

—The match between the Manhattau and New York Clubs has been postponed until to-morrow.

"The Newark Cricket Club, of New Jersey, held its monthly meeting on Monday last, when a number of applicants were ad-mitted to membership. William Brewster, the well-known pro-fessional, has been engaged for the season, and a large number of fixtures are being made.

ONONDAGA 18. OSWEGO FALLS.-This match was played at Syra President, L. L. Peddingbaus, Marietta, Ohio; Third Vice-President, L. T. Church, Charlotte, Mich.; Corresponding Secretary and Treasurer, G. F. E. Pearsall, Brooklyn; Recording Secretary, J. V. J. Manley, Toledo. Executive Committee: A. G. Constaof time the game was declared drawn. —The Longwoods defeated the Fall River Cricket Club on their grounds on July 19th. Longwood, 105 and 150; Fall River, 30. Geo. Wright scored 54, not out, in second innings of Longwood.

DETROY, Mich., July 20th.—The Staten Island Cricket Club played a match yesterday and to-day with the Peninsular Club, of this city. The Staten Islander played two innings, scoring 49 in the first and 19 in the second. The Peninsulars, one innings, 185.—Our English correspondent writes, July Joli, i Eton and Harrow are playing to-day. Harrow, lirst innings, 185; Eton, first innings, 187.

first innings, 107."

HAMILTON US. TORONTO .- Played at Hamilton, Ont., July 17th, and resulted in a draw. The game was witnessed by a large num-ber of speciators, among whom there were many ladies. Rain, however, unfortunately interfered with the play and caused much delay. Score:—

YACHTING NEWS.

NEWPORT YACHT CLUB.—More than a year ago we wrote: "If the club voice to make itself feet in the annals of yacht racing, the club voice ilbertal prizes, open to all recognized yachts, and the club voice libertal prizes, open to all recognized yachts, and the club voice libertal prizes, open to all recognized yachts, and heat will annually come to the line which will show more cracks with racing large alot than any other match in American waters, owned to be come the highest ambition and the worthicts laurels and American yachtsman could wish. To pocket the club prizes in club races, with no entries worthy the rame, is drivel in great and American yachtsman could wish. To pocket the club prizes in club races, with no entries worthy the rame, is drivel in great water and the worthicts laurels and American yachtsman could wish. To pocket the club prizes in club races, with no entries worthy the rame, is drivel in great and the prizes and yarnad match every year under liberal and enlightened sailing rules; no cheap plated ware, but a solid, substantial from the Recel Lightship around the Vineyard and hone, and for the twenty tonners and under, to Block Island and back; a regatta committee who knows its business, and cur graps something more than length measurement and balloon jibs. There are great option to the prizes, and wo warrant the Newport Yacht Club en most of the material at hand, weak-is-need though it be in a soaway. Let them select courses in waters our crafts can venture in, put up the prizes, and wo warrant the Newport Yacht Club open races will bring to its roil members by the hundred and clippers by the score. Will the new board of officers let the world know they live?"

Will the new board of officers let the world know they live?"

Will the new board of officers let the world know they live?"

latter town must be content with second rink as a yactume profit and it thus growls forth its discontent in the New Yrrk Herdit of recent date:

and it thus growls forth its discontent in the New Yrrk Herdit of recent date:

To see that the property will be visited by the various yacht squal-rons while on their annual cruise, and it is probable that several ruces will take place over the Block Island course. New Bedford, however, by a wise consideration of the wishes of the profit of the profit of the profit of the profit of the yacht clin performance of the yacht clin

attained just what we owished to see "the Newport people" do, and that without any "cups and money from Folker And Star Mark and the without any "cups and money from Folker And Star Mark and the will do something toward regaining for the pretty fown its wonted precedence as a yachting port. The officers for the year are: Commoder, I kortsught of Philadelphin; The officers for the year are: Commoder, I kortsught of Philadelphin; The officers for the year are: Commoder, I kortsught of Philadelphin; The officers of the year are: As a superior of Cambridge, Mass. Measurer, Richard Youmans, of Newport.

A New Cutter, "The O.K. Kazé, cutter, 23 tons, belonging to Rear-Com, Sumicharst, K. N. S. Y. S., has been sailing well in her initial races. She was built by Butler, of Hallfax, from his own lines, and was also sailed by him in the recent render, July 3d. Inc., and the present of the transfer of the present of the transfer of the present in the eyes of her to bring her down to proper lines. Yet in a good working the schooler, of 2s tons. The Pastime is a recent production of D. J. Lawlor, the well-known anval architect of Chelesa, Muss. and is very much liked in Hallfax waters, barring her rather full quarsepoed. The racing between her and the cutter will always be close, and afford the opportunities for gauging the support value of the single sick of the cutter or the excess of tonnage on the part of the Schooner.

ATLANTIC YACHT CLUB.—Com. Fish has issued the following orders regarding the annual cruise of this club:-

APLANTIC FACIFY CLOB.—Com. Fish has issued the following orders regarding the annual cruise of this club:—

GENERAL ORDERS—NO. 1, on Saturday, July 10th, 1880.

The fleet will assemble at FLAGSHIP AGNES, July 10th, 1880.

Its consistent of the samual cruise.

Classes D. E. F and G. the Vice Commodore commanding, will form the first division.

Classes A. B and C., the Rear Commodore commanding, will form the second cruise of the samual commodore. The samual commodore is the samual commodore commanding will form the second dim—From the flagship; to prepare.

Second Gun—From the flagship; to prepare.

Second Gun—From the Rear-Commodore's flagship, ten minutes later; for the first division to start.

Third Gun—From the Rear-Commodore's flagship, ten minutes later; for the first division to start.

The movements of the fleet will be: Saturday, July 31st, at 320 r.M. (first gun), from Whitestone for Black Rock. Boats leave blor No. If, East Ritver, Pine street, at 2:19 P.M., and James slip at 2 F.M., connecting with Long Island Kaliroad train, due at White-Monday, A. Mr. 23 c. M., from Black Rock for New London.

Monday, A.M. 23 c. A., From Black Rock for New London.

P.M., connecting with Long Island.

Monday, Aug. 2d, 6 A.M., from Black Rock for New London.

Thresday, Aug. 3d, 9 A.M., from New London for Block Island.

Thursday, August 5th, 10 A.M., from New Bedford for Oak Bluffs or Vineyard Haven.

Friday, Aug. 6th, 8 A.M., for Newport. Saturday, Aug. 7th, from Newport for Greenport. I. A. Fish, Commodore. By order of W. W. RICHARDS, Fleet Captain.

My. W. Ricotards, Fleet Captain.

1. A. Feil, Commodore.

W. W. Ricotards, Fleet Captain.

1. A. Feil, Commodore.

The Stran Caramana,—At a second attempt to launch this nondescript more but strape gave way, and she was again bauled modern to be supported to the second strategy of the second strat

INTER-LAKE ASSOCIATION.—We are glad to see the first initima-tion of the formation of an inter-lake Yachting Association. The value of such an organization to ske we achtsuch we have al-ready pointed out at length in these columns. Our friends in the Wors have always exhibited so much enterprise in building up the sport, in salling open matches and in adopting sensible rules of measurement, that we feel certain the new project will suc-ceed when once fairly undertaken.

ceed when once fairly undertaken.

New Canors.—The new canoes made by W. P. Stephens, Rahway, N. J. are from models of his own, devised to meet certain experiences which his practical knowledge of canocing has augmented to be supported by the control of the con

modes at prices to suit all.

THE PADLE.—Devotees of the paddle and novices about to encage in the sport will be interested in a well written and comprehensive composition on the subject of canoeing, which appears in Harper's Monthly for July. It is from the pen of Com. Chas. E. Chase, a gentleman whose significant particular to our readers, and whose long experience enables him to write as an authority and when the pen of the price canoeis many a useful little him when didnot or in examp. Chase, a gentiem and whose long e and to give to bro afloat or in camp.

and to a vector of the consistent and yet as some in the number of an analysis of the consistency of the con

Bostox Ciry Beratta.—Among the first-class center-boards, stoop Stren did some very fine sailing, and if she can repeat her performance, Mr. L. H. Keith certainly has one of the fastest stoops of her tonnage. She actually beat Madeap in a fresh breeze over a twenty mile course, duly 5th, by some seconds, though 4ft. 7lm. shorter, and with allowances beat the bigger boat 4m. 28s.

County Chatlenge Cup, the Expert, 22ft, Hin, E. G. Souther, won from Hurt Times, Ist, 10in, J. J. Bennett. This makes the fourth successive victory of the Expert. The race was sailed in Lynn harbor over a seven mile course, from club house around Shagg Rocks, and return. Wind light and not favorable to the Expert, as he is faster in strong winds. She was sailed by Neal, who skippers her in all matches. Mr. C. G. Weld, of the Murici, has now challenged the without.

EXPERIMENTAL.—Smith, of City point, Boston, has finished a model 10ft. long, if t. beam and 2ft. deep, for a mechanical genius who thinks he has hit the right thing for high speed. A large boat will be built after this experimental model.

MURIEL'S RECORD.—The Boston Herald says: "The sloop Muriel, formerly the Nattle, built by W. B. Smith, has made a remarkable record this season. She has entered in eight races, including Gity of Boston regalita, and she has won the first prize in each without any time allowance, although she has been generally pitted against larger boats. Mr. Arthur Dean has charge of the Javiel, and will be her skipper during the season's regalits."

the Muriel, and will be her skipper during the season's regartas."

New Yacturs.—Jamiel Pound, Jr., of Gloucester Mass, has dipished a new sloop for the Brown Bros. Sie is 24ft, long and 94ft,
beam, called the Venus. Richmond, of Mystie Bridge, Conu., has
overhauled the old time Haswell, formerly owned by Mr. C. H.
Mallory. She is now named the Harmy Butler and hails from
Providence. The Shiph, Mr. Mallory's new schooner, described
Sitt, long, 22ft, beam, 7ft, deep, draws oft, water; mainmast,
68ft; mainboom, 44ft. The sloop Aller, formerly belonging to
Mr. Harny Steer, of Providence, has been altered into a schooner
by Smith, of Nyack. She is 75ft, long; mainmast 65ft, foremast
16ft, jib-boom outside of cap 12ft., main-boom 16ft., main-gaft
24ft, fore-boom 20ft, fore-gaft 18ft.

22ft., fore-boom 20fts, fore-gaff 18ft.

ROYAL NOVA SCOTIA.—In a match sailed July 10th, for yachts exceeding 15 tons, there were three entries: Pastime, schooner, 35 tons, W. II, Brookheld; 24 thatrass, schooner, 17 tons, D. Cronna, and Di-Lag, cutter, 25 tons, Rear-Com, Sumichman, Course from Anderson (1998). The Course from the C

was: Pastine 23.1.2, G:-Kave 2.2.23, Albatross 2.5,130, SUNBEAN-NEVA.—Probably a match will be made between the new Newt, built by Hutchins & Prior, Boston, with the well-known Sunbeam, Messes, Fox & Kenney.

AMERICA-PHANTOM.—It has been rumored for some time that America and Plantom are matched for 20 miles to windward this fall. All right; here is a chance to test a deep keel ugainst one of the skimming dish style, and the America's victory, which we retain the state of the pastill further the propagation of sound tless on the question of depth.

CANOE FOR SALE.—New canvas canoes, never used, made to rder, can be bought at reasonable figure. Address this office.

order, can be bought at reasonable figure. Address this office. SEAWANIARA YAGUT CLEM.—The annual cruise of this ciub his now hearly been brought to a close. From the start it has been the property of the property of the property of the property of the first point of the property of the first point of which, and all hands hung well together under the flag of Com. W. A. W. Stewart. The squadron rendexvoused at Glen Cove according to orders July 13th. The following got under way at 7:30 bound for Morris Cove, the first port to be made: Schooners, Stokes: shoops, Ragina, 24 tons, Commonore W. A. W. Stewart. Schemer, 16 tons, Vice-Commodore C. S. Lee; Corsair, 25 tons, S. B. Dawson; Wage, 19 tons, L. Charlon, M. D. Francia, cuttry, 24 tons, P. B. Hitchcock; Petrel, cutter, 7 tons, John Hyslop; Venture, 25 tons, C. L. Persins; Fischer and Royer, 30 tons, W. E. Isedin, 25 tons, C. L. Persins; Victors and Royer, 30 tons, W. E. Isedin Corming the "afterputant" in the doubtful wind, For several bours it was more or less of a drift, the order of sailing changing time and again as successive craft caught the catspayer. At 3 P.M. welcome signs of a lively southeast wind appeared to the re-

lief of the fleet, and working sails only soon became the order. As the yachts had been pretty well sentered there was a good deal the stronger of the pretty well sentered there was a good deal to the stronger of the pretty sentered there was a good deal to the stronger of the pretty of the pretty of the sentence of the pretty of the sentence of the pretty of the sentence of the

THE CANOE CONGRESS.

THE CANOE CONGRESS.

Billio Forest and Stream:

Mr. C. F. Gardener, of New York, reached Caldwell, Lake George, July 14th, and has, at the request on N. H. Hishop, taken George, July 14th, and has, at the request of N. H. Hishop, taken charge of the camping grounds offered for the tene of the Canoe Congress by Messrs, Crosby of Crosbyside, Seelye of Fort George Hotel, and Dr. William Adamson, Président of the Lake George Beautia Association, Mev. C. A. Cressy left Lisbon, N. H., research of the Congress o

THE LARGEST CLUB.

There is out Stream:—
There seems to be some don't as to what club really is the larg.
There seems to be some don't as to what club really is the larg.
There seems to be some don't into the Now York Yacht Club credited with eighty-dro sait, the Reverly with olg hty-three and the Eastern with seventy-two. You say the Borerly taxes the lead in point of numbers, but your own figures would seem to contradict the statement. I make the order as fullows: First, The Research of the Company

ther correspondent is right in the order in which he places the Our correspondent is right in the order in which he places the clubs. The paragraph concerning the leverly Y. C. was written before the receipt of this year's club book of the N. Y. Y. C. We may here add that all clubs exhibit a very marked increase in their fleets for the current year, due unquestionably to the recent prosperity in business as well as the rapid popularization of the sport, many new owners hostim colors for the first time who but a year ago shunned the sea as they would a postilence.

A CHANCE TO TRY.

New York, July 16th.

Editor Forest and Stream:—

1 see by this week's paper that the owner of the "Thingy Reed sleep, 36ft, mean length, of Hoston, 'monounces himself ready to sail his keel against any conter-board which has a mind to try him on." It he will toake his shoop fast, to his keel, and being him on." It he will toake his shoop fast, to his keel, and being cruise, I know of a center-board shoop called the Elephant that will take the starch out of him for fun or money. I have all along refrained from taking part in the keel as, center-board controversy because more theoreting cannot convince either partizang.

CALTAIN.

CALTAIN.

We are not aware that the owner of the Viking has issued a formal challenge, though he was reported as willing to sail centerboards on even terms.

han connected though he was reported as withing to sail center-boards on even terms.

Annivers—The two new steam yachts, Coroni and Stranger, already described in these columns, arrived from the Delawing Joy Stat. They tell these columns arrived from the Delawing Joy Stat. They tell the state of the sta

New Special at Sea.—The little 5ft. bout, Little Western, now making the passage to Europe with two hands, was spoken, in dealers, the special

THE SAD FATE OF MONTE,

THIS story comes under the head of "Froth" in a contemporary :-

There was no better behaved dog in the entire State of Illinois than Ballard's "Monte." He was young, handsome, intelligent, educated, and of good moral habits. He was a high-bred setter, with long, soft hait, dark brown in color and tawny under the throat. His eves were soft and melting, in their expression, his silken ears had the patrician droop, and his aristocratic tail was eloquent in its expression of Joy and affection, and rigid as an axe-handle when its owner came to a point. As for his nose—there never was such a nose lung to a dog before. He could scent a quali across a forty-acre field, and could retrieve anything except his reputation in the latter part of his career. When Ballard was mervous or flustered, and missed good shots, Monte cheerfully came up to be lieked with the ramrod, magnanimously taking all the biame on himself; but, when anybody else of the party missed a fair shot, Monto made no attempt to conceal his contemptuous disgust. On these occasions he usually relieved his mind by licking the other dog. Monte had a bright future before him. But, alas! in an evil hour, he tasted his first glass of beer, and from that moment was a ruined dog. The way of it was this: It was a hot day in August, and Ballard and his friend had been hunting over the fiery stubble for hours. No water was to be had, though a keg of beer was in the wagon. Monte was nearly gone up. His tongue lung out a foot or more, and his palpitating sides indicated speedy dissolution. Ballard, unable to obtain

water, gave him a quart of beer, which he lapped up with satisfaction and demanded more. He was given a pint more. Considerably refreshed, the hunt was resumed; but Monte behaved strangely. He dashed about in a reckless manner, and tumbled headlong over fences. He barked in a maudlin, incoherent way, and quarrelled without cause with Smith's dog. He seemed to have lost the control of his nose, and would run over a covey of grouse, and a moment after come to a dead point on a field mouse or a grasshopper. It was painfully evident that Monte was drunk—drunk as a fiddler. The next morning Monte got up with a raging headache. He felt bad. His hair pulled. But he seems to have heard of the drunkard's axiom, "The hair of the dog is good for the bite," and he accordingly followed Ballard down town, and "rung in" on him while he was taking his matulinal whiskey and tansy. Ballard stock ale. Several loafers thought it was funny to see a dog making a beast of himself, so they invited poor Monte to take another and another, until the upshot of it was he went home that night drunker than ever. It got noised around town that Monte liked beer, and everybody began to invite him. The consequence was that he became a sot.

Monte made frequent efforts to reform, but dog-flesh is weak. His good master, becoming a larmed, served

Monte made frequent efforts to reform, but dog-flesh is weak. His good master, becoming alarmed, served

notice on all the whiskey shops not to let Monte have anything; but all to no purpose. He found means to get drunk every day. Beer got too weak for him, and he took to whiskey. Finally the end came. After an unusually protracted debauch, Monte began to see things. He would bristle up at the imaginary dogs, and then shrink in the most abject terror from some imaginary assailant. Then he would come to a dead point on nothing, and again he would hustle imaginary cats about the yard, and, getting them in a corner, bark for hours at vacancy. He couldn't sleep; he couldn't eat; he couldn't do anything sensibly, and finally died as the fool dieth—of jim-jams. We buried him under an apple tree, with a headboard bearing the following inscription:—

SACRED TO THE MEMORY OF "MONTE,"

ONLY DOG of A. C. Ballard,
Who, (the Dog) Died Dec. 12th, 1858,
OF TYPHODE PISEMONIA.

Superinduced by Overwork and Mental Anxiety,
"GONE, BUT NOT FORGOTTEN."

We couldn't find it in our hearts to say that so good a dog had died of delirium tremens.

HUNTING THE WILD GOAT .- The residents in the

neighborhood of Lexington avenue and Sixty-ninth street within the last few days complained to Capt. Gunner, of the Twenty-eighth precinct, that enormous numbers of goats rendered that region unsavory, especially in the hot weather. Every circus bill in the district had been devoured, and a legion of fierce-bearded, frisky capricornians were devastating the garbage bins and gutters. In their petition to the police the suppliant taxpayers declared that even the paving stones were in danger and asphalt pavement was a luxury. Capt. Gunner, thus appealed to, fitted up a large truck, which he yesterday put in charge of Roundsmen Chun and Dalbee with ten patrolmen in uniform. They were sent out at 3 o'clock in the morning with instructions to capture all the billy goats which roamed among the rocks and sported in back alleys. For ten hours the hunters continued their work, followed about by a crowd of scolding women, who every now and then rushed from the surrounding shanties to protect their ill-smelling pets. By 12 o'clock forty-one goats had been captured, two patrolmen had recieved black eyes, four had their coats torn, one was relieved from any desire to be seated for a week or so, and the entire neighborhood had been turned upside down. The noisy, odorous and rebellious load was taken to the city pound and there placed beyond the reach of fence bills and ash barrels. It is proposed to continue the raid when volunteers can be procured.

Sailing Southward.

EN ROUTE TO TRINIDAD, July 3d. THE promise made four months ago, that I would write a latter for Former in the same of th has haunted me like a nightmare; yet such has been the nature of my occupation-one day on board some coasting vessel, another in town, the next in the country, and again in the depths of the forest, that I have gladly procrastinated. The pledge was unexpectedly brought to mind some three weeks ago, and in this manner: It was in the island of Nevis, latitude 17°, while I was the guest of a large land proprietor there, Sir Graham Briggs. The library of Sir Graham is well stocked with English books and among them I found one bearing the title, "Wild Life in Florida." Glancing it through I found my own nom de plume, and investigating further discovered that the author of the book above mentioned had copied entire one of my letters to FOREST AND STREAM, written six or seven years ago. He mentions having met "Prof. Fred Beverly," and then gobbles entire a letter of mine, filling ten pages of this purloined volume. I say purloined, for even the very title to his book was taken from the general one given to the letters I was writing for your paper in the times when we were young. This was enough to cause me at once to dip my pen and inflict upon you a letter then and there; but other matters claimed attention, and it was postponed. Since then I have winged my way still further south, by way of Montsenat and Dominica, Martinique and St. Lucia, and last evening we left Barbados, and are now speeding toward Trinidad. As I write in the pleasant smoking room of the Flamborough, one of the delightful steamers of the Q. and G. P. S. S. line, we are steaming past the island of Tobago. A host of memories rush upon me now, for I am right in sight of my old hunting ground of two years Tobago | an island all alone, forsaken, half-abandoned, yet containing in its dark forests and behind the lines of cocoa palms that fringe its shores, such birds as belong only to the great southern continent, and such shooting as few other islands, except Trinidad, will give. Like a great wave these memories of my past wandering

crowd tumultuously upon me, and the scenes of my former wild adventures invite me again and again,

attention to the opening of the present voyage. The first week in March I left New York on the steamer Haulji, commanded by that prince of true and gallant seamen, so long and so well known to Southern travelors, Capt. Faircloth. We were bound for St. Thomas by way of Porto Rico, and if I were to say that we arrived eventually in safety, I should but give utterance to a foregone conclusion. We sailed southward, crossed the gulf stream in due time, and successfully passed through the strong passage between Hatterss and the Bernudas. The second day we could venture on deck without overcosts, and the fourth found us sighing for a touch of winter. And so the days passed on, and the North Star sank lower and lower, and the gades blew milder and balmier, as the Hadji plowed her way onward, with her prow pointed toward the Caribbean sea. There were but three passengers, and at least one-third of the number was sick. For the fortieth time I lay in my berta and resolved never again to venture on the sea. I always do this when I go to sea—decide that I do not nean to repeat it. But then, what's the use? Just as soon as my foot touches land the old longing for new scenes comes over me; I am just as much refreshed by a touch of earth as that old giant of mythology. But what a horrible thing is seasickness! I shudder at the bare thought of what I have endured when suffering from that affliction. And the worst of it is, one cannot overcome it. For seven years I have been a victim, and seven times seven is the number of my attacks. I have tried everything, but without avail; the nearest approach to a cure is to seek a shady spot and lie down as quietly as you can. You lie at full length in your bunk, and groan in misery, and there comes up out of the water a vague and watery shape, taking the form of a devil fish, and it squats upon your stomach and envelops you in its slimy arms, and squeezes out of you all life and all desire to live. The remedies prescribed for seasickness are as many and as various as those in vogue for a

OUTIFF FOR CAMPING IN THE WEST INDIES.

Every time I start out for the Southern forests the question arises: What shall I take with me? And every time I return, no matter how much I have taken, but a small portion of my original outfit returns with me. It is, of course, desirable to travel as lightly equipped as possible; it is equally desirable to carry all one wants—this axiom is thrown in gratuitously. Combining in myself the two occupations of collector of birds and the photographer, I am obliged to carry, in addition to what would answer the wants of tourists in general, special apparatus and equipments; yet I am not very heavily weighted with my trunks, having learned, from a bitter experience with portor and boatmen, how to dispense with what I don't need.

Now, thee is the matter of clothing; take nothing

experience with porter and boatmen, how to dispense with what I don't need.

Now, these is the matter of clothing; take nothing but what is light and loose and easy fitting—in a word, take all the old clothing you can collect. You will never find a people more grateful for old clothes than the negroes you will meet in the woods and in the country. A "Yankee coat," or shirt, is more preferred by them than great riches, and for a pair of trowsers they will call down upon you the richest blessings of Heaven. I can almost trace my line of travel by the line of garments I have left behind me—"Here," I might say, "I gave away a coat, here a vest," etc.—it is such a pleasure to give away to a grateful recipient that for clothing in this country is linen, duck, or drill; and though it is universally worn here, and the tailors here have made garments of it from time immemorial, yet it would be better to have them made in the State than out here. Now though there are some trades for which the negro is can of the tailors here are either black or colored men. Now though there are some trades for which the negro is especially adapted, and in which he fairly shines, while the white man appears mean and despicable—such for instance, as that of the barber or waiter—it was very evident that he was not created for a tailor. That profession requires art and calculation, neither of which is possessed by the son of Ham. A "ready-made" suit from the States, even of the lowest price, will far surpass an ordered one here. Take, then, a fair supply of cool clothing, such as you would wear North in the months of July and August.

For the rough climbing in the mountains and the riding over rude trails, one needs an especial outfit. Forth-

For the rough climbing in the mountains and the rid-ing over rude trails, one needs an especial outifit. Fortu-nately for me, just previous to my departure I bethought myself of an advertisement in the Forest and Stream, and invested a small sum in a sportsman's coat, two pairs of leggins and a pair of shoes. No investment has ever paid me a better rate of interest than that one, and I have only regretted that I did not make the thing more complete and add several of the other articles which the last three months of forest life have shown to be so neceslelong only to the great southern continent, and such hooting as few other islands, except Trinidad, will give, hooting as few other islands, and heart the coat, he no can be a few of the marks of many a stain from leaf and tree, but never a rent. It attracted attention and encomiums wherever I vore it.

For a month and a half of this trip I was in islands well similar one before the set of the marks and full of pockets, has been worn by me the marks and full of pockets, has been worn by me the words, and leaf tree, but never a rent. It all the marks and full of pockets, has been worn by me the words, and beauty, my American was a few of light, was for the coat, he had a large of light, was a few of light, was a few of light, was for the coat, he had a large of light, was a few of light, was a few of light, was a few

head, etc., the spines of which wound one terribly. Several times I have had my knee-pan stuck full of these spines and have been made so lame that I could hardly walk. Threading the fortuous goat-tracks among rocks covered with these cacti, I have felt it a comfort and consolation to have on the canvas leggins; and as for the shoes—I can't render them justice. They were broad-soled, armed with hob nails well riveted in, and made of leather so well dressed that three months of almost constant wear finds them as soft and pliable as at the beginning. I have climbed hills and mountains, walked mile after mile over rough stony paths, and have waded for hours in shallow salt-ponds, and those shoes have not abraded the least particle of skin from my feet. Encased in these shoes and eggins I could bid defiance to thorms and rocks, and could leap down the steep mountain trails so rapidly that my negro attendhance to thoms and rocks, and could leap down the steep mountain trails so rapidly that my negro attend-ants were always left in the rear. If there was one thing I congratulated myself in bringing out, it was that pair of shoes, for they gave me a feeling of real security every time I put them on; against dogs and snakes they were a perfect protection; with them on one could even kick at fate itself.

every time I put them on; against dogs and snakes they were a perfect protection; with them on one could even kick at fate itself.

For a hat, wear anything but a black one; by all odds the best hat for a tropical climate is the "pith helmet" of the East Indies, which can be obtained in St. Kitts, Antigua, Martinique, Barbados and Trinidad; in fact, in nearly every island of importance. It is the only hat that is actually sun proof, though, from the porous nature of the material composing it, it will not do for rainy weather. It is sold at various prices, eight to twelve shillings (English) being the average. It is extremely light, helmet-eliaped, protects the eyes and back of the neck; the rim is lined with green, to protect the eyes, and it is well ventilated. No nearer approach to a perfect hat has ever been manufactured. Imitations are much worn here of cork and caoutchoue; but, though a trifle more shapely, these latter are heavier and hotter.

As it is necessary, in a tour for the collecting of birds, to have a gun that will be useful in shooting humming-birds and the like, I had long looked in vain for the right article. Just before leaving, a friend showed me a small gun with a pistol handle—a sort of compromise between a gun and a pistol—which was breech-loading, with a barrel about two feet in length. There was no name to indicate the maker, but upon the breech was stamped the somewhat equivocal motto, "never miss." This prejudiced me against the gun, for it reminded me of that man who ordered his tombstone in advance of his death, and had inscribed upon it what the papers at that time called a "rather premature statement"—"none knew him but to love him."

It was a convenient weapon, however, and, riding or walking, I generally carried it in my hand, as one would

time called a "rather premature statement"—"none knew him but to love him."

It was a convenient weapon, however, and, riding or walking, I generally carried it in my hand, as one would a stick. For some time 1 did not even fire it; but one day (it was in the island of St. Johns), I went out with it to a frangipanni free that was full of blossoms and of birds. The first bird fired at was a large thrush, which fell dead, leaving me astonished at the performance of the spiteful little pistol; then I shot at a humming-bird, with like result. Before I left the tree I had secared nine birds in nine consecutive shots. This, taking into consideration the small size of the charge fired, the few shot, and the minuteness of the body of a humaning-bird, ought not to be considered bad for the gun, In all, I have fired about four hundred shots with it, and have had occasion to use it more than my larger gun.

Though but few of the islands of the Lesser Antilles contain animals large enough to be classed as game, yet one must have a gun suitable for shooting sea-birds, man-o'-war birds, pelicans, pigeons, etc., as well as the monkeys and deer that abound in some islands. Such as the monkeys and deer that abound in some signals. Such a gun, of 12 bore, 28 inch barrel, weighing seven and one-half pounds, I have always had with me as a mainstay. For the last eight years I have used a genuine American gun, and have never had reason to prefer any other; in fact, the "Fox" gun, made by the American Arms Company, of Boston, suits me better than any other; in fact, the "Fox" gun, made by the American Arms Company, of Boston, suits me better than any other; in fact, the "Fox" gun, preference I maintained several years ago, before

pany, of Boston, suits me better than any other 1 have ever used.

This preference I maintained several years ago, before the gun had arrived at the perfection of the present arm. But now, with all its improvements, I am only strengthened in my opinion that it is the best gun for the money, American or foreign, that the market affords, The one I now own, though a comparatively cheap gun, has every advantage that any gun can possess—pistol grip, rebounding locks, etc.—and has attracted attention everywhere I have been. The guns most in use out here are of two kinds—the cheap French, and the higher-priced English. The former are mostly pin-fires, varnished stocks, and with stiff, clumsy action, with a profuseness of showy engraving, and having a tawdry effect generally. The English guns are much inferior to equal priced guns of American make. In finish, action, symmetry and beauty, my American gun surpassed them all, and several gentlemen declared their intentions of ordering a similar one before, the shooting season came round. Powder and shot may be bought at any of the sea-ports, and in Barbados, shells, cartridges, and all the requirements for a breech-loader.

The gun is the only arm one is likely to have use for though a revolver or rifle may be of use in whiling away the time at larget practice. So far as necessity for the vevolver goes, there is none. Mine has hain in my trunk since I left, and is rusty for want of use.

A harumock, a pair of blankets, a rubber blanket, and the various simple articles of use in camping out in the North—all these should be taken. Books should be taken sparingly, and then only such as you would wish to leave among the people, for the various and varied use o which one may put his time will permit of little time for reading. Paper, ink, penells, note-books, etc., of course; and, if one is artistically inclined, he should by all means attempt to sketch the wondrous mountains and the good of the course of the course, and, if one is artistically inclined, he should by all means attempt to sketch the wondrous mountains and indispensable part of my outfit formerly I worked the old-fashioned. "wet process," and it took two large trunks to hold camera and chemicals; but now, all this is changed; my exarera occupies but about a square foot of space, and plates for one hundred pictures are packed among my clothing in my trunk. The instrument to which I am indebted for all this saving of space and luggage is called the "Tourograph," and is the invention of a young photographer of Boston, Jit. Iliair. At first sight it appears only a sequare box, but by removing a side box is disclosed, which contains a dozon prepared "gelatine plates." These plates are contained in grooves, each in a separate groove, and held in place by screws, each one numbered. Each number corresponds with another on the focusing side, so that, by an ingenious arrangement, all one has to do to expose a plate is to focus for distance; then, turning the focusing slide till the number of the plate wanted is in the right place, loose the screw, holding the plate in position, thus letting it drop into a rack below, by means of which it is rearried into focus. The lens is then un

could desire, oven with the thermometer at minety or thereabout.

The Bocas are now in sight, those gateways to the Bay of Paria and Trinidad, and I must bring this roundabout ramble to a close. To-morrow is the Fourth, which, being Sunday, will be celebrated on the fifth. To-morrow and the day after I shall be in Port of Spain, and I'll wager I don't smell the smoke of a cracker. In refreshing contrast comes the memory of a Fourth in Martinique two years ago. There were no crackers, no fireworks and no speeches, except one by our Consul: "Takeanother glass, my friend, in honor of the great American cagle." In my mind's eye I see him yet, beaming upon a half circle of chairs, said chairs ranged about a two-gallon jar of punch, each chair containing a patriotic American, for the tinac being. It was only a week ago that I heard him give orders to Sam, his servant, for the brewing of a mightier punch than that of two years ago, and here am I, three hundred miles away, with not eye na brother American to grasp my hand and exclaim, "Long may she wave!" Here's to the flag, all the same, though.

BRIGHT FEATHERS .- Mr. Frank R. Rathbun, who is well known to many of our readers by his valuable ornithological papers, has commenced the publication of a beautiful work on birds, entitled "Bright Feathers." The author's purpose is to furnish, in cheap form, a series of illustrated biographies of ten or twelve of the more highly colored birds of the Northeastern States.

Judging from the initial number, the work will be one that all should have. It is a well printed folio on heavy tinted paper, with wide margins, and is illustrated by an excellent colored plate and a number of beautiful woodcut vignettes.

The purple finch is excellently portrayed in the plate the coloring is good and the attitudes natural and lifelike. Figures are given of the male and the female, and of the egg—all natural size. The text is bright and interesting, and contains quotations from many of the best authorities. The present work will have a great value in arousing an interest in ornithology among many who, without such a volume to bring it to their notice, would never realize the beauty of the science. Mr. Rathbun's volume will, we trust, be as successful from a pecuniary point of view as it promises to be from an artistic standpoint; and we do not hesitate to recommend it to our readers. The price per part is \$1.

COUNT L. F. DE POURTALES.-We regret to notice the death of L. F. de Pourtales, long an associate of the elder Agassiz. He came to this country twenty years ago, and has devoted much of his time to the study of the Radiata. He has been engaged in deep-sca dredging, and was for some years an assistant on the Coast Survey.

Count de Pourtales was a Swiss by birth, and recently came into possession of estates in Switzerland. He was the author of many valuable scientific papers, prominent among which are his writings on corals

THE SENSES OF ANIMALS .- A correspondent writing from Savannah, Tenn., gives an interesting account of the acuteness of the senses of certain birds and insects in perceiving the approach of an earthquake long before it was observable to human feeling. He says:

was observable to human feeling. He says:—

"On the evening of the 18th inst, a few minutes before 8 o'clock, I was sitting on the front porch trying to get cool and listening to the katydids that were keeping up a racket all around. A large colony of martins have established themselves in the upper part of the porch and were quietly sleeping. All of a sudden the katydids stopped short, and the martins came flying out in a breakneck fashion, as if a snake had invaded the quiet of their home. In a few seconds afterwards we felt a distinct shock of an earthquake, which lasted about a minute, shook the house and rattled the windows. The shock was felt by every one in town, and extended for miles around. The wave seemed to travel from the southwest to northeast. What I want to know is why and how did the birds und the katydids feel the shock before the rest of us?

A SNAKE STORY .- A correspondent has sent us an ex cerpt from the York Pennsylvanian, which gives the details of a remarkable circumstance, deserving to go on record. No one can cavil at this story or pretend to disbelieve it, for we have the most convincing proof of its truth. Our correspondent states most emphatically that he knows Locust Run well, and that it is a great place for pheasants (local for ruffed grouse), for he has killed them there; he does not, it is true, say that it is a good place for black snakes, but, on the other hand, he does not say that there are none there. What could be more convincing! We have Locust Run, the pheasants and an inherent probability that black snakes exist. No one but an extremely captious person will be disposed to doubt the veracity of the York Pennsylvanian's little tale. Here it is :-

Here it is:—
Several weeks ago, while clearing new land at the foot of Locust Run, in Lower Windsor township, there was discovered a plieusant's nest with twelve eggs. Thursday afternoon, last week, John and Peter Emenheiser, sixteen and nineteen years old, on looking at the nest espied seven young pheasants, about two days old—five eggs remaining unhatched. At the edge of the nest lay a black snake, five feet ten inches long, the serpent having charmed the chirping birds. The youths killed the snake, and throwing it into the road a few feet from the neet, the seven rescued pheasants manifested astonishing excitement, and crazed with agony hastened to the serpent, some creeping under it. At a short distance was the old bird, realizing the perilous situation of the brood, screeching and lapping her wings.

A PROLIFIC MOTHER.—Early in April last, a three year old short horn heifer belonging to Mr. Wm. Myers, of Pittsiord. Monroe County, N. Y., died during the period of gestation. On examination after death it was found that she was about to become the mother of no less than six well developed calves. The sire was a Durham yearling sixteen months old. The remarkable litter, if such a term may be employed, are said to be now in the possession of Mr. C. K. Howlett, of Rochester, N. Y.

WHITE HARRS.—Corpus Christi, Texas.—Editor Forest and Streum:—I have seen white jack rabbits in this State many times in the spring, but they were always a good ways off and I always had the sun at my back in

looking at them. On several occasions I have killed these apparently white jacks, and found, when I got to them, that they were ash colored, or simply dingsy old fellows, which had not yet shed their long winter hair, which, like the hair of all animals exposed to the weather, gets dingsy or fadded, just as every black horse loses his gloss and is a dirty brown in color just before shedding in the seriou.

and is a dirty brown in color just before shedding in the spring.

The sun stining on this dingy, faded hair from the proper angle makes it look white, but the color green, red or yellow, would be as nearly correct as white for any specimen of jack rabbit it has fallen to my lot to observe. I have seen deer identically the same way—white at a distance apparently, but never white when killed. As to my opportunity of observation, yon will be satisfied when I state that I have lived in Western Texas over thirty years and am fond of my gun. Of one thing you may be assured: In Western Texas jack rabbits do not turn white in winter.

The hare referred to by our correspondent is no doubt.

The hare referred to by our correspondent is no doubt Lepus callotis, which is not known ever to turn white in winter. It is not probable that L. campestris would do so either, as far South as Texas.

HISSING SNAKES.—Washington, July 2d.—Editor Forest and Stream:—"Enquirer" asked, on page 389 of your issue of June 17th, "Do snakes hiss?" Our observations on the collection of snakes in the Smithsonian institution enable us to assert that snakes do hiss. This is especially the case with the Heterodon, the gopher, or indigo snake (Spulotes crebennus), and with the pine, or bull snake (Pithyophis melanoleneus). The sound produced by them, apparently in anger, is a loud and distinct hiss. A sound closely resembling a hiss, but produced by rapid motions of the tail, is noticeable in snakes of the species Bascanium constrictor.

Observer.

Manchester, N. H., June 25th.—Editor Forest and Stream:—One summer's day in 1870 I was hoeing in a garden, when my attention was attracted by a peculiar hissing—almost singing—note, different from anything I had ever heard. I followed up the sound, and found that it came from a common striped black and yellow snake. He was coiled up under a projecting stone of the wall, and, with mouth partly open, was singing his little song. His voice was sharp, pretty high pitched, and with a harsh, grating quasity. I am no naturalist. Was it Heterodon platyrhinos?

B. B. Probably not Heterodon.

Probably not Heterodon.

State School of Mines, Golden, Col., June 30th.—Editor Forest and Stream:—I had often doubted the same fact as "Enquirer," until two or three years ago, when in the month of May I turned up a flat stone along the flanks of the Rocky Mountains and removed a pair of large bull snakes (a harmless species, sometimes attaining four or five feet, and marked not unlike a rattlesnake). They greeted nee with a storm of hissing, that put all skepticism on this matter to flight; and their formidable attitude of defense and noise made me start back for a moment ere I attempted to capture the pair. This is the only instance of hissing I have met with in my inter-course with the snakes of this region, of which the bull snake, rattlesnake and blue racer are the commonest. I never heard a rattlesnake hiss. These snakes had lain there all winter, and were probably hybernating.

A. LAKES,

Augusta, Maine, July 10th.—Editor Forest and Stream:—Some fifteen years ago, then residing in Wareham, Mass., I was preparing to go down the river to fish for sharks, when I was suddenly astonished by hearing our large mastiff dog, Barnum, violently barking. I had my shark spear in my hand, and went to the hedge and was startled to hear a loud hiss. Upon investigation, I discovered a large adder holding my dog at bay. His head was flattened, and he was certainly hissing fearfully. Taking the proper precautions, I pinned him with my spear, and of course killed him. He measured two feet eleven inches in length.

Editor Forest and Stream :

Editor Forest and Stream:—
Observing in your issue of July 8th the remarks on' 'Do snakes hiss,' '1 am induced to relate the following incident: A few days ago 1 was fishing in a creek in Sullivan County (this State). Passing along down stream, 1 arrived at a point where the water, after tumbling over some rocks, formed itself into a small eddy. Here I was surprised to see lying on the bank of the stream twenty or thirty water-snakes—large and small and of a variety of colors. Most of the snakes disappeared into the water as I approached. Those that remained on shore coiled themselves up and raising their heads darted back and forth with remarkable rapidity their forked tongues, making at the same time a distinct hissing noise. The 'dhissing' was, in fact, so loud that it surprised me and I stood for a moment observing the different snakes, all of which ing" was, in fact, so loud that it surprised me and I stood for a moment observing the different snakes, all of which seemed to be in a state of frenzied excitement. One in particular—about two feet in length and of a greyish white color—darted at me several times as if to drive me away, uttering the while this hissing noise. It was dispatched in the usual manner. Perhaps this will convince "Shadow" that water snakes as well as land snakes do

hiss.

Another incident: Not long ago I was on the Hudson Palisades with a friend, We were seated upon a rock leisurely putfing our cigars, when suddenly we were startled by a loud hiss (similar to that sometimes made startled by a load his similar to that sometimes made by parent gees, close to our heads. Springing to our feet, we found ourselves confronted by a red viper or copperhead (Trigonocephalus contortrix) about three and one-half feet in length and one and one-half incluss in diameter at the thickest part. Its head was almost hat and would probably measure two inches across. The animal did not appear to be in its pleasantest mood, and had we not beat a retreat we would probably have felt the force of its wrath. We returned shortly, however, with a noose, made of twine and attached to the end of a stick, and captured Mr. Copperhead as he was about to spring at one of us.

We intended to bring the snake to New Yorkalive, but the porter into whose charge it was given tightened the cord, thereby strangling it.

OZIAS S. FREEMAN,

NORTHERN RANGE OF THE BLUE GROSBEAK .- In your NORTHERN KANGE OF THE BLUE GROSEBAK.—In your issue of June 24th. a paragraph states that this species was shot in Massachusetts in May hast. In order to give its most northern range, I may say that I secured a line male specimen some years ago on the north shore of the St. Lawrence, opposite Bic. I think I published this fact in the Canadian Naturalist at that time.

Montreal, Canada. WM, Cutper.

Hish Culture.

HATCHING THE SPANISH MACKEREL.

THIS valuable fish, Cybium maculatum, the first hatching of whose eggs by the United States Fish Commission we noticed last week, was first discovered to be spawning in Chesapeake Bay by Mr. R. E. Earll, of the Commission, who hatched the first fish on the 29th of June of this year. It seems that his attention was attracted to it by finding one with ripe eggs while he was gathering fishery statistics for the census in Mobjack Bay, an arm of the Chesapeake, and on going over to the cast side of the latter he found the fish in much greater numbers in the vicinity of Crisfield, where it has been caught by the local fishermen for many years. but its movements and spawning habits were not at all known. Here Mr. Earll found that the fish were just heginning to spawn, and he immediately started for Washington to report his discovery to Prof. Baird, whose delight at the announcement far exceeded that with which he had just received a telegram from Germany telling him that the first prize, the Emperor's Cup, had been awarded to him at the International Fishery Exhibition in Berlin for the best collection illustrating the fishery resources and fish culture of America. Mr. Earll was immediately sent back to the spawning grounds with instructions to make a full investigation, hatch some if possible, and report. This he did, and with such hatching apparatus as he could gather he made the trial with perfectly satisfactory results, hatching about a half million of fish in three or four different lots. His first lot was washed out of the boxes by a storm; he then covered them and hatched some which went through the wire-cloth and escaped, although this was of thirty-two wires to the inch, a fact which gives an idea of the smallness of the young fish. He then fastened a covering of coarse cotton on the top of the wire-cloth and had the pleasure of seeing the fry remain after hatching. water was \$49. Fahr., and the fry hatched in eighteen hours after impregnation, but swam belly up on the first day on account of the large oil globule which prevents them from going below. The next day they righted and in two days they were enabled to go to the bottom. They are reported as being unusually hardy, forty of them having been kept for two days in a glass globe without change of water.

The subsequent experiments of Major Ferguson have confirmed the observation of Mr. Earll, and the next season there will no doubt be many millions of this toothsome fish hatched by the Fish Commission, for most fortunately its season begins after that of the shad has closed and at a time when the Fish Hawk has little else to do. It will be entirely feasible to transport the fry of this fish by steamer to Delaware Bay and other parts wherever they may be desired, and so to increase the stock in many places. Their great numbers of eggs, from 200,000 to 500,000 in an individual, and short period of hatching, render it possible to turn out immense quantities during their extended spawning season.

Another fact was established in these experiments; that is, the ability of the fry of the Spanish mackerel to live in brackish water, it being believed heretofore that this fish could only survive in very salt water. Mr. Earll certainly has reason to feel proud of his discovery, which is a most important one to the fish culturist, the epicure and the fisherman, for this dainty fish is very irregular in its appearance in our markets, and consequently varies in price greatly, being ranked by many as the best of all fishes for broiling, and when plenty seldom selling for less than twenty-five cents a pound, but when scarce often bringing a dollar.

McCloud Rivei: Salmon.—United States Fishery, Baird, Shasta County, Cal., July 1st.—The salmon in the McCloud River seen to be more plentiful than ever this season. We caught with a small piece of net, about one-sixth the size of an ordinary seine, one evening last week, 150 salmon at one haul. This, of course, would be nothing to speak of after our bridge and rack for obstructing the salmon are in, but the river is now entirely free from obstructions.

The character of the rod fishing is well shown by the fact that Master James Maynard, Jr., of San Francisco, caught opposite our house, with a bamboo rod, ten salmon before 9 o'clock last 'flursday morning,' the largest three of which weighed respectively 14 pounds, 12; pounds and 10 pounds,

ises to assume appalling proportions; as a whole deer now ises to assume appalling proportions; as a whole deer now only lasts the trout two days. Luckily we have salmon to feed then on in the sunmer. Those that want Mc-Cloud River trout (Salmo iridea) for public distribution can probably get all they wish for this year by making seasonable application to Prof. Baird, United States Commissioner of Fish and Fisheries. Although a beautiful and delicious tish, the Salmo iridea will live and thrive in warmer and muddler waters than the Salmo Footscalls and consequently reviewless. thrive in warner and muddler waters than the Samo fontinalis, and consequently particularly commends itself to the inhabitants of the States lying south of the natural habitat of the fontinalis. LIVINGSTON STONE.

IMPORTED SAIBLING AND WHITEFISH.—United States IMPORTED SHABLISI AND WHITEFISH.—ORREG. STATE Fishery, Baird, Shasta County, Cal., July 11th.—Edil Forest and Streum.—I had the good fortune to recei last winter from the German Government, through the kindness of Herr von dem Borne, of the Deutsche Fischer

kindness of Herr von dem Borne, of the Deutsche Fischerei Verein, a present of several thousand eggs each of two varieties of the whitefish of Lake Constance, Switzerland, and twenty thousand eggs of the variety of German trout known as saibling (Salmo salvelluus).

Most of the eggs arrived in good order. The whitefish, soon after being hatched, were turned loose, and the young saiblings I left with Mr. Gilbert, of Plymouth, Mass., to be reared in his ponds. I am happy to inform your readers that Mr. Gilbert gives the following favorable report of them: "The saiblings are doing linely. None have died, and they grow much faster than trout (Salmo Jonthualis). As they grow they resemble a trout (Jonthualis) very much; in fact, if they were together it would be impossible to pick out the trout (Jonthualis) from the saiblings. Their habits, however, are different from those of the trout. I think they feed more off the bottom, picking up the insects. They do not seem to est one another, as trout to. I think they are a hardy, rapid tions of the tout. I time they read note of the bottom, picking up the insects. They do not seem to eat one another, as trout do. I think they are a hardy, rapid growing and easily raised fish."

From Mr. Gilbert's description of the young saiblings,

it would appear that they might be quite a desirable fish to introduce into this country.

More American Enterprise. The quantity of silkworm gut at present in New York City is far greater than ever before, but the quality is, as a rule, very bad. As anglers, we must see this fact and mourn over it, for without good gut, good fishing tackle is an impossibility. What is comparatively a small matter to us is a great matter to manufacturers. Our friends, Abbey & Imbrie (who consume rather more than half of the entire importation of Spanish gut), found each year that the grades were lower than the preceding year, and that each year there was more and more rough and worthless gut admixed in every hundred. Last spring, therefore, Imbrie went over to Spain to see what could be done. He found that all the best gut was produced in Murcia: that made elsewhere being entirely unfit for use. After a long and careful investigation, he concluded to establish a factory there for his firm, as otherwise it would not be possible to guarantee quality or be certain of a regular supply. This necessitated a great deal of trouble and the outlay of a large amount of money. But success has crowned his efforts, and his firm are recently in receipt of the "first fruits" of their factory. They have restored the old grades, and the gut is the smoothest and roundest we over saw. We know that all anglers and all makers of fishing tackle will rejoice in the possibility of obtaining good gut from this time forward, and we gratulate this firm on this still further evidence of their undaunted pluck and perseverance. We know that they do not go into anything heedlessly, and we are sure that they will make money out of their venture, though it does almost take one's breath away to find an American firm establishing the largest factory of its kind about 4,000 miles away from home.

ARE THERE TROUT IN THE FRENCH BROAD ?-Will you ARE THERE THOUT IN THE FRENCH BROAD f—Will you kindly tell me whether there is any good trout fishing to be had in that part of North Carolina called the "French Broad," the western part, I believe. I am anxious to take a trip through there on account of the beautiful scenery, but do not particularly care to unless I can throw a fly most of the time.

A. F. J.

Can any of our readers give us definite information about the fishing in the stream named and about the dis trubution of trout in North Carolina; in what counties

TROUTING IN NEW BRUNSWICK

HE rounds to my bear traps usually took three days, but to gain a day for a visit to the "Kilburn" 1 hade it in two, finishing up at noon by bringing in a fine

made it in two, finishing up at noon by bringing in a fine bear.

Section boss Win. Glew, with whom I was camping at Sugar Brook, on the line of N. B. & C. R. R., kindly permitted his sons, George and Bob, and their cousin, Tommy Tuck, to accompany me. At 2:10 P.M. the last train passed north, leaving the track clear. A sack was stowed with bread, salt pork, salt, tea, sugar, frying pan, tin pail for boiling tea, and two drinking cups: my top-coat and blanket tied compactly for a seat in the birch, case of rods, landing net, rifle and axe, comprised the luggage. The hand-car was rolled on to the track to receive us, and "all aboard!" and we were off for a four miles run, as fast as three pair of muscular arms, incited by anticipated sport, could propel it.

Arriving at 56 Carry, the car was put off on a turnout in a jiffy, and the one and a quarter trail entered. This brought us, in due time, to the head of dead water on the lesser inlet. In a few moments George and Bob produced their birch from its resting place in the woods, and while it was being launched and trimmed, I hung up my rod with a black palmer and black may for a bait. The distance to the lake is about a mile, as the crow flies, but its simuous windings double the distance. It is a lovely stream, and the lower half discloses deep, broad reaches of water at every bend, where the trout most congregate. At each of these pools we make a brief tarry, and by the time we reach the lake a dozen or more fine trout rost contributes.

stream, and the lower half discloses deep, broad reaches of water at every bend, where the trout most congregate. At each of these pools we make a brief tarry, and by the time we reach the lake a dozen or more fine trout are taken. It is then decided to cross the lake, one mile, to "Camp Stewart," have an early supper, so as to enjoy the best fishing between sunset and dark.

Arriving at the landing George proceeds to dress some trout, while Bob and Tom go up to camp and start the fire. Tom essays the roll of cook by virtue of having once served in the capacity of steward on a coaster, and while the culinary affairs are progressing I light my briarwood and lie down on what was once a luxurious couch of codar boughs, and muse upon the past.

Here, in the hunter's camp, built by old Pete Sebattis, four of us met annually, and spent a season of unalloyed happiness, which again passes in review. Again Neal, Will and Jack surround me, recounting the sports of the day, and mapping out for the morrow. Now, it is near midnight; the wood is piled on for the night, for the nights here are cool, howelit the days are warm; the light flashes upon strings of, duck, partridge and trout light flashes upon strings of, duck, partridge and trout the nights here are cool, howbeit the days are warm; the light flashes upon strings of, duck, partridge and trout suspended around, and Jack's rich, deep voice wakes the echoes of the wooded hill with "Three Black Crows" and "Paddy O'Doyle," by way of benediction, as we turn in, Ah! dear old camp! Thy pleasures will be ever green in memory.

in memory.

But supper is ready, and the deacon seat serves for table, slices of bread for plates, which absorb the drippings of the luscious trout, which are dissected thereon by fingers and hunting knife. Trout and plate disappear together.

I would here digress to say that to fry trout evenly

thereon by fingers and hunting knife. Trout and plate disappear together.

I would here digress to say that to fry trout evenly they should be scored across slightly in several places on the sides; it prevents curling up. The moal ended, pipes are lighted, the remaining food hung up out of the way of vermin and "varmints," and we again launch the birch, this time for the upper or main inlet, where we arrive in time to find the water fairly boiling with jumping trout. The same east of dark tlies (No. 8 hook) are taken soon as they touch the water. Singles and pairs are killed and landed till "you can't rest." No time now to fight flies, which settle down upon one as a cloud, though ever and anon the eyelashes gather them to the extent of blinding, when they must be brushed out. As twilight deepens, the jumps suddenly cease, and no efforts can get another rise. The sport was brief, but grandly exciting. But pen of mine cannot portray it in idetail; besides, the theme is hackneyed, and those who have been there know all about it. When we return to the landing, the boys are to have their sport(?). Drift-wood is piled on a llat rock and fired. Stout cord and cod hooks, attached to improvised poles of alder, and with chunks of pork for bait, each takes position on a rock and enjoy themselves lifting out the beautiful fish attracted there by the light. This is kept un till Tom ships from his rock and fetches up waist-deep in water. This is a damper, surely, and necessitates a fire at the camp, and, as there is a new camp built by the lumbermen last fall a few rods above the one described, where the boughs are comparatively fresh, we hie on to it, and soon Tom is seen with simply vest and hat on, drying his other garments by a fire built against a large birch stump in front of camp. While this is going on, the lads amuse themselves with a greasy pack of cards, playing the game of forty-fives. At 11 o'clock we turn in, and the word is passed to turn out at daylight for a brief trip up the main inlet. Four o'clock finds and three-fourus, and start on our return before S o clock. The rod is tried in inlet returning, but not a rise is obtained. The sky is clear, and the rays of the sun are too scorching. The birch is again hald away to rest for one week, the trail taken, and in due time the car is reached, and we return to Sugar Brook after an absence of less than twenty hours, every moment of which was rife with surveying a property of the results of the surveying a property of the results of the surveying a property of the results of the surveying a property of the results of the surveying a property of the results of the surveying a property of the surveying and a nother red latter a chief is the surveying a survey of the supremest enjoyment, and another red letter added to the calendar of life. Corrorat Lot Warffeld. Hillsboro Bridge, N. H., July 15th.

A HINT TO TACKLE DEALERS.—New York fishing tackle dealers would tind it very profitable to exhibit their thin fishing tackle the coming Cincinnati Industrial Exposition, which is now advertising for space allowned the summer of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the summer of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grants of the grant plants of the grant plants of the grant plants of the grants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grant plants of the grants of the grant plants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the grants of the gr

had a party, consisting of Dr. and Mrs. Everett Herrick, and Mr. Jas. Ford, of New York. They have made an average of fifty fish during the past three days. I could report nucle larger scores if the weather had been pleasant. We have had rain and no wind for the past few days, and it has been difficult to get bait, and we are longer getting on the grounds. The old patrons of the Riverside are beginning to arrive daily, among whom are Mr. W. C. Rogers and family, who will remain with us rill late in the season. Also D. W. Lee and wife, Prof. A. M. Mayer and family, Everett Herrick and wife. I would also wish to inform others of our patrons who have not as yet been here that Mr. A. H. Corwin, who was proprietor or the house last season, is now in no way connected with it, but that it is under the direct supervision of the owner, Chas. A. Smith, which is a sufficient guarantee to those who know him, that the house will be better kept than ever before.

A. B.

BLACK BASS VS. GREEN BASS.

BLACK BASS VS. GREEN BASS.

Editor Forest and Stream:—
It is at a sacrifice of time, taste and inclination that I notice the communication of "St. Clair," on "Black Bass vs. Trout," in FOREST AND STREAM, of July 15th. I feel constrained to do so, however, in justice to myself, inasmuch as he, indirectly, by implication and innuendo, charges me with mendacity and misrepresentation.

"St. Clair" begins his article by saying: "Finding in recent issues of FOREST AND STREAM the old controversy revived ament black bass and trout, and finding also some rather peremptory and unpleasant doubts from Dr. Henshall and other gentlemen concerning former articles written by myself for your paper (Black Bass and 'Black Bass Fishing'), I must ask you to hear me."

Now the fact is, I have never given "St. Clair" or his articles a second thought since I read them on their appearance, two years ago. I have never alluded to them in any shape or manner, or expressed any doubts—"peremptory," "unpleasant," or otherwise—in regard to them.

em. A reference to his articles, at this writing, confirms the A reference to his articles, at this writing, confirms the impression made upon my mind at the time of their first perusal, viz.: that they were indisputably outré, and contained statements in regard to the black bass that were immistably rash, inconsistent and erroneous, and which stamp their author us being rather Quixotic and opinionated. I remember he was quite eager for a war of words with some one or any one in defense of his unique views, and "threw down the gage of battle," and offered to "break lances" with any gentleman upon the subject."

offered to "break lances" with any gentleman upon the subject."

To my nind he seemed firmly entrenched in a "rut" on the question of the identity of the black bass, out of which it would have been a work of supererogation to have tried to extricate him by arguments; for my impression, based upon his dogmaticskyle, was that though convinced, he would be "of his own opinion still." No doubt my impressions were shared by others, for, so far as I know, no one took up the offered gage of battle. That it would have been futile to have done so has since been proven, and my predictions have thus been confirmed; for several of our ablest practical ichthyologists subsequently published in Fontest AND STREAM foreible and convincing articles on the identity and nomenclature of the black bass, notaby those of Profs. Theo. Gill and D. S. Jordan. Frof. Jordan's paper, especially, covered the whole ground, reviewing the matter from the first description of the black bass by Lacepède down to the present time.

But all in vain. "St. Clair's" faithin his own opinions

But all in vain. "St. Clair's" faith in his own opinions But all in vain. "St. Clair's Taith in his own opinions on the subject remain unshaken; for in his last article he seems to be only willing that the mountain shall come to him, for he expresses no inclination to go to the mountain. He is apparently as firmly rooted to his previous convictions as Rhoderick Dhu to his rock, and states positively that he alone is right in the matter, and that all others of a contrary opinion are wrong, in the following than heaves:—

all others of a contrary opinion are wrong, in the following plann language:—

1. I want this vexed question set at rest. It shall be set at rest, forever. It is right that we have a fish at the South called front, which, to superficial observers and to those who are not to the "manor bon," hook like black biass. "A but which are no more in the plant of

call our prece base black bass. Many southernors cell them total, and tout they will be with them until the call of time, bare my words: we have no black bass in the South, and no greek bass.

Could any assertions be stronger? Now if it is really essential that this question should be set at rest by one to the "manor born," then for the sake of science let him be born quickly; or, if he be already born, let him be "born again," if necessary, for it seems that the efforts of all others have been unavailing, in the estimation of "St. Clair," But let us see what such "superficial observers" and "well meaning but mistaken" persons, as Profs. Agassiz, Gill, Jordan and Cope (who have been misled by a similarity of mouth, and, to some extent, form "), have to say about the matter.

I will, however, premise by stating the fact, that the first scientific description of the black bass was made by taccipede, a celebrated French naturalist, in 1890. His description was based upon a drawing and description of the "Southern rests" water trout." sent to him by M. Boso from South Carolina, labelled "trout perch;" this called Labons satunoides, or the "trout-like hasa," which specific name (sathnoides) is retained to this days for one species of the black bass. Lacejede afterwands received a specimen of this same "Carolina trout," but which had a deformed dorsal tin, its latter portion being separated by an injury from the balance of the fin on account of this peculiarity (the little fin), he named it Microplerus stolemieus.—"Dolomieu's small fin," in homo of his friend Dolomieu; and this generic name (Microplerus) is retained to the present day for the genus black bass. Curvier subsequently identified the latter specimen as he longing to the genus decide, which is sell presented, and this species of Microplerus are in our natural history that we made the unavailed to the search to the central born to make a surely come in our natural history that we made the securate in our natural history was curlet on the manufaction of the

Valenciennes by Milbert, from New York, and Le Sueur, from the Wabash River, Indiana.

Thus we see that the genus Micropterus (black bass) was founded upon the Southern "trout," and, moreover, upon that particular species of "trout" or black bass (the small-mouthed) which is held by many, both North and South, to be the only true, real, Simon-pure, clearquill, original Jacobs black bass; they regarding the large-mouthed black bass (M. pallidus) as the "off-ox," or "lest-handed" black bass.

Tet "St. Clair" denies that either species of Southern "trout" is the black bass, and furthermore declares that the black bass does not exist in Southern waters. Now let us see what this denial amounts to:—

In 1873, Prof. Theo. Gill, at the request of Prof. S. F. Baird, United States Fish Commission, thoroughly investigated the genus Micropterus to determine the number of species. After examining specimens from the Great Lakes (Champlain to Michigan), the States of New York, Pennsylvania, Ohio, Michigan, Illinois, Iowa, Kentucky, Missouri, Tennessee, Alabama, Texas. Wisconsin, West Virginia, North and South Carolina and Georgia; and after a thorough investigation of the specimens in their morphological and anatomical features, he says: "No differences could be found much, if any, greater than such as could be detected among numerous individuals from any given locality." And further: "No deviations have been found, from the ordinary standard, of such a character as at all to compare, for example, with the differences among the small-mouthed or large-mouthed forms." Prof. Gill's monograph, embodying these remouthed forms, or to indicate that there are any specific differences among the small-mouthed or large-mouthed forms." Prof. Gill's monograph, embodying these results, is published in the "Proceedings of the American Association for the Advancement of Science," Vol. XXII, 1874, pp. 55–72.

Prof. Agassiz, in 1854, identified the "trout" from the Tennessee River in Alabama, as a black bass, which he named, provisionally, Grystes nobilis. This was a largemouthed bass.

Prior to 1870, Prof. E. D. Cope took and identified the large-mouthed black bass in the Catawba, Neuse, Great Pedee and Santee rivers in North Carolina; these streams all flowing into the Atlantic.

Pedee and Santee rivers in North Carolina; these streams all flowing into the Atlantic.

In 1877, Prof. Jordan and his assistants, A. W. Brayton and C. H. Gilbert, fished the streams of the Alleghany region of South Carolina, Georgia and Tennessee, most of which were the headwaters of rivers emptying into the Atlantic. Prof. Jordan published the results of these investigations in his "Contributions to N. A. Ichthyology" No. 3, in "Bulletin of U. S. National Museum;" XIII., 1878, from which I select the following quotations:

tions:—
"Prof. Cope obtained this species (M. pallidus) in the Catawba. We collected none in the Saiuda or Ennoree, butlive were told that 'trout,' as the species of Microperus are universally called in the South, are frequently taken there," Page 15.
"This species (M. salmoides) is abundant in the tributaries of the Savannah, where it is known as the 'trout."

Page 31.

Abundant (M. salmoides) in the Oconee and Ocmul-gee," Page 35,
"Not very abundant" (M. pallidus), Chattahooche River, Page 40,

(M. salmoides), in Etowah, Coosa and Oostanaula.

"Abundant; but less so than the preceding (M. pallidus). The two species are known indiscriminately as trout." Page 46.

"trout," Page 46,
"The 'white trout,' as this species (M. pallidus) is often called, is common in the Cumberland."
"The 'black trout' (M. suhmoides) occurs with the preceding (M. pallidus), and is still more abundant."
In Prof. Jordan's "Fishes of Upper Georgia," in the "Annals of the New York Lyceum of Natural History," vol. xi., 1877, page 314, he says of M. pallidus:
"Abundant in the Etowah, Oostanaula and Coosa Rivers, rather more so than the next species (M. suhmoides), and overywhere confounded with it under the name of trout."
Now, if this evidence is not

Now, if this evidence is not conclusive and convinc-ing to "St. Clair," that the "trout" is the black bass, and exists in the streams of his own and other Southern

"St. Clair" has repeatedly stated what the black bass is of, but has neglected to tell us what the black bass is, makes he does so in the second paragraph of his last article, when he says :-

In one of those articles I stated that a black base proper could not be found in any stream in the South. I now reiters that subscenent, and say that I will stand or fall on the Tesientific evidence of the best informed ich hypologists in the United States, the two fish (J. schnoldes and C. attrawis to be dissected together.

that surtement, and say that I will stand or fall on the selentine evidence of the best informed leithylogirist in the United States, the two fish (M. satinoides and C. attarius) to be dissected together.

Now, as "St. Clair" tactily admits in this same article that the "Southern trout" is M. salmoides or M. pallidus, we must conclude that by C. attarius he means the "black bass;" for what in the world Centropristis atrarius has to do with the matter I can't imagine, unless we take this view of it. If he really holds the C. attarius to be the "black bass," then the whole matter is explained. It is simply another case of mistaken identity, and he has, for the first time, furnished the key to his peculiar views. But the Centropristis attarius really has no more to do with the black bass (Micropterus) than the black ranapper or the black grouper. The C. attarius is a true marine fish of the Atlantic coast, generally known as the "see bass," though in a few places along the coast is locally known as black sea bass, black will, black perch and black fish, and it was formerly called, on a portion of the Jersey coast, "black bess," though this name has fallen into disuse since the introduction of the black base proper into the inland waters of that State.

But upon reading the third paragraph of "St. Clairs" article we are all at sea again, with the rudder unshipped, for he tells us there that "they exist side by side in some streams, but in no Southern stream. They can be found in Kentucky and Missouri together, and even in Tennessee, in waters that empty into the Ohio, but in no others." No, he cannot mean C. attarius, the sea base, for it exists in no inland streams, and—what can he mean? I give it up.

No, he cannot mean C. atravius, the sea bass, for it exists in no inland streams, and—what can he mean? I give it up.

If "St. Clair" really wishes to be set right in this matter there is a royal road open to him. Let him send specimens of "Southern trout," or, as he calls them, "green bass," in alcohol to Frofs. Baird, Gill or Goode, of the Smithsonian Institution, or to Prof. E. D. Cope, of the Academy of Natural Sciences, Philadelphia, or to any other naturalists whom he considers the "best informed ichthyologists in the United States," with the request to identify and name the same, and if they do not pronounce them black bass (Micropterus) I will admit that "St. Clair" is the "best informed ichthyologist in the world," so far as the black bass is concerned. So much for the "black bass."

And now let us see how reliable "St. Clair" is upon other Southern game fishes. In the last paragraph of his article he states that there are no rock bass in the South except in one tributary of the Flint River. In a former article he said it existed in three streams emplying into Flint River (perhaps he has caught them all out of the other two). Now what are the facts? Prof. Jordan and his assistants took and identified the rock bass (Ambloptites rupestris) in tributaries of the Chattahoochee, Alabana, Tennessee and Cumberland rivers, where they were "abundant,"

"St. Clair" further says: "Dr. Henshall speaks of the striped bass (Roccus chrysops) as never weighing over two pounds," Il de does not give me even the benefit of the

Tennessee and Cumberland rivers, where they were "abundant."

"St. Clair" further says: "Dr. Henshall speaks of the striped bass (Roccus chrysops) as never weighing over two pounds." He does not give me even the benefit of the saving clause, Pinaforically speaking, of "hardly ever;" but, having set up this man of straw, he proceeds to belabor it, and infers, "from these data," that I never saw a fresh water striped bass! Now this is the "most unkindest cut of all," to use a garbled quotation for such an inference. What I really did say, and, like Jack Bunsby, "what I says! sticks to," was that the weight of Roccus chrysops "seldom exceeds two or three pounds." If I had placed the maximum weight at three pounds, if I had placed the maximum weight at three pounds it would have been entirely correct, for it is the fact. I have caught thousands of three pan fish in the lakes of the Northwest, and generally to my great disgust and annoyance when angling for black bass. I have also taken them in "Green River," Kentucky. But they "seldom exceeded two or three pounds," never reaching five pounds in weight.

While I do not doubt that "St. Clair" caught one weighing nine pounds (in a former article he placed it at seven pounds; perhaps by next year it will grow to eleven, for it is evident from these various statements that it was weighed in its own scales), the mere statement of the fact amounts to nothing as establishing the maximum weight of the species. It was simply a monstrosity, an exception to the general rule, as is, indeed, a five pounds with the sass. I have seen a steer that weighed upwards of 5,000 pounds, a mule nineteen and a half feet tall; a woman balance the scales at 700 pounds; a six-legged calf: the Siamese twins; and a double headed girl; but what do they all prove? Nothing. They are simply exceptions to a general rule—monstrosities.

at 700 pounds, a six 1985.

and a double headed girl; but whiat do they all prove? Nothing. They are simply exceptions to a general rule—monstrosities.

This plan of conducting a case, by presenting the arguments of the opposing side in a distorted, incomplete, or garbled form, and then, Quixote-like, booted and spurred, with lance in poise, making a terrific onslaught on the windmill of his own creation, is one much practiced by the average village lawyer, and is styled "bettingging." I take it that "St. Clair" is a lawyer, for he put words into my mouth that I never used, and misquoted my printed statements. I therefore excuse him upon the ground of force of habit, and cheerfully exonerate him from all seemingly smister motives.

Pernaps he thought I was making light of the fresh water striped bass, for he seems to feel a fatherly and proprietary interest in this fish, as he says:—"1 believe I first had the honor, through the solicitation of Chas. Hallock, Esq., former editor of Forest AND Syraca, of introducing the fresh water striped bass to the notice of the public."

AND STREAM, of introducing the fresh water striped bass to the notice of the public.

Oh, no, 'St. Clair,' it was first described and "introduced to the public" by Radinesque, in 1820, probably before you were born; and it still retains the specific name (Chrysops) which he bestowed upon it. He caught his specimen in Kentucky waters, too. It has been a well-known pan fish ever since, being very abundant in the great lakes and lakelets of the Northwest, but has never-been considered much of a fish, except by juvenile anglers. Its praises are yet to be sung.

Finally, as examples of "St. Clair's" system of an "accurate nonenclature," he enumerates the Southern game

fishes as green bass, speckled perch, true perch (red fin), jack, and ruw mouth perch; names that mean anything or nothing outside of his own immediate neighborhood. While I have none but the kindliest feelings toward "St. Clair"—or any other brother angler, for that matter—I do not desire to again allude to these matters. Life is too short and art too long to indulge in profitless discussions. When "St. Clair" has forwarded his specimens of "black bass" and "green bass" to competent icthyologists of his own choosing, for dissection and identification, i will be much pleased to learn the result. In the meantime, he can ventilate his "green bass" ideas without any interference on my part, inthe future as in the past, so long as he does not misrepresent me.

Cynthiana, Ky., July 22d.

MR, DIPSY CATCHES TROUT,

MR. DIPSY CATCHES TROUT.

MR. DIPSY found himself in the pleasant Island of Prince Edward, which, as all readers of Forkst and Stream know, is a hundred-and-forty-mile-long bank of red sandy loom in the Gulf of St. Lawrence, in shape like the crescent moon with the bight facing the north. No hills break its surface, and consequently there are no brawling streams tumbling from rock to rock with a pleasant murmur; with the exception of three or four, all the "rivers," so called, run but a short course through badly culitvated fields and patches of second-growth woods, until they debouch in narrow creeks or estuaries, sometimes of two or three miles in length, up which the sea-tides come and which have been croded and eaten out by the ever-encroaching action of the ebb and flow on the level and friable soil. These small rivers are fed by numerous springs, and are filled with a cold, translucent water, so pure that it is really spoiled by the admixture of whiskey. Once Prince Edward Island was an angler's Eden, but alas I its streams have been fished out—not legitimately, but by systematic poaching. Hon. J. C. Pope, the present Canadian Minister of Marine and Fisheries, himself a native of the island and a skilful angler, has, during his one year's tenure of office, done a good deal with the aid of a zealous staff of subordinates to eries, himself a native of the island and a skillful angler, has, during his one year's tenure of office, done a good deal with the aid of a zealous staff of subordinates to protect the small vestige of tishing that remains; but it takes a long time to restore a plundered stream. There are still a few cozy nooks where fair catches of trout may be had if you know where to look for them. Which reminds, that the writer is authorized to mention that Col. Duver, Dominion Inspector of Fisheries, whose post office address is Alberton, will do all in his power to direct any legitimate angler to the best places wherein to try fisherman's luck.

man's luck. Nobody knew to what nationality Mr. Dipsy belonged. When questioned on the subject he would wink with one of his funny little eyes, pat his paunch—for he had a paunch—and remark that he was a citizen of the world. This was doubtless true, for he must have been born somewhere. And as he stood about five feet two in his fishing boots, had very spindle legs to support his "fair round belly" (see Shakcepeare), and moreover as he wore reddish side whiskers on a round face with a salmon-colored nose in the center of it, and as he frequently aspiratized an h in the wrong place and sometimes left off aspirating it altogether, there were reasons to believe he was a native of England.

It was on the pleasant 1st of May the writer was woke in pfrom a not very comfortable bed, consisting of a pine beard and a Scotch plaid on the floor of a cottage, by a voice singing out "'illo!" "hillo yourself!" was the reply, "Wake hup! rouse hout! heverything is lovely for fishing." n's luck. Nobody knew to what nationality Mr. Dipsy belonged.

yolice singing by . "Wake hup! rouse hout! heverything is lovely for fishing."

The dewdrops hung on the grass in the gray morning like little prisms. Also on Mr. Dipsy's whiskers. We trudged on to what is called Lot Ten River, Prince County, and set up our rod just as the sun rose and was seen through the trees like a great ball of fire. Mr. Dipsy in a high state of excitement made a cast and caught——a tree.

Next time he was more successful; hardly had his two flies touched the water when two trout appended them-

Next time no was more successin; narmy nad his two flies touched the water when two trout appended themselves and were whisked out far into an adjoining field. Mr. Dipsy ran after them with his short legs and basketted them with every appearance of satisfaction, then back to the river and commenced thrashing again; more trout. The finny beauties seemed determined to be taken that morning—two, one, one, two, one and at length as trout. The namy beauties seemed determined to be taken that morning—two, one, one, two, one and at length a one-pounder. Dipsy hauled him out by main strength, sat down on the bank, applied his mouth to a green bottle and then broke forth in a stentorian voice in the angler's song:—

"A hirt is whire he salmon's one."

"A birr! a whirr! a salmon's on,
A goodly fish! a thumper!-that's so."

"A birr! a whirr! a salmon's on, Agoodiy tish! a thumper!-that's so." Agoodiy tish! a thumper!-that's so." Not wishing to have his eyes lashed out by Dipsy's flying flies the writer proceeded up stream to a sheltered bend he wot of, and where he speedily extracted two dozen of fair sized fish in what he flatters himself was rather a neat manner. His companion was concealed from view by a little headland, clothed with low spruce trees, now green and golden in the rising sun. Suddenly from behind the clump arose a tremendous yell, as of a man in mortal agony, accompnied by what seemed a roll of thunder. Casting down his rod and making his way through the copse, the writer found that this time Mr. Dipsy had caught——a bull.

A bull of the obnoxious kind, with wide-spreading horns and a shaggy, buffalo mane. The animal was fairly hooked in the eye, and was wildly slasking his head and tearing over the plain, Dipsy following him with loud shrieks of dismay, but keeping his but twell forward, as recommended by the best scientific anglers. The writer followed in much alarm of mind until Tanrus leaned a mirey ditch, and with a final bellow disappeared. When your correspondent got to the spot, Mr. Dipsy's waterproof boots, sticking up, were almost the only part of him to be seen. A good scraping down and another application to the little green bottle partially restored him, and we resumed our fishing. By this time the sun was too high for the fly, so Dipsy tried bait.

It would take too loug to enter into details of the sport. Smifice it to say that when your correspondent lad made out, as nearly as he could guess, his thirty pound weight, he sought his companion. What was his astonishment to see four domestic ducks, with thirty promated and fluttered and made a gallant defense for his life!

Expostulation and remonstrance were alike thrown away on the "citizen of the world." Having landed his drake and killed him, Dipsy took another suck of his pocket companion, and producing a small game-ledger he then and there entered his day's work, thus:—

"Mr. Dipsy, Lot Ten River, Prince Edward Island, Canada, Trout, 14: bulls, 1; ducks, 5."

This is the last time I mean to go fishing with Mr. Birsy.

A BLACK BLACK BASS.—Clinton, Ark., July 1st.-A BLACK BLACK DASS.—Climath, Ark., Jaig isi,—Soine time ago—a year, perhaps—i wrote a short account of a very black bass I hid observed in some of the waters of the region. The other day, while angling in Archey's Fork with a trolling spoon, I caught, among others, one of the identical fellows. He was a true M. sathroides in all save with a trolling spoon, I caugus, according to the lellows. He was a true M satunoides in all save color, and more than true in that. The inky blackness extended to every fin, covered the belly as well as the back, and even went so far as the inside of his mouth. I saw several othor specimens following my spoon, but failed to hook them. I had no means of preserving this one. The appearance was certainly unique. The fish seemed in perfect health, and was "game" to the last.

Salmon Roe.

THE RUSHTON BOAT PRIZE.—Rochester, N. Y. July 21st. Editor Forest and Stream.—Your paper of the 15th inst. contained a letter from Mr. J. H. Rushton, which I think

contained a letter from Mr. J. H. Rushton, which I think calls for an answer, as it seems to convey an implied consure on the managers of the Sportsmen's State Convention in 1879.

It is true that Mr. Rushton offered his boat as a prize for fly-casting, but when the Prize Committee requested him to let them put it up as a prize in a shooting match, he gave unhesitating consent, and his boat (which was a fine one) was made second prize in the second shooting contest—the first being a \$225 Baker gun. For the purpose of attracting attention and as an advertisement, it was in far the best place by the change, for scores of peple took interest in the shooting where individuals did in the fly-casting, and if I remember right there was a sharp was in far the uest place of the characteristic ple took interest in the shooting where individuals did in the fly-casting, and if I remember right there was a sharp contest in "shooting off" for the boat. It was won by a sportsman in Dansville, and has probably brought its maker's name to the attention of more men who shoot on water and require boats than if won by some trout angler who does most of his fishing from shore.

EDMOND REDMOND (Ex Secretary).

EDMOND REDMOND (Ex Secretary).

THE ELK HORN VALLEY.—West Point, Cumming County, Nebraska, July 20th.—As I have never seen anything in the Forest and Stream in regard to the Elkhorn Valley and its numerous ponds and rivers, I take it upon myself to give a short description of its attractions for sportsmen. It is not exactly a wild country, nor is it so thickly populated but that there is plenty of game and fish to be had in their seeson. The Elkhorn River rises in the Northwestern part of the State and flows in a general southeast direction and empties in the famous Platt River. It abounds in catfish, suckers, whitefish, pickerel and salmon trout, and a few eels, but the greatest sport we have is in the ponds along the side of the river, which are well stocked with both black and rock bass; they weigh from one to five pounds; also pickerel, which run from one to eighteen pounds. They are mostly taken with spoon hooks. Last year I tried to take the bass with a fly, but met with very little success, owing, probably, to my inexperience in fly-fishing.

Sportsmen come from Omaha to fish in these ponds, and claim they are the best in the State.

Who Can Beat This?—Eine Green, Ind., July 20th. Win Can Beat This—Elma Green, Ind., July 20th.—
On the morning of the 18th inst. I went out on one of
the small lakes near this place—a lake about four miles
in circumference—and in running once around I landed
in the boat forty-five black bass, and probably lost half
as many more in trying to get them in. I used Mann's
No. 20 spoon, on line with rod, which proved too small
to hold well on large bass.

T. A. S.

samany more in trying to get them in. I used Mann's No. 20 spoon, on line with rod, which proved too small to hold well on large bass.

vice has now been given in the columns of FOREST AND STREAM as to how all these things can be taught, and there are very few places in the country where it cannot be done.

Setters can, of course, be made to do the work of spaniels, but in thick cover their size is against them; and also, it can only be done at the expense of spoiling their style and ranging qualities. If setters are not allowed to range out of sight they cannot be better than spaniels, and if they do range out of sight one must be forever bothered by having to look for them when they are on a point. I know that some setters will flush game in cover and be quite steady in the open, but these are exceptional spaniels, and not the rule.

Another thing in favor, of spaniels is that, being small and handsome, they make nice house dogs, and a brace of them do not cost more to keep than one setter or pointer.

BEX. can, of course, be made to do the work of

For woodcock shooting in the tall corn there is no dog like the well-broken cocker spaniel. When either pointers or setters are used the birds, nine times out of ten, will not "top," but flit off diagonally across the rows and consequently present no shot. But behind a well-broken brace of cockers there is music in the air, and a drifting lot of feathers besides.

IRISH WOLFHOUNDS AS DEER AND BEAR DOGS,

EAST SAGINAW, Mich., July 9th.

East Sagnaw, Mich., July 9th. Editor Forest and Stream:—
I take pleasure in complying with your request to give a description of my pair of imported Irish wolfhounds. I had for a long time desired a breed of dogs for deer hunting, which were larger, faster and more savage and courageous than those in use, which are largely of foxhound blood in all degrees of purity, or rather impurity. The same breed I also designed to use in bear hunting, for which purpose the above-mentioned qualities would be very essential.
Having read descriptions of the supposed to be extinct.

for which purpose the above-mentioned qualities would be very essential.

Having rend descriptions of the supposed to be extined breed of Irish wolfhounds, I became convinced they would fill the bill, with the exception of running by scent, and upon this subject I could obtain no reliable information. Noticing in the advertisements in FOREST AND STREAM that Mr. Frank Adocok, of Shevington Hall, W. Wigan, England, made a specialty of breeding large and powerful dogs for attacking and pulling down large game, I wrote a letter of inquiry, and learned that he had some line specimens, which he was breeding, and the result of this little advertisement in FOREST AND STREAM was that I purchased a pair of puppies (dog and bitch) by his celebrated "Ranger," out of his "Atalanta," both prize winners, Ranger having taken first prize at the Dublin show in April, 1879. They were admitted dury free by the custom house authorities at New York, being imported for breeding purposes, but I doubt if the privilege is worth the bother and red tape-necessary to secure it. oure it

lege is worth the bother and rea tape-necessary to excure it.

They arrived last December, and are now about nine months of age, and tough and hearty as one could desire. In general appearance the male, though but about half grown, is tall (twenty-six inches at the shoulder) and majestic looking, head of good size and well slaped, jaw strong, with dangerous looking fangs, ears erect, with pendant tips, neck long but strong, body of great length and tail nearly touching the ground; legs large, long and muscular, with feet which make a track as large as a full grown wolf. No dew-claws. Coat rough, long and wirry, especially under jaws and on the breast, with tufts of long hair over the eyes and hanging from the under flews. Color gray, blotched with black and fawn-colored spots.

The bitch is somewhat smaller and more slender, quite like a greyhound in build, and very active and wiry.

like a greyhound in build, and very active and wiry. Color and markings exactly like the dog, but the coat is short and soft, a characteristic of the bitches of this breed, I am told.

Adcock's reliability and fairness, and to whose extensive kennels and stables I would recommend all who desire import rare dogs and blooded horses.

If. B. Roney.

PATAL DISEASE AMONG DOES IN THE SOUTH.—Savannah, Gat, July 20th.—Editor Forest and Stream:—I send you a slip from one of our daily papers concerning a very strange disease, that has been advancing southward for the past eighteen months. As far as I can learn no such disease was ever known here before. I lost five hounds with it a year ago, and several of my friends have lost dogs this year. If anyone can give any light on the subject through your paper it will be gratefully received. I know of hogs and cats that were bitten; they took the disease, and died.

The following is the cutting referred to in W. A * bleft.

The following is the cutting referred to in Mr. A.'s let-

ter:—

"We learn from gentlemen living in South Carolina, along Black River and the vicinity, that a disease of a malignant character has for some weeks been prevalent among the dogs in that neighborhood, and many valuable nnimals have been sacrificed. The symptoms are similar to the rabies, and the dogs affected manifest a disposition to avoid people, but are very savage toward animals. Several planters have lost fine horses and cows which were bitten by dogs affected with this madness. Strange to say, a few people who have been bitten have not apparently been affected in the least, whilst the horses and cows that were attacked suffered greatly and died. The exact character of the disease is not known, though from the symptoms it would seem to be akin to hydrophobia; the animals affected rushed at once for water. A youth, who was bitten by one of these "mad" dogs a week or two ago, was brought to Savannah for medical treatment, and speedily recovered, and has exhibited no ovil effects of the bite. of the bite.

We learn that the mortality among the canines has We learn that the mortality among the cannes has been very great, and several gentlemen have lost entire kennels of fine dogs. The dogs affected with the disease have been killed in many instances before they had time to spread the infection by biting. The disease still prevails though for lack of material not to the same extent."

We know of no such disease, unless it be "rabies," which we are inclined to think this must be.

7 COURSING DEER IN A TWO-ACRE LOT,-Since the days when Barnum conducted his "Greatest Show on Earth" when Barnum conducted his "Greates show on Learn" in the Madison Square garden, coursing Joher has not been carried on to any great extent in the cities of the United States. But in Cincinnati the exciting sport seems to have revived within the last few weeks, and those that were fortunate enough to witness the impromptu circus on Major Morgan's property, declare that "there's nothing like it." Col. Thos. B. Paxton of the Porkopolis, owns an frish greyhound of the female persuasion, who is believed to be of the purest origin. She is of a creamy white color, with tinely pointed black nose and black cyclids, symmetrical in build, with a thingracefully sweeping tail. A greyhound in tip-top condition should be all lire, animation and sprightliness, galety expressed in the sparkle of the eyes and the bounding elasticity of the limbs. Should be also so refreshing to the beholder as to produce the idea that the excellencies of the animal could be carried on further. This is all claimed for Lady, Col. Paxton's bitch. It is said she can run like the wind, and, in fact, go so fast when the spirit noves her as to resemble a long streak of dancing moon-shine, making it an even bet as to which end is her lady-slip. Major Morgan owns a herd of six deer, which he keeps on his lawn, a plot of ground of about two acres in extent. A few evenings ago a party of gentlemen visited the Major, to see the greyhound and the doggy stock, which he takes much pleasure in showing to his friends, when somebody suggested a trial of "Lady's" speed on the deer. The newspaper report is as follows:

"The latter stood in a group near the north wall of the ground, observing evidently with some interest the movement of the visitors. Lady was started after them, and the whole herd scampered off to get out of her way. As she pressed too closely the bucks turned at bay and drove her off, sometimes following her. She was evidently unused to sport of this kind, and, possibly from lack of training, was a little slow in warming up to it, or the deer, bein in the Madison Square garden, coursing 'deer has not been carried on to any great extent in the cities of the But in Cincinnati the exciting sport

when they entered.
"An anusing incident connected with this period of the chase was the part taken by a little frish beagle, an unpretending little dog that a few would think of looking at twice. He had been an interested spectator of the sport for some time, and had made irrequent essays to stake part in it. Unable longer to restrain himself, hegave himself up to it fully, and joined in the chase with as

great a show of vim as the greyhound. While unable to keep up with his fleet-footed rival, his tact enabled him to make a good showing by cutting across the circles, while the hound followed every curve and turn of the

while the hound followed every curve and turn of the deer.

"Fearing that the deer was being too closely pressed, Major Morgan attempted to call off the hound, but without success. Half a dozen times as the animals passed him closely he stepped between them and tried to frighten Lady away, but without avail. Both, after a chase of fifteen minutes, showed such evidence of fatigue that he determined to stop it, and the spectators quickly formed a line as the animals passed on the next round, and succeeded in separating them.

ed in separating them.
"Deer and hound were both thoroughly tired and nearly
out of wind. Their mouths were wide open, their tongues
lolled out, and each panted uncomfortably for breath.
The chase showed the blood of Lady, and that unless interrupted, as it was, the chase might have continued until one or the other had fallen from exhaustion."

Measurement of Beagles.—Essex County Hunt, Montclair, N. J., July 27th.—Editor Forest and Stream:—At your request I have carefully weighed and measured some of our champions, and would say that a good beagle in thorough working condition should weigh one pound and one ounce (avoirdupois) to every inch at shoulder and cars from tip to tip same as height; more the better.

HARRY HOWARD, Huntsman.

-We call attention to the notice of Mr. E. Z. Miley, of Lancaster, Pa., who advertises for a man to take charge of his kennel.

TORONTO DOG SHOW.—In another column we publish the notice of the Grand International Bench Show of Dogs to be held in Toronto, Sept. 8th, 9th and 10th. This promises to be an excellent exhibition and worthy of the attention of all dog men.

Photographs of Dogs.—Messrs. Notman & Sandham, the well known photographers of Montreal, have sent us two excellent prints of two groups of dogs. They are wonderfully clever, and portray with life-like accuracy many of the various breeds.

KENNEL NOTES.

SALES.—Bess.—Mr., T. H. Dwyer, of this city, has purchased from Mr. E. C. Alden, Dedham, Mass., the Gordon setter bitch Bess, Bassett's Queen Ress-Doane's Tom. Sancho.—Mr. A. H. Evans, tue President of the Woodmont Rod and Gun Club of Washington City, has purchased of Mr. Chas. F. Kent, of Bing washington by the produced of all the state of the best field dogs in America. Victor-Lucy, wheth —Mr. N. Elmore has sold to Mr. L. E. Burke, of Westfield, Mass., a fine English hare beagle puppy by Victor out of Lucy.

DEATHS.—Pride of the Border.—Mr. Chas. H. Raymond's fa-mous Laverack setter dog Pride of the Border diel some time ago. Fritz.—Mr. E. M. Le Moyne, of Yonkers, N. Y., has lost by death his beautiful liver and white cocker spaniel Fritz, out of Mr. McKoon's Fanny Fer: and Sam.

PRESENTATION.—Sis.—Elna Green, Ind., July 20th.—I am pleased to acknowledge a present of the red Irish setter puppy Sis, from Mr. James Chubb, of Cleveland, Ohio. She is the finest bitch in this section: Champion Eleho-Gip stock, and is most fully ap

NAMES CLAIMED.—Bounce.—srr. W. H. West, of Belfast, Maine, claims the name of Bounce for his red frish setter puppy wholped April IIth, 1889, out of Bridger Planket by Dirk Hatterrick; purchased from the kennels of Mr. E. J. Robbins, of Wethersfield, Conn. Nethe.—Mr. Edward P. Abern, of Elizabeth, N. J., claims the name of Nellie for his liver and white pointer puppy, presented to him by Judge Gildersleeve, of this city, The puppy is two months old.

Brkn.-Fairy'H.-Pontiac.-Mr. John C. Higgins' Fairy II. to

WHELPS.—Petrol—Mr. John C. Higgin's, Delaware City, Del., Petrel whelped July 16th to his Dashing Monarch. Petrel II.—Mr. John C. Higgin's Petrel II. whelped July 16th to his young Lay-Joint C. Higgin's Petrel II, whelped July 15th to his young Lav-ceack, Flow-Nessel, Hitchook's Hellydry's (formerly Lincoln & Hellyar) imported bitch Flora whelped on July 9th five pupples— one dog and four bitches—by Arlington, Glysq (ween-Dr. Hen-shall's setter bitch Glysy Queen (floyal Duke-Queen), whelped June 4th, 1889, cight—three dogs and five blickes—by Col. Howard's nne 414, 1884, eight-three degs and nye biteles—by Col. Howard's Irish setter Bugg (Bob-Duck); colors, all red and all black. Norah-Mr. Chas. H. Dayton's, Peckskill, N. V., red Irish setter bitch Norah, first New York, 1880, whelped July 24th teu puppies—six dogs and four bitches -by champion Rory O'More.

PUBLISHERS' DEPARTMENT.

THE FISHING GAZETTE KNIPS. We have received from Mr. B. Marston, editor of the Fishing Gazette, a knife designed by m for the use of angiers, and called the "Fishing Gazette bim that no the use of angless, and caused the "Pishing Gazette Kulle." The tool is a very useful one, and contains sixteen dis-tinct (implements, including screw-driver, Baglish and French measures, file, disgorger, scissors, etc. Our angling friends wil-appreciate the value of such an addition to their equipment. We are informed that this knife can be obtained from Messrs. Thorn hill & Co., 144 New Bond street, London, and that the price

A TEMPERATE DEPARTURE. - The following communication explains itself :-

ALEXANDRIA BAY, N. P., 1880.

Mesey, H. H. Wurner & Co.:—
Gentlemen: I have been doctoring the last four years for rhonmatism in the back, sciatics and kidney diffusities, and have been
at no time free from pain until commenced taking Warner's Safe
kidney and Liver Cure, which has entirely cured me. I want to
keep it in the house to treat my friends with, instead of wine
and liquous, as it will cure the diseases they will produce. Very
truly yours.

THE GRAND NATIONAL MEETING.

NOTES ON THE SHOOTING-LESSONS FROM THE WORK DONE.

To say that the meeting at Buffalo was a success, does not con Yor a sufficient idea of the entirely satisfactory conduct and results of the meeting. The attendance of contestants was smaller than the Committee anticipated, particularly of lady archors, the long distances to be traversed causing many of the leading toxobilities of the West to forego the pleasures of the Tourney. The arrangements at the grounds were perfect, and but for the

Intolerable burning of the sun, and the severe berieve and but for the funderable burning of the sun, and the severe breeze constantly sweeping across the ranges, the pleasures of the contest would have been unmarred. No doubt archers are prone to attribute have been immarred. No doubt archers are prone to attribute their poor seoring too much to bad weather, and too little to the influences of a public meeting. Yet there can be no question that the first two days of the meeting were trying ones upon the long range shooting, the drift of the arrows at 100 yards averaging not less than eight feet. It may not be unprofitable to suggest to archers in general a few of the principal causes which produce the low scoring at national meetings as compared with private practice records. Some of these causes may, to some extent, be removed and others modified in their effects, but several are without remedy. The first trial which the nuglority of archers in our country have to undergo, and the necessary effect of which is to somewhat shatter the nerves and weaken the conarchies in our country have to undergo, and it is necessary cuest of which is to somewhat sbatter the nerves and weaken the control of the weapons, is the journey of from three hundred to one thousand miles from home to the place of meeting. If any archer will make such a journey immediately before shooting over his own range at his home, he will discover a serious falling. over his own range at his home, he will discover a serious ranning by in his scoring. The next matter to be mentioned seems trifling in itself, but its effects are always observable in diminished coring, and this is the change of diet and loss of sleep, which can scarcely be avoided when one attends one of these great public meetings. The natural embarrassment and nervousness attendmeetings. The inturn emeatriesment and nervousness attend-ant upon a public contest also to some extent militates sgainst accuracy, but the chief cause, and the one for which there seems to be no remedy, comes from the changed surroundings. At-home the archer shoots the York Round from 4 o'clock to 6 o'clock in the afternoon, when the air is cool and pleasant, and o special the atternoon, when the mr is cool and present, and the shadow of the great trees protect him from the scorching rays of the sun, the familiar background enables him to find his point of aim at once, and he maintains it with steadiness because his bow does not weaken in the shade to any appreciable extent. bow does not weaken in the shade to any appreciable extent. He occupies only about two hours in completing the round, and his nerves are kept well strung up from the beginning to the end. There is nothing to distract the attention from the work in hand, and all the energies are directed to one matter. At a great public meeting, however, the archer is compelled to shoot upon a strange field, under the glare of a summer sun, from 10 o'clock AM, until 6 o'clock PM, to drug through a single Vork Round. He misses the familiar background, and hunts in vain for his point of aim on the shining sky above his target. The moonday hear weakens his how several natures, and his point of aim on. point of aim on the shining sky above his target. The mounday heat weakens his how several pounds, and his point of aim constantly rises. He has not met his old friends on the target field since the last national meeting, and in his anxiety to note their style and accuracy, he suffers his attention to wander from his own target. These things, with many others unnecessary to be here recalled, combine to reduce the scoring at every public meeting about 20 per cent. below the average of the same archers in private practice.

The records of the Private Practice Club for the month simmediately preceding the National Meeting clearly proves this to be

ately proceeding the National Meeting clearly proves this to be true. Only one archer, Mr. Frank H. Walworth, approached his private practice average. The winner of the champion medal, Mr. L. L. Peddinghaus, averaged for June In the Private Practice Club only a trille better than his work at the public meeting, getting an average double round of 731 against a score of 700 at the ling an average contine round of an against a score of no at the linflad meeting. With the two exceptions already named, the average fulling off, was about 20 per cent. A list of the 6 highest scores made at the Hulhalo meeting by members of the Private Practice Club, opposed to the averages of the same archers for the month of June, will show the true effect of a public meeting the product of the same archers for the month of June, will show the true effect of a public meeting.

| ing :- June average | . Buffalo meeting. | Gain. | Loss. |

Even this is not a fair test, since only the 7 highest scores secured Even tons is not a lartest, smooth of the remainder sources earlied by members of the Private Practice Club are chosen as a basis, and, of course, those secring nearest up to their average would be most likely to secure the highest records. An examination of all the scores made by the members of the Private Practice Club at the Buffalo meeting will show no instance other than that of

at the Binnin meeting win show to instance over train that Mr. Willworth, where an archer equalled his June average. We have catled attention to these difficulties attending a public meeting, not for the purpose of exensing the shortcomings of our archers, but in the hope that every contestant may heedfully bear them in remembrance, striving entrestly to conquer as many I them as possible, and bearing with great patience those which

of them as pressions, and hearing with great paracelect sees where cannot be overcome.

That systematic effort will greatly reduce their evil effects can-not be doubted, and the wonderful improvement in the general scoring since the national meeting of last year, goes far to encourscoring since the national meeting of last year, goes far to encourage us to greater effort. Looking to the records of the two national meetings, we find progress overywhere. Three scores this year exceed that by which the medal was won at Chicago, while the average of the 5 highest scores exceed it some points. Last year there were only 5 scores exceed it some points, while this year there were 12. At Chicago the 15 highest scores only averaged 401 points, while at Buildious average of 500 points was obtained. Such an increase, if continued through another year, would bring us to almost even torms with the veteran archers of fewer busines, (at the 324, 24th and 25th of June the first great Great Britain. On the 23d, 24th and 25th of June the first great Great Britain. On Intessal, attented and oster of June the user great public meeting of the archers of Rogland occurred at Leannington, upon grounds famous for the surprisingly great scores made there, and the attendance of archers was greater than this amount meeting ever before called together. The Raglish champion (Mr. Walters), together with such removaed toxopholics as kinned. (Alt., Wallers), wallord, Elliott, Col. Lewin, Piers Legh, Yates Foots.
Aston, Eyre Hussey, Neshau, Sagar, Butt, and many others of
twenty years' experience, among them the two last winners of
the champion medal of the United Kingdom, shot there during two days, the first of which the London Field pronounces, "alto

trether onite a day for skillful exercise with the bow," and the second day "even more pleasant than on the previous day." De-space these favorable conditions the average of the 15 highest scores only reached diff points. Of course this is good scoring, a record to be proud of, but since a deduction of 18 per bring their average as low as ours, we can surely feel a degree of exultation at our measure of success,

No archer who attended our national meeting can doubt that

No archer who attended our national meeting can doubt that more than 20 per cept, will be added to our average scoring at the national meeting of 1881 in Prospect Park, at Brooklyn.

Thus far mention has only been made of the scores achieved by the gentlemen contending, because from the greater number of gentleman contestants who attended at each of the national meetings, a better comparison could be drawn,

Because of the fact that most of the societies belonging to the Association are located in the West, and at distances runging from 300 to 1,000 miles from Buffalo, the attendance of lady archers was, unfortunately, very small, only 11 appearing before the ladies' targets to strive for the championess medal. Here allso, a marked improvement in the general shouting can be noted. The 10 highest scores sedected from 20 at Chicago last year everaged 405 points, while the entire score of this meeting averaged 435 points, and in this total the score of Marked Sibbs is taken, although she did not shout at either 50 or 40 yards on the first day. In comparing the scoring of the two national meetings it should also be remembered that at Chicago the shoot fing was done at single conds, that is, the targets were placed only we the north ends of the ranges, and the archers standing in the pleasant shade at the south end had only to shoot and have their arrows returned to them. In this way a point of alm was much more easily established and maintained, and no doubt the scoring was higher than it otherwise would have been.

Our English cousins poke fun at us because of our lack of hardi-

hood in thus avoiding the walk from end to end, and so far as our genticuon are concerned, the mild censure was will de served, for half the real pleasure of archery coincs of the lively march from end to end; but our English half riends of the low even with all the rich health which years of exercise and free ni have given them, would scarcely care to face the parching flames of have given them, would searcely care to face the parching flames of the July sun as they bour upon us from our unclouded and shining skies. England is a land of clouds and cool air, of showers and damp tent?; while a cloudy day in summer is the exception with us; the rule being a dry and balf parched turf, a burning southwest wind, and a white giaro on earth and sky which seriously affects the archer's aim. These things coustledered, it is not to be wondered at that our ladies found the shooting at double cind, this year, less pleasant than the evolutions of the "Recking-chair brigate" at Chicago last year! While the gentlemen will all desire to keep up the system of double end, by all means is all desire to keep up the system of double ends, by all means let the ladies hereafter shoot one way only. We hope the executive all desire to keep up the system of double ends, by all means let the ladies hereafter shoot one way only. We hope the executive committee will see this as we do. Every lady who shot at the Buffalo meeting will agree with this idea. We have approached our report of the shooting at this meeting slowly, dropping our ideas of various matters connected with the meeting at places where we trust some archers may find them and turn them to future value. It is now much more pleasant to turn and take a glance down the line of contestants and note their work.

At the ladies' (argets, where the shooting beginn at the 50 yard range, prominence was at once taken by Mrs. Noves, she obtains

range, prominence was at once taken by Mrs. Noves, she obtain ing a lead of 25 points at that range over Mrs. Days, she is obtaining a lead of 25 points at that range over Mrs. Days, who was next in order of uncit. This lead, however, she lost at the next range, Mrs. Days, with a score of II rat 40 yards, gaining a lead of one point over Mrs. Noyes, her most dangerous rivel, a lead which she stendily increased throughout the two days, until the conclusion of the double round showed her the winner over the next highest by 66 points.

Mrs. Davis shot well up to her practice scores at 40 and 30 yards and only at the 50 yards range showed any of the effects of a public meeting. Mrs. Noyes did better than any other lady at 50 yards, but she overshot the target at 30 yards and could not main—

Amount of the dark which her longest range gave her.

Mrs. Brown, Mrs. Church and Mrs. Lee, who are without doubt among the very first of our lady archest, did not shoot with that accuracy which has made them winners in so many matches, the championess obtaining 82 points iess than the score which won her the medal last year. Mrs. Church and Mrs. Lee cuch fell 200 points below their average practice records, and many of the other ladies equally as much. Mrs. Gibbs, who did not arrive in time to shoot that two longer ranges on the first day, shot very well indeed, her combined score at the 40 and 30 yards ranges on the second day surpassing anything seen at the Indies targets ber by yards sore being 115 points, and her 30 yards score is points, as well as the points and her 30 yards score is points. Ms. Sovering has improved very much lately, and may well be proud of the position she secured in the score lists. Ms. Sidway, Mrs. Smith and Mrs. Chapin, who have had scarcely any practice this season, scored very well and regularly throughout practice this season, scored very well and regularly throughout the context, and, with the practice of the coming year, bid fair to cause the lady champion no little anxiety. Their shooting showed excellent training in true form, the want of practice being the only drawback. Miss Dunbar, who could not shoot on the second day, was scoring well and evenly, and will certainly rank high in next year's contest.

At the gentlemen's targets the struggle for supremacy was At the gentlemen's targets the struggle for supremacy was keen from the first, the scoring being very light and the leaders keen fine the first, the scoring being very light and the leaders keeping volume to gether, the 5 highest scores standing: Walter Shrumban 165, L. L. Peddinghaus 165, Lorenzo Devol 100, Will H. Theompson 94, and F. H. Walworth 90. The 53 jurds range gave to Burnham 133 points, to Peddinghaus 133, to Devol 87, to Thompson 139, and to Walworth 96, leaving the 5 in the following order: Burnham 238, Peddinghaus 237, Thompson 230, Devol 87, and Walworth 188. Coming note the 69 yards range bunched thus closely, the interest was intense, and here the only really fine performance of the meeting was winessed. Mr Representations performance of the meeting was witnessed. Mr. Burnham added 93 points to his score, Mr. Peddinghaus 109, Mr. Devol 75, Mr. Walworth 88, while Mr. Thompson scored with all his 24 arrows, obtaining 140 points.

The first day's shooting thus left the 5 leaders: Thompson 370,

Peddinghaus 346, Burnham 331, Walworth 274, and Devol 262. ginning the second day; these gentlement and ded to their scores at 100 yards: Thompson 129, Peddinghaus 113, Burnham 101, Wal-worth 125, and Devol 8, Peddinghaus 118, Burnham 101, Wal-worth 125, and Devol 8, Devolution 120, Peddinghaus 114, Burnham 125, Wallworth 102, and to Devol 55, leaving the 140, Burnham 123, Walworth 102, and to Devol 65, leaving the standing at the beginning of the last, 60 yards thus: Thompson 619, Peddinghaus 604, Burnham 555, Walworth 501, and Devol 407, It seemed almost a foregone conclusion that Mr. Thompson would again become the champion, as his scoring on the previous day at 60 yards induced the beief that he would again lead at that range; but he did not score even moderately, his first dozen arrows being almost valueless. With his second dozon he increased his score rapidly, seeming to gather nerve and power as the ond approached, but it was too late to save bim, and he closed with a score of \$5 points. Mr. Burnham, by brilliant shooting, added 118 points to his score, Mr. Devol 63, Mr. Walworth 39, and Mr. Ped-

finghams 102. As the contest approached, the close there was in linguistics. As the contest approximate the observation was intense exclusion and the urchers as they discovered the exceedingly close race between Mr. Peddinghaus and Mr. Thompson, and when the latter had shot his last end, scoring 13 points and it was announced that Mr. Peddinghaus must score 15 points and it was announced that Mr. Feddinghaus must score to points to lic, there was a general cessation in the shooting to ecc him shoot his last end. He shot with great care and eathmess, and his nerve held up to the last. His liest and second arrows were in the red, and turning to Mr. Thompson, who had approached him, he conversed for a moment with him. Mr. Thompson said: "Y hope conversed for a moment with min. Mr. Thompson saut: The arrow structs in the bude, string air; teaming and control phonship by 4 points. No emblem of championship was ever won more gracefully, or yielded with more evident pleasure.

After the close of the contest for the medals, a third day was given to a handleap by the ladies of 48 arrows at 50 yards, and a

subscription handican by the gentlemen of 48 arrows at 60 yards The handicap was based upon the scores made with the same The handicaly was used upon the scores have with we said number of arrows at 60 yards on the preceding two days. Mr. Thompson's score of 22 was taken as the basis of the gentleman's handicap, and each archer was given the difference between the score made by him on the two preceding days and Mr. Thompscore made by him on the two preceding mays and an accordance son's score. The ladies' handleap was based upon the scores made the 48 arrows shot at the same range on the preceding days, Mrs Noyes' score leading the handleap. The shooting by the ladies was a great improvement upon the 50 yards performances of the was a great improvement upon the 50 yards performance two first days of the meeting and resulted in Mrs. Church two ints days of the needing and resoluted a Mrs. Spalding Brown ing first place, Mrs. Townsend Davis second, Mrs. Spalding Brown third, Mrs. John Lee fourth, Mrs. John S. Noyes fifth, Miss Lover-ing sixth, Mrs. F. Sidway seventh, Mrs. L. G. Chapin eighth, and Mrs. E. B. Smith ninth.

The gentlemen's handicap produced a higher average up In gentiemen's manural produced a light a volage, although reneral scoring than was seen upon the lirst two days, although here was but one score exceeding 200 points, Mr. Will H. Thomp-on scoring 241 from 47 hits, Mr. Ford P. Hall coming next with 35. We have not present space for the bandicap scores, but can 185. only give the winners. The first place was taken by Mr. Ford P. Hall; second, Dr. E. B. Weston; third, W. E. Brewer; fourth, G. F. E. Pearsall.

The team shoot at the American Round closed the meeting, and

no little excitement was caused by the close contest for first place between the Archers and the Buffalo Toxopholites. The between the Arden Archers and the Buffalo Toxopholites. The Toxopholites led by 38 points at 60 yards, and at the close of the 59 yards range were still 5 points ahead of their dangerous antagonists. At 40 yards the Ardens overtook their rivals and passed them, coming out 39 points ahead. The individual records, with a few exceptions, were not good. The 6 scores of 400 and over were as follows: Will II. Thompson 518, Walter Burnhum 477, L. L. Peddinghaus 455, E. L. Parker 433, John A. Booc 403, Jese B. Devol 401.

It is clearly demonstrable that 60 yards is the minimum limit of archery ranges for gentlemen, and we think the executive com-mittee should abandon the American Round for the team shoot, and give us either the last half of the York Round, or 14 arrows at 60 yards. This last is a very beautiful round, and is shot in a are of parts. This use is a very beautiful round, and is shot in a grand day each year by the most skillful and powerful body of archers in the world—the Royal Toxxopholites, of London. The team shoot should always be at short range so that the scoring team shoot should always be a tenior tanger so that the souther may easily be perceived by the on-lookers, and no more perfect round could be arranged than this of 144 arrows at 60 yards. The team shoot should occupy more time than it does, and this result rould be obtained, counted with the advantage of shooting at onwould be obtained, coupled with the advantage of shooting at one of the ranges of the York Round, and doing away with the changing of ranges during the contest.

On the evening of the 15th, the archers assembled at the prize

room in the Palace Hotel, and the prices were awarded. Of course this was one of the happiest hours of the meeting, and the executhis was one of the mapping months of the eeting, and the executive committee were complimented upon the success of the plan adopted by them of permitting winners to take choice of prizes in the order of their scores, and the new committee will do well to follow their example.

INNOVATIONS IN ARCHERY.

Editor Forest and Stream: The prompt action of the National Archery Association in ex The prompt action of the National Michely Association in citiding from its competitions the use of the "peep-sight," may be said not only to have given that not very injectious continuous tated the hole, but to have destroyed all hope of its resurrection in any band of skilled archers. Were this the sole at tempted innovation in archery not a word need be said, but in asmuch as other mechanical devices of similar, or equal import, are likely to follow (the "arrow holder" has already caught my attention) a few words as to the purpose and aim of archery, in a far as such contrivances can have any immediate connection with

Yankee ingenuity, with all its devices for advancing our civili-zation, evading the difficulties that beset us in our struggles for ranker ingentity, with a rise of the conditions of the cation, evading the difficulties that beset us in our struggles for existence, or enjoyment, or anchiorating the conditions of our lives in any way, commands my admiration and gratitude; but lives in any way, commands my numeration and gratitude; but not infrequently upon meeting with some very ingenious patient for evading the very thing which it is most desirable to accomplish, for getting over, or under, or around that which it is most desirable to get through, am I constrained to couple with my admiration a couplet of Popo's:—

"Some to whom heaven in with as been profuse.

"You are much more to turn the to the use."

"Some to wood meaved in within Societies, process,"
The want as much more to turn it to its use."
The ond to which the archer aspires is not the greatest degree of accuracy attainable, regardless of the means employed, but the greatest degree of accuracy attainable with given implements by bow, a string and an arrow. These are the only implements by greatest degree of accurracy attainable with given implements—a bow, a string and an arrow. These are the only implements by which is should be permitted, as an archer, to accomplish his end. And herein lies the chief fiscination of the sport. It is not the ability to bunch a number of missiles in giv n circles 60, 80 and 160 yards distant that attracts the toxopholite, for any bungler can do as much with a shot gun, but it is the ability to attain a high degree of accuracy with such simple implements as a bow, as string and an arrow, requiring for their successful manipulation such infinite skill. The fine poise and freedom for full muscular play, the resolute and unwavering will and cool command of the nerves, and at the instant of utter muscular tosion and montal caim, the gentle, nimble work of the fingers, obeying the accurate eyo and quick uncering judgment, and the smooth starts and stops and sweeps and seeming pauses, which may be said fairly to rival those in the marvelous meloties of 8 winhurne.

The argument in favor of these assistants to accuracy with the long bow, namely, that many ladies and gouldenen are discouraged by the difficulties they have to contend with before mustering their weepons, can have but little force, even if it be wholly true, which is doubted. Any gentleman of ordinary ability and strength, who provides himself with sultable weapons and Ford'

work on archery, can with a little combined practice and study see his way to success at the turgets. And any lady who will pro-vide herself with a gentleman who has accomplished this much, vide herself with a gentleman who has teconaphismor this mann, can uthin the same result in about one-tenth of the time it took him to do so. Those who complain that Ford's theory of alming is unintelligible to them, have but to secure a copy of the new edition of "How to Train in Archery," by Mesers. Maurice and Will H. Thompson, wherein Ford's theory of niming is presented. simple and concise form.

in a simple and concise form.

Were our bows and arrows our weapons of war or of the chase;
were we dependent on them for our safety or our sustenance,
well might we hall the inventor of any contrivance which might enable us to use them with greater ease or certainty-a cross-bow onnote us to use those with greater tasse of calling a constitution with globe sights and hair trigger might be most acceptable if no gun were obtainable—but using them only in pursuance of a reflaced, healthful, manly, merry pastime, as a rest of skill let us maintain the dignity of the sport in every particular, making no compromise with the riflemen, with whom we do not pre ad to compete in point of accuracy, and adopting none of their

tend to compete in point or accuracy, and adopting from our deci-appliances as substitutes for our physical and mental vigor.

The advantages of any of these modern shifts, as Ascham might have called them, as to increasing the scores of the expert, are here assumed, but not admitted. And it may be well to add that nero assumed, our to admitted. And it and it all such shifts, of whatever character, whether alming by a pin on the bow hand or marks on the string, should be, and undoubtedly will be, like the peep sight, forever burred when occasion may require it. The glove and brace are serviceable only as a protection to the wrist and fingers.

rotection to the wrist and lingers.
Surely it is needless to exputiate upon the assertion that these nodern contrivances for obviating the difficulties that obtain in trehery, not only lessen the possibilities of skill in the archer and narrow the gap between the expert and the muff, but do viocee to all gratee as well. Imagine the Apollo Belvidere griping in arrow-holder and squinting through a peep sight. modern contrivance archery, not only

F. H. WALWORTH.

HE APPROVES THE PEEP-SIGHTS .- Bethel, Maine, July 24th .-HE APPROVES THE PEET-SHIRTS.—Profile, another sum and Editor Forest and Stream:—I see by your last issue that the National Archery Convention have set themselves against the new peep-sights, presumably because it gave them too great advantages and left too little for skill. If that is their point, may I vantages and let too futte of sail. It mis a deal pools only respectfully inquire why they do not recommend to our rifferent the abolition of graduated sights and wind gauges in intermational contests? If the thing gives too great accuracy (?), increase the range to 125 or 150 yards; but don't say that because the bow the range to the or my artes; but our easy that because the now has been in principle a long stick with a string across list chord from the time of Abraham, so It must be to the end of time. Who were heard of a rifleman that advocated about ranges and un-sighted rifles? Yet I fail to see the difference between that and the attitude of the Convention. YOUNG-MAN-AFRAID-OF-HIS-ARROW:

It will be remembered that the peep sight was discussed at Buffalo, the other day. Mr. Weston introduced for consideration a It will be remembered that the peep sight was discussed at Buffalo, the other day. Mr. Weston introduced for consideration a resolution that the archery peep-sight be burred for the meeting. This led to a long debate upon the justice of permitting the "peep-sight" to be used at the tournament of the week, and upon the advisability of recognizing it as a fair and legitimate did to the archer in obtaining his aim. The majority of the speakers were strongly opposed to the device in question, and Mr. Burnham moved, as an amendment to Mr. Weston's resoluon, that the "peep-sight be forever barred from the tournaments of the association." Mr. Burnha and the resolution adopted as amended.

NEW YORK OF SPHYTEN DUVYIL.-Smuten Duneil, New York City, July 24th.—A match between the teams of the Duyvil Archery Club and of the New York Archery Club York City, was shot at Spuyten Duyvil Saturday, July 24th. The wing are the scores of the match :-

PURCHASE OF CARROLL ISLAND,-One of the most renowned shooting grounds for canvas-back ducks is Carroll Island in Chesapeake Bay, not far from the mouth of Gunpowder Creek, and but 14 miles from Baltimore This island has an area of 1,200 acres, and the extent of the shore is 10 miles. In season it is the resort of multitudes of ducks, including, in the order of their arrival in these waters, teal, black-heads, canvas-backs and red-heads. The teal appear about the 1st of October, and two weeks later the larger fowl put in an appearance. The excellence of the feed and its abundance make this a favorite resort for the birds. The celery, the tea-weed and other plants which grow in the brackish water, and on which ducks delight to feed, grow here in the greatest profusion, and attract the fowl from far and near.

Carroll's Island belonged originally to the old Carroll estate, and more recently to William Slater. Many attempts to purchase it have been made by shooting clubs, and we believe that \$100,000 was at one time offered for it and refused. The shooting privileges have been rented in previous years for \$3,000 per annum.

We understand that this property has just been bought by an association of twenty gentlemen, of whom ten are New Yorkers, five Philadelphians, and five residents of Each member has subscribed \$2,500, as an admission fee, and the deeds have this week been delivered to the association. Many improvements are to be made on the island, and a new club-house built.

The shooting is principally point shooting and bar shooting, and those who are familiar with the conformation of the island will appreciate the excellence of the sport that the owners of the island are likely to have this fall. The bags made here average from twenty-five to fifty birds to the gun on shooting days.

A DISGRACEFUL SQUABBLE. - In the quarrel between the agents of the Sharps and Ballard Rifle Companies, as reported by cable from England, the travelers for both companies have enacted rather a shameful part. might have been thought that both men would have cared more about the success of the team than they did for the few dollars difference between the prize each wanted and the one he got ; but any one who credited them with so much patriotism and liberal feeling did them a manifest injustice.

From beginning to end the exhibition of the American Rifle Advertising Team has been such as to cause Americans to wish that some of its members were citizens of any other country than the United States.

THE HALFORD-HYDE MATCH. S ERVED them right" was the general verdict when

the cable announced on Saturday last that the squad of shooters gathered together by Gun-Agent Hyde had been defeated on Wimbledon common by an equal number of small-bore celebrities from that side. this match was first suggested and so industriously misrepresented by its projector as an international match, the Forest and Stream has been vigilant in declaring its true character. Defeat was predicted by us, simply because from the very nature of its composition those elements which have gone to make the victories of previous and bona fide American teams were wanting in this nondescript company. They were either self-appointed, or possibly, what is worse, hired for the work. The team, if it can be so dignified, had no recognized head, and discipline was at the lowest ebb. The team had no backing from this side the ocean, and whatever of importance attached to it was in the possible mischief it could accomplish in breaking down the prestige which had grown up about American rifle doings here and in Great Britain. The match itself was of no moment whatever; nothing depended upon it : the Palma does not change hands ; it was not a championship contest; and having defeated eight Americans by a score which has never been surpassed at Wimbledon, Sir Henry Halford wins merely the empty honor of having carried off the victory from nobody in particular. Had Messrs, Hyde and Halford carried out their original programme of having a bit of a private match, in which each should be assisted by three gentlemen of his choice, nobody would have aught to say about it. The Forest and Stream would probably have said not a word about the immaterial event, beyond a ten line report of the scores. But, swelling with conceit, the manager of the match had worked it up to an offensive prominence under false pretenses. The Board of Direc tors here did a very dignified and proper thing in ignoring any direct allusion to the match, and providing against the contingency of having the official Irish-American contest of 1880 mixed up in any way with this miserable mushroom match. If it is not understood on the other side by the British National Rifle Association and its members that Hyde had not a scintilla of authority to act as a representative American, it has not been for want of outspoken utterances from this side. There seems to have been an apprehension on the part of the public that the match was nationally insignificant, for the cable informs us that the spectators were but a handful, and that the affair passed off with supreme dreariness, without enthusiasm of any sort until, at the finish, Capt. Halford began the usual talk about "our cousins from the New World," etc. Hyde, in responding, seemed to have some appreciation of the cause of his collapse, and struck the key-note of his opponent's success, and made a confession of his own preliminary care lessness when he said that the British team discipline had won them the battle.

It does not appear that there was any special mishap coming in to throw the Hyde team so far in the shade. The day was palpably good, and the weather conditions not unfavorable, else why the superb score of the British team. The marking was fair and just, and the Amer icans got all they earned; but with far finer weapons in their hands, they were whipped in a disgraceful manner by men to whom they should have given the closest sort of a struggle, and according to all precedents have shown a clean pair of heels. If everybody who should read or hear of the match could be made to understand precisely its real insignificance as an international contest, no special harm would result, and the press of America very generally understands the situation ; but in Great Britain, now that victory has inclined that way, much stress will no doubt be laid on the "International" character of the If our friends over the water find any satisfaccontest. tion in this, they are abundantly welcome to it; but they must remember, in their congratulation, that America is still the champion, and so long as the Palma remains on this side of the ocean they cannot claim championship

The mere accident of similarity of numbers in the make-up of the team, and of the distances fired over permits comparisons to be made with Elcho Shield contest scores, and by this test the work of the British team stands out very well. Sir Henry Halford has had the first chance of showing that the lessons of his defeat at Creedmoor, in 1877, have not been thrown away. The men were capitally squadded, and the steadiest sort of work is shown in the detailed list of scores. The men had caught the idea from the genuine American teams of former years, of each giving the cue to his follower at the same target. Had the Hyde men been able to do the same there would have been one of the finest long-range contests on record, and a score to have beaten the British one must needs have been very fine indeed.

The match, such as it was, will not be without its good fruits. It may teach American riflemen that they are not invincible, as indeed they are very far from being as individual shots. The reliance placed by all good team captains thus far on a good team discipline has not been a mis-placed one. There was need of it at all times, and in the

future more even than in the past. What our American riflemen are without it, Gun-Agent Hyde has most thoroughly demonstrated. Sir Henry Halford may take heart now in his promised work of bringing a band over for the Palma match next year. That match of 1881 will be more nearly a trial of men than any we have yet had. The Britishers have caught our secret of team organization. They have taken careful observation of our weapons, and are not a whit behind us now as rifle makers. Nothing now remains but a test of men, and this we are likely to have next time, when the record will be resumed from the point where it was dropped in 1877. though the interim has been given up to such by-play as walk-over matches and gun-agent farces.

THE RISE IN SEAMANSHIP.

HE prize for seamanship, or "neatness" in the keep and outfit for the year, offered to its members by the San Francisco Yacht Club, has been awarded to the sloop Annie, Capt. Jabez Howes. She is thoroughly equipped in every respect, as one might suppose from the experience of her owner as a ship captain. Reside handsome furniture, bright paint, smooth sides and brasswork throughout, her boatswain's and navigator's department are fully supplied with all the requisites of a Binnacle taffrail, log and lead, charts, long cruise. mathematical instruments, sailing directions, barometer, life preservers, fenders, watch tackles, storm gear and sails, ship's library, signal codes, side lights, deck and riding lights, night signals, oil-skins, fog horn, scrubbing gear, boats and fittings, racing sails and spars. housing topmast, taut rigging, eyes leathered, chafing gear, rope ends hitched and grafted, ample ground tackle, kedge and spare anchor, pumps and plumbing, galley and fittings, sailmakers' and carpenters' supplies, tarpaulins, skylights and hatch covers, all these, and the multitude of lesser things which go to make up a sailor's yacht, were found aboad the Annie sloop in regular "ship-shape and Bristol fashion." Of course, skipper Howes would have had his beauty in thorough trim anyhow, prize or no prize, but the attention drawn to his craft, and the manner of her keep, will induce members of the San Francisco Yacht Club to cut their jibs accordingly, save on the beer and grog, and put their money into a tidy ship instead. The Seawanhaka Yacht Club and the Salem Bay Yacht Club have followed suit, and we venture to assure large results from their action in a season or two, for if there is one thing we are more deficient in than another in our New York squadrons it is in a seamantike outfit of our yachts. We have been absorbed almost entirely with attempts at great speed, and every other feature of the sport has been allowed to remain neglected. We guarantee that not one yachtsman out of three can "box the compas," not one out of six can "mark the lead line," and not one out of a hundred can "work a day's reckoning." This is not said altogether in disparagement of our amateur tars, but rather with a view to calling their attention to matters wherein we are still sorely deficient. So many yachtsmen are annually new to the sport that they are naturally lacking in all that calls for time, experience or study to acquire; but from the well-known adaptibility of Americans to anything they undertake in earnest, we argue that a few years more will work a great change for the better, especially when we once have some sort of standards set up as an example to follow. Hence, we have been foremost among our contemporaries in advocating everything that seemed to drive us nearer to the desired goal, and we would like to see other clubs fall into line with those mentioned in devoting a portion of the year's prize money to something else than racing—to rewards for seamanship, for the greatest number of days underway, for the best kept log, for improvements and useful devices in rig, or fittings, or, generally, for the display of superior efficiency in any of the principal features, the attainment and spread of which would promote the interests of the sport.

-A Long Island negro last week mistook a boy's head for a woodchuck and shot at it, killing the boy. The jury brought in a verdict of accidental shooting. It should at least have censured the man for culpable carelessness. This is not the first instance of the kind on Too many men and boys have been shot because record. the shooter thought that they were wild animals. A wholesome disciplining of the responsible parties would have a salutary effect.

The man who does not know the difference between a boy's head and a woodchuck has no business with a gun, and the gunner who discharges his rifle in the woods at what he supposes to be a deer, but which proves to be a man, ought to be kept at home and not allowed to go into the woods. The simple possession and handling of firearms appear to deprive some men of common sense; they become crazy to shoot, and in this condition are subject to all sorts of hallucinations, in which they behold all manner of familiar woodland objects as game walking. Happily much of the supposed game turns out to be blackened stumps, dark rocks and fallen logs; occasion

ally the mistake is more serious, and human life is sacrificed to their rashness.

To the "didn't-know-it-was-loaded" class of fire-arm handlers, must be added the "thought-it-was-a-woodchuck" variety; and the man or woman who values his or her life, will do well to give both of these dangerous classes a very wide berth.

-Mr. Frank Lord, the well-known expert in off-hand pistol shooting, sailed for Europe last Saturday. We have already described in the FOREST AND STREAM Some of Mr. Lord's very entertaining and really remarkable feats, with exhibitions of which he is always willing to favor his friends. To his programme have recently been added several new shots, one of which consists in cut-ting in twain with his bullet a card thrown up edgewise. Some of these new accomplishments will no doubt surprise even those of his European friends who are familiar with his former shots.

We should add that Mr. Lord is, in the strictest sense of the word, a gentleman amateur, who practices this form of recreation from pure love of the sport, and in thus jealously guarding his skill from all taint of other motives is deserving of the highest credit,

In these days of "professionalism," it is refreshing to see a man who owns fast horses enjoy their steed and take pride in their performances without pitting them on the race course for a money purse; a man who can glory in the strength of his body without rushing on to the sawdust track; and a man who has the quick eye and the steady aim to excel in pistol shooting without posing before the public for gate money and prizes.

-The paper published to-day on Grouse Shooting in the Northwest is timely. The writer has been long enough in the field to claim a practical knowledge of what he talks about.

GREENE SMITH.-Greene Smith, known throughout the United States as a sportsman and naturalist, died at his home in Peterboro last Friday morning, July 23d, aged thirty-nine years.

The announcement will be received without surprise but with none the less of regret by his numerous friends. to whom it has long been known that recovery from his disease, consumption, was impossible.

With this brief note of Mr. Smith's death, we leave until next week a more extended sketch of his life, particularly that side of it by which he was best known to our readers as a devoted follower of field sports and an enthusiastic collector of birds.

The Onondaga County Sportsmen's Club, of S rracuse, held a special meeting last Saturday and adopt d these resolutions :-

WHEREAS, Greene Smith, a loved and loving brother. h and friend, at a time when manhood's morning almos : reaches noon, and while the shadows are still falling toward the West, by an act of Providence, whose ways are wondrous and ps it flading out, was taken from amongst rs and from this "beautift tworld," as he often used to describe it, and we, his friends, here a sembled feeling it, not only our duty, but our sacred privilego, i) express

our feelings upon this occasion,

Resolved, That in the death of Greene Smith we are again re-Resolved, that in the death of Greene smith we are again reminded of the uncertainty of the duration of life and of the reality of death.

Resolved, That in the deceased we knew a genial and faithful

friend, and although born of illustrious parentage, receiving an education by study and travels, aided by a liberal acquic ement of wealth and position, which fell to his lot, yet always us slish, upright in all his intercourse with his fellow men, and hor orable in

all things.

Resolved, That we deeply sympatize with his widow an I surviv-

Reseased, That we deeply sympathes with its whow an surviv-ing relatives in this, the bour of their affliction.
Resolved, That these proceedings be published in the 3yracuse appers, and a copy forwarded to the bereived widow.
Resolved, That the President appoint three members of this club to attend the tuneral of the deceased at Peterboro on the 20th

instant. Messrs. F. E. Carroll, Thomas Kimber, Jr., and Charles

R. Wright were appointed a committee to at end the funeral. The Central City Sportsmen's Club also passed a series of resolutions as follows :-

WHEREAS, It has pleased the Divine Providence to remove from earth Greene Smith, just as he was reaching the prime of man

earth Greene Smith, just as he was reacoing the prime of man-hood, with his faculties developed and his intellectrin its ripest vigor, and Whereas, The members of this organization cherish with the fondest recollection the remembrance of his genial ways, his kindly heart and his unselfish spirit, recalling with unmeasured sadness the many bright hours spent in the company of one of Nature's noblemen, who was an enthusiast over Nature's leveli-

ness, and
WHERLAS, This association has had many evidences of the generosity, the public spirit and the deep interest taken by our departed brother in pastimes which in common we have enjoyed,

practed brother in pastinnes which in common we have enloyed, therefore, be it Ress/leaf. That the members of the Central City Sportsmen's Club have learned with inexpressible sadness of the death of our departed brother, who was a member of this orcanization. We desire to give expression to our appreciation of his conspicuous faients, his large heart which was ever charitable where charity was needed, and his bright and genial ways which illumined his pathway in life and which reflected their smekine and brightness upon his follow-men, making them better for having known him.

Resolved, That this association can never forget our departed friend, who shared the pleasure, and bore like bruit of the trails that beset it, and whose princely heart was never happy unless in doing good to his fellow-men.

Resolved, That we tender to the afflicted wife of our departed wother our deepest sympathy in her bereavement and her her

to accept this inadequate tribute to the sterling worth of a man who was the noblest of them all. Resolved, That a committee be appointed to attend the fun-

al at Peterboro, on Monday, July 26th, at 5 P.M., and a copy

of the proceedings be furnished to the press.

Resolved, That an engrossed copy of the above preamble and

resolutions be forwarded to Mrs. Greene Smith.

The committee appointed were: Howard Soule, Frank

B. Klock, Lucius Moses, R. W. Jones, James Geddes, J. P. Brumelkamn.

The following letter was transmitted by the President of the New York State Association, of which Mr. Smith was, in the years before his sickness, a most active member, and in 1877 the President :--

BROOKLAN, July 25th Mrs. Greene Smith:-

Dear Madam: It is with extreme regret that the sad announ ment of your husband's death is received. My personal acquaintance with him, though brief, was such as to endear him to me. The irreparable loss sustained by true sportsmen caunot be properly expressed in the space of this communication. Believe me that the intelligence will cause profound sorrow among the many members of the New York State Association for the Protection of Fish and Game, who were intimate with him and were cog-nizant of his personal worth, work and acquirements. Scattered, as they are, throughout the State, no formal action can be taken by the Club delegates until thoannual meeting in 1881, when suitable measures will be adopted to perpetuate his memory while, on behalf of that Association as its President, and personally tendering you heartfelt sympathy and condoience in your bereavement, permit me to subscribe myself, with very great respect, sincerely yours, ABEL CROOK

GAME PROTECTION.

THE CONNECTICUT WOODCOCK LAW. -The Stamford, Conn., Advocate takes issue with those who think the game law of that State is not observed as it should be, Commenting on the subject it forcibly says :-

Commenting on the subject it forcibly says:—
In the first place, we don't admit for a moment the game law prohibiting the shooting of summer woodcock is a dead letter. It certainly is not in this section of the State, and if it is in and around Hartford, it is not the fault of the law, but the sportsmen (?) themselves. If the sportsmen of Hartford are willing to be overrun with market shooters and "pot hunters" out of season, they must of course have "poor picking" in the fall; but wo doubt very much if such men as Robinson, Bestor and others whom we might name, will admit that the law is a dead letter of that it is not a good and wholesome one. In the second place, the old law permitting the killing of woodcock on and after July 4th was the most abused law ever allowed to stand on our statute books, for more reasons than we have room to give here. All decency rebels ever allowed to stand on our statute books, for more reasons than we have room to give here. All decency rebels against it, for the sake of man and beast, to say nothing about the destruction of the poor, half-grown birds. To go back to the barbarous times of summer shooting would be a long stride from the path of progress. The whole sporting fraternity is crying out against it, and it has been forever abolished in many States beside this State, and it is the opinion of all thinking naturalists and sportsmen that if we wish to exterminate the noblest game bird in the world, continue the summer shooting of woodcock. No. The sportsmen of Connecticut know their best interest, and will never consent to go back to summer shooting. Show us the man who will claim that there would be any sport in hunting woodcock du their best interest, and will never consent to go back to summer shooting. Show us the man who will claim that there would be any sport in hunting woodcock during the present month, while the thermometer stands at nearly ninety every day, when after the birds are bagged the chances are they would spoil before the return home. Is that sport? Is it not more like a crime? In the third place, the law in New York is on until September, and works well. The "pot hunters" may not like it, but are they the sportsmen of the great State of New York? We think not. If "many of the sportsmen of New York think a mistake was made in extending the time from July to September," let us know who they are. Give us the names of the "leading sportsmen" of that or another State, who will not say the law is a grand, good and common sense one, and for every such name we will furnish scores who do."

When the local press maintain this position on came

When the local press maintain this position on game and game laws, the work of game protection will be accomplished. This has the ring; it is sound, and we hope to hear more of it.

to hear more of it.

A PROPOSED PROTECTIVE SOCIETY.—New York, July 22d.—Editor Forest and Stream:—I have been talking over a plan with a number of fellow sportsmen, whereby we may be enabled to establish an Association which will protect game in the vicinity of New York. We all know that the Society for the Protection of Game, in New York City, does its work faithfully and well, but in the neighborhood of New York, on Long Island, in New Jersey, and other localities where we are in the habit of looking for game and fish, there is no, or at least very little, protection—especially, perhaps, where the West Jersey Game Society has control. Farmers and residents generally do not wish to complain of their neighbors, and are afraid to get the ill-will of poachers; beside which, it takes time and money to bring these offenders to justice. My plan is as follows: Let a central association be formed in New York; members can be from any locality, and a suitable reward be offered, not \$5 nor \$10, but \$25 or \$50, for evidence sufficient to procure conviction, and also the club to see that the individuals are properly prosecuted. If such an association was known to exist, and poachers found they were relentlessly prosecuted, poaching would be at a discount very quickly. It is useless to look for aid from State associations; they, as we know, have neither the time nor inclination. It seems to me such an organization ought to have a hundred or two hundred members residing at and around New York, and an assessment of \$5 each would be sufficient to start with. Let those who are in carmest send in their names, and we will call a meeting and organize at once.

MIGRATORY QUAIL.—Kennebunk, Me., July 24th.—We

MIGRATORY QUAIL.—Kennebunk, Me., July 24th.—We received our quota of migratory quail in good condition, and released them in such localities in our vicinity as

seemed to us best fitted for them. The result of such an experiment was the general topic of conversation, not only among sportsmen, but the farmers, store-keepers, and in fact everybody suddenly discovered that they were interested in the migratory qual. Reports were received daily of the birds being seen somewhere, until it really got to be Indicrous to have some thick-headed fellow, who didn't know a sparrow from a blue jay, insist that he had seen a quall several times in his garden or cow yard. 'O, yes, it was a quail; he know it was a quail, because he had never seen a bird like it before, when it was probably some bird common in this vicinity; but yet never having noticed the bird before, he thought it must be some new species, and therefore quail. However, the quail nested quite soon after they were released, and have laid from eight to ten eggs in nests that have been disvovered; in some cases they have already hatched, and out of the nest; some are still on the nest. There has been but one case of loss that has come to my knowledge, that of a bird being run over by a nowing machine while on the nest covering the eggs. You can hear them at most any time in the day, but to see them is quite another thing; yet I have heard of their coming about the buildings of the farmers and feeding. Although some of the birds have wandered long distances from where they were released, yet they seem to have generally remained near the localities where they were turned loose. We hope that next year will bring them back to us in

loose.

We hope that next year will bring them back to us in goodly numbers, and then we shall know that with us G.C. L. the experiment is a success.

Game Bag and Gun.

GAME IN SEASON IN AUGUST.

Woodcock, Philohela minor.
Black-bellled plover, ox-cyc,
Squalarnah helvelica.
Ring plover, Æpjalitis semipatmatis.
Stilt, or long-shanks, Himanic,
pus nigricolik.

pus nigricallis, ed-bring downtcher, Vellow-shanks, Totanus flaripes, ed-broasted snipe, downtcher, Action of the Macrarhamphus griscus,

*This enumeration s general, and is in condict with many of he State laws. "Bay birds" generally, including various species of plover,

sundpiper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group Linneala, or shore birds.

Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15th.

—Address all communications to "Forest and Stream Publishing Company, New York."

GROUSE SHOOTING IN THE NORTHWEST.

Roberts Shoother Refine Annual vacation in the Northwest, preferring the fresh prairie breezes to a crowded hotel, and the freedom of camp life to the conventional restraints of a modern watering place. Each season he has there net with Eastern sportsmen in constantly increasing numbers, and as a stranger's first shooting trip to that region is rarely one of unqualified success it will, perhaps, not be amiss to offer a few suggestions on the subject. It may be accepted as a general truth, in all kinds, of humanity, that mere skill with the gun is not in itself sufficient to insure a good bag of game, and this principle applies with peculiar force in grouse shooting. The most indifferent shot will bring down his birds easily enough when he has the good fortune to find them, but grouse

applies with peculiar force in grouse shooting. The most indifferent shot will bring down his birds easily enough when he has the good fortune to find them, but grouse are not to he met with in every wheat stubble and along the margin of every slough "as thick as chickens in a barn yard." On the contrary, even in the best grouse region in America (Sonthern Minnesota, Northwest fowa and Eastern Dacotah) it is common enough for well-equipped sportsmen to beat over miles of good-looking country without getting a point or starting a feather. There is an abundance of game, but the country is vast, and none but a practiced eye can pick out the "likely places" with any sort of precision. Nor are there any royal rules for the guidance of the uninitiated. An old hunter, for instance, mounts the buggy seat, sweeps the lorizon and directs the driver to some swale, or ridge, or slough, or stubble. But there are a hundred such places within view, and when you ask why he selects that particular one he can only reply: "It's a likely looking spot for 'em." Were he to justify his impression by assigning specific reasons and going into details, he would neerly mystify himself and noislead you. He generalizes, unconsciously, perhaps, but almost unerringly, just as an Indian generalizes a feint trail, or an old banker an accommodation bill.

And this will explain the wide diversity of opinion that the sure of the sure

izes, unconsciously, perhaps, but almost unerringly, just as an Indian generalizes a feint trail, or an old banker an accommodation bill.

And this will explain the wide diversity of opinion which prevails in regard to the most suitable dogs for grouse-nunting. If the sportsuan proposes to beat up the whole country, he must have bold, wide-ranging dogs, with high speed and great bottom—well-musteded pointers, if their feet are good, or the pointer dropper, or, best of all, the Irish setter. But if the hunter has a fair knowledge of the game and its haunts; if he can pick out the choice bits of country with reasonable accuracy, then a steady, fine nosed, close ranger will prove serviceable enough—a. Gordon, for instance, or even a good, stanch dog who is far past his prime and almost useless for general purposes.

On his first visit to the prairies an Eastern sportsman generally takes out his best qualid eg; and it is scarcely too much to say that the animal's merit will exactly mark the degree of his owner's disappointment. A half-broken puppy, which has been worked a little on quali with older dogs, will generally acquit himself reasonably well on grouse. True, he beats with a perplexed uncertainty, sometimes timid and sometimes bold, but he has at least been taught to back his superiors, and will seldom run in. Above all, not much is expected from him, and when he tremblingly makes a cronching point, and holds it, his achievement is looked upon as heng full of hope and promise. But, ahas! it is far otherwise with your main dependence—stanch old Ponto, Ponto is your lavorite. You have worked him for five seasons, and each year your fongue has grown more vasions, and each year your fongue has grown more vasions, and each year your fongue has grown more wanted and each year your fongue has grown more wanted and make pendence, and with a near-clous nose—a dog who knows his duties and glories in the knowledge. See with what freedom

he quart'-its on the breeze. Observe the sweeping flow and sir nous grace of his lithe gallop. Note his perfect poise, and his nigh-ord nonchalance. Why, there is an air of distorated self-reliance in the very lashing of his 'ail. See, with a sudden swirl he turns on the wind, and for a moment stands like a shape of bronze. And now, with head up and muscles tense and eyes glazed, he draws on his quarry with the noiseless glide of a pursuing fate. Fifty yards, a hundred, a hundred and fifty (Diana! what a nose b), two hundred yards, if it's a foot. Suddenly, some twenty yards ahead, a fine covey whirls into the air and sails for adistant corn field. Poor Ponto! He droops his flag and turns toward you with a rueful countenance, quite chopfallen. You haven't the heart to seproach him, but give him a cheery word and bid him fry again. No use. He grows worse and worse—circles, flushes, chases with desperate speed, and finally comes to heel looking crushed, humiliated, woe-begone. There is something uncanny about those big quail; something he cannot understand. You send him forth again, with a grave "stoady," and steady it is, for he stands to gophers, saids larks warder. moles terrains. cannot understand. You send him forth again, with a grave "steady," and steady it is, for he stands to gophers, field larks, snakes, moles, terrapins; anything, everything. After awhile he begins to do moderately well, in a pottering sort of way, but nevermore will he be the bold, free, dashing quall dog that he once was. Meantine the puppy is improving by the hour, and when you return East he will work better on quail than will poor, demoralized Ponto—not that he will show the snap and precision of your old favorite, but he will do good, cautious work, and close in freely enough as you gammanch.

snap and precision of your local harders, after he will do good, cautious work, and close in freely enough as you approach.

If you would have a dog work well on both quail and grouse, by all means break him on grouse first, training him to hold his point on the first seent. True, he may be grouse-broken on quail if you are content to hunt him alone; but you have no right, and indeed you will find it difficult to make him stand fast to his own find when other trained dogs are allowed to draw past him. Perhaps the best grouse range for the coming season will be found in Southwest Minnesota, taking the belt of country lying between the Southern Minnesota Railroad and the fowa line, and working westward to the eastern boundary of Dacotah. This is a magnificent region of fertle prairie, interspersed with lakes and sloughs which begin to fill with water-fowl toward the close of September. It is now accessible by the recent western extension of the Southern Minnesota road, which was opened last fall. This country has been surveyed and marked by quarter sections into minute topographical classifications, the object being to denote the character and lay of land to intending settlers, but the maps are of great utility to the sportsman, enabling him to follow the game ranges, no matter whether his quest be for grouse or water-fowl. These topographical maps can probably be obtained from John C. Easton, Esq., Lanesboro, Minn. At least, they were prepared under his direction, and he is an accommodating gentleman and a keen sportsman—a man of superb executive ability, President of the Kest.

In regard to guns, of course each sportsman has views West.

the West.

In regard to guns, of course each sportsman has views of his own. English visitors and gentlemen from the East usually bring something light, and during the early part of the season a saven nounder does well enough. But, as usually bring something light, and during the earry part of the season a seven pounder does well enough. But, as the season advances, and the grouse get wild, and the ducks and geese begin to come in, mere skill must yield to weight of metal. The man who drops live drachins of powder into his choked 10 will have the big bar.

WAU-ZEE.

Another correspondent, writing from West Point, Cummings County, Nebraska, says:

Cummings County, Nebraska, says:—
Prairie chickens are now as big asquail, and will soon be ready to kill. Elkhorn Valley cannot be surpassed for chicken hunting; they are here by the thousands, and sportsmen come from Chicago in the season by hundreds to hunt them. We also have plenty of snipe, plover and quail in their season, and quite a number of deer in the winter; there are numerous hotels in the valley, and good board can be had for 84 per week. Ducks and geese are abundant in the spring, and take it all in all sportsmen will not regret a visit to the Elkhorn Valley. It is reached by the Chicago and North Western Roliroza, 'viat, Missouri Valley to Frentont, then up the valley by the Elkhorn Valley Railroad. horn Valley Railroad.

Montana Game Fields .- Burn's Ranch, Montana, MONTANA GAME FIELDS.—Burn's Ranch, Montana, July 13th.—In this place there is plenty of antelope, white tail, and some black tail. Elk and buffale can be found in a radius of twenty miles. The latter will be along the river (Yellowstone) in about four weeks, but the elk always stay back in the hilts. As soon as the bullberries are ripic (September) the hears will commence to show themselves. This place is fifty miles from Fort Butford, and can be reached either by stage or by river. The fare from Bismarck is \$15. As a hunting ground it cannot be beaten. Horses can be hired or bought at low figures. Guides and house accommodations can be found along the river is most any place. Persons coming into figures. Guides and house accounting the river in most any place. Persons comu along the river in most any place. Persons comu this country will find a shot gun to be a valuable a fact hered game. Persons coming into

New York.—Corthandt.—The Cortland Shooting Club are seeing to the protection of game in their neigh-borhood, and this year the prospects for fall shooting (ruffed grouse and woodcock) are unusually promising. We hope to see the Cortland Club at Brooklyn next year.

IS TRAP SHOOTING CRUEL?

WALKERTON, Ont. Editor Forest and Stream :-

for porest that stream (=-'that is sport? You don't mean to say you enjoy the agony of little fish fastened to the hook, or the pain of the pigeon dying t leaves the trap? Yet certain it is that shooting glass balls or as it leaves the tran? asking lish in a net five no such pleasure as killing the fish and the bird with rod and gun. It is not the skill required which show gives the pleasure. Man and all predatory animals seem to be instinctively cruci, and if so the gratification of the passion within proper bounds is not wrong. Then what are proper bounds? Are we only to lish and shoot that we may cat? Pshaw! that is pot-hunting, discussing, deserving of the contempt of all true sportsmon. The fact is, on this question men form and exthat is potening obscusting a user and or a contemporal ac-true sportsion. The fact is, on this question men form and ex-press opinions which are saily at variance. For instance, if a lot of boyses the dogs on a cut we all condemn their cruelty, al-though the eat is a predatory animal, whose chief delight is to

catch and torture the poor little mouse. Yet when we see field of huntsmen in brilliant searlet and mounted on splendld horses galloping over the country at the risk not only of their own necks, but their horses also, with a pack of hounds chasing own necks, but their horses also, with a pack of nounce consume the fox, we never think it proper to speak of cruelty. Yet where is the difference in looking on "this picture and on this?" Then a man "goos a-shooting," fires into a flock of birds, kills perhaps one or two and wounds a half a dozen, which fly off to their coverts and die miserably or become food for hawks; and which the coverts and die miserably or become food for hawks; and who thinks of the crueity? Yet when a man fires at a single bird ou of a trap and only kills or wounds the bird he fired at, we have of a trap and only kills or wounds the bird he fired at, we have a howl from the humane man which really makes one shudder and stop to think whether or not one deserves to be condemned for it. If it pleases a man to catch or breed a bird, to put it into a trap and shoot at it, why should he not do it? The religion of the Anglo-Saxon forbids it not, and nature asserts it to be right. If we had not the cruel instinct we could not live. The Indian would still occupy this continent, for it was cruel in the whites to detail the property of the could be a supported by the country of the property of the support of the cruel in the whites to detail the country in th drive him from his home and occupy it. Yet will any man say i was wrong? No; for it is following the rule of nature—the weaker goes to the wall—"the survival of the fittest." The box crucker goes to the world path is naturally as he easts. "To step aside and let the reptile live" is the result of education, and we don't object to any one cultivating it in himself to the hizbest non to object to any one equivating it in minsor, to the discossiplicity but we do object to an interference with legitimate sport by people who object to one and not another equally cruel act.

When our laws compel us to destroy animal life only in the most painless method-to chloroform the ox instead of using the polaxe-we will admit the consistency of our "Prevention of Cruelt sac-we will admit the consistency of our Prevention of Crushy, to Animals" man, and quit shooting birds either at trap or otherwise. No doubt but that we all try to deceive ourselves into the belief that we take no delight in being cruel, but it is deception belief that we take no using in room, in only, for man is naturally cruel and takes pleasure in it.

Gunner,

ROCHESTER, N. Y., June 15th.

Editor Forest and Stream :-

That trap shooting bears but poor comparison with the pursuit of game in the field will, I think, be scarcely gainsaid by the most carnest advocate of the former sport; but I maintain that a part of friends who like shooting can pass a few hours very agreeably in testing their nerve and skill at the traps. That pigeon shooting is an elevating amusement I shall not claim, neither would dmit that it is more debasing than ordinary shooting in the field and to assert that would be high freeson against the universal and to assert that would be high treason against the universal protein-bood of sportsmen—an offense so rank as to deserve death without benefit of clergy! When the millendium arrives, bringing with it the perfect man, probably he will neither shoot game in the field nor pigeons from traps for his amusement. Then will the manufacturers of artificial targets reap even greater harvest than they now do. But, until that time, it books as if mankind would continue to get sport for thouselves out of what is death to follow mentures. I have not thus expensive in the continue to get sport for themselves out of the first than the follow mentures. what is death to fellow creatures. I have at times—when in a sentimental mood, no doubt—asked myself, as I admired the graceful form and beautiful plumage of a ruffed grouse or sulpe that I had shot, what right I had to kill so beautiful and barmless a creature. But before an answer was framed, my dog came to another point, and settlement of the question was postponed. Il amount point, and settlement of the question was possibiled, in una himself was not subject to pain and death, he would have less oxcuse for indicting those ills on other sentient beings than he can now employ to soothe the twinges of conscience which some feel on pouring a charge into a flock of wild ducks, or knocking right and left the startled members of "Rob White's" knowing right and left the startled memoers of how white's family, which never gave their destroyer any offense. I cannot see that there is any more cruelty in pigeon shooting than in the shooting of game, the propriety of which is never questioned by many sportsmen who object to trap shooting. Should I ever be come convinced that pigeon shooting over traps is cruel and in-defensible, I am inclined to think that, to be consistent, I shall also condemn and give up field shooting. If I am not inistaken, modern research disproves the theory that

The poor dumb beetle we tread on Feels a pang as great as when a giant dies.

This modern view is by far the most satisfactory to us who shoot, for surely it is not for the mere pleasure of killing that so many like the sport of shooting. The follow who measures his enjoyment by the amount of blood he sheds when out shooting does not know the pleasure which those of another temperament derive from other sources of delight in the field. Let there be less countenance to the killing of great numbers of birds and fish by professed sportsmen, and something will be gained.

EDMUND REDMOND.

IMPROVED TRAP SHOOTING METHODS.

Editor Forest and Stream.

Editor Forest and Stream:—
ying the fact that glass ball shooting affords to
our overworked business men, of all classes, a source of relaxation from the cares of daily life that alone more than compention from the cares of daily life that mone more than compan-sates for the outlay, leaving altogother out of the account the pleasure derived.

But my utilizarianism comes to the front and asks: "Why not

turn our recreation, in this line, to a little better account?

turn our recreation, in this line, to a line octact account?
What the genuine sportsman most wants is to be a steady, uniform, first-class shot in the field; and to be able to stand at eighteen yards and break a good per centum of balls thrown straighten. away (or nearly so) does not always accomplish that need a more varied style of practice—one that proximates nearer

need a more varied style of practice—one that proximates nearer the flight of game than that now in vogue.

One of the most difficult things with the young sportsman—the one that slways conflues thin not a little—1s to select for his shot one of several birds around him, taking wing simultaneously. Every old sportsmann will recognize the picture in his early experience, and I have observed it in many, indeed, all beginners with whom it has been my fortune, or misfortune (*us you like it ".") whom it has been my fortune, or misfortune ("as you like it"), to be thrown. And to overcome this difficulty, I have adopted, in our club practice, the use of two Card traps, placed five yards apart, and behind a screen. They are kept revolving in the same direction, by means of a continuous belt passing around the axles of both traps, and operated by a boy sitting between them. Both traps are sprung at once, and the shooter allowed to take his hoice of balls.

Another feature which we have added in our practice, the ad-vantages of which will be recognized by all sportsmen, is to place two men at the score at the sume time—on the right and left sides alternately-and having both traps sprung simultaneously, the shooters take the balls on their respective sides.

shooters take the balls on their respective sides.

This serves the double purpose of first making the shooter decide on the instant which bird is his, and having once decided, teaches him to hold on it until the shot is fired, and thereby arolis the unpleasant but quite common mistake of doubling with a companion on the same bird. Secondly, it has a tendency to overcome the nervousness caused by the discharge of a companion's gun in close proximity to the shooter. This plan, with the

eccentric collar removed so the traps will give incoming balls certainly gives a very difficult shot, and approaches nearer to the ctual field shooting than any other means yet adopted with bails ince they get as badly "mixed" as birds sometimes do in the

We also use two traps in single ball shooting, with one man at the score, springing one tran at a time.

The traps are under the immediate control of the referee by teans of treadles connected with the "pull" wires. h the "pull" wires.
ROBERT I. HAMPTON,
President Cherokee Gun Club.

SHOOTING MATCHES.

MONTREAL, Ouchec, July 14th .- Vesterday afternoon the shooting match between Messrs. A. Bonneville and C. Pepin, for the litle of champion wing shot of the Province of Quebec, was won by the former, with 20 straight, Pepin missing his last bird. by the former, with systrangin, repin mission is also out. The shooting was far above the average. Although each competitor was allowed the use of both barrels, Mr. Bonneville used his second only once and Mr. Pepin but twice. The wind blew from the southeast, and the birds were generally good. The attendnce was very poor.

MEDFORD, Mass., July 19th .- At a glass ball shoot at Spindle MEDICARDA, AGOS, AGOS INICA AC GRASS OF A GRASS VIBES SALVAN, the following scores were made out of a possible 20: C. Howe IS, L. H. Barrows IG, T. Martin IB, W. R. Dennett 15, W. Kendall IS, J. Westcoil I4, C. Evrans I3, M. Burr I3, C. B. Fletcher I3, A. C. Cook II, A. H. Harris II, T. Wilkinson II.

WEBSTER, Mass., July 20th.—The Rod and Gun Club of this town are constantly at practice at the Base Ball Park, and some good cores are binted at in the near future. NAHANT SHOOTING CLUB.-NAHANT, Mass., July 21st.

RANGE AND GALLERY.

THE KENNEDY MAGAZINE RIPLE. In the FOREST AND STREAM THE RENNEDY MAGAZINE MUPLE—ITH THE POWER AND STREAM OF LAST REAM OF LA than the cracking or glass bails and other objects as they are thrown from the hand of an experienced second. The account, however, omitted to state that the weapon used was the Ken-nedy magazine arm, and was made by the Whitney Arms Com-pany, of New Haven. For a magazine and hunting rile it is second to none made. That it is appreciated is seen in the grow-ing demand for it from all sections of the country, and especially ing demand for it from all sections of the country, and especially from the West, where the hunting qualities of an arm are nextly severely tried. The breech is of very simple construction, perfectly safe, having rolled metal in the line of resistance to the fire, and it can be manipulated and fired as rapidly as any arm. The company are now making a rifle of the same name and style, but intended to use a 60 grain cartridge of .55 caliber. President Whitney also reports: "We have made about 2,000 of the Burgess gun, that uses the United States Government cartridge, and has sold better for sporting purposes than any new gun ever put on the market; in the same time, and has given good satisfaction." on the market in the same time, and has given good satisfaction.

THE HALFORD-HYDE MATCH.

By noon of Saturday last it was generally known on this side BY noon of Saturday last it was generally known on this side the water that the team of Americans whom Mr. Hyde had collected to meet a company of Britishers had met with a crushing defeat. Despite all advice to the contrary, and in direct opposition to the calmer judgment of men who were in a better position and in a better frame of mind than he to estimate the strength of the British team and the weakness of his own party, Mr. Hyde persisted in carrying out his arrangement with Sir Henry Halford for a British-American match. The match was set down for the last day of the Wimbledon meeting, and on Saturday last it was fought. The Americans had been shooting through the prize meeting, and had secured plenty of individual practice. They were busy working and struggling for the many tempting prizes to be found on the long list of the English prize meeting. The "representative American gentlemen," as they were proud to style themselves, had become a mere party of mus-hunters, There was an abundance of time between the close of the Irish match on June 20th last, and the match of Saturday last, for the American ton to have taken a season of systematic drill. The Dollymount Range was open to them. So that at Houndalow and adozen others. They did not avail themselves of these openings, and while Sir Henry Halford was displaying more than ordinary carries and caution in the selection and desophine of them and the match of an and adozen others. They did not avail themselves of these openings, and while Sir Henry Halford was displaying more than ordinary care and caution in the selection and discipline of his me care and caution in the selection and discipline of his men, Hyde was working, really if not intentionally, to six up internal dissension in the squad of shooters which he dignified with the name of team. Co. Bodine, with Bathbone and Fisher, had wisel, set sail for America, preferring to show their opinion of the scrub match by keeping severely away. To add to the discomfort of the Americans and set the alimax to the chapter of perverse blunders in which they have been blundering for a month mag. Hyde must needs get ant a wrangle over his wine, resulting in the withdrawal of Farrow from the tean and the substitution of Rockwell. This removed the last prop from the platform on

which the Americans were to stand and win. Farrow has lone when the Americans were to stand and win. Fattrow has long been accustomed to hold his own in long as well as short range work. Ho is specially an individual shot, not caring much for the help to be gained from those squadede with him. He was thrown over, and in his place was taken a man regarded as a very anotable shot, but in this particular instance to failig unprepared anstable shot, but in this particular instance totally unprepared for elevation to a place on the team. That he was so unprepared is only in keeping with the whole management of the team, and the blaine can be laid only at the door of the captain (?) of the team. There is a cabled story that Hyde and one of his men quarrieled over the possession of a cask of sherry, and that the team man, for reasons satisfactory to himself, no doubt, preferred to take Hyde's assertions and promises in writing rather than twent of muth.

to take Hyde's assertions and promises in writing rather than by word of mouth.

As finally made up, the Hyde team included Jackson, Laird, Scott, Brown, Hyde, Dudkey, Gerrish and Reciewell. The British team were divided into four Irishmen and four Englishmen squadded into two groups at targets H and I, according to the mationalities. Young, Fenton, Joynt and Milner were the Irish contingent, while the Englishmen were Bates, Evans, Godsal and

The firing opened at 9:45 with pleasant weather prevailing : by The irring opened at \$25 with pleasant weather prevaining; to the o'clock, however, the clouds began to gather, and it was evident that there was to be a downfall of rain. It came before this range had been fired over, but not till the parting shots. The Britishers, with their superior organization, had been enabled to The promptly, one after another, while the Hyde men prolonged their miserable performs ace until they were caught in the rain on target B. Scatt, Laird, Jackson and Rockwell shoth order. Scott opened with a bullseye, Laird and Jackson following with Scott opened with a bulkeye, Laird and Jackson following with the same, while Reckwell went off into a center on target C. Hyde, Gerrish, Dudley and Brown followed in order. The opening was poor, and while Gerrish and Dudley secured a bulkeye, Brown took only a center. On the other targets seven bulkeyes and a center e-were the openings shown, placing the figure for the livest round; at Halford Team 39, Hyde Team 34. On the next round the total's showed Halford Team 76, Hyde Team 74. On the next round a clean score of bulkeyes from the Hyde targets and a single c-nter on the part of the British men kept them only one polytamer. But with the fourth round, a nair of incest from the pol'at apart. But with the fourth round a pair of inners from the American targets widened the gap between the totals, and the Hyde men thereafter had a hopeless stern chase. They nover came within hailing distance of their opponents. Not a single inner was made on the British targets at this range while the Americans had no less than twelve of them, with a miss thrown in to holp the down pace. While the British average was 72 in the possible 75, the Hyde squad scored but 63 at this range, and a difference of 35 points killed anything but the most remote chance of a victory for the visitors.

With the opening at 900 yards it was evident that the Hyde men With the opening at 900 yards it was ovident that the Hyde men were utterly demoralized. While the British opening round was 37, the opposition was but 31, tookwell sending a bullet into the earth before the target. He changed his gun, taking a reserve one from Scott; but, after a few shots, of which the majority were misses, he wont back to his own weapon. The weather, during this time, was very favorable. Though the wind veered frequently and rather sharply severed times during the day, the changes were not such as should have prevented skillful ride-workers was the way from washing rands caves. The light was signily magnifications. the changes were not such as should have prevented skillful rifle-ment from making good scores. The light was sinopity magnifi-cent. During the first stuge it was a cold, leaden gray, but ob-Jects were very distinct. As the day advanced, the light became score mellow, and the targets stood clear and sharp cut against the butts. Before the second stage was finished, "gun fire" not-fled that lunch was waiting. Sir Henry flatford made a strenu-ous effort to induce the military officers in charge of the butts to continue the shooting until the scores were complete, but in vain. After an hour's interval, the shooting at 900 yards was com-pleted, the score board showing that the Americans had fallen behind 44 noints. At this range tabe fittish team was 80 points behind 41 points. At this range the British team was 80 points

behind 41 points. At this range toe British team was 80 points ahead, with victory assured.

It was evident when the 1,000 yards stage opened that the Americans had given up all hope of winning the match. Each man shot for himself, intent only on making a comparatively decent showing in the mass of inferiority which the Hyde team had become. The Britishers were a trille careless, too, with their victory so well assured, and the result shows that the American 1,000 yards total was a point ahead of that made by the Britishers. The grand total, however, came with a difference of 79 points in favor of the Bufferst team. of the Haiford team

The actual work of the teams in detail may be seen in the fol-

COLUMBUS, Ohio, July 7th.—The shoot for the new State Badge closed to-day with a very close run of work. On the day previous the Westerville team retired with a lead of eleven teams, and one yet to hear from—Richwood. The latter was out bright and early this morning, and faced the target with a steady nerve. They built this morning, and faced the target with a steady nerve. They built up an evenly balanced score, and between 9 and 10 'clock tinished the centest with \$30 points out of a possible \$50, being forty-two better than Westerville, the next best. The team was jubilant over the result, and came to the city with their guns spiked with brooms. They repaired to the office of the Adjutant-General, when Governor Foster made a speech and presented the \$100 yold budge to the Richwood team. He also presented Mr. G. W. Speelman with the \$50 gold badge for the best individual shot. The following is the complete team score:—

TWIST VERSUS VELOCITY.

Editor Forest and Stream :-

Editor Forest and Stream:—
The problem of the influence of twist on velocity, is a very inluteresting one to me, and if you will bear with me, I will helefy give an abstract of some experiments or the United States Ordanace Department, which I have not seen published, bearing on this subject. The experience of these officers, with minds trained in the investigation of these abstract questions and with the use of the finest instruments to be had; for the determination of initial pressure and initial velocity, should be taken with a great degree of authority.

In 1874, during an investigation of the system of "muzzle riflue," the attention of the Chief of Ordanace is called, by a prominent army officer, to the "apparently great and unnecessary waste of force," caused by a twist of one turn in 22 inches, adopted in the new army 45 calibor rifle. The question being referred to Col. Beatton for Investigation, that officer reports (Ordanace Notes No. 39) and estimates, after a preliminary examination, the difference in initial velocity, obtained from a smooth

(Manades Actes a Person and a Saturates a Person and a smooth hore, 45 caliber, and the same barrel, grooved with a 22 inch twist, at 49 feet per second. This estimate is based upon an approxi-

mate valuation given to K, representing the radius of gyration (0.13 inch) of the ball around its longer axis, in an equation originated by him embracing all the elements of the problem. "This loss" for reports is no preater; than is lable to occur in a series of initial velocities obtained with the same ammunition, and produces but little variation in the accuracy of fire and in the flatness of the trajectory." "In further confirmation of this," the results of a series of experiments at the Frankford Arsenal is submitted (at 300 and 500 yards), with two 45 caliber riles, one having a 23 inch and the other a 35 inch twist. The rillo with the 23 inch twist at both ranges required less elevation than the one with 35 inch twist; an indication that, in this instance increased twist certainly did not reduce the velocity. Another example is given, to the same purport, from previous experiments.

mently, by a carefully constructed and enlarged model, Subsequently, by a carefully constructed and enlarged modes, Lieut. Mcteaff fixed a correct value to K, the radius of gym-tion (equals 0.1556), which determined the difference in velocities obtained from smooth bore and the rifle of the 23 inch twist to be of feet, instead of 49 feet per second. To test the accuracy of the formula, two barrels were then grooved in exactly the same way except the grooves in one case were straight, and in the other case, with a 22 inch twist. Initial velocities obtained from these rifles, with service charges (70 grs. powder and 40 grs. of lead). rifles, with service charges (70 grs. powder and 40 grs. of lead), showed for the first, 1,442 feet, and with the second 1,382 feet per second, a difference of 60 feet per second, a result agreeing closely with that from the formula. Volocities were then taken from two "partly grooved" barrels, one with a 22 inch twist and the other with a 45 inch twist, with results of 1,351 feet and 1,371 feet per second—rose perclively, a difference of only 20 feet per second—too. small to take account of, as in the series of initial velocities, taken during these experiments, with the same service charge and same

on Nov. 20th, 1878, a series of experiments were made under the auspices of the editor of the London kield, by the well known London rifle linkers, the Messrs. Holland, to ascertain the lialitial velocities and penetration of different rifles designed for large game. No attention appears to have been paid to the twist of the grooving (as that feature is not reported); but one experiment directly bore upon that point. The velocities one experiment directly fore upon that point. The velocities on-tained from a 10 bore smooth-bore and a 10 bore rille, each using eight drachms C, & H, No. 6, and a 6891 spherical ball, are given as 1.470 and 1.460 feet per second, respectively, a difference of only 10 feet—twist of grooving not given, but supposed to be moderate. It is stated, in the discussion following, as being the rule at Woolwich Arsenal, to allow 48 feet per second for error of justru-

Woolwich Arsenal, to allow 48 feet per second for error of Justrument In testing velocities.

The results, from the above experiments, indicate that there is little or no loss in velocity in the small bore riles, between a moderate twist and a more rapid twist, whereas I am inclined to think that, even at short ranges, increased accuracy is gained by the rapid twist. Judging from the results of experiments just made by me, to obtain accurate trajectories with different charges and projectiles, by means of paper screens, at 282 yards (travers) and commander them with the trajectories and selections. charges and projectiles, by means of paper screens, at 282 yards intervals, and comparing them with the trajectories and velocities obtained at the late rifle trial by the Messes, Holland, I feet aure that with the usual service charge and using the same powder, C. & H. No. 6., an initial velocity is obtained of at least 1,850 to 1,000 feet per second, the rifle having a 29-link twist and 34-inch barrol. Barometric pressure, 24.55 inches, which of course should be allowed for, in making a comparison for points, when the pressure is about 29.56 inches.

There is one point, in the discussion of this question, usually overlooked; the necessity of a certain amount of confinement to the powder, us, with all explosives, to insure its complete combistion and develon its maximum excansive force. It is monared.

the powder, as, with all explosives, to insure its complete com-bustion and develop its maximum expansive force. It is apparent to me that there are certain condutions of powder charge, weight of ball, and depth and twist of grooving, from which no loss of velocity need occur. As an illustration, I suppose that with a 4.5-cal, 30-inch burrel, 95rs. of powder, and 550grs, of ball and smooth bore, the maximum results are obtained, the powder fully consumed and its full expansive force developed. Instead of the 550grs, ball, substitute one of half its weight (say 575grs), and other conditions remaining the same. It is evident to me the all other conditions remaining the same. It is evident to me the light ball will be forced from the muzzle before the powder is light ball will be forced from the muzzle before the powder is consumed, resulting in a loss of power; but, by grooving the same barrel, with grooves more or less deep and with twist more or less rapid, a certain amount of resistance is produced equal in amount to the resistance offered by the 256grs, which represents the difference of weight of the two balls. On firing the light ball from the grooved barrel the powder then will be fully consumed, and its maximum expansive force developed and the same "energy" (product of weight and velocity) will be imparted to each ball at moment of exit from the muzzle. Under the above conditions, it will appear that the twist, etc., would not effort the velocity. The product it shough it slaves in coroses the recoil. The in-

the above conditions, it will appear that the twist, etc., would not effect the velocity, though it always increases the recoil. The inference, also, is that the smooth bore will not burn as much powder as the grooved barrel, with same weight of ball.

Bearing upon this subject, I will briefly recapitulate the results of exhaustive experiments made by Major, J. P. Parley, of the Oriannee Department, made to determine "what length of bore of service rifles gives a maximum initial velocity to the builet." With the service charge (70, 48grs.) experiments were made with 11 different lengths of barrel, from 5 inches to 122 inches. "The Il different lengths of barrel, from 5 inches to 123 inches. "The experiments conclusively show that below 22 inch (carbino) longth of barrel" (where the velocity was 1.210 feet) "the initial velocity rapidly decreased. At rifle length (3.2.6 inch) the velocity was 1.320 feet. Then the increase was slow up to 90 inches, and from that length to 112 inches no increase of a practicable character was realized, and then the velocity retrograded. At 90 inch length, velocity 1,416 feet, at 112 inches the maximum velocity was attained, 415 feet. With service length of bore (3.2.6 inches) and service ball (465grs and varying charges of powder, from 15grs, to 146 real throughting expensively increased until at 15grs, the maximum grs.) the velocities gradually increased until, at 120grs., the maxigrs. the venorities granding) refreshed than a Logist the man mum velocities retrograled, with increased charges, to 1,494 feet. With service bore, service charge or powder and varying balls, the highest velocities was obtained with the 20grs. (pistol) ball—1,539 highest velocities was obtained with the source, preconducting the feet. With the 12 inch barret, 130;rs. powder and 330;rs. ball, it velocity of 2,632 feet per second was obtained. Substituting a doigrs, ball in the last experiment, the velocity attained was 1,730 feet per second. With same length of bore, "so long as proportional twights of powder and ball are preserved, the velocities tional weights of powder and ball are preserved, the velocities are practically the same; as Hygrs. of powder and 80px. grander are accepted a velocity varying but little from that incident to 70gxs, powder and 460 of lead. "When long barrels were fired there was little If any smoke, but instead a small quantity of black dust, as it were, issued from the muzzle." "The report of the discharge with the long barrel was light, and that of the short barrel heavy. A 3 inch bore rotated the ball perfectly, but less than 1 inch of grooves failed to do so, and the recoil with the short barrel was excessive."

The conclusions arrived at were, that having in view the ques tion of recoil, accuracy, convenience of bandling, etc., the service rifle already adopted (as also the service charge) was the proper

model. These "ordinance notes" contain a great deal of valu able information, of which the above is a short synons able information, of which the above is a short synopsis, and their full publication would be duly appreciated by sportsmen. I have never seen them in print until recently. It appears that with service charge (70, 405 grs.), increasing the length of bore from 32.6 inches to 112 inches, increases the initial velocity 216 feet per second. With 139 grs. powder, and 465 grs. lead, increasing the longth of bore similarly, increases the velocity 197 feet. In the light of these facts the question is naturally suggested, whether, if a .45 caliber, 32.6 inch barrel, is not of sufficient length to utilize fully the grass from 70 grs. powder, can it be expected that a 20 inch, 26 inch, 26 inch and 28 inch barrel will fully con-sume from 40 to 70 and 110 grs., such lengths laying heap adonated

chart as mote, as men and 23 men harrel will fully con-sume from 1070 and 110 prs., such lengths having been adopted in some cases by most of the prominent rille factories? Would it not be better to proportionately lighten the barrels and lengthen them to 30 or 32 inches, without adding to weight, thereby insuring a better balanced arm, and capable of giving greater velocity? It is understood that "musket" powder was used in the above experiments, which is understood to be a little coarser, slower burning and of a little less strength than the standard F. G. rifle powder of American manufacture, but there is not sufficient difference in strength to affect the results.

Is not summont difference in strength to affect the results.

In conclusion, I fear that friendly shoot with Mr. H. W. C. cannot soon take place, unless he joins me in a contemplated excursion during the fall among the big horn, elk, etc. I promise him royal sport, and in the meantime we may be able to unravel some of the mysteries of 'twist' and other rifle anomalies. He shall also be introduced to a few grizziles, and during the interview I will see that his flanks and rear are well protected.

P. Montone.

Dricket. FIXTURES.

July 30th, at Syracusc.—Onondagas vs. Oswego Falls. July 31sr, at Hoboken.—St. George vs. Staten Island August 3d, at Prospect Park.—Nowark vs. Manhattan. August 6th.—at Syracuse.—Utica vs. Onondagas.

THE CANADIAN CRICKETERS.—The tour of the team called "Canadian cloven," unsuccessful from the first, has terminated. All future fixtures have been abandoned, and Hail, Smith and Gillear sailed from Liverpool for Quebee and home two weeks ago, and the remainder of the team followed last week.

-We call the attention of all cricketers to the notice of Shaw & Shrewsbury, in another colu

-The Marion second played the Unions, of Kingston, Philadelphia, on the 24th inst. at Ardmore. Morion, first innings, 104, second, 114, five wickets. Union, first innings, 68.

—The Germantown and Girard second elevons played at Nicotown on the 24th inst. Girard, 96 and 51; Germantown, 87.

THE STATEN ISLAND CLUYS TOHE.—OR Saturday, July 17th, a Jolly party of cricketers belonging to the Staton Island Cricket Club loft this city for Detroit, Mich., where they arrived in time, on Monday, to commence their game with the Peninsulars, of that Club left this city for Detroit, Mich., where they arrived in time, on Monday, to commence their game with the Peninsulars, of that city. They were kindly received by the oricketers there, and after two days' play left a ball behind them. Smith, the new professional of the Peninsular Cricket Club, Just sent over by Alfred Shaw, from Nottlingham, England, proved a terror. He is a young man of medium stature, and like most English professionals is quict and reserved in bearing. His style is said to resemble that of the Australian' demon,' attlough not so fast. This was his firstgame with the Peninsulars. From Detroit to Toronto occupied the night of Tuesday, and upon reaching there several of the team looked as if they had been entered in a "go-as-you-please," and their play certainly proved it. The Bor received them with open arms, and treated them right royally. The grounds of the Toronto Cricket Club are famous for good wickets, and the match, although one sided, was full of merit and fine cricket. Wednesday evening saw the match brought to a close, and on Thursday a return was commenced and drawn. Friday, Hamilton was visited, and there their old foes of last year were on hand to duplicate their victory of lest season at Staten Island. A glance at the records of this match shows that the Islanders topped last year's innings, 47 and 43, by 49 and 75. Unfortunately, Mr. Wand was absent, but Mr. Simonds had come from Kansas City. After leaving another ball, No. 3, the tourists left for home, on Saturday, vin. Nigarar Falls. They reached home safe and sound, on Monday, with enough stories of their trip to keep the mouths of the junior members open for weeks to come. It is but fair to say the eleven was a weak one, both Harvev and Miley being stay-arthomes. The following are the full scores of the matches, winding up with a battling average table of the trip:—
STATEN ISLAND E. PENINSULHS.—First match. Played at the Recreation Park, Detroit, Mich., on July 19th and 20th, reculting in the defeat of the tourists by a

the defeat of the tourists by an innings and 25 runs. The condi-tion of the ground, owing to the heavy rains, was unfavorable to the Staten Islanders, as they went first to the bat. Score:— STATEN ISLAND.

STATEN ISLAND

Sprague. J. J. Eyre.

onto July 21st, and resulted in the visitors' defeat by an innings and 63 runs. The wicket upon which this match was played is probably the best in America. The eleven of the home club was the best it ever brought on the field, it being stronger than that pitted against the Young Americas a few weeks ago. Among the recruits were Browning, of Montreal, the hero of the largest score in America; E. R. Ogden, of Chicago, and Logan, of Fencion Falls, the latter probably the best bowler in the Dominion. The feature of the match was Behan's score of 71, procured by masterly defense, combined with free and vigorous hitting. It contained one 4, seven 3s, fifteen 2s, and singles. He was finally caught splendidly by Filmer at deep long off off Lanc, who bowled superbly throughout. Score:—

Young America vs. Port Hope.—The Young America Clubof

YOUNG ABERICA '8' POTE HOPE.—The YOUNG AMERICA CIVE OF Piniadelphia held the first match of their Canadian tour at Port Hope on the 5th and 6th of July. The Port Hope ground is stirted the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the wicket first and were soon disposed of for 3'', They ought to have made more, but as is generally the case when a young club meets one of more celebrity, the former battem are generally nections and unable to show what they are worth. Hayden sew str wickets fall, and played a barn door innings for 10. II, Haiff got 20 in the best form shown by any of the Canadians. The bowling and indig of the visitors were both magnificent. The analysis of C. A. Newhalf's bowling will speak for fiself. Van Rensseler's combination of welcet-keeping and long-stopping was instead, the property of the prop against. The fielding was quite up to the mark, that of Jones (c boy from Trinity College school at cover point, and Wadsworth

at point, being most prominent. Port Hope, who commenced their second innings on Monday afternoon, ald better in their second authent, but failed by live runs to save the one innings defected. Hogers got 25 by very steady batting. Trousdelt, who played in good form, 12, including a 6 to square legs. Young played very nicely tor 8. The howling and fielding of the visiting was again anguideen, and worth going a long distance to see. On Wednesday occurrence have been dependent on the control of the their visitors at a garden party, which was largely attended and -Montreal casily defeated Three Rivers, at Montreal, by 134 to

78 in the first innings. Montreal's second innings totalled 182. Browning, for the winners, made 49 and 63.

Belmont (2d) vs. Girard (2d).—Played at West Philadelphia July 17th, and won by the home club by 61 runs on first innings' BILLMONT SECOND-FIRST INNINGS.

CHALLENGE TO THE ANTHRACITE.

Editor Forest and Stream:— In view of the claims to public recognition which the most eco-nomical method of generating and applying steam holds forth, we are willing to do our share toward softing the problems at Issue among engineers, and consequently request problems.

nomical method of generating and specific properties at less te annong eighneers, and consequently request you to publish the following: pleased to enter upon a friendly competition against the Ferkinssystem of boilers and engines on board the Anthracties with our own coil boiler and compound engines on board the steam yacht Leila, upon such terms and conditions as may be mutually agreed upon. We appet, therefore, that an early agreets of the steam of the steam that the steam of th

We trust that this challenge will be accepted by the Anthracitle. There is no reason why it should not, and there is every reason why it should not, and there is every reason why it should. The Lathractic ame to America to show the great economy of high stewn in general and the Perkins system in particular. She has been most extensively "written up" by the lay press, which does not understand anything about such matters. As yet not a single journal competent to deal with engineering questions has really examined the Perkins claims from a scientific standpoint; they have so far been content to give the news of her arrival and reputed performance from the lips of interested parties. The daily press having given the eue, all others have painted in the same colors. We are not among those who take much shock in the Perkins system often than the American coll system. There is not a single point in the Perkins boiler which is superior to the Herreshoff coil or to the Root holler, or to Baheock and Wilcon's bolier, or any other sectional or pipe boiler. It is simply a reproduction of a very old idea, clothed in a garb just different county to deceive the uninitiated and to warrant the assumption of a special name. In principle the boiler is absolutely identical with the Babeock and Wilcon, and inits practical structure it is much inferior. So for as the Perkins en-

and to warrant the assumption of aspecial name. In principle the boiler Isaboultely identical with the Babocok and Witex, and in its practical structure it is much inferior. So for as the Perkins engines are concerned, they are an entirely uncalled for complication and excessive weight in proportion to the power developed, the adoption of the single acting cylinders to overcome the turning away of packing being a most crude, clumsy, and expossive roundahout way of overcoming a very small diluculty. To engineers, the statement which has been going the rounds of the press "that the great difficulty of providing lands with packing which would not leak or hurn away was finally overcome by Mr. Perkins substituting a third single noting cylinder, which therefore had no gland," must have enamated from a very worthy disciple of Watt and Stephenson indeed, but it is published asgospel truth, nevertheless, all over the country, and is exceedingly complimentary to Mr. Perkins. Now, asto the truth of the matter, the idea of using steam at high pressure as a means of obtaining evenously is used as the hills, and has been worked to the fullest becent in more than one system. Mr. Ferkins has simply carried his steam to still higher pressure, not because of any virtue in his apparatus, not because others could not do the same, but simply because others who laye worked the field have gone even

further than Mr. Perkins, and after experiments have found that in practice no economy is gained by carrying steam much over 175 pounds, however seductive higher pressures may be in theory Mr. Perkins is simply the victim of a very enticing theory, but he will obtain equal results when he comes back to 200 pounds and a well designed commond of the usual style. Friction of additional machinery, extra friction of steam in its numerous transfers, increased areas for condensation and expansion in passages fers, increased areas for condensation and expansion in passages, back pressures and increased weights of boiler and engine, will probably account for this failing of practice to work up to the standard of theory. Ils present engines are good only for the scrap heap. No wonder that Englishmen are slow in adopting them, and no wonder that the S. S. Wanderer, 700 tuns, Mr. Lambert, has thrown the whole Perkins system overboard and come back to a shell boiler and three cylinder compounds. But us the Anthrietie is here to prove things, and not merely to induce the average newspanser becomes now the lawboard or the average newspanser becomes now the lawboard or the storage newspanser becomes now the lawboard or the storage newspanser becomes newspanser becomes newspanser becomes newspanser becomes newspanser becomes newspanser becomes newspanser becomes newspanser becomes newspanser. the average newspaper reporter or picayune nautical flysbeet, we trust that the interested parties will not hesitate to accept any trust that the interested parties will not hesitate to accept any reasonable oballongs to an actual test; otherwise, they may as well make up their minds at once that Americans will fight sby of the whole business, and view the Anthractic in the same light they do a circuis in the country—good coungh to look at as long as it is a "free show," but forgotten as soon as passed by. If the Herreshoff Manufacturing Co. will offer anything like fair terms to the Anthractic, we hope a competitive trial will be brought about, for the Herreshoff's represent the most advanced practice in America, and the outcome of the trial would do very much to want setting and the parts programment approaching a setting and the cutcome of the trial would do very much to ward settling one of the most prominent engineering questions

A GREAT STEAM YACHT RACE.

THE BENNETT CHALLENGE CUPS.

THE following are the conditions under which the various Challenge Cups, presented by Ex-Com. J. G. Bennett to the New York Yacht Club, can be salid for the THE CAPE MAY CHALLENGE CUP.

The course for the Cape May Challenge Cup, presented to the shib in 1872, by Jas. Gordon Bennett, Esq., is establi-hed as for-

The course for the Cape May Challenge Cup, presented to the club in 1872, by Jas. Gordon Bennett, Esq., is established as following the course of the course

Cup No. 1 will be offered to the schooler which of the New York Yacht Club, to be an intended to the schooler which of the New York Yacht Club, to be an intended to the schooler which yet the usual course; which from the network off Satern Island, to and around the lightship off Sandy Hook and return. Said cup to be held by the winner for the term of 30 days after the race, without liability to challenge. Upon the expiration of said euro, the off said cub, and be prepared to sail a race over the same course, or such other course as may be designated by the annually elected Regata Committee of the New York Yacht Club, or, in the absence of the members thereof, by a committee appointed by the the usual cruising limits of the New York Yacht Club, or, in the absence of the different days next consumpt the receipt of such challenge, or forfeit the cup to the challenger. During the time in said of the the work of the said of the term of a said cub, as above required.

Should any yacht succeed in holding the cup in two consecutives.

salied upon a notice of a days, merca, or account of required.
Should any yield succeed in holding the cup in two consecutive races during one season, the winner thereof will not again be lindered by the consecutive compensation of the yachting senson of the year next ensuing the coording to the rules of the New York Yacht Club, with the time allowance.

CUP No. 2.

Cup No. 2, will be offered to the sloop yachts of the New York Yacht Ciub, to be sailed over such a course, and at such a time as may be designated by the regatta committee, or by such other as is provided for above, and to be won and held upon the same conditions as the cup for the schooler yachts.

CUP No. 3.

Cup No. 3 will be offered to the yachts of all nations, to be sailed for in an ocean mee, on a course from the lightship off Neepport to and around the lightship off Sandy Hook and outside the term of 30 days after the race, without liability to challenge. Epon the expiration of said period, the winner or the cup nust accept any challenge and be prepared to said a race over the same course within the space of litteen days next ensuing the toccipit any yacht succeed in holding the cup in two consecutive races during one season, the owner thereof will not again be liable to challenge out mill the commencement of the yachting season of the year first ensuing. For example, the control of the year that the close of a season by a foreign yacht, the owner thereof will be lable to challenge during the season of the year ensuing, for an ocean race over a course from the Needles, side of Wight, to and around a stakeboat off the barbor of Cherbourg, and return.

The ocean race, for Cup No. 3, above named, will be sailed according to the rules of the New York Yacht Club, but without always for time.
It is understood that in case any yacht holding one of the become interest to the programme of the programme of the programme of the programme of the programme of the programme of the programme of the programme of the programme of the programme of the programme of the programme of the provided for the schooners and sloops and for the ocean programme.

niter and form place of the control to the control to the control to the control to the control to the control to the control to the control to the control to the control to the control to the control to the Control to the Control to the control

York Yacht Club, to be salled for again in an ocean race as above provided.

The yaching season in American waters for the before-named they achieve the provided of the properties of the third Thursday in October.

Upon each of the Challenge Cups there shall be engraved the names of those yachts and the owners thereof that have held the same, and a dis, with appropriate devices thereon, shall be encoursed of the superior of the properties o

SEAWANHAKA YACHT CLUB.

ANNUAL CRUISE.

ANNUAL CRUISE,

In our last week's issue we left the squadron of this club riding to their second bowers in the anug harbor of Newport, over Sunday, July 18th. Next morning when the preparatory signal of the property of th

others as may weathered and clinic rock in Assuppir harbor; but obtained as any weathered and clinic rock in Assuppir harbor; but Schemer and Wars still holding the lead. Before the day was over, Wanderer's length began to-tell, and sent her up on the flagship's quarter.

A like locker and a nord run was made to Chark's Paint. Here the leaders were brought "by "to avait the fleet and the time of the great was taken by Schemer at an anchor. The latter had led all day, and had made the distance from Lime Rock to the Point and the state of the program of the program of the great was taken by Schemer at an anchor. The latter had led all day, and had made the distance from Lime Rock to the Point (15), Volknite 5.18.8, Corscii 5.13.19, Intropic 5.28.29. With the commodore leading, the fleet sailed into harbor in close order and were received with a salute from the fleet of the New Bedford Y. C., 1921 in form a crilise of several days. The next day, Tuesday, set flown for the foreupon and evening entertainment by the N. B. Y. C. failed to come off, and all hands had to slick to their exists all day and take it out in Havanus and yarns. The Entertainment of the control of the seven and the set of the seven and drowned out of the programme by Jupiter Plurius. The great of the Boston cutter. A catboat race between the members of the Scawanhalka Y. C., as well as the gir and yard races, were all drowned out of the programme by Jupiter Plurius. The Title. The most important event during the errisch however, was the critical inspection of the fleet for the purpose of assigning the annual "prize for examinability." The commodore appointed one to undertake the examinability the errisch however, was the critical inspection of the fleet for the purpose of assigning the annual "prize for examinability the critical inspection of the later to the purpose of assigning the annual "prize for examinability the critical inspection of the later to the purpose of assigning the annual "prize" and the same and holding to the sloop in refre

SALEM BAY YACHT CLUB.

Salem, Mass., July 25th.

Editor Forest and Stream:—
Our annual regarta, sailed July 21st, was a dull race, as you will see by the times made comparing it with the last regarta. In the lirst class the Vica got over about 20 miles of the course better the course better the course better third class the courtes between 19ac Crest and Peri was class, us they started within 20 seconds of each other and returned within 8 seconds, varying only fourteen seconds for the course of 7 miles and the varying only fourteen seconds for the course of 7 miles and the varying only fourteen seconds for the course of 7 miles and the varying only fourteen seconds for the course of 7 miles and the varying only fourteen seconds for the course of 7 miles and was leading by over a mile and a half when a sudden shift of wind and eath streak threw her dead to leavant and astern by over a mile, and the wind dying out soon afterward made it impossible to catch the rest. The record for the day is as for-lews:

Name, Owner and Rig.
Name, Owner and Rig.
Viva, G. W. Benson, k. sloop,
Lizzio A. Roby, J. Brown, k. schooner

Answers to Correspondents.

TT No notice taken of Anonymous Communication

- I H. S. Boston, -- Address Thos, Sedgwick Steele, Hartford, Conn. S. E., Batchellorville.-Write to our canoe advertisers for circulars.
- M. C. K., Warm Springs, N. C.—For hirds' eggs write to J. Wallace, 17 North William street, N. Y.
- Iace, IT North William street, N. Y.
 A. A. N., City.—For lawn tennis rules consult the manual of the game, published by J. B. Lippincott & Co.
 J. H. E., Arlington, Md.—We have referred your communication to the Peake's Island Club, Peake's Island, Maine, who are looking for wild pigeons.
- T. M. C.—The scores in snipe shooting have related to shots while the birds were on the wing. Your account of shooting birds on the ground would hardly be appropriate in that connec-
- W. E. M., Poughkeepsie, N. Y.—For full information about the route and cost of Maine trip, see in our issue of Feb. 24th, 1880 "Parmachenee and the Rangeley Circuit," It covers the ground completely.
- P. H. McE., North Platte, Neb.—We do not understand that there is any difference in the present methods of manufacture from the old methods, and we fail to see how the same process can produce the different results named.
- A. P. T., Belaire, Ohio, -The lessee of the Laval is Hon. D. E A. F. T., Bearre, Onio.—Ine resect the Lavan's Holl. D. F. Price, Quebec. The open season for sea, or striped, bass (Roccus lineatus) in Nova Scotia and New Brunswick is Aug. 1st to April 1st, for nets; augling with hook and line allowable at all times.
- S., Menominec, Mich.—Can you furnish me the address of two or more parties from whom I can probably get specimens of Rocky Mountain lion, moose, and elk heads and horus, etc., for mounting? Ans. Write to J. Wallace, 18 North William street,
- G. E. J., New York.—One of the makers of your gun was a lerk of Spies. The gun is very likely one of cheap Birming ham

make, but the fact that the barrels are soft is nothing against if oft barrels belong to the best of gons; even laminated steel may be out with a sharp knife.

- W.O.C., Hoston, Mass.-Apply twice a day the following ointment, with plenty of friction: Powdered bicarbonate of potash, ment, with pienty of friction: Powdered mearbonnte of potash, one ounce; powdered white vitriol, one-quarter ounce; sub-sul-pbur, two ounces; lard, eight ounces. Mix and rub well into the skin. Continue the Fowler solution of arsenic, five drops twice a day with dog's food. Send your name and address in full.
- J. E. H., New York.—Paul Mead's Dash was out of a red Irish setter blich owned by Mr. A. Johnson. She was sent to Allanny, N. Y., and warded by a red Irish setter from Ireland, the owner heling on a tour to this country. Mr. Johnson paid, 25f or the services of the dog, Red Dash being on of that litter. Mr. F. H. Palmer's red Irish bitch Belle had no pupples when sent here. She came from Dublin,
- T: B.—Do black base ever become lousy? If so, do they ever bave a fungoid growth all, or nearly all, through their flesh? The growth that is the "fungoid" resembles what a miner would call a moss agate. I have a base containing just such as I have described. I will make you some microscopic slides and send them a moss agate. I have at ones containing just such as I have accorded. I will make you some microscopic sides and send them down. Ans. All fresh water fishes have fungoid growths on injured parts, and are subject to parasites.
- J. H. M., Poughkeepsie, N. Y.—As a subscriber to your valuable J. II. A., Foughteepste, N. I.—As a subscriber to your valuable journal I would like to know how to can tisk and game. After a trip up in the mountains I would like to bring back as much as possible of what has been caught and killed. Ans. You cannot can lish or neats without expensive machinery. You may bring them back in brine or dry-salted, or, if not to be kept over a few trip up in the me days, a mixture of pepper and brown sugar is good. Clean the fish and rub this well along the backbone.

HAT, Baltimore.-1. What hat do you consider the best for proection against the sun when fishing or otherwise exposed to it: is not the own last very good? 2. Do trout take the ly in West Virginia about July 18t? 3. What is the best thing to protect you from the files? Ans. I. The cork hat is good; so is a well ventlated felt hat, with cabbage or other large leaves in the top. 2. Yes. 3. Old of pennyroyal is ussed; also preparations of tar, which are about as bad as the flies. Perhaps a fly net or "bee bonnet" is ood as any.

- E. M., New York.-Can you fell me of any retired lakes in the E. M., New York.—Can you tell me of any retired lakes in the southern part of Canada, where I can get good black bass fishing —like Charleston Lake, for instance? How can they be reached? Ans. There are lakes in York, Cardwell and Ontario counties. Go to Toronto and take rall north or northwest for these. You can hardly miss black buss in any Canadian lakes Charleston Lake is eighteen miles from Brockville, and north of that is a chain of lakes which are little frequented, and on some of which it is said, an angler never wet a line.
- S. P. G., Savannah.-Strictly, the manner of measuring should, S.F.G., Savanuan—Strictly, the manner or measuring should, be regulated by the rules you have agreed to sail under. If those rules do not cover the ease in question, the matter must be refer-red to the club or ruling authorities for decision, as the meas-urer has no right to give the rules his personal interpretation, unless authority to that effect has been specially delegated to him, units saturoity to fine elect use peer specially detegrated to him, the trust are simply in a unbisterial capacity. On broad grounds the measurement on deck should be taken without reference to the protruding of the water line at either end, as long as the water line is also measured and the mean length used, but if only over rill length is used, then the greatest length should be taken wherever found.

G. H. T.—We assume that by 30-inch level you mean the pitch of the screw. Then with 450 turns, and say 20 per cent. slip, your of the screw. Then with 450 turns, and say 20 per cent, slip, your launch should make 10.24 miles—insked, you say she makes only eight. This may be due to faulty propeller, inadequate model for higher speed, or to both. The latter is most likely the case, as your boat of 35x71 is rather short and wide for speed. You also turn up too fast; and a larger wheel and fewer turns would serve Letter. As you do not wish to increase the draft, experiments with various wheels would probably result in a gain, but cannot recommend any special wheel. The usual one for a 35t. launch would be 32x73 or thereabouts, from which we judge your wheel churns the water too much and has not effective surface enome. churns the water too much and has not effective surface enough. The Herreshoffs have a good speed wheel; apply to them.

W. S. C .- Will you inform me through your valuable paper hat you would call the following fish? Some parties claim be a brook trout and others to be a salmon trout. It was caught the other morning about 1 o'clock by a young man while fishing for buildheads at the entrance of the outlet to our lacke "Chan-tauqua." The lake was stocked some five or six years ngo with tauqua." The lake was stocked some and on any the were de-salmen frout, but from what I can understand, they were de-strayed by the miskopel, which predominate. The following are stands from the first tent moves and they were usestroyed by the pickerel, which predominate. The following are the dimensions: Weight, 11 pounds: length, 14 inches; width, 31 inches; circumference, 81 inches; tail very nearly straight; tins plink, edges of same black; dorsal fin mottled with black; plnk, edges of same black; dorsal fin mottled with black; measures across the thickest part of the back, I inches; pearl colored line through center of side from head to mil; breadth of tail, 2 inches, sume color as back fin; color of body solden; color of eyes; center black, iris yellow. Spots on side, carmine mixed with light pearl. Head shaped something like a shad, only larger mouth. Large number of teeth, Ans. Color is not to be depended upon in fish. The lake trout or "salmon trout" is not red spected. It may be a brook trout, unless its head is too much "like a brook trout, unless its head is too much "like a

shad."

Capt. Wilcox's Bluefish Story.—Capt. Wilcox, of a Mystic menhaden fishing tug, says that last week when he was off the south shore of Long Island in company with three schooners, they ran across the largest school of bluefish be or any of the crews had ever seen. On board of the tug was a bran new \$300 seine, very strong and capacions. It was let out, and the tug started with it around the school. As the folds of the seine swept steadily together, the water boiled with the violent motion of the imprisoned fish. Fifty thousand bluefish were loaded on the decks of the three schooners and the tug. The fish weighed from two to six pounds apiece and loaded down the four vessels. But the beautiful net was an utter ruin. There was not a mesh left that was not chewed into small strings. It was a dead loss, and was thrown away. The fishermen say that where one fish was caught ten or more made their escape. made their escape.

made their escape,

LITERALLY LED INTO CAPITIVITY.—The learned author of the "Descent of Man," in noticing that the animals often suffer from the diseases that afflict ourselves, might have added that in some cases they are not free from our vices also, According to a recent letter from Darfur, in Africa, the monkeys of that region are inordinately fond of a kind of beer made by the natives, who use the beverage to capture their simial poor relations. Having placed quantities of the beer where the monkeys can get at it, the natives wait until their victims are in various degrees of inebriation, and when they then mingle with them the poor creatures are too much fuddled to recognize the differences between negro and ape. When the negro takes the hand of one of them to lead him off, some other fond creature clings to the hand of the latter one, negro takes the hand of one of them to lead him out, some other fond creature clings to the hand of the latter one, another to his hand, and thus a single negro may sometimes be seen carrying off a string of stargering monkeys. When secured, the beer is administered in decreasing quantities, so that they may only gradually awaken to the sad result of their spree.—Boston Herald.

the sad result of their spree.—Boston Heraul,

Escaped Sea-Lions.—Eight sea-lions, which had been confined in a crib at the Brighton Beach Aquarium, Engenan's Pier, Coney Island, escaped into the ocean last Friday evening, and at once disappeared for parts unknown. Three manmoth snapping turtles went with them. The largest of the sea-lions was known as "Bill;" he was about 6ft. 2in. in length, and his mate, "Fanny, was almost as large. There were also, beside the four other medium sized specimens, two buby sea-lions. The proprietor estimated the loss at \$5,000. No insurance, Much trepfalation was manifested among the bathers at Coney Island when it became known that the lions were at large. The fear was, however, entirely groundless, These amphibians are formidable only in name, and would not molest a human leg, unless they mistook it for a good fat herring. Engeman, the owner of the lions, offered a reward of \$50 each for their return.

D., Oetdental Hotel, San Francisco, Cal.

Spanish Silk Worm Gut.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our Mr. Imbrie has just returned from Murcia, Spain, where all the high quality gut is made. While there he organized the most extensive and perfect factory for making this article in the world. The grades named below will run at least 25 per cent better than those of any other manufacturers.
